

TITLE VIII  
*SOLID WASTE MANAGEMENT AND DISPOSAL*

CHAPTER 100  
SCOPE OF TITLE — DEFINITIONS — FORMS — RULES OF PRACTICE  
[Prior to 12/3/86, Water, Air and Waste Management[900]]

**567—100.1(455B,455D) Scope of title.** The department has jurisdiction over the management, dumping, depositing, and disposal of solid waste by establishing standards for sanitary disposal projects and by regulating solid waste through a system of general rules and specific permits. The construction and operation of any sanitary disposal project requires a specific permit from the department.

This chapter provides general definitions applicable to this title and rules of practice, including forms, applicable to the public in the department's administration of the subject matter of this title.

Chapter 101 contains the general requirements relating to solid waste management and disposal. Chapter 102 pertains to the permits which must be obtained in order to construct and operate a sanitary disposal project. Chapter 103 details the requirements for all sanitary landfills accepting only coal combustion residue. Chapter 104 details the requirements for sanitary disposal projects with processing facilities. Chapter 105 sets forth the requirements for the planning and operation of all composting facilities. Chapter 106 pertains to design and operating requirements for recycling operations. Chapter 107 sets forth the rules pertaining to beverage container deposits and approval of redemption centers. Chapter 108 pertains to the reuse of solid waste. Chapter 109 contains the procedure for the assessment and collection of fees for the disposal of solid waste at sanitary landfills. Chapter 110 contains design, construction, and operation standards for solid waste management facilities. Chapter 112 details the requirements for all sanitary landfills accepting only biosolids. Chapter 113 details the requirements for all sanitary landfills accepting municipal solid waste. Chapter 114 details the requirements for all sanitary landfills accepting only construction and demolition wastes. Chapter 115 details the requirements for all sanitary landfills that are industrial waste monofills. Chapter 117 details the requirements for outdoor storage and processing of waste tires. Chapter 118 governs removal and disposal of PCBs from white goods. Chapter 119 provides requirements for collection and disposal of waste oil. Title VIII, Chapters 120 and 121, govern land application of sludge and other solid waste.

This rule is intended to implement Iowa Code section 455B.304 and chapter 455D.

**567—100.2(455B,455D) Definitions.** For the purpose of this title, the following terms shall have the meaning indicated in this chapter. The definitions set out in Iowa Code section 455B.301 shall be considered to be incorporated verbatim in these rules.

*"Airport"* means public-use airport open to the public without prior permission and without restrictions within the physical capacities of available facilities.

*"Annular space"* means the open space formed between the borehole and the well casing.

*"Aquifer"* means a saturated geologic formation or combination of formations which has appreciably greater ability to transmit water than do adjacent formations. Typically, an aquifer is capable of yielding usable quantities of water to a well.

*"Areas susceptible to mass movement"* means those areas of influence (i.e., areas characterized as having an active or substantial possibility of mass movement) where the movement of earth material at, beneath, or adjacent to the MSWLF site, because of natural or man-induced events, results in the down slope transport of soil and rock material by means of gravitational influence. Areas of mass movement include, but are not limited to, landslides, avalanches, debris slides and flows, soil function, block sliding, and rockfall.

*"Attendant"* means an employee of a sanitary disposal project who is not employed or assigned to operate the equipment used on the site.

“*Bird hazard*” means an increase in the likelihood of bird/aircraft collisions that may cause damage to the aircraft or injury to its occupants.

“*Commission*” means the environmental protection commission.

“*Compost*” means organic material resulting from biological decomposition of waste which can be used as a soil conditioner or soil amendment.

“*Composting*” means the controlled, biological decomposition of selected solid organic waste materials under aerobic conditions resulting in an innocuous final product.

“*Confined aquifer*” means an aquifer with a confining bed above and below. Water in a confined aquifer is under pressure such that water rises above the top of the aquifer in a well which penetrates the aquifer.

“*Confining bed*” means a geologic formation exhibiting relatively low ability to transmit water compared to adjacent formations. Confining beds are typically not capable of yielding usable quantities of water to a well.

“*Construction and demolition waste*” means waste building materials including wood, metals and rubble which result from construction or demolition of structures. Such waste shall also include trees.

“*Construction and demolition waste disposal site*” means a sanitary landfill which accepts only construction and demolition wastes.

“*Contaminated animal carcasses*” means waste including carcasses, body parts and bedding of animals that were exposed to infectious agents during research, production of biologicals, or testing of pharmaceuticals.

“*Contaminated sharps*” means all discarded sharp items derived from patient care in medical, research, or industrial facilities including glass vials containing materials defined as infectious, suture needles, hypodermic needles, scalpel blades, and Pasteur pipettes.

“*Cultures and stocks of infectious agents*” means specimen cultures collected from medical and pathological laboratories, cultures and stocks of infectious agents from research and industrial laboratories, wastes from the production of biological agents, discarded live and attenuated vaccines, and culture dishes and devices used to transfer, inoculate or mix cultures.

“*Department*” means the Iowa department of natural resources.

“*Displacement*” means the relative movement of any two sides of a fault measured in any direction.

“*Downgradient*” means direction of decreasing hydraulic head.

“*Downgradient well*” means a well which has been installed downgradient of the site and is capable of detecting the migration of contaminants from the site.

“*FAA certified airport*” means an airport serving air carriers certified by the Civil Aeronautics Board that has been issued an airport operating certificate from the Administrator of the Federal Aviation Administration pursuant to Section 612 of the Federal Aviation Act, 49 U.S.C. §1432, and 49 CFR Part 139. (NOTE: This definition includes the municipal airports in or near Iowa as follows: Moline, Illinois; Omaha, Nebraska; and Burlington, Cedar Rapids, Des Moines, Dubuque, Fort Dodge, Mason City, Ottumwa, Sioux City, and Waterloo, Iowa.)

“*Fault*” means a fracture or a zone of fractures in any material along which strata on one side have been displaced with respect to that on the other side.

“*Firewood processing facilities*” means facilities which process or allow the public to process trees into firewood.

“*Flood plain*” means the area adjoining a river or stream which has been or may be hereafter covered by flood water.

“*Free liquid*” means the liquid produced when a 100-milliliter or 100-gram representative sample is placed on a standard mesh number 60 (fine mesh size) conical paint filter for five minutes. Method 9095 EPA SW 846.

*“Garbage”* means all solid and semisolid, putrescible animal and vegetable wastes resulting from the handling, preparing, cooking, storing, serving and consuming of food or of material intended for use as food, and all offal, excluding useful industrial byproducts, and shall include all such substances from all public and private establishments and from all residences.

*“Geologic cross section”* means a drawing of a subsurface profile showing the various strata encountered based on at least three soil borings.

*“Groundwater flow path”* means the route of water (and contaminant) travel within the groundwater system.

*“High water table”* is the position of the water table which occurs in the spring in years of normal or above normal precipitation.

*“Holocene”* means the most recent epoch of the Quaternary Period, extending from the end of the Pleistocene Epoch to the present.

*“Human blood and blood products”* means human serum, plasma, other blood components, bulk blood, or containerized blood in quantities greater than 20 milliliters.

*“Hydraulic head”* means the energy contained at a point in the groundwater system. Hydraulic head is measured as the elevation to which water rises in a piezometer.

*“Incineration”* means the processing and burning of waste for the purpose of volume and weight reduction in facilities designed for such use.

*“Industrial process wastes”* means waste that is generated as a result of manufacturing activities, product processing or commercial activities. It does not include office waste, cafeteria waste, or other types that are not the direct result of production processes.

*“Infectious”* means containing pathogens with sufficient virulence and quantity so that exposure to an infectious agent by a susceptible host could result in an infectious disease when the infectious agent is improperly treated, stored, transplanted, or disposed of.

*“Infectious waste”* means waste which is infectious, including but not limited to contaminated sharps, cultures and stocks of infectious agents, blood and blood products, pathological waste, and contaminated animal carcasses from hospitals or research laboratories.

*“Karst terranes”* means areas where karst topography, with its characteristic surface and subterranean features, is developed as the result of dissolution of limestone, dolomite, or other soluble rock. Characteristic physiographic features present in karst terranes include, but are not limited to, sink-holes, sinking streams, caves, large springs, and blind valleys.

*“Land application”* means a method through which sludge is applied to the ground surface. Land application may include subsurface injection.

*“Landfill property”* means the entire area of the landfill including the disposal site and any other contiguous property proposed for actual landfill use.

*“Land pollution”* means the presence in or on the land of any solid waste in such quantity, of such nature and for such duration and under such condition as would affect injuriously any waters of the state, cause air pollution or create a nuisance.

*“Leachate”* means a liquid that has percolated through or drained from a solid waste landfill.

*“Lithified earth material”* means all rock, including all naturally occurring and naturally formed aggregates or masses of minerals or small particles of older rock that formed by crystallization of magma or by induration of loose sediments. This term does not include man-made materials, such as fill, concrete, and asphalt, or unconsolidated earth materials, soil, or regolith lying at or near the earth surface.

*“Local governments”* means those counties or municipalities using the sanitary disposal project.

*“Lower explosive limit”* means the lowest percent by volume of a mixture of explosive gases in air that will propagate a flame at 25° Celsius and atmospheric pressure.

*“Maximum horizontal acceleration in lithified earth material”* means the maximum expected horizontal acceleration depicted on a seismic hazard map, with a 90 percent or greater probability that the acceleration will not be exceeded in 250 years, or the maximum expected horizontal acceleration based on a site-specific seismic risk assessment.

*“Mean”* is the sum of all the measurements divided by the number of measurements.

*“Monitoring well”* means any well installed solely for the sampling of groundwater quality at a given location and depth and constructed in a manner approved by the department.

*“Municipal solid waste landfill (MSWLF)”* means a discrete area of land or an excavation that receives household waste, and that is not a land application site, surface impoundment, injection well, or waste pile, as those terms are defined under 40 Code of Federal Regulations Part 257.2. An MSWLF also may receive other types of RCRA subtitle D wastes, such as commercial solid waste, nonhazardous dry sludge, and industrial solid waste. An MSWLF may be publicly or privately owned. An MSWLF may be a new MSWLF site, an existing MSWLF site, or a lateral expansion.

*“Open burning”* means any burning of combustible materials where the products of combustion are emitted into the open air without passing through a chimney or stack.

*“Open dump”* means any exposed accumulation of solid waste at a site other than a sanitary disposal project operating under a permit from the department.

*“Open dumping”* means the depositing of solid wastes on the surface of the ground or into a body or stream of water.

*“Operating area”* means the immediate portion of a sanitary disposal project used for unloading and handling of solid waste to prepare it for processing or final disposal.

*“Operator”* means an employee of the sanitary disposal project who is employed and assigned to operate the equipment used on the site.

*“Pathological waste”* means human tissues and body parts that are removed during surgery or autopsy.

*“Perched saturated zone”* is a localized saturated zone occurring above the regional zone of saturation. The perched saturated zone’s presence is caused by a lens of relatively impermeable material within the unsaturated zone that impedes the downward movement of water toward the zone of saturation.

*“Piezometers”* are devices used to measure hydraulic head at a specific point in the groundwater system. Piezometers are generally small diameter wells sealed along the entire length and open to water only at the bottom through a short section of well screen, which is the point where hydraulic head is measured. A piezometer may be constructed similar to a monitoring well or may be a driven well point.

*“Planning area”* means the localities and facilities involved in any aspect of the sanitary disposal project(s) management of waste, including out-of-state localities and facilities, if applicable. A planning area may include one or more sanitary disposal projects.

*“Pollution control waste”* means any solid waste residue extracted by, or resulting from, the operation of pollution control equipment.

*“Poor foundation conditions”* means those areas where features exist which indicate that a natural or man-induced event may result in inadequate foundation support for the structural components of an MSWLF site.

*“Potentiometric surface”* is the imaginary surface that represents the level to which water from an aquifer (confined or unconfined) will rise in wells.

*“Private agency”* is defined in Iowa Code section 28E.2.

“*Processing facility*” means the site and equipment for the preliminary and incomplete disposal of solid waste, including but not limited to transfer, open burning, incomplete land disposal, incineration, composting, reduction, shredding and compression.

“*Public agency*” is defined in Iowa Code section 28E.2.

“*Public water supply system*” means a system for the provision to the public of piped water for human consumption, if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the year. Such term includes: (1) any collection, treatment, storage, and distribution facilities under control of the supplier of water and used primarily in connection with such system, and (2) any collection (including wells) or pretreatment storage facilities not under such control which are used primarily in connection with such supply system. A public water supply system is either a “community water system” or a “noncommunity water system.”

a. “*Community water system*” means a public water supply system which serves at least 15 service connections used by year-round residents or regularly serves at least 25 year-round residents.

b. “*Noncommunity water system*” means a public water supply system that is not a community water system.

“*Recycling*” means any process by which waste or materials which otherwise become waste are collected, separated, or processed and reused or returned to use in the form of raw materials or products. Recycling includes, but is not limited to, the composting of yard waste which has been previously separated from other waste and collected by the sanitary facility, but does not include any form of energy recovery.

“*Refuse*” means putrescible and nonputrescible wastes including but not limited to garbage, rubbish, ashes, incinerator ash, incinerator residues, street cleanings, market and industrial solid wastes and sewage treatment wastes in dry or semisolid form.

“*Refuse collection service*” means a publicly or privately operated agency, business or service engaged in the collecting and transporting of solid waste for disposal purposes.

“*Rubbish*” means nonputrescible solid waste consisting of combustible and noncombustible wastes, such as ashes, paper, cardboard, tin cans, yard clippings, wood, glass, bedding, crockery or litter of any kind.

“*Rubble*” means stone, brick or similar inorganic material.

“*Salvageable material*” means discarded material no longer of value for its original purpose but which has value if reclaimed.

“*Salvaging*” means the systematic removal of salvageable material in a formal and orderly manner as a part of the normal operating procedure of a sanitary disposal project.

“*Sanitary disposal*” means a method of treating solid waste so that it does not produce a hazard to the public health or safety or create a nuisance.

“*Sanitary disposal project*” is defined in Iowa Code section 455B.301.

“*Sanitary landfill*” means a method of disposing of solid waste on land by utilizing the principles of engineering to confine the solid waste to the smallest practical volume and to cover it with a layer of earth so that no nuisance or hazard to the public health is created.

“*Sanitary landfill operator*” means an individual having active, daily, on-site responsibility for day-to-day operation of a department-permitted sanitary landfill. This individual must also have the authority to turn waste away at the gate when the waste is considered unacceptable.

“*Scavenging*” means the uncontrolled removal of materials from the unloading or working area of a sanitary disposal project.

“*Seismic impact zone*” means an area with a 10 percent or greater probability that the maximum horizontal acceleration in the lithified earth material, expressed as a percentage of the earth’s gravitational pull, will exceed 0.10g in 250 years.

“*Sewage sludge*” is defined in 567—Chapter 67.

“*Shelby tube*” is a thin-walled, seamless steel tube with a sharp cutting edge which is used to obtain undisturbed samples of cohesive or moderately cohesive soils (silts and clays).

“*Shoreland*” means land within 300 feet of the high water mark of any natural or artificial, publicly or privately owned lake or any impoundment of water used as a source of public water supply.

“*Site*” means any location, place or tract of land used for collection, storage, conversion, utilization, incineration or landfilling of solid waste, to include the landfill area, nonfill work areas, borrow areas plus a 100-foot wide perimeter surrounding the working areas or the property line if it is closer than 100 feet to the working areas.

“*Sludge*” means any solid, semisolid, or liquid waste generated from a commercial or industrial wastewater treatment plant, water supply treatment plant or air pollution control facility or any other such waste having similar characteristics and effects.

“*Soil boring*” means a hole drilled or driven into the subsurface for the purpose of determining subsurface characteristics.

“*Solid waste*” is defined in Iowa Code section 455B.301.

“*Solid waste collection*” means the gathering of solid waste from public and private places.

“*Solid waste incinerator operator*” means an individual with active, daily, on-site responsibility for day-to-day operation of a department-permitted solid waste incinerator. This individual must also have the authority to turn waste away when it has been determined to be unacceptable.

“*Solid waste storage*” means the holding of solid waste pending intermediate or final disposal.

“*Solid waste transportation*” means the conveying of solid waste from one place to another by means of vehicle, rail car, water vessel, conveyor or other means.

“*Special wastes*” means any industrial process waste, pollution control waste, or toxic waste which presents a threat to human health or the environment or a waste with inherent properties which make the disposal of the waste in a sanitary landfill difficult to manage. Special waste does not include domestic, office, commercial, medical, or industrial waste that does not require special handling or limitations on its disposal. Special waste does not include hazardous wastes which are regulated under the federal Resource Conservation and Recovery Act (RCRA), hazardous waste as defined in Iowa Code section 455B.411, subsection 3, or hazardous wastes included in the list compiled in accordance with Iowa Code section 455B.464.

“*Specific yield*” is the ratio of the volume of water that a given mass of saturated rock or soil will yield by gravity to the volume of that mass. This ratio is stated as a percentage.

“*Split spoon sampler*” means a device used in conjunction with a drilling rig to obtain core samples from unconsolidated strata.

“*Stabilized sludge*” means sludge that has been processed to a point where it has the ability to resist further change, produces minimal odor, and has achieved a substantial reduction in the pathogenic organism content. (The department recognizes principles of stabilization other than the conventional biological processes. Whether these processes produce a stabilized sludge will be evaluated on an individual basis.)

“*Standard deviation*” means the square root of the variance.

“*Storage coefficient*” is the volume of water an aquifer releases from or takes into storage per unit surface area of aquifer per unit change in head.

“*Structural components*” means liners, leachate collection systems, final covers, run-on/run-off systems, and any other component used in the construction and operation of the MSWLF that is necessary for protection of human health and the environment.

“*Toxic wastes*” means materials containing poisons, biocides, acids, caustics, pathological wastes, and similar harmful wastes which may require special handling and disposal procedures to protect the environment and the persons involved in the storage, transport and disposal of the wastes.

“*Transfer station*” means a fixed or mobile intermediate solid waste disposal facility for transferring loads of solid waste, with or without reduction of volume, to another transportation unit.

“*Transmissivity*” is the rate at which water is transmitted through a unit width of an aquifer under a unit hydraulic gradient.

“*Tree chipping facilities*” means facilities which chip trees and brush for the purpose of mulch production.

“*Trees*” means trunks, limbs, stumps, or branches from trees or shrubs and untreated, uncoated, chemically unchanged wood wastes. This shall not include wood products which are part of an otherwise defined waste or have been contaminated by coatings, treatments or metals.

“*Tremie tube*” means a pipe used to fill the annular space in a well from the bottom up.

“*Unconfined aquifer*” means an aquifer which does not have a confining bed above it. The level of water in a well in an unconfined aquifer is below the top of the aquifer formation.

“*Unsaturated zone*” is the subsurface zone above the water table in which the interstitial spaces are only partially filled with water.

“*Unstable area*” means a location that is susceptible to natural or human-induced events or forces capable of impairing the integrity of some or all of the landfill structural components responsible for preventing releases from a landfill. Unstable areas can include poor foundation conditions, areas susceptible to mass movements, and karst terranes.

“*Upgradient*” means direction of increasing hydraulic head.

“*Upgradient well*” means a well which is capable of yielding groundwater samples that are representative of regional conditions and are not affected by the landfill site. Such a well is typically placed upgradient of the site, if possible, and, if not, is placed in an upgradient direction and as near the site as feasible.

“*Variance*” means the sum of the squared differences between the actual measurement and the mean divided by one less than the number of measurements.

“*Waste reduction*” means practices which reduce, avoid, or eliminate both the generation of solid waste and the use of toxic materials so as to reduce risks to health and the environment and to avoid, reduce or eliminate the generation of wastes or environmental pollution at the source and not merely achieved by shifting a waste output or waste stream from one environmental medium to another environmental medium. Waste reduction includes, but is not limited to, home yard waste composting, which prevents yard waste from entering the waste stream.

“*Water table*” means the water surface below the ground at which the unsaturated zone ends and the saturated zone begins.

“*Yard waste*” means debris such as grass clippings, leaves, garden waste, brush and trees. Yard waste does not include tree stumps.

“*Zone of saturation*” is the subsurface zone below the water table in which the interstitial spaces are completely filled with water.

This rule is intended to implement Iowa Code section 455B.304 and Iowa Code chapter 455D.

**567—100.3(17A,455B) Forms and rules of practice.**

**100.3(1) Applications for permits and renewals.** Any private or public person or agency desiring to secure any permit or renewal of a permit provided for in Iowa Code chapter 455B, division IV, part 1, or the rules promulgated pursuant thereto, shall file a properly completed application with the program operations division of the department.

*a.* A properly completed application shall consist of the application form with all blanks filled in by the applicant, all signatures, and all documents and information required by the solid waste disposal rules. Application forms may be obtained from:

Administrative Support Station  
Environmental Protection Division  
Iowa Department of Natural Resources  
Henry A. Wallace Building  
900 East Grand  
Des Moines, Iowa 50319

Properly completed forms should be submitted in accordance with the instructions on the form. Where not specified in the instructions, forms should be submitted to the Solid Waste Section.

*b.* Application for the following permits or renewals shall be made in triplicate on the forms indicated:

(1) A sanitary disposal project permit pursuant to Iowa Code section 455B.305 — Form 43. 542-3199

(2) A temporary permit pursuant to Iowa Code subsection 455B.307(1) — Form 44. 542-1012

(3) A renewal of a sanitary disposal project permit pursuant to 567—subrule 102.2(1) — Form 45. 542-3208

*c.* It is strongly recommended that applicants contact the department before engineering plans are drafted, to ensure that the requirements of the rules are understood and to discuss any special problems of the proposed project.

**100.3(2)** Rescinded IAB 3/12/97, effective 4/16/97.

**567—100.4(455B) General conditions of solid waste disposal.** Except as provided otherwise in 567—Chapters 100 to 121, a private or public agency shall not dump or deposit or permit the dumping or depositing of any solid waste at any place other than a sanitary disposal project approved by the director, or pursuant to a permit granted by the department which allows the disposal of solid waste on land owned or leased by the agency.

**100.4(1) Definitions.** For the purposes of this rule:

“*Farm animals*” means cattle, swine, sheep or lambs, horses, turkeys, chickens and other domestic animals;

“*Farm buildings*” means barns, machine sheds, storage cribs, animal confinement buildings, and homes located on the premises and used in conjunction with crop production or with livestock or poultry raising and feeding operations; and

“*Farm waste*” means machinery, vehicles and equipment used in conjunction with crop production or with livestock or poultry raising and feeding operations, trees, brush and grubbed stumps generated on the same property, or ashes from the burning thereof, but specifically does not include agricultural chemicals, fertilizers or manures, or domestic household wastes.

**100.4(2) Special requirements for farm waste, farm buildings, and dead animals.**

a. A private agency may dispose of farm waste and farm buildings without first having obtained a sanitary disposal project permit, in accordance with paragraph 100.4(2)“c,” provided that:

(1) The farm waste was owned by the private agency and was used on the premises where disposal occurs.

(2) Prior to disposal of vehicles, machinery, and equipment, all fluids shall be drained, including motor oils, motor fuels, lubricating fluids, coolants and solvents, and agricultural chemicals; and all batteries and rubber tires shall be removed.

(3) Prior to disposal of storage or feeding equipment, the equipment shall be emptied of all contents not otherwise authorized for burial pursuant to these rules.

(4) Farm buildings have been emptied of contents not otherwise authorized for burial pursuant to these rules and have been buried on the premises where they were located.

(5) All materials drained or removed from farm waste or farm buildings prior to disposal shall be recycled, reused or disposed of in accordance with Iowa Code chapter 455B and the rules implementing that chapter.

(6) The farm waste and farm buildings are buried in soils listed in tables contained in the county soil surveys and soil interpretation records (published by the U.S. Soil Conservation Service) as being moderately well drained, well drained, somewhat excessively drained, or excessively drained soils. Other soils may be used if artificial drainage is installed to obtain water-level depth more than two feet below the burial depth of the waste.

(7) The lowest elevation of the burial pit is six feet or less below the surface.

(8) The farm waste and farm buildings are immediately covered with a minimum of 6 inches of soil and finally covered with a total minimum of 24 inches of soil.

b. A private agency may dispose of dead farm animals without first having obtained a sanitary disposal project permit, provided that the disposal is in accordance with paragraph 100.4(2)“c,” the rules of the department of agriculture and land stewardship, and:

(1) The dead farm animals result from operations located on the premises where disposal occurs.

(2) A maximum loading rate of 7 cattle, 44 swine, 73 sheep or lambs or 400 poultry carcasses on any given acre per year. All other species will be limited to 2 carcasses per acre. Animals that die within two months of birth may be buried without regard to number.

(3) The dead animals are buried in soils listed in tables contained in the county soil surveys and soil interpretation records (published by the U.S. Soil Conservation Service) as being moderately well drained, well drained, somewhat excessively drained, or excessively drained soils. Other soils may be used if artificial drainage is installed to obtain water-level depth more than two feet below the burial depth of the waste.

(4) The lowest elevation of the burial pit is six feet or less below the surface.

(5) The dead farm animals are immediately covered with a minimum of 6 inches of soil and finally covered with a total minimum of 30 inches of soil.

c. Farm waste, farm buildings, and dead farm animals must be disposed of in accordance with the following separation distances:

(1) At least 100 feet from any private and 200 feet from any public well which is being used or would be used without major renovation for domestic purposes.

(2) At least 50 feet from adjacent property line.

(3) At least 500 feet from an existing neighboring residence.

(4) More than 100 feet from any body of surface water such as a stream, lake, pond, or intermittent stream, except as provided in (6) below.

(5) Outside the boundaries of a flood plain, wetland, or shoreline area, except as provided in (6) below.

(6) Trees, brush and grubbed stumps generated as a result of clearing, snagging, maintenance or repair of drainage ditches or outlets may be buried within 100 feet of a surface water, and within a flood plain or shoreline area.

**567—100.5(455B) Disruption and excavation of sanitary landfills or closed dumps.** No person shall excavate, disrupt, or remove any deposited material from any active or discontinued sanitary landfill or closed dump without first having notified the department in writing.

**100.5(1)** Notification shall include an operational plan stating the area involved, lines and grades defining limits of excavation, estimated number of cubic yards of material to be excavated, sanitary disposal project where material is to be disposed and estimated time required for excavation procedures.

**100.5(2)** An excavation shall be confined to an area consistent with the number of pieces of digging equipment and trucks used for haulage.

**100.5(3)** The disposal of all solid waste resulting from excavation shall be in conformity with Iowa Code chapter 455B and these rules.

These rules are intended to implement Iowa Code section 455B.307.
