FOOTNOTES:  
<sup>1</sup>"Submersion" means that values given are for submersion in a hemispherical semi-infinite cloud of airborne material.  
<sup>2</sup>These radionuclides have radiological half-lives of less than 2 hours. The total effective dose equivalent received during operations with these radionuclides might include a significant contribution from external exposure. The DAC values for all radionuclides, other than those designated Class "Submersion," are based upon the committed effective dose equivalent due to the intake of the radionuclide into the body and do NOT include potentially significant contributions to dose equivalent from external exposures. The licensee may substitute 1E-7 μCi/ml for the listed DAC to account for the submersion dose prospectively, but should use individual monitoring devices or other radiation measuring instruments that measure external exposure to demonstrate compliance with the limits. (see 40.17)  
<sup>3</sup>For soluble mixtures of U-238, U-234, and U-235 in air, chemical toxicity may be the limiting factor (see 40.15(5)). If the percent by weight (enrichment) of U-235 is not greater than 5, the concentration value for a 40-hour workweek is 0.2 milligrams uranium per cubic meter of air average. For any enrichment, the product of the average concentration and time of exposure during a 40-hour workweek shall not exceed 8E-3 (SA) μCi-hr/ml, where SA is the specific activity of the uranium inhaled. The specific activity for natural uranium is 6.77E-7 curies per gram U. The specific activity for other mixtures of U-238, U-235, and U-234, if not known, shall be:  
SA = 3.6E-7 curies/gram U U-depleted  
SA = [0.4 + 0.38 (enrichment) + 0.0034 (enrichment)<sup>2</sup>] E-6, enrichment ≥ 0.72  
where enrichment is the percentage by weight of U-235, expressed as percent.

NOTE:  
1. If the identity of each radionuclide in a mixture is known but the concentration of one or more of the radionuclides in the mixture is not known, the DAC for the mixture shall be the most restrictive DAC of any radionuclide in the mixture.  
2. If the identity of each radionuclide in the mixture is not known, but it is known that certain radionuclides specified in this appendix are not present in the mixture, the inhalation ALI, DAC, and effluent and sewage concentrations for the mixture are the lowest values specified in this appendix for any radionuclide that is not known to be absent from the mixture; or

|                                                                                                                                                                                                                                                                                                                                                                                                                                |       | -                              | -            | -               | -                                      | 1E-6              | 1E-5                               |

3. If a mixture of radionuclides consists of uranium and its daughters in ore dust (10 μm AMAD particle distribution assumed) prior to chemical separation of the uranium from the ore, the following values may be used for the DAC of the mixture: 6E-11 μCi of gross alpha activity from uranium-238, uranium-234, thorium-230, and radium-226 per milliliter of air; 3E-11 μCi of natural uranium per milliliter of air; or 45 micrograms of natural uranium per cubic meter of air.

4. If the identity and concentration of each radionuclide in a mixture are known, the limiting values should be derived as follows: determine, for each radionuclide in the mixture, the ratio between the concentration present in the mixture and the concentration otherwise established in Appendix B, Chapter 40 for the specific radionuclide when not in a mixture. The sum of such ratios for all of the radionuclides in the mixture may not exceed "1" (i.e., "unity").

EXAMPLE: If radionuclides "A," "B," and "C" are present in concentrations  $C_A$ ,  $C_B$ , and  $C_C$ , and if the applicable DACs are  $DAC_A$ ,  $DAC_B$ , and  $DAC_C$ , respectively, then the concentrations shall be limited so that the following relationship exists:

$$\frac{C_A}{DAC_A} + \frac{C_B}{DAC_B} + \frac{C_C}{DAC_C} \leq 1$$

## CHAPTER 40

## APPENDIX C

QUANTITIES<sup>1</sup> OF LICENSED OR REGISTERED MATERIAL REQUIRING LABELING

| Radionuclide  | Quantity<br>( $\mu$ Ci)* | Radionuclide  | Quantity<br>( $\mu$ Ci)* |

| Americium-246m                                                                                        | 1,000 | Fermium-254                                                                                                                    | 10    |
| Americium-246                                                                                         | 1,000 | Fermium-255                                                                                                                    | 1     |
| Curium-238                                                                                            | 100   | Fermium-257                                                                                                                    | 0.01  |
| Curium-240                                                                                            | 0.1   | Mendelevium-257                                                                                                                | 10    |
| Curium-241                                                                                            | 1     | Mendelevium-258                                                                                                                | 0.01  |
| Any alpha-emitting radionuclide not listed above or mixtures of alpha emitters of unknown composition | 0.001 | Any radionuclide other than alpha-emitting radionuclides not listed above, or mixtures of beta emitters of unknown composition | 0.01  |

\*To convert  $\mu\text{Ci}$  to  $\text{kBq}$ , multiply the  $\mu\text{Ci}$  value by 37.

<sup>1</sup>The quantities listed above were derived by taking 1/10th of the most restrictive ALI listed in Table I, Columns 1 and 2, of Appendix B to this chapter, rounding to the nearest factor of 10, and constraining the values listed between 37 Bq and 37 MBq (0.001 and 1,000  $\mu\text{Ci}$ ). Values of 3.7 MBq (100  $\mu\text{Ci}$ ) have been assigned for radionuclides having a radioactive half-life in excess of E+9 years, except rhenium, 37 MBq (1,000  $\mu\text{Ci}$ ), to take into account their low specific activity.

NOTE: For purposes of 40.61(5), 40.64(1), and 40.95(1) where there is involved a combination of radionuclides in known amounts, the limit for the combination shall be derived as follows: determine, for each radionuclide in the combination, the ratio between the quantity present in the combination and the limit otherwise established for the specific radionuclide when not in combination. The sum of such ratios for all radionuclides in the combination may not exceed “1”—that is, unity.

## CHAPTER 40

## APPENDIX D

## REQUIREMENTS FOR TRANSFERS AND MANIFESTS OF LOW-LEVEL RADIOACTIVE WASTE INTENDED FOR DISPOSAL AT LICENSED LAND DISPOSAL FACILITIES

As used in this appendix, the following definitions apply:

“Chelating agent” means amine polycarboxylic acids (e.g., EDTA, DTPA), hydroxy-carboxylic acids, and polycarboxylic acids (e.g., citric acid, carbolic acid, and glucinic acid).

“Chemical description” means a description of the principal chemical characteristics of a low-level radioactive waste.

“Computer-readable medium” means that the regulatory agency’s computer can transfer the information from the medium into its memory.

“Consignee” means the designated receiver of the shipment of low-level radioactive waste.

“Decontamination facility” means a facility operating under an Agreement State or Nuclear Regulatory Commission license whose principal purpose is decontamination of equipment or materials to accomplish recycle, reuse, or other waste management objectives and, for purposes of this appendix, is not considered to be a consignee for LLW shipments.

“Disposal container” means a container principally used to confine low-level radioactive waste during disposal operations at a land disposal facility (also see “high integrity container”). Note that for some shipments, the disposal container may be the transport package.

“EPA identification number” means the number received by a transporter following application to the administrator of EPA as required by 40 CFR Part 263.

“Forms 540, 540A, 541, 541A, 542, and 542A” are official forms referenced in this appendix. Licensees need not use originals of these forms as long as any substitute forms are equivalent to the original documentation in respect to content, clarity, size, and location of information. Upon agreement between the shipper and consignee, Forms 541 (and 541A) and Forms 542 (and 542A) may be completed, transmitted, and stored in electronic media. The electronic media must have the capability for producing legible, accurate, and complete records in the format of the uniform manifest.

“Generator” means a licensee operating under an Agreement State or Nuclear Regulatory Commission license who (1) is a waste generator as defined in this rule, or (2) is the licensee to whom waste can be attributed within the context of the Low-Level Radioactive Waste Policy Amendments Act of 1985 (e.g., waste generated as a result of decontamination or recycle activities).

“High integrity container (HIC)” means a container commonly designed to meet the structural stability requirements of 10 CFR 61.56, and to meet United States Department of Transportation requirements for a Type A package.

“Land disposal facility” means the land, buildings and structures, and equipment which are intended to be used for the disposal of radioactive wastes. For purposes of this appendix, a “geologic repository” as defined in 10 CFR Part 60 is not considered a land disposal facility.

“Package” means the assembly of components necessary to ensure compliance with the packaging requirements of United States Department of Transportation regulations, together with its radioactive contents, as presented for transport.

“Physical description” means the items called for on Form 541 to describe a low-level radioactive waste.

“Residual waste” means low-level radioactive waste resulting from processing or decontamination activities that cannot be easily separated into distinct batches attributable to specific waste generators. This waste is attributable to the processor or decontamination facility, as applicable.

“Shipper” means the licensed entity (i.e., the waste generator, waste collector, or waste processor) who offers low-level radioactive waste for transportation, typically consigning this type of waste to a licensed waste collector, waste processor, or land disposal facility operator.

“Shipping paper” means Form 540 and, if required, Form 540A which includes the information required by United States Department of Transportation in 49 CFR Part 172.

“Uniform Low-Level Radioactive Waste Manifest” or “uniform manifest” means the combination of Forms 540, 541 and, if necessary, 542, and their respective continuation sheets as needed, or equivalent.

“Waste collector” means an entity, operating under an Agreement State or Nuclear Regulatory Commission license, whose principal purpose is to collect and consolidate waste generated by others, and to transfer this waste, without processing or repackaging the collected waste, to another licensed waste collector, licensed waste processor, or licensed land disposal facility.

“Waste description” means the physical, chemical and radiological description of a low-level radioactive waste as called for on Form 541.

“Waste generator” means an entity, operating under an Agreement State or Nuclear Regulatory Commission license, who (1) possesses any material or component that contains radioactivity or is radioactively contaminated for which the licensee foresees no further use, and (2) transfers this material or component to a licensed land disposal facility or to a licensed waste collector or processor for handling or treatment prior to disposal. A licensee performing processing or decontamination services may be a “waste generator” if the transfer of low-level radioactive waste from its facility is defined as “residual waste.”

“Waste processor” means an entity, operating under an Agreement State or Nuclear Regulatory Commission license, whose principal purpose is to process, repackage, or otherwise treat low-level radioactive material or waste generated by others prior to eventual transfer of waste to a licensed low-level radioactive waste land disposal facility.

“Waste type” means a waste within a disposal container having a unique physical description (i.e., a specific waste descriptor code or description; or a waste sorbed on or solidified in a specifically defined media).

#### I. Manifest

A waste generator, collector, or processor who transports, or offers for transportation, low-level radioactive waste intended for ultimate disposal at a licensed low-level radioactive waste land disposal facility must prepare a manifest reflecting information requested on applicable Forms 540 (Uniform Low-Level Radioactive Waste Manifest (Shipping Paper)) and 541 (Uniform Low-Level Radioactive Waste Manifest (Container and Waste Description)) and, if necessary, on an applicable Form 542 (Uniform Low-Level Radioactive Waste Manifest (Manifest Index and Regional Compact Tabulation)). Forms 540 and 540A must be completed and must physically accompany the pertinent low-level waste shipment. Upon agreement between shipper and consignee, Forms 541 and 541A and 542 and 542A may be completed, transmitted, and stored in electronic media with the capability for producing legible, accurate, and complete records on the respective forms. Licensees are not required by this agency to comply with the manifesting requirements of this part when they ship:

(a) LLW for processing and expect its return (i.e., for storage under their license) prior to disposal at a licensed land disposal facility;

(b) LLW that is being returned to the licensee who is the “waste generator” or “generator,” as defined in this part; or

(c) Radioactively contaminated material to a “waste processor” that becomes the processor’s “residual waste.”

For guidance in completing these forms, refer to the instructions that accompany the forms. Copies of manifests required by this appendix may be legible carbon copies, photocopies, or computer printouts that reproduce the data in the format of the uniform manifest.

NRC Forms 540, 540A, 541, 541A, 542, and 542A, and the accompanying instructions, in hard copy, may be obtained by writing or calling the Office of Information Services, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0111, telephone (301) 415-5877 or by visiting the NRC's Web site at <http://www.nrc.gov> and selecting forms from the index found on the home page.

This appendix includes information requirements of the United States Department of Transportation, as codified in 49 CFR Part 172. Information on hazardous, medical, or other waste required to meet Environmental Protection Agency regulations, as codified in 40 CFR Parts 259, 261, or elsewhere, is not addressed in this section, and must be provided on the required EPA forms. However, the required EPA forms must accompany the Uniform Low-Level Radioactive Waste Manifest required by this chapter.

### Information Requirements

#### A. General Information

The shipper of the radioactive waste shall provide the following information on the uniform manifest:

1. The name, facility's address, and telephone number of the licensee shipping the waste;
2. An explicit declaration indicating whether the shipper is acting as a waste generator, collector, processor, or a combination of these identifiers for purposes of the manifested shipment; and
3. The name, address, and telephone number, or the name and EPA identification number, for the carrier transporting the waste.

#### B. Shipment Information

The shipper of the radioactive waste shall provide the following information regarding the waste shipment on the uniform manifest:

1. The date of the waste shipment;
  2. The total number of packages/disposal containers;
  3. The total disposal volume and disposal weight in the shipment;
  4. The total radionuclide activity in the shipment;
  5. The activity of each of the radionuclides, H-3, C-14, Tc-99, and I-129 contained in the shipment;
- and
6. The total masses of U-233, U-235, and plutonium in special nuclear material, and the total mass of uranium and thorium in source material.

#### C. Disposal Container and Waste Information

The shipper of the radioactive waste shall provide the following information on the uniform manifest regarding the waste and each disposal container of waste in the shipment:

1. An alphabetic or numeric identification that uniquely identifies each disposal container in the shipment;
2. A physical description of the disposal container, including the manufacturer and model of any high integrity container;
3. The volume displaced by the disposal container;
4. The gross weight of the disposal container, including the waste;
5. For waste consigned to a disposal facility, the maximum radiation level at the surface of each disposal container;
6. A physical and chemical description of the waste;
7. The total weight percentage of chelating agent for any waste containing more than 0.1 percent chelating agent by weight, plus the identity of the principal chelating agent;
8. The approximate volume of waste within a container;
9. The sorbing or solidification media, if any, and the identity of the solidification media vendor and brand name;
10. The identities and activities of individual radionuclides contained in each container, the masses of U-233, U-235, and plutonium in special nuclear material, and the masses of uranium and thorium in source material. For discrete waste types (i.e., activated materials, contaminated equipment, mechanical filters, sealed source/devices, and wastes in solidification/stabilization media), the identities and activities of individual radionuclides associated with or contained in these waste types within a disposal container shall be reported;
11. The total radioactivity within each container; and
12. For wastes consigned to a disposal facility, the classification of the waste pursuant to 10 CFR 61.55. Waste not meeting the structural stability requirements of 10 CFR 61.56(b) must be identified.

#### D. Uncontainerized Waste Information

The shipper of the radioactive waste shall provide the following information on the uniform manifest regarding a waste shipment delivered without a disposal container:

1. The approximate volume and weight of the waste;
2. A physical and chemical description of the waste;
3. The total weight percentage of chelating agent if the chelating agent exceeds 0.1 percent by weight, plus the identity of the principal chelating agent;

4. For waste consigned to a disposal facility, the classification of the waste pursuant to 10 CFR 61.55. Waste not meeting the structural stability requirements of 10 CFR 61.56(b) must be identified;

5. The identities and activities of individual radionuclides contained in the waste, the masses of U-233, U-235, and plutonium in special nuclear material, and the masses of uranium and thorium in source material; and

6. For wastes consigned to a disposal facility, the maximum radiation levels at the surface of the waste.

#### E. Multigenerator Disposal Container Information

This section applies to disposal containers enclosing mixtures of waste originating from different generators. (Note: The origin of the LLW resulting from a processor's activities may be attributable to one or more "generators" (including "waste generators") as defined in this appendix.) It also applies to mixtures of wastes shipped in an uncontainerized form, for which portions of the mixture within the shipment originate from different generators.

1. For homogeneous mixtures of waste, such as incinerator ash, provide the waste description applicable to the mixture and the volume of the waste attributed to each generator.

2. For heterogeneous mixtures of waste, such as the combined products from a large compactor, identify each generator contributing waste to the disposal container and, for discrete waste types (i.e., activated materials, contaminated equipment, mechanical filters, sealed source/devices, and wastes in solidification/stabilization media), the identities and activities of individual radionuclides contained in these waste types within the disposal container. For each generator, provide the following:

(a) The volume of waste within the disposal container;

(b) A physical and chemical description of the waste, including the solidification agent, if any;

(c) The total weight percentage of chelating agents for any disposal container containing more than 0.1 percent chelating agent by weight, plus the identity of the principal chelating agent;

(d) The sorbing or solidification media, if any, and the identity of the solidification media vendor and brand name if the media is claimed to meet stability requirements in 10 CFR 61.56(b); and

(e) Radionuclide identities and activities contained in the waste, the masses of U-233, U-235, and plutonium in special nuclear material, and the masses of uranium and thorium in source material if contained in the waste.

#### II. Certification

An authorized representative of the waste generator, processor, or collector shall certify by signing and dating the shipment manifest that the transported materials are properly classified, described, packaged, marked, and labeled and are in proper condition for transportation according to the applicable regulations of the United States Department of Transportation and this agency. A collector in signing the certification is certifying that nothing has been done to the collected waste that would invalidate the waste generator's certification.

#### III. Control and Tracking

A. Any licensee who transfers radioactive waste to a land disposal facility or a licensed waste collector shall comply with the requirements in paragraphs A.1. through A.9. of this appendix. Any licensee who transfers waste to a licensed waste processor for waste treatment or repackaging shall comply with the requirements of paragraphs A.4. through A.9. of this appendix. A licensee shall:

1. Prepare all wastes so that the waste is classified according to 10 CFR 61.55 and meets the waste characteristics requirements in 10 CFR 61.56;

2. Label each disposal container (or transport package if potential radiation hazards preclude labeling of the individual disposal container) of waste to identify whether it is Class A waste, Class B waste, Class C waste, or greater than Class C waste, in accordance with 10 CFR 61.55;

3. Conduct a quality assurance program to ensure compliance with 10 CFR 61.55 and 61.56 (the program must include management evaluation of audits);

4. Prepare the Uniform Low-Level Radioactive Waste Manifest as required by this appendix;

5. Forward a copy or electronically transfer the Uniform Low-Level Radioactive Waste Manifest to the intended consignee so that either (1) receipt of the manifest precedes the LLW shipment or (2) the

manifest is delivered to the consignee with the waste at the time the waste is transferred to the consignee. Using both (1) and (2) is also acceptable;

6. Include Form 540 (and Form 540A, if required) with the shipment regardless of the option chosen in paragraph A.5. of this section;

7. Receive acknowledgment of the receipt of the shipment in the form of a signed copy of Form 540;

8. Retain a copy of or electronically store the Uniform Low-Level Radioactive Waste Manifest and documentation of acknowledgment of receipt as the record of transfer of licensed material as required by 641—subrule 39.4(41); and

9. For any shipments or any part of a shipment for which acknowledgment of receipt has not been received within the times set forth in this appendix, conduct an investigation in accordance with paragraph E of this appendix.

B. Any waste collector licensee who handles only prepackaged waste shall:

1. Acknowledge receipt of the waste from the shipper within one week of receipt by returning a signed copy of Form 540;

2. Prepare a new manifest to reflect consolidated shipments that meet the requirements of this appendix. The waste collector shall ensure that, for each container of waste in the shipment, the manifest identifies the generator of that container of waste;

3. Forward a copy or electronically transfer the Uniform Low-Level Radioactive Waste Manifest to the intended consignee so that either: (1) receipt of the manifest precedes the LLW shipment or (2) the manifest is delivered to the consignee with the waste at the time the waste is transferred to the consignee. Using both (1) and (2) is also acceptable;

4. Include Form 540 (and Form 540A, if required) with the shipment regardless of the option chosen in paragraph B.3. of this section;

5. Receive acknowledgment of the receipt of the shipment in the form of a signed copy of Form 540;

6. Retain a copy of or electronically store the Uniform Low-Level Radioactive Waste Manifest and documentation of acknowledgment of receipt as the record of transfer of licensed material as required by 641—subrule 39.4(41);

7. For any shipments or any part of a shipment for which acknowledgment of receipt has not been received within the times set forth in this appendix, conduct an investigation in accordance with paragraph E of this appendix; and

8. Notify the shipper and this agency when any shipment, or part of a shipment, has not arrived within 60 days after receipt of an advance manifest, unless notified by the shipper that the shipment has been canceled.

C. Any licensed waste processor who treats or repackages waste shall:

1. Acknowledge receipt of the waste from the shipper within one week of receipt by returning a signed copy of Form 540;

2. Prepare a new manifest that meets the requirements of this appendix. Preparation of the new manifest reflects that the processor is responsible for meeting these requirements. For each container of waste in the shipment, the manifest shall identify the waste generators, the preprocessed waste volume, and the other information as required in paragraph E.1. of this appendix;

3. Prepare all wastes so that the waste is classified according to 10 CFR 61.55 and meets the waste characteristics requirements in 10 CFR 61.56;

4. Label each package of waste to identify whether it is Class A waste, Class B waste, or Class C waste, in accordance with 10 CFR 61.55 and 61.57;

5. Conduct a quality assurance program to ensure compliance with 10 CFR 61.55 and 61.56 (the program shall include management evaluation of audits);

6. Forward a copy or electronically transfer the Uniform Low-Level Radioactive Waste Manifest to the intended consignee so that either (1) receipt of the manifest precedes the LLW shipment or (2) the manifest is delivered to the consignee with the waste at the time the waste is transferred to the consignee. Using both (1) and (2) is also acceptable;

7. Include Form 540 (and Form 540A, if required) with the shipment regardless of the option chosen in paragraph C.6. of this section;

8. Receive acknowledgment of the receipt of the shipment in the form of a signed copy of Form 540;

9. Retain a copy of or electronically store the Uniform Low-Level Radioactive Waste Manifest and documentation of acknowledgment of receipt as the record of transfer of licensed material as required by 641—subrule 39.4(41);

10. For any shipment or any part of a shipment for which acknowledgment of receipt has not been received within the times set forth in this appendix, conduct an investigation in accordance with paragraph E of this appendix; and

11. Notify the shipper and this agency of any shipment, or part of a shipment, that has not arrived within 60 days after receipt of an advance manifest, unless notified by the shipper that the shipment has been canceled.

D. The land disposal facility operator shall:

1. Acknowledge receipt of the waste within one week of receipt by returning, as a minimum, a signed copy of Form 540 to the shipper. The shipper to be notified is the licensee who last possessed the waste and transferred the waste to the operator. If any discrepancy exists between materials listed on the Uniform Low-Level Radioactive Waste Manifest and materials received, copies or electronic transfer of the affected forms must be returned indicating the discrepancy;

2. Maintain copies of all completed manifests and electronically store the information required by 10 CFR 61.80(l) until the license is terminated; and

3. Notify the shipper and this agency when any shipment, or part of a shipment, has not arrived within 60 days after receipt of an advance manifest, unless notified by the shipper that the shipment has been canceled.

E. Any shipment or part of a shipment for which acknowledgment is not received within the times set forth in this section must:

1. Be investigated by the shipper if the shipper has not received notification or receipt within 20 days after transfer; and

2. Be traced and reported. The investigation shall include tracing the shipment and filing a report with this agency. Each licensee who conducts a trace investigation shall file a written report with this agency within two weeks of completion of the investigation.

## CHAPTER 40

## APPENDIX E

CLASSIFICATION AND CHARACTERISTICS OF LOW-LEVEL  
RADIOACTIVE WASTE

## I. Classification of Radioactive Waste for Land Disposal

a) Considerations. Determination of the classification of radioactive waste involves two considerations. First, consideration must be given to the concentration of long-lived radionuclides (and their shorter-lived precursors) whose potential hazard will persist long after such precautions as institutional controls, improved waste form, and deeper disposal have ceased to be effective. These precautions delay the time when long-lived radionuclides could cause exposures. In addition, the magnitude of the potential dose is limited by the concentration and availability of the radionuclide at the time of exposure. Second, consideration must be given to the concentration of shorter-lived radionuclides for which requirements on institutional controls, waste form, and disposal methods are effective.

## b) Classes of waste.

1) Class A waste is waste that is usually segregated from other waste classes at the disposal site. The physical form and characteristics of Class A waste must meet the minimum requirements set forth in Section II. (a). If Class A waste also meets the stability requirements set forth in Section II. (b), it is not necessary to segregate the waste for disposal.

2) Class B waste is waste that must meet more rigorous requirements on waste form to ensure stability after disposal. The physical form and characteristics of Class B waste must meet both the minimum and stability requirements set forth in Section II.

3) Class C waste is waste that not only must meet more rigorous requirements on waste form to ensure stability but also requires additional measures at the disposal facility to protect against inadvertent intrusion. The physical form and characteristics of Class C waste must meet both the minimum and stability requirements set forth in Section II.

c) Classification determined by long-lived radionuclides. If the radioactive waste contains only radionuclides listed in Table I, classification shall be determined as follows:

1) If the concentration does not exceed 0.1 times the value in Table I, the waste is Class A.

2) If the concentration exceeds 0.1 times the value in Table I, but does not exceed the value in Table I, the waste is Class C.

3) If the concentration exceeds the value in Table I, the waste is not generally acceptable for land disposal.

4) For wastes containing mixtures of radionuclides listed in Table I, the total concentration shall be determined by the sum of fractions rule described in Section I.(g).

TABLE I

| Radionuclide             | Concentration                  |                             |
|--------------------------|--------------------------------|-----------------------------|
|                          | curie/cubic meter <sup>a</sup> | nanocurie/gram <sup>b</sup> |
| C-14                     | 8                              |                             |
| C-14 in activated metal  | 80                             |                             |
| Ni-59 in activated metal | 220                            |                             |
| Nb-94 in activated metal | 0.2                            |                             |

|                                                                                 |        |
|---------------------------------------------------------------------------------|--------|
| Tc-99                                                                           | 3      |
| I-129                                                                           | 0.08   |
| Alpha emitting transuranic radionuclides with half-life greater than five years | 100    |
| Pu-241                                                                          | 3,500  |
| Cm-242                                                                          | 20,000 |
| Ra-226                                                                          | 100    |

<sup>a</sup> To convert the Ci/m<sup>3</sup> values to gigabecquerel (GBq) per cubic meter, multiply the Ci/m<sup>3</sup> value by 37.

<sup>b</sup>To convert the nCi/g values to becquerel (Bq) per gram, multiply the nCi/g value by 37.

d) Classification determined by short-lived radionuclides. If the waste does not contain any of the radionuclides listed in Table I, classification shall be determined based on the concentrations shown in Table II. However, as specified in Section I.(f), if radioactive waste does not contain any nuclides listed in either Table I or II, it is Class A.

1) If the concentration does not exceed the value in Column 1, the waste is Class A.

2) If the concentration exceeds the value in Column 1 but does not exceed the value in Column 2, the waste is Class B.

3) If the concentration exceeds the value in Column 2 but does not exceed the value in Column 3, the waste is Class C.

4) If the concentration exceeds the value in Column 3, the waste is not generally acceptable for near-surface disposal.

5) For wastes containing mixtures of the radionuclides listed in Table II, the total concentration shall be determined by the sum of fractions rule described in Section I.(g).

TABLE II

| Radionuclide                                               | Concentration,<br>Column 1 | curie/cubic meter * |          |
|------------------------------------------------------------|----------------------------|---------------------|----------|
|                                                            |                            | Column 2            | Column 3 |
| Total of all radionuclides with less than 5-year half-life | 700                        | *                   | *        |
| H-3                                                        | 40                         | *                   | *        |
| Co-60                                                      | 700                        | *                   | *        |
| Ni-63                                                      | 3.5                        | 70                  | 700      |
| Ni-63 in activated metal                                   | 35                         | 700                 | 7000     |
| Sr-90                                                      | 0.04                       | 150                 | 7000     |
| Cs-137                                                     | 1                          | 44                  | 4600     |

\*AGENCY NOTE: To convert the Ci/m<sup>3</sup> value to gigabecquerel (GBq) per cubic meter, multiply the Ci/m<sup>3</sup> value by 37. There are no limits established for these radionuclides in Class B or C wastes. Practical considerations such as the effects of external radiation and internal heat generation on transportation, handling, and disposal will limit the concentrations for these wastes. These wastes shall be Class B unless the concentrations of other radionuclides in Table II determine the waste to be Class C independent of these radionuclides.

e) Classification determined by both long- and short-lived radionuclides. If the radioactive waste contains a mixture of radionuclides, some of which are listed in Table I and some of which are listed in Table II, classification shall be determined as follows:

1) If the concentration of a radionuclide listed in Table I is less than 0.1 times the value listed in Table I, the class shall be that determined by the concentration of radionuclides listed in Table II.

2) If the concentration of a radionuclide listed in Table I exceeds 0.1 times the value listed in Table I, but does not exceed the value in Table I, the waste shall be Class C, provided the concentration of radionuclides listed in Table II does not exceed the value shown in Column 3 of Table II.

f) Classification of wastes with radionuclides other than those listed in Tables I and II. If the waste does not contain any radionuclides listed in either Table I or II, it is Class A.

g) Determination of concentrations in wastes. The concentration of a radionuclide may be determined by indirect methods such as use of scaling factors which relate the inferred concentration of one radionuclide to another that is measured, or radionuclide material accountability, if there is reasonable assurance that the indirect methods can be correlated with actual measurements. The concentration of a radionuclide may be averaged over the volume of the waste, or weight of the waste if the units are expressed as becquerel (nanocurie) per gram.

h) The sum of the fractions rule for mixtures of radionuclides. For determining classification for waste that contains a mixture of radionuclides, it is necessary to determine the sum of fractions by dividing each radionuclide's concentration by the appropriate limit and adding the resulting values. The appropriate limits must all be taken from the same column of the same table. The sum of the fractions for the column must be less than 1.0 if the waste class is to be determined by that column. Example: A waste contains Sr-90 in a concentration of 1.85 TBq/m<sup>3</sup> (50 Ci/m<sup>3</sup>) and Cs-137 in a concentration of 814 GBq/m<sup>3</sup> (22 Ci/m<sup>3</sup>). Since the concentrations both exceed the values in Column 1, Table II, they must be compared to Column 2 values. For Sr-90 fraction,  $50/150 = 0.33$ ; for Cs-137 fraction,  $22/44 = 0.5$ ; the sum of the fractions = 0.83. Since the sum is less than 1.0, the waste is Class B.

## II. Radioactive Waste Characteristics

a) The following are minimum requirements for all classes of waste and are intended to facilitate handling and provide protection of health and safety of personnel at the disposal site.

1) Wastes shall be packaged in conformance with the conditions of the license issued to the site operator to which the waste will be shipped. Where the conditions of the site license are more restrictive than the provisions of this chapter, the site license conditions shall govern.

2) Wastes shall not be packaged for disposal in cardboard or fiberboard boxes.

3) Liquid waste shall be packaged in sufficient absorbent material to absorb twice the volume of the liquid.

4) Solid waste containing liquid shall contain as little freestanding and noncorrosive liquid as is reasonably achievable, but in no case shall the liquid exceed 1% of the volume.

5) Waste shall not be readily capable of detonation or of explosive decomposition or reaction at normal pressures and temperatures, or of explosive reaction with water.

6) Waste shall not contain, or be capable of generating, quantities of toxic gases, vapors, or fumes harmful to persons transporting, handling, or disposing of the waste. This does not apply to radioactive gaseous waste packaged in accordance with Section II.(a)(8).

7) Waste must not be pyrophoric. Pyrophoric materials contained in wastes shall be treated, prepared, and packaged to be nonflammable.<sup>4</sup>

8) Wastes in a gaseous form shall be packaged at an absolute pressure that does not exceed 1.5 atmospheres at 20°C. Total activity shall not exceed 100 Ci (3.7 TBq) per container.

<sup>4</sup>See 641—38.2 of these rules for the definition of pyrophoric.

9) Wastes containing hazardous, biological, pathogenic, or infectious material shall be treated to reduce to the maximum extent practicable the potential hazard from the nonradiological materials.

b) The following requirements are intended to provide stability of the waste. Stability is intended to ensure that the waste does not degrade and affect overall stability of the site through slumping, collapse, or other failure of the disposal unit and thereby lead to water infiltration. Stability is also a factor in limiting exposure to an inadvertent intruder, since it provides a recognizable and nondispersible waste.

1) Waste shall have structural stability. A structurally stable waste form will generally maintain its physical dimensions and its form, under the expected disposal conditions such as weight of overburden and compaction equipment, the presence of moisture, and microbial activity, and internal factors such as radiation effects and chemical changes. Structural stability can be provided by the waste form itself,

processing the waste to a stable form, or placing the waste in a disposal container or structure that provides stability after disposal.

2) Notwithstanding the provisions in Section II.(a)(3) and (4), liquid wastes, or wastes containing liquid, shall be converted into a form that contains as little freestanding and noncorrosive liquid as is reasonably achievable, but in no case shall the liquid exceed 1% of the volume of the waste when the waste is in a disposal container designed to ensure stability, or 0.5% of the volume of the waste for waste processed to a stable form.

3) Void spaces within the waste and between the waste and its package shall be reduced to the extent practicable.

### III. Labeling

Each package of waste shall be clearly labeled to identify whether it is Class A, Class B, or Class C waste, in accordance with Section I.

## CHAPTER 40

## APPENDIX F

## QUANTITIES FOR USE WITH DECOMMISSIONING

| <u>Material</u> | <u>Microcurie*</u> |
|-----------------|--------------------|
| Americium-241   | 0.01               |
| Antimony-122    | 100                |
| Antimony-124    | 10                 |
| Antimony-125    | 10                 |
| Arsenic-73      | 100                |
| Arsenic-74      | 10                 |
| Arsenic-76      | 10                 |
| Arsenic-77      | 100                |
| Barium-131      | 10                 |
| Barium-133      | 10                 |
| Barium-140      | 10                 |
| Bismuth-210     | 1                  |
| Bromine-82      | 10                 |
| Cadmium-109     | 10                 |
| Cadmium-115m    | 10                 |
| Cadmium-115     | 100                |
| Calcium-45      | 10                 |
| Calcium-47      | 10                 |
| Carbon-14       | 100                |
| Cerium-141      | 100                |
| Cerium-143      | 100                |
| Cerium-144      | 1                  |
| Cesium-131      | 1,000              |
| Cesium-134m     | 100                |
| Cesium-134      | 1                  |
| Cesium-135      | 10                 |
| Cesium-136      | 10                 |
| Cesium-137      | 10                 |
| Chlorine-36     | 10                 |
| Chlorine-38     | 10                 |
| Chromium-51     | 1,000              |
| Cobalt-58m      | 10                 |
| Cobalt-58       | 10                 |
| Cobalt-60       | 1                  |
| Copper-64       | 100                |
| Dysprosium-165  | 10                 |

| Any alpha-emitting radionuclide<br>not listed above or mixtures<br>of alpha emitters of unknown<br>composition                          | 0.01               |
| Any radionuclide other than<br>alpha-emitting radionuclides, not<br>listed above or mixtures of beta<br>emitters of unknown composition | 0.1                |

\*To convert  $\mu\text{Ci}$  to  $\text{kBq}$ , multiply the  $\mu\text{Ci}$  value by 37.

\*\*Based on alpha disintegration rate of U-238, U-234, and U-235.

NOTE: This Appendix is retained for use by those Agreement States that need to adopt decommissioning regulations compatible with the U.S. Nuclear Regulatory Commission.

NOTE: Where there is involved a combination of isotopes in known amounts, the limit for the combination should be derived as follows: Determine, for each isotope in the combination, the ratio between the quantity present in the combination and the limit otherwise established for the specific isotope when not in combination. The sum of such ratios for all the isotopes in the combination may not exceed "1"—that is, unity.

## CHAPTER 40

## APPENDIX G

## RADIONUCLIDES OF CONCERN

| Radionuclide                                                    | Quantity of Concern <sup>1</sup> (TBq) | Quantity of Concern <sup>2</sup> (Ci) |
|-----------------------------------------------------------------|----------------------------------------|---------------------------------------|
| Am-241                                                          | 0.6                                    | 16                                    |
| Am-241/Be                                                       | 0.6                                    | 16                                    |

| Tm-170                                                          | 200                                    | 5,400                                 |
| Yb-169                                                          | 3                                      | 81                                    |
| Combinations of radioactive materials listed above <sup>3</sup> | See footnote below <sup>4</sup>        |                                       |

<sup>1</sup>The aggregate activity of multiple, collocated sources of the same radionuclide should be included when the total activity equals or exceeds the quantity of concern.

<sup>2</sup>The primary values used for compliance with this Order are TBq. The curie (Ci) values are rounded to two significant figures for informational purposes only.

<sup>3</sup>Radioactive materials are to be considered aggregated or collocated if breaching a common physical security barrier (e.g., a locked door at the entrance to a storage room) would allow access to the radioactive material or devices containing the radioactive material.

<sup>4</sup>If several radionuclides are aggregated, the sum of the ratios of the activity of each source,  $i$  of radionuclide,  $n$ ,  $A_{(i,n)}$ , to the quantity of concern for radionuclide  $n$ ,  $Q_{(n)}$ , listed for that radionuclide equals or exceeds one.  $[(\text{aggregated source activity for radionuclide A}) \div (\text{quantity of concern for radionuclide A})] + [(\text{aggregated source activity for radionuclide B}) \div (\text{quantity of concern for radionuclide B})] + \text{etc.} \dots \geq 1$

Use the following method to determine which sources of radioactive material require increased controls (ICs):

- Include any single source equal to or greater than the quantity of concern in Appendix G.
- Include multiple collocated sources of the same radionuclide when the combined quantity equals or exceeds the quantity of concern.
- For combinations of radionuclides, include multiple collocated sources of different radionuclides when the aggregate quantities satisfy the following unity rule:  $[(\text{amount of radionuclide A}) \div (\text{quantity of concern of radionuclide A})] + [(\text{amount of radionuclide B}) \div (\text{quantity of concern of radionuclide B})] + \text{etc.} \dots \geq 1$

## Guidance for Aggregation of Sources

NRC supports the use of the IAEA's source categorization methodology as defined in TECDOC-1344, "Categorization of Radioactive Sources," (July 2003) (see [http://www-pub.iaea.org/MTCD/publications/PDF/te\\_1344\\_web.pdf](http://www-pub.iaea.org/MTCD/publications/PDF/te_1344_web.pdf)) and as endorsed by the agency's Code of Conduct for the Safety and Security of Radioactive Sources, January 2004 (see <http://www-pub.iaea.org/MTCD/publications/PDF/Code-2004.pdf>). The Code defines a three-tiered

source categorization scheme. Category 1 corresponds to the largest source strength (equal to or greater than 100 times the quantity of concern values listed in the table in Appendix G) and Category 3 corresponds to the smallest (equal to or exceeding one-tenth the quantity of concern values listed in the table in Appendix G). Increased controls apply to sources that are equal to or greater than the quantity of concern values listed in the table in Appendix G, plus aggregations of smaller sources that are equal to or greater than the quantities in the table in Appendix G. Aggregation only applies to sources that are collocated.

Licensees that possess sources in total quantities that equal or exceed the table in Appendix G quantities are required to implement increased controls. Where there are many small (less than the quantity of concern values) collocated sources whose total aggregate activity equals or exceeds the table in Appendix G values, licensees are to implement increased controls.

Some source handling or storage activities may cover several buildings or several locations within specific buildings. The question then becomes: When are sources considered collocated for purposes of aggregation? For purposes of the additional controls, sources are considered collocated if breaching a single barrier (e.g., a locked door at the entrance to a storage room) would allow access to the sources. Sources behind an outer barrier should be aggregated separately from those behind an inner barrier (e.g., a locked source safe inside the locked storage room). However, if both barriers are simultaneously open, then all sources within these two barriers are considered to be collocated. This logic should be continued for other barriers within or behind the inner barrier.

The following example illustrates the point: A lockable room has sources stored in it. Inside the lockable room, there are two shielded safes with additional sources in them. Inventories are as follows:

The room has the following sources outside the safes: Cf-252, 0.12 TBq (3.2 Ci); Co-60, 0.18 TBq (4.9 Ci); and Pu-238, 0.3 TBq (8.1 Ci). Application of the unity rule yields:  $(0.12 \div 0.2) + (0.18 \div 0.3) + (0.3 \div 0.6) = 0.6 + 0.6 + 0.5 = 1.5$ . Therefore, the sources would require increased controls.

Shielded safe #1 has a 1.9 TBq (51 Ci) Cs-137 source and a 0.8 TBq (22 Ci) Am-241 source. In this case, the sources would require increased controls, regardless of location, because they each exceed the quantities in the table in Appendix G.

Shielded safe #2 has two Ir-192 sources, each having an activity of 0.3 TBq (8.1 Ci). In this case, the sources would not require increased controls while locked in the safe. The combined activity does not exceed the threshold quantity 0.8 TBq (22 Ci).

Because certain barriers may cease to exist during source handling operations (e.g., a storage location may be unlocked during periods of active source usage), licensees should, to the extent practicable, consider two modes of source usage—"operations" (active source usage) and "shutdown" (source storage mode). Whichever mode results in the greatest inventory (considering barrier status) would require increased controls for each location.

## CHAPTER 40

## APPENDIX H

## NATIONALLY TRACKED SOURCE THRESHOLDS

The Terabecquerel (TBq) values are the regulatory standard. The curie (Ci) values specified are obtained by converting from the TBq value. The curie values are provided for practical usefulness only and are rounded after conversion.

| Radioactive Material | Category 1<br>(TBq) | Category 1<br>(Ci) | Category 2<br>(TBq) | Category 2<br>(Ci) |
|----------------------|---------------------|--------------------|---------------------|--------------------|
| Actinium-227         | 20                  | 540                | 0.2                 | 5.4                |
| Americium-241        | 60                  | 1,600              | 0.6                 | 16.0               |
| Americium-241/Be     | 60                  | 1,600              | 0.6                 | 16.0               |
| Californium-252      | 20                  | 540                | 0.2                 | 5.4                |
| Cobalt-60            | 30                  | 810                | 0.3                 | 8.1                |
| Curium-244           | 50                  | 1,400              | 0.5                 | 14.0               |
| Cesium-137           | 100                 | 2,700              | 1.0                 | 27.0               |
| Gadolinium-153       | 1,000               | 27,000             | 10.0                | 270.0              |
| Iridium-192          | 80                  | 2,200              | 0.8                 | 22.0               |
| Plutonium-238        | 60                  | 1,600              | 0.6                 | 16.0               |
| Plutonium-239/Be     | 60                  | 1,600              | 0.6                 | 16.0               |
| Polonium-210         | 60                  | 1,600              | 0.6                 | 16.0               |
| Promethium-147       | 40,000              | 1,100,000          | 400.0               | 11,000.0           |
| Radium-226           | 40                  | 1,100              | 0.4                 | 11.0               |
| Selenium-75          | 200                 | 5,400              | 2.0                 | 54.0               |
| Strontium-90         | 1,000               | 27,000             | 10.0                | 270.0              |
| Thorium-228          | 20                  | 540                | 0.2                 | 5.4                |
| Thorium-229          | 20                  | 540                | 0.2                 | 5.4                |
| Thulium-170          | 20,000              | 540,000            | 200.0               | 5,400.0            |
| Ytterbium-169        | 300                 | 8,100              | 3.0                 | 81.0               |

These rules are intended to implement Iowa Code chapter 136C.

CHAPTER 41  
SAFETY REQUIREMENTS FOR THE USE OF  
RADIATION MACHINES AND CERTAIN USES  
OF RADIOACTIVE MATERIALS

**641—41.1(136C) X-rays in the healing arts.**

**41.1(1) Scope.** This rule establishes requirements, for which a registrant is responsible, for use of X-ray equipment and imaging systems by or under the supervision of an individual authorized by and licensed in accordance with state statutes to engage in the healing arts or veterinary medicine.

*a.* The provisions of Chapter 41 are in addition to, and not in substitution for, any other applicable portions of 641—Chapters 38 to 42.

*b.* All references to any Code of Federal Regulations (CFR) in this chapter are those in effect as of July 9, 2008.

**41.1(2) Definitions.** For the purpose of this chapter, the definitions of 641—Chapters 38 and 40 may also apply. The following are specific to 641—Chapter 41.

*“Accessible surface”* means the external surface of the enclosure or housing of the radiation producing machine as provided by the manufacturer.

*“Added filtration”* means any filtration which is in addition to the inherent filtration.

*“Aluminum equivalent”* means the thickness of type 1100 aluminum alloy affording the same attenuation, under specified conditions, as the material in question.

*“Attenuation block”* means a block or stack, having dimensions 20 centimeters by 20 centimeters by 3.8 centimeters, of type 1100 aluminum alloy or other materials having equivalent attenuation.

*“Automatic exposure control (AEC)”* means a device which automatically controls one or more technique factors in order to obtain at a preselected location(s) a required quantity of radiation (see also “Phototimer”). (Includes devices such as phototimers and ion chambers.)

*“Base density”* means the optical density due to the supporting base of the film alone. The base density of a film is the optical density that would result if an unexposed film were processed through the fixer, wash, and dryer, without first passing through the developer.

*“Base plus fog density”* means the optical density of a film due to its base density plus any action of the developer on the unexposed silver halide crystals. The base plus fog density can be measured by processing an unexposed film through the entire processing cycle and measuring the resultant optical density.

*“Beam monitoring system”* means a system designed to detect and measure the radiation present in the useful beam.

*“C-arm X-ray system”* means an X-ray system in which the image receptor and X-ray tube housing assembly are connected by a common mechanical support system in order to maintain a desired spatial relationship. This system is designed to allow a change in the projection of the beam through the patient without a change in the position of the patient.

*“Cassette”* means a light-tight case, usually made of thin, low X-ray absorption plastic, for holding X-ray film. One or two intensifying screens for the conversion of X-rays to visible light photons are mounted inside the cassette so that they are in close contact to the film.

*“Cephalometric device”* means a device intended for the radiographic visualization and measurement of the dimensions of the human head.

*“Certified components”* means components of X-ray systems which are subject to regulations promulgated under Public Law 90-602, the “Radiation Control for Health and Safety Act of 1968,” the Food and Drug Administration.

*“Certified system”* means any X-ray system which has one or more certified component(s).

*“Coefficient of variation”* or *“C”* means the ratio of the standard deviation to the mean value of a population of observations. It is estimated using the following equation:

$$C = \frac{s}{\bar{x}} = \frac{1}{\bar{x}} \left[ \sum_{i=1}^n \frac{(x_i - \bar{x})^2}{n-1} \right]^{1/2}$$

where:

$\bar{s}$  = Estimated standard deviation of the population.

$\bar{X}$  = Mean value of observations in sample.

$X_i$  =  $i^{\text{th}}$  observation in sample.

$n$  = Number of observations in sample.

*“Computed tomography”* means the production of a tomogram by the acquisition and computer processing of X-ray transmission data.

*“Control chart”* means a chart used to record (and control) the results of quality control testing as a function of time.

*“Control limit”* means the range of variation on a control chart beyond which action must be taken to correct the results of quality control testing.

*“Control panel”* (see X-ray control panel).

*“Cooling curve”* means the graphical relationship between heat units stored and cooling time.

*“CT”* (see “Computed tomography”).

*“Dead-man switch”* means a switch so constructed that a circuit closing contact can be maintained only by continuous pressure on the switch by the operator.

*“Dedicated mammography equipment”* means X-ray systems designed specifically for breast imaging, providing optimum imaging geometry, a device for breast compression and low dose exposure that can generate reproducible images of high quality.

*“Densitometer”* means an instrument which measures the degree of blackening (or radiographic density) of film due to radiation or light by measuring the ratio of the light intensity incident on the film to the light intensity transmitted by the film.

*“Detents”* means mechanical settings that limit or prevent the motion or rotation of an X-ray tube, cassette assembly, or image receptor system.

*“Developer”* means a chemical solution (alkaline) that changes the latent image (exposed silver halide crystals) on a film to a visible image composed of minute masses of black metallic silver.

*“Developer replenishment”* means the process, occurring as film travels past a certain point in the processor, triggering the activation of a pump, whereby fresh developer is added in small amounts to the solution in the developer tank of the processor. The purpose is to maintain the proper alkalinity, chemical activity, and level of solution in the developer tank.

*“Diagnostic mammography”* means mammography performed on an individual who, by virtue of symptoms or physical findings, is considered to have a substantial likelihood of having breast disease.

*“Diagnostic source assembly”* means the tube housing assembly with a beam-limiting device attached.

*“Direct scattered radiation”* means that scattered radiation which has been deviated in direction only by materials irradiated by the useful beam (see “Scattered radiation”).

*“Entrance exposure rate”* means the exposure free in air per unit time at the point where the center of the useful beam enters the patient.

*“Equipment”* (see “X-ray equipment”).

*“Field emission equipment”* means equipment which uses an X-ray tube in which electron emission from the cathode is due solely to the action of an electric field.

*“Filter”* means material placed in the useful beam to preferentially absorb selected radiations.

*“Fixer”* means a chemical solution (acidic) which removes the unexposed and undeveloped silver halide crystals from film so it will not discolor or darken with age or exposure to light. Fixer also hardens the gelatin containing the black metallic silver so film may be dried and resist damage from abrasions.

*“Fixer retention”* means the inadequate removal of fixer from the film by the water in the wash tank of the processor. Retained fixer causes eventual brown discoloration of the radiograph.

*“Fluoroscopic imaging assembly”* means a subsystem in which X-ray photons produce a visual image. It includes the image receptor(s) such as the image intensifier and spot-film device, electrical

interlocks, if any, and structural material providing linkage between the image receptor and diagnostic source assembly.

*“Focal spot (actual)”* means the area projected on the anode of the X-ray tube bombarded by the electrons accelerated from the cathode and from which the useful beam originates.

*“Focal spot size”* means the area of the target or anode that is bombarded by electrons from the cathode of the X-ray tube to produce X-rays. The smaller the focal spot, the better the limited spatial resolution of the X-ray system, especially in magnification mammography.

*“Fog”* means the density added to a radiograph due to unwanted action of the developer on the unexposed silver halide crystals or by light, radiation, chemical, or heat exposure during storage, handling, and processing.

*“General purpose radiographic X-ray system”* means any radiographic X-ray system which, by design, is not limited to radiographic examination of specific anatomical regions.

*“Gonad shield”* means a protective barrier for the testes or ovaries.

*“Healing arts screening”* means the use of radiation on human beings for the detection or evaluation of health indicators for which the individual is considered at high risk when such tests are not specifically and individually ordered by:

1. An individual authorized under 41.1(3)“a”(7), or
2. An individual licensed as a physician in Iowa and listed as an authorized user on an NRC or agreement state radioactive materials license.

*“Heat unit”* means a unit of energy equal to the product of the peak kilovoltage, milliamperes, and seconds, i.e.,  $\text{kVp} \times \text{mA} \times \text{second}$ .

*“Image contrast”* means the amount of radiographic density difference between adjacent areas resulting from a fixed amount of attenuation difference or light exposure difference.

*“Image intensifier”* means a device, installed in its housing, which instantaneously converts an X-ray pattern into a corresponding light image of higher energy intensity.

*“Image noise”* See “Radiographic noise.”

*“Image quality”* means the overall clarity and detail of a radiographic image. Limiting spatial resolution (or resolving power), image sharpness, and image contrast are three common measures of image quality.

*“Image receptor”* means any device, such as a fluorescent screen or radiographic film, which transforms incident X-ray photons either into a visible image or into another form which can be made into a visible image by further transformations.

*“Image sharpness”* means the overall impression of detail and clarity in a radiographic image.

*“Inherent filtration”* means the filtration of the useful beam provided by the permanently installed components of the tube housing assembly.

*“Kilovolts peak”* (see “Peak tube potential”).

*“kVp”* (see “Peak tube potential”).

*“kWs”* means kilowatt second.

*“Leakage technique factors”* means the technique factors associated with the diagnostic or therapeutic source assembly which are used in measuring leakage radiation. They are defined as follows:

*a.* For diagnostic source assemblies intended for capacitor energy storage equipment, the maximum-rated peak tube potential and the maximum-rated number of exposures in an hour for operation at the maximum-rated peak tube potential with the quantity of charge per exposure being 10 millicoulombs, i.e., 10 milliamperere seconds, or the minimum obtainable from the unit, whichever is larger.

*b.* For diagnostic source assemblies intended for field emission equipment rated for pulsed operation, the maximum-rated peak tube potential and the maximum-rated number of X-ray pulses in an hour for operation at the maximum-rated peak tube potential.

*c.* For all other diagnostic or therapeutic source assemblies, the maximum-rated peak tube potential and the maximum-rated continuous tube current for the maximum-rated peak tube potential.

*“Linear attenuation coefficient”* or “ $\mu$ ” means the quotient of  $dN/N$  divided by  $dl$  when  $dN/N$  is the fraction of uncharged ionizing radiation that experience interactions in traversing a distance  $dl$  in a specified material.

*“Line-voltage regulation”* means the difference between the no-load and the load line potentials expressed as a percent of the load line potential. It is calculated using the following equation:

$$\text{Percent line-voltage regulation} = 100 (V_n - V_l) / V_l$$

where

$V_n$  = No-load line potential and

$V_l$  = Load line potential.

*“mAs”* means milliamperere second.

*“Maximum line current”* means the root-mean-square current in the supply line of an X-ray machine operating at its maximum rating.

*“Mobile X-ray equipment”* (see “X-ray equipment”).

*“PBL”* (see “Positive beam limitation”).

*“Phototimer”* means a method for controlling radiation exposures to image receptors by the amount of radiation which reaches a radiation-monitoring device(s). The radiation-monitoring device(s) is part of an electronic circuit which controls the duration of time the tube is activated (see “Automatic exposure control”).

*“PID”* (see “Position indicating device”).

*“Portable X-ray equipment”* (see “X-ray equipment”).

*“Position indicating device”* means a device on dental X-ray equipment used to indicate the beam position and to establish a definite source-surface (skin) distance. It may or may not incorporate or serve as a beam-limiting device.

*“Positive beam limitation”* means the automatic or semiautomatic adjustment of an X-ray beam to the size of the selected image receptor, whereby exposures cannot be made without such adjustment.

*“Processor”* means an automated device which transports film in a controlled manner by a system of rollers through specialized sections where developing, fixing, washing, and drying of the film occur.

*“Protective apron”* means an apron made of radiation-absorbing materials used to reduce radiation exposure.

*“Protective glove”* means a glove made of radiation-absorbing materials used to reduce radiation exposure.

*“Quality assurance”* means the overall program of testing and maintaining the highest possible standards of quality in the acquisition and interpretation of radiographic images.

*“Quality control”* means the actual process of testing and maintaining the highest possible standards of quality in equipment performance and the acquisition and interpretation of radiographic images.

*“Radiation therapy simulation system”* means a radiographic or fluoroscopic X-ray system intended for localizing the volume to be exposed during radiation therapy and confirming the position and size of the therapeutic irradiation field.

*“Radiograph”* means an image receptor on which the image is created directly or indirectly by an X-ray pattern and results in a permanent record.

*“Radiographic contrast”* means the magnitude of optical density difference between structures of interest and their surroundings, or between areas of film receiving different amount of X-ray or visible light exposure.

*“Radiographic noise”* means unwanted fluctuations in optical density on the screen-film image.

*“Rating”* means the operating limits as specified by the component manufacturer.

*“Recording”* means producing a permanent form of an image resulting from X-ray photons.

*“Repeat (or reject) analysis”* means a systematic approach to determine the causes for radiographs being discarded or repeated, or both.

*“Replenishment rate”* means the amount of chemicals added in order to maintain the proper chemical activity of developer and fixer solutions.

*“Response time”* means the time required for an instrument system to reach 90 percent of its final reading when the radiation-sensitive volume of the instrument system is exposed to a step change in radiation flux from zero sufficient to provide a steady state midscale reading.

*“Safelight”* means a source of minimal visible light in a darkroom, produced at frequencies (colors) to which the film is insensitive, protecting the film from unwanted exposure (fog) while allowing personnel to function more efficiently and safely.

*“Screen”* means microscopic phosphor crystals on a plastic support used in conjunction with either single or double emulsion film; the screen emits visible light when exposed to X-radiation, creating a latent image on X-ray film.

*“Screen-film combination”* means a particular intensifying screen used with a particular type of film. Care must be taken to match the number of screens (one or two) to the number of emulsions coating the film and to match the light output spectrum of the screen to the light sensitivity of the film.

*“Screen-film contact”* means the close proximity of the intensifying screen to the emulsion of the film, necessary in order to achieve a sharp image on the film.

*“Sensitometer”* means a device used to reproducibly expose a piece of film to a number of different levels of light intensity.

*“Sensitometric strip”* means a sheet of film exposed by a sensitometer, resulting in a gray scale range. Such strips are used to measure the range of densities, from minimum to maximum, resulting from a reproducible set of exposures.

*“Sensitometry”* means a quantitative measurement of the response of film to exposure and development. Sensitometry is used to test the processor setup and stability.

*“SID”* (see “Source-image receptor distance”).

*“Source”* means the focal spot of the X-ray tube.

*“Source-image receptor distance”* means the distance from the source to the center of the input surface of the image receptor.

*“Spot check”* means a procedure which is performed to ensure that a previous calibration continues to be valid.

*“Spot film”* means a radiograph which is made during a fluoroscopic examination to permanently record conditions which exist during that fluoroscopic procedure.

*“Spot-film device”* means a device intended to transport or position a radiographic image receptor between the X-ray source and fluoroscopic image receptor. It includes a device intended to hold a cassette over the input end of an image intensifier for the purpose of making a radiograph.

*“Stationary X-ray equipment”* (see “X-ray equipment”).

*“Technique factors”* means the following conditions of operation:

a. For capacitor energy storage equipment, peak tube potential in kV and quantity of charge in mAs;  
b. For field emission equipment rated for pulsed operation, peak tube potential in kV, and number of X-ray pulses;

c. For CT X-ray systems designed for pulsed operation, peak tube potential in kV, scan time in seconds, and either tube current in mA, X-ray pulse width in seconds, and the number of X-ray pulses per scan, or the product of tube current, X-ray pulse width, and the number of X-ray pulses in mAs;

d. For CT X-ray systems not designed for pulsed operation, peak tube potential in kV, and either tube current in mA and scan time in seconds, or the product of tube current and exposure time in mAs and the scan time when the scan time and exposure time are equivalent; and

e. For all other equipment, peak tube potential in kV, and either tube current in mA and exposure time in seconds, or the product of tube current and exposure time in mAs.

*“Tomogram”* means the depiction of the X-ray attenuation properties of a section through the body.

*“Tube rating chart”* means the set of curves which specify the rated limits of operation of the tube in terms of the technique factors.

*“Useful beam”* means the radiation emanating from the tube housing port or the radiation head and passing through the aperture of the beam-limiting device when the exposure controls are in a mode to cause the system to produce radiation.

*“Variable-aperture beam-limiting device”* means a beam-limiting device which has capacity for stepless adjustment of the X-ray field size at a given SID.

*“Viewbox”* means a device by which a uniform field of white light is transmitted through an X-ray so that the image on the film may be seen.

*“Visible area”* means that portion of the input surface of the image receptor over which incident X-ray photons are producing a visible image.

*“X-ray control panel”* means a device which controls input power to the X-ray high-voltage generator and the X-ray tube. It includes equipment such as timers, phototimers, automatic brightness stabilizers, and similar devices, which control the technique factors of an X-ray exposure.

*“X-ray equipment”* means an X-ray system, subsystem, or component thereof. Types of X-ray equipment are as follows:

a. *“Mobile X-ray equipment”* means X-ray equipment mounted on a permanent base with wheels or casters for moving while completely assembled.

b. *“Portable X-ray equipment”* means X-ray equipment designed to be hand-carried.

c. *“Stationary X-ray equipment”* means X-ray equipment which is installed in a fixed location.

*“X-ray exposure control”* means a device, switch, button or similar means by which an operator initiates or terminates the radiation exposure. The X-ray exposure control may include such associated equipment as timers and backup timers.

*“X-ray field”* means that area of the intersection of the useful beam and any one of the set of planes parallel to and including the plane of the image receptor, whose perimeter is the locus of points at which the exposure rate is one-fourth of the maximum in the intersection.

*“X-ray high-voltage generator”* means a device which transforms electrical energy from the potential supplied by the X-ray control to the tube operating potential. The device may also include means for transforming alternating current to direct current, filament transformers for the X-ray tube(s), high-voltage switches, electrical protective devices, and other appropriate elements.

*“X-ray system”* means an assemblage of components for the controlled production of X-rays. It includes minimally an X-ray high-voltage generator, an X-ray control, a tube housing assembly, a beam-limiting device, and the necessary supporting structures. Additional components which function with the system are considered integral parts of the system.

*“X-ray table”* means a patient support device with its patient support structure (tabletop) interposed between the patient and the image receptor during radiography or fluoroscopy. This includes, but is not limited to, any stretcher equipped with a radiolucent panel and any table equipped with a cassette tray (or bucky), cassette tunnel, image intensifier, or spot-film device beneath the tabletop.

#### **41.1(3) Administrative controls.**

a. Registrant. The registrant shall be responsible for maintaining and directing the operation of the X-ray system(s) under the registrant’s administrative control, for ensuring that the requirements of these rules are met in the operation of the X-ray system(s), and for having the following minimum tests performed by a registered service facility according to the following schedule:

1. Medical/chiropractic: timer accuracy, exposure reproducibility, kVp accuracy as set forth in 41.1(6), and light field/X-ray field alignment as set forth in 41.1(6) every two years.

2. Dental/podiatry: timer accuracy, exposure reproducibility and kVp accuracy as set forth in 41.1(7) every four years.

3. Fluoroscopic: entrance exposure rate (41.1(5) “c”), and minimum SSD (41.1(5) “f”) annually.

4. Veterinary systems are exempt from the above testing requirements.

All service and installation shall be performed by persons registered under 641—subrule 39.3(3). The registrant or the registrant’s agent shall ensure that the requirements of these rules are met in the operation of the X-ray system(s).

(1) An X-ray system which does not meet the provisions of these rules shall not be operated for diagnostic or therapeutic purposes unless so directed by the agency. All position locking, holding, and centering devices on X-ray system components and systems shall function as intended. All X-ray systems shall be maintained in good mechanical repair and comply with all state and local electrical code requirements.

(2) Individuals who will be operating the X-ray systems shall be adequately instructed in safe operating procedures and be competent in the safe use of the equipment. In addition:

1. Operators in medical facilities shall meet the requirements of 641—Chapter 42 as applicable, and have a current permit to practice in diagnostic radiography. The individual's permit to practice shall be posted in the immediate vicinity of the general work area and visible to the public.

2. Operators in dental facilities shall meet the requirements of the Iowa dental examiners board.

(3) A chart shall be provided in the vicinity of the diagnostic X-ray system's control panel which specifies, for all examinations performed with that system, the following information:

1. Patient's body part and anatomical size, or body part thickness, or age (for pediatrics), versus technique factors to be utilized unless automatically set by the X-ray system;

2. Type and size of the film or film-screen combination to be used;

3. Type and focal distance of the grid to be used, if any;

4. Source to image receptor distance to be used, except for dental intra-oral radiography; and

5. Type and location of placement of human patient shielding to be used (e.g., gonad).

(4) Written safety procedures shall be provided to each individual operating X-ray equipment, including patient holding and any restrictions of the operating technique required for the safe operation of the particular X-ray system. The operator shall be able to demonstrate familiarity with these procedures.

(5) Except for patients who cannot be moved out of the room, only the staff and ancillary personnel required for the medical procedure or training shall be in the room during the radiographic exposure. Other than the patient being examined:

1. All individuals shall be positioned such that no part of the body will be struck by the useful beam unless protected by 0.5 millimeter lead equivalent.

2. The X-ray operator, other staff, ancillary personnel, and other persons required for the medical procedure shall be protected from the scattered primary radiation by protective aprons or whole body protective barriers of not less than 0.25 millimeter lead equivalent.

3. Human patients who cannot be removed from the room shall be protected from the direct scatter radiation by whole body protective barriers of 0.25 millimeter lead equivalent or shall be so positioned that the nearest portion of the body is at least 2 meters from both the tube head and the nearest edge of the image receptor.

(6) Gonad shielding of not less than 0.50 millimeter lead equivalent shall be used for human patients, who have not passed the reproductive age, during radiographic procedures in which the gonads are in the useful beam, except for cases in which this would interfere with the diagnostic procedure.

(7) Individuals shall not be exposed to the useful beam unless (1) the radiation exposure occurs in the context of a previously established professional relationship between a licensed practitioner of the healing arts or a licensed registered nurse who is registered as an advanced registered nurse practitioner pursuant to Iowa Code chapter 152 and a patient, which includes a physical examination by the practitioner of the patient unless such examination is not clinically indicated; and (2) such practitioner issues a written order for the radiation exposure. The written order shall be issued prior to the exposure unless the exposure results from care provided in an emergency or surgery setting. A verbal order may be issued provided the licensed practitioner is supervising the procedure and the order is documented in the patient's record after the procedure is completed. This provision specifically prohibits deliberate exposure for the following purposes:

1. Exposure of an individual for training, demonstration, or other non-healing arts purposes; and

2. Exposure of an individual for the purpose of healing arts screening except as authorized by 41.1(3) "a"(11).

(8) When a patient or film must be provided with auxiliary support during a radiation exposure:

1. Mechanical holding devices shall be used when the technique permits. The written safety procedures, required by 41.1(3) "a"(4), shall list individual projections where holding devices cannot be utilized;

2. Written safety procedures, as required by 41.1(3) "a"(4), shall indicate the requirements for selecting a holder and the procedure the holder shall follow;

3. The human holder shall be instructed in personal radiation safety and protected as required by 41.1(3) “a”(5)“2”;

4. No individual shall be used routinely to hold film or patients; and

5. In those cases where the human patient must hold the film, except during intraoral examinations, any portion of the body other than the area of clinical interest struck by the useful beam shall be protected by not less than 0.5 millimeter lead equivalent material.

6. Each facility shall have leaded aprons and gloves available in sufficient numbers to provide protection to all personnel who are involved with X-ray operations and who are otherwise not shielded.

(9) Procedures and auxiliary equipment designed to minimize patient and personnel exposure commensurate with the needed diagnostic information shall be utilized.

1. The speed of film or screen and film combinations shall be the fastest speed consistent with the diagnostic objective of the examinations. Film cassettes without intensifying screens shall not be used for any routine diagnostic radiological imaging, with the exception of veterinary radiography and standard film packets for intra-oral use in dental radiography.

2. The radiation exposure to the patient shall be the minimum exposure required to produce images of good diagnostic quality.

3. Portable or mobile X-ray equipment shall be used only for examinations where it is impractical to transfer the patient(s) to a stationary X-ray installation.

4. X-ray systems subject to 41.1(6) shall not be utilized in procedures where the source to human patient distance is less than 30 centimeters.

5. If grids are used between the patient and the image receptor to decrease scatter to the film and improve contrast, the grid shall:

- Be positioned properly, i.e., tube side facing the correct direction, and the grid centered to the central ray;

- If the grid is of the focused type, be at the proper focal distance for the SIDs being used.

(10) All individuals who are associated with the operation of an X-ray system are subject to the requirements of 641—subrule 40.36(3) and rules 641—40.15(136C) and 641—40.37(136C). In addition:

1. When protective clothing or devices are worn on portions of the body and a personnel monitoring device(s) is present, it (they) shall be worn in accordance with the recommendations found in Chapter 4 of the National Council of Radiation Protection and Measurements Report No. 57.

2. Exposure of a personnel monitoring device to deceptively indicate a dose delivered to an individual is prohibited.

(11) Healing arts screening. Any person proposing to conduct a healing arts screening program shall not initiate such a program in the state of Iowa without prior written approval of the agency. When requesting such approval, that person shall submit the information outlined in Appendix C of this chapter. The agency shall not approve a healing arts screening program unless the applicant submits data supporting the efficacy of the screening test in diagnosing the disease or condition being screened. If any information submitted to the agency becomes invalid or outdated, the applicant shall notify the agency in writing within five calendar days.

(12) Rescinded IAB 3/31/04, effective 5/5/04.

b. Information and maintenance record and associated information. Records in 41.1(3) “b”(1) and (3) below shall be maintained until the X-ray system is removed from the facility. There shall be two cycles of records on file for items in 41.1(3) “b”(2) below. The registrant shall maintain the following information for each X-ray system for inspection by the agency:

(1) User’s manual for the X-ray system;

(2) Records of surveys, calibrations, maintenance, and modifications performed on the X-ray system(s) with the names of persons who performed such services;

(3) A copy of all correspondence with this agency regarding that X-ray system.

c. X-ray utilization log. Except for veterinary facilities, each facility shall maintain an X-ray log containing the patient’s name, the type of examinations, the dates the examinations were performed, the name of the individual performing the X-ray procedure, and the number of exposures and retakes involved. When the patient or film must be provided with human auxiliary support, the name of the

human holder shall be recorded. These records shall be kept until the facility is inspected by this agency or until all films listed on the utilization log have been purged.

*d. Plan review.*

(1) Prior to construction of all new installations, or modifications of existing installations, or installation of equipment into existing facilities utilizing X-rays for diagnostic or therapeutic purposes, the floor plans and equipment arrangements shall be submitted to the agency for review and verification that national standards have been met. The required information is denoted in Appendices A and B of this chapter.

(2) The agency may require the applicant to utilize the services of a qualified expert to determine the shielding requirements prior to the plan review and approval.

(3) The approval of such plans shall not preclude the requirement of additional modifications should a subsequent analysis of operating conditions indicate the possibility of an individual receiving a dose in excess of the limits prescribed in 641—Chapter 40.

*e. Federal performance standards.* All X-ray equipment shall comply with the applicable performance standards of 21 CFR 1020.30 to 1020.40 which were in effect at the time the unit was manufactured. All equipment manufactured before the effective date of 21 CFR 1020.30 to 1020.40 shall meet the requirements of the Iowa rules. Persons registered to possess the affected radiation-emitting equipment in Iowa shall be responsible for maintaining the equipment in compliance with the appropriate federal performance standards.

*f. X-ray film processing facilities and practices (except for mammography).* Each installation using a radiographic X-ray system and using analog image receptors (e.g., radiographic film) shall have available suitable equipment for handling and processing radiographic film in accordance with the following provisions:

(1) Manually developed film.

1. Processing tanks shall be constructed of mechanically rigid, corrosion-resistant material; and

2. Film shall be processed in accordance with the time-temperature relationships recommended by the film developer manufacturer. The specified developer temperature and immersion time shall be posted in the darkroom. Deviations from the manufacturer's recommendations shall be in writing and on file at the facility. Documentation shall include justification for the deviation.

3. Devices shall be utilized which will indicate the actual temperature of the developer and signal the passage of a preset time appropriate to the developing time required.

(2) Automatic processors and other closed processing systems.

1. Film shall be processed in accordance with the time-temperature relationships recommended by the film developer manufacturer.

2. Processing deviations from the requirements of 41.1(3)"f" shall be documented by the registrant in such manner that the requirements are shown to be met or exceeded (e.g., extended processing and special rapid chemistry).

3. All processing equipment shall be in good mechanical working order.

(3) Other requirements.

1. Pass boxes, if provided, shall be so constructed as to exclude light from the darkroom when cassettes are placed in or removed from the boxes, and shall incorporate adequate shielding from stray radiation to prevent exposure of undeveloped film.

2. The darkroom shall be light tight and use proper safelighting such that any film type in use exposed in a cassette to X-radiation sufficient to produce an optical density from 1 to 2 when processed shall not suffer an increase in density greater than 0.1 when exposed out of the cassette in the darkroom for 2 minutes with all safelights on. If used, daylight film handling boxes shall preclude fogging of the film.

3. Darkrooms typically used by more than one individual shall be provided a method to prevent accidental entry while undeveloped films are being handled or processed.

4. Film shall be stored in a cool, dry place and shall be protected from exposure to stray radiation. Film in open packages shall be stored in a light tight container.

5. Film cassettes and intensifying screens shall be inspected periodically and shall be cleaned and replaced as necessary to best ensure radiographs of good diagnostic quality.

6. Outdated X-ray film shall not be used for diagnostic radiographs, unless the film has been stored in accordance with the manufacturer's recommendations and a sample of the film passes a sensitometric test for normal ranges of base plus fog and speed.

7. Film developing solutions shall be prepared in accordance with the directions given by the manufacturer and shall be maintained in strength by replenishment or renewal so that full development is accomplished within the time specified by the manufacturer.

(4) Records shall be maintained to verify that the items in 41.1(3) "f" are performed according to the requirements. Records may be discarded only after an agency inspection has been completed and the facility determined to be in compliance.

g. Retention of films. Record retention of films shall be seven years for patients 18 years of age or older and seven years plus the difference between the patient's age and 18 for minors.

(1) If the facility is currently utilizing hard-copy film to store images, it may continue to use this method throughout the retention period.

(2) If the facility is currently utilizing computer media and also storing images in a hard-copy format, it may continue to use this method of retention throughout the retention period. If the images are also on computer media, the data should be backed up, or refreshed, at appropriate intervals as defined by the facility.

(3) If the facility is solely utilizing computer media to store study information for which a report is generated, the recording media is to be stored in conditions that will ensure that deterioration will not occur for the period required by this policy. The facility must maintain either retrieval or access or both to the stored images.

(4) If a patient's medical images are identified as being involved in a legal case, the records should immediately be coded appropriately, and maintained for the required time frame defined in this paragraph. At the time the records have reached the end of the appropriate time frame for retention, the previously identified responsible individuals involved in the legal action should be contacted for further instruction.

(5) If records are temporarily transferred to any party, appropriate information relating to location, date of release, and individual having custody of the records should be maintained.

(6) A facility that is ceasing operations must either transfer its film records to another facility or provide the film records to its patients. A certified letter as to the location, or disposition, of the film records must be sent to notify the patients of the transferal.

**41.1(4) General requirements for all diagnostic X-ray systems.** In addition to other requirements of this chapter, all diagnostic X-ray systems shall meet the following requirements:

a. Warning label. The control panel containing the main power switch shall bear the warning statement, legible and accessible to view: "WARNING: This X-ray unit may be dangerous to patient and operator unless safe exposure factors and operating instructions are observed."

b. Battery charge indicator. On battery-powered X-ray generators, visual means shall be provided on the control panel to indicate whether the battery is in a state of charge adequate for proper operation.

c. Leakage radiation from the diagnostic source assembly. The leakage radiation from the diagnostic source assembly measured at a distance of 1 meter in any direction from the source shall not exceed 100 milliroentgens (25.8  $\mu\text{C/kg}$ ) in one hour when the X-ray tube is operated at its leakage technique factors. Compliance shall be determined by measurements averaged over an area of 100 square centimeters with no linear dimension greater than 20 centimeters.

d. Radiation from components other than the diagnostic source assembly. The radiation emitted by a component other than the diagnostic source assembly shall not exceed 2 milliroentgens (0.516  $\mu\text{C/kg}$ ) in one hour at 5 centimeters from any accessible surface of the component when it is operated in an assembled X-ray system under any conditions for which it was designed. Compliance shall be determined by measurements averaged over an area of 100 square centimeters with no linear dimension greater than 20 centimeters.

e. Beam quality.

## (1) Half-value layer.

1. The half-value layer of the useful beam for a given X-ray tube potential shall not be less than the values shown in Table I. If it is necessary to determine such half-value layer at an X-ray tube potential which is not listed in Table I, linear interpolation or extrapolation may be made.

Table I

| Design operating range (kVp) | Measured potential (kVp) | Half-value layer (mm of aluminum) |
|------------------------------|--------------------------|-----------------------------------|
| Below 50 . . . . .           | 30                       | 0.3                               |
|                              | 40                       | 0.4                               |
|                              | 49                       | 0.5                               |
| 50 to 70 . . . . .           | 50                       | 1.2                               |

|                              | 110                      | 3.0                               |
|                              | 120                      | 3.2                               |
|                              | 130                      | 3.5                               |
|                              | 140                      | 3.8                               |
|                              | 150                      | 4.1                               |

2. and 3. Rescinded IAB 4/8/98, effective 7/1/98.

4. For capacitor energy storage equipment, compliance with the requirements of 41.1(4)“e” shall be determined with the system fully charged and a setting of 10 mAs for each exposure.

5. The required minimal half-value layer of the useful beam shall include the filtration contributed by all materials which are permanently between the source and the patient.

(2) Filtration controls. For X-ray systems which have variable kVp and variable filtration for the useful beam, a device shall link the kVp selector with the filter(s) and shall prevent an exposure unless the minimum amount of filtration required by 41.1(4)“e”(1)“1” is in the useful beam for the given kVp which has been selected.

*f.* Multiple tubes. Where two or more radiographic tubes are controlled by one exposure switch, the tube or tubes which have been selected shall be clearly indicated prior to initiation of the exposure. This indication shall be both on the X-ray control panel and at or near the tube housing assembly which has been selected.

*g.* Mechanical support of tube head. The tube housing assembly supports shall be adjusted such that the tube housing assembly will remain stable during an exposure unless tube housing movement is a designed function of the X-ray system.

*h.* Technique indicators.

(1) The technique factors to be used during an exposure shall be indicated before the exposure begins. If automatic exposure controls are used, the technique factors which are set prior to the exposure shall be indicated.

(2) The requirement of 41.1(4)“h”(1) may be met by permanent markings on equipment having fixed technique factors. Indication of technique factors shall be visible from the operator’s position except in the case of spot films made by the fluoroscopist.

(3) The technique indicators shall be accurate to within manufacturer’s standards.

i. Rescinded IAB 3/30/05, effective 5/4/05.

**41.1(5) *Fluoroscopic X-ray systems except for computed tomography X-ray systems.*** All fluoroscopic X-ray systems shall be image intensified and meet the following requirements:

a. Limitation of useful beam.

(1) Primary barrier.

1. The fluoroscopic imaging assembly shall be provided with a primary protective barrier which intercepts the entire cross section of the useful beam at any SID.

2. The X-ray tube used for fluoroscopy shall not produce X-rays unless the barrier is in position to intercept the entire useful beam.

(2) Fluoroscopic beam limitation.

1. For certified fluoroscopic systems with or without a spot film device, neither the length nor the width of the X-ray field in the plane of the image receptor shall exceed that of the visible area of the image receptor by more than 3 percent of the SID. The sum of the excess length and the excess width shall be no greater than 4 percent of the SID.

2. For uncertified fluoroscopic systems with a spot film device, the X-ray beam with the shutter fully opened (during fluoroscopy or spot filming) shall be no larger than the largest spot film size for which the device is designed. Measurements shall be made at the maximum SID available but at no less than 20 centimeters from the tabletop to the film plane distance.

3. For uncertified fluoroscopic systems without a spot film device, the requirements of 41.1(5)“a”(2)“1” apply.

4. Other requirements for fluoroscopic beam limitation:

- Means shall be provided to permit further limitation of the field. Beam-limiting devices manufactured after May 22, 1979, and incorporated in equipment with a variable SID or a visible area of greater than 300 square centimeters shall be provided with means for stepless adjustment of the X-ray field;

- All equipment with a fixed SID and a visible area of 300 square centimeters or less shall be provided either with stepless adjustment of the X-ray field or with means to further limit the X-ray field size at the plane of the image receptor to 125 square centimeters or less;

- If provided, stepless adjustment shall, at the greatest SID, provide continuous field sizes from the maximum attainable to a field size of 5 centimeters by 5 centimeters or less;

- For equipment manufactured after February 25, 1978, when the angle between the image receptor and beam axis is variable, means shall be provided to indicate when the axis of the X-ray beam is perpendicular to the plane of the image receptor;

- For noncircular X-ray fields used with circular image receptors, the error in alignment shall be determined along the length and width dimensions of the X-ray field which pass through the center of the visible area of the image receptor.

(3) Spot-film beam limitation. Spot-film devices shall meet the following requirements:

1. Means shall be provided between the source and the patient for adjustment of the X-ray field size in the plane of the film to the size of that portion of the film which has been selected on the spot-film selector. Such adjustment shall be automatically accomplished except when the X-ray field size in the plane of the film is smaller than that of the selected portion of the film. For spot-film devices manufactured after June 21, 1979, if the X-ray field size is less than the size of the selected portion of the film, the means for adjustment of the field size shall be only at the operator’s option;

2. Neither the length nor the width of the X-ray field in the plane of the image receptor shall differ from the corresponding dimensions of the selected portion of the image receptor by more than 3 percent of the SID when adjusted for full coverage of the selected portion of the image receptor. The sum, without regard to sign, of the length and width differences shall not exceed 4 percent of the SID;

3. It shall be possible to adjust the X-ray field size in the plane of the film to a size smaller than the selected portion of the film. The minimum field size at the greatest SID shall be equal to, or less than, 5 centimeters by 5 centimeters;

4. The center of the X-ray field in the plane of the film shall be aligned with the center of the selected portion of the film to within 2 percent of the SID; and

5. On spot-film devices manufactured after February 25, 1978, if the angle between the plane of the image receptor and beam axis is variable, means shall be provided to indicate when the axis of the X-ray beam is perpendicular to the plane of the image receptor, and compliance shall be determined with the beam axis indicated to be perpendicular to the plane of the image receptor.

(4) Override. If a means exists to override any of the automatic X-ray field size adjustments required in 41.1(5) "a"(2) and 41.1(5) "a"(3), that means:

1. Shall be designed for use only in the event of system failure;
2. Shall incorporate a signal visible at the fluoroscopist's position which will indicate whenever the automatic field size adjustment is overridden; and
3. Shall have a clear and durable label as follows:

#### FOR X-RAY FIELD LIMITATION SYSTEM FAILURE

b. Activation of the fluoroscopic tube. X-ray production in the fluoroscopic mode shall be controlled by a device which requires continuous pressure by the fluoroscopist for the entire time of any exposure. When recording serial fluoroscopic images, the fluoroscopist shall be able to terminate the X-ray exposure(s) at any time, but means may be provided to permit completion of any single exposure of the series in process.

c. Exposure rate limits.

(1) Entrance exposure rate allowable limits.

1. Fluoroscopic equipment which is provided with automatic exposure rate control shall not be operable at any combination of tube potential and current which will result in an exposure rate in excess of 2.6 mC/kg (10 roentgens) per minute at the point where the center of the useful beam enters the patient, except

- During recording of fluoroscopic images; or
- When an optional high level control is provided. When so provided, the equipment shall not be operable at any combination of tube potential and current which will result in an exposure rate in excess of 5 roentgens (1.3 mC/kg) per minute at the point where the center of the useful beam enters the patient unless the high level control is activated. Special means of activation of high level controls shall be required. The high level control shall only be operable when continuous manual activation is provided by the operator. A continuous signal audible to the fluoroscopist shall indicate that the high level control is being employed.

2. Fluoroscopic equipment which is not provided with automatic exposure rate control shall not be operable at any combination of tube potential and current which will result in an exposure rate in excess of 5 roentgens (1.3 mC/kg) per minute at the point where the center of the useful beam enters the patient, except:

- During recording of fluoroscopic images; or
- When the mode or modes have an optional high level control, in which case the mode or modes shall not be operable at any combination of tube potential and current which shall result in an exposure rate in excess of 5 roentgens (1.3 mC/kg) per minute at the point where the center of the useful beam enters the patient, unless the high level control is activated. Special means of activation of high level controls shall be required. The high level control shall only be operable when continuous manual activation is provided by the operator. A continuous signal audible to the fluoroscopist shall indicate that the high level control is being employed.

3. Compliance with the requirements of 41.1(5) "c" shall be determined as follows:

- If the source is below the table, exposure rate shall be measured 1 centimeter above the tabletop or cradle;

- If the source is above the table, the exposure rate shall be measured at 30 centimeters above the tabletop with the end of the beam-limiting device or spacer positioned as closely as possible to the point of measurement;

- All C-arm fluoroscopes, both stationary and mobile, shall meet the entrance exposure rate limits at 30 centimeters from the input surface of the fluoroscopic imaging assembly with the source positioned at any available SID provided that the end of the spacer assembly or beam-limiting device is not closer than 30 centimeters from the input surface of the fluoroscopic imaging assembly.

- For a lateral type fluoroscope, the exposure rate shall be measured at a point 15 centimeters from the centerline of the X-ray table and in the direction of the X-ray source with the end of the beam-limiting device or spacer positioned as closely as possible to the point of measurement. If the tabletop is movable, it shall be positioned as closely as possible to the lateral X-ray source, with the end of the beam-limiting device or spacer no closer than 15 centimeters to the centerline of the X-ray table.

4. Fluoroscopic equipment which is provided with both automatic exposure rate control mode and a manual mode shall not be operable at any combination of tube potential and current which shall result in an exposure rate in excess of 10 roentgens (2.6 mC/kg) per minute in either mode at the point where the center of the useful beam enters the patient, except:

- During recording of fluoroscopic images; or
- When the mode or modes have an optional high level control, in which case the mode or modes shall not be operable at any combination of tube potential and current which shall result in an exposure rate in excess of 5 roentgens (1.3 mC/kg) per minute at the point where the center of the useful beam enters the patient, unless the high level control is activated. Special means of activation of high level controls shall be required. The high level control shall only be operable when continuous manual activation is provided by the operator. A continuous signal audible to the fluoroscopist shall indicate that the high level control is being employed.

5. Any fluoroscopic equipment manufactured after May 19, 1995, which can exceed 5 roentgens (1.3 mC/kg) per minute shall be equipped with an automatic exposure rate control. All entrance exposure rate limits shall be 10 roentgens (2.6 mC/kg) per minute with an upper limit of 20 roentgens (5.2 mC/kg) per minute when the high level control is activated.

6. Conditions of periodic measurement of maximum entrance exposure rate are as follows:

- The measurement shall be made under the conditions that satisfy the requirements of 41.1(5) "c"(1)"3";

- The kVp, mA, or other selectable parameters shall be adjusted to those settings which give the maximum entrance exposure rate;

- The X-ray system(s) that incorporates automatic exposure rate control shall have sufficient attenuative material placed in the useful beam to produce either a milliamperage or kilovoltage or both to satisfy the conditions of 41.1(5) "c"(1)"3."

(2) Reserved.

d. Barrier transmitted radiation rate limits.

(1) The exposure rate due to transmission through the primary protective barrier with the attenuation block in the useful beam, combined with radiation from the image intensifier, if provided, shall not exceed 2 milliroentgens (0.516  $\mu$ C/kg) per hour at 10 centimeters from any accessible surface of the fluoroscopic imaging assembly beyond the plane of the image receptor for each roentgen per minute of entrance exposure rate.

(2) Measuring compliance of barrier transmission.

1. The exposure rate due to transmission through the primary protective barrier combined with radiation from the image intensifier shall be determined by measurements averaged over an area of 100 square centimeters with no linear dimension greater than 20 centimeters.

2. If the source is below the tabletop, the measurement shall be made with the input surface of the fluoroscopic imaging assembly positioned 30 centimeters above the tabletop.

3. If the source is above the tabletop and the SID is variable, the measurement shall be made with the end of the beam-limiting device or spacer as close to the tabletop as it can be placed, provided that it shall not be closer than 30 centimeters.

4. Movable grids and compression devices shall be removed from the useful beam during the measurement.

*e.* Indication of potential and current. During fluoroscopy and cinefluorography the kV and the mA shall be continuously indicated.

*f.* Source-to-skin distance. The SSD shall not be less than:

- (1) 38 centimeters on stationary fluoroscopes installed on or after August 1, 1974,
  - (2) 35.5 centimeters on stationary fluoroscopes which were in operation prior to August 1, 1974,
  - (3) 30 centimeters on all mobile fluoroscopes, and
  - (4) 20 centimeters for mobile fluoroscopes used for specific surgical application.
- (5) The written safety procedures must provide precautionary measures to be adhered to during the use of this device in addition to the procedures provided in 41.1(3) "a"(4).

*g.* Fluoroscopic timer.

(1) Means shall be provided to preset the cumulative on-time of the fluoroscopic X-ray tube. The maximum cumulative time of the timing device shall not exceed five minutes without resetting.

(2) A signal audible to the fluoroscopist shall indicate the completion of any preset cumulative on-time. Such signal shall continue to sound while X-rays are produced until the timing device is reset.

*h.* Control of scattered radiation.

(1) Fluoroscopic table designs when combined with procedures utilized shall be such that no unprotected part of any staff or ancillary individual's body shall be exposed to unattenuated scattered radiation which originates from under the table. The attenuation required shall be not less than 0.25 millimeter lead equivalent.

(2) Equipment configuration when combined with procedures shall be such that no portion of any staff or ancillary individual's body, except the extremities, shall be exposed to the unattenuated scattered radiation emanating from above the tabletop unless that individual:

1. Is at least 120 centimeters from the center of the useful beam, or
2. The radiation has passed through not less than 0.25 millimeter lead equivalent material including, but not limited to, drapes, Bucky-slot cover panel, or self-supporting curtains, in addition to any lead equivalency provided by the protective apron referred to in 41.1(3) "a"(5).

(3) The agency may grant exemptions to 41.1(5) "h"(2) where a sterile field will not permit the use of the normal protective barriers. Where the use of prefitted sterilized covers for the barriers is practical, the agency shall not permit such exemption.

*i.* Spot-film exposure reproducibility. Fluoroscopic systems equipped with spot-film (radiographic) mode shall meet the exposure reproducibility requirements of 41.1(6) "d" when operating in the spot-film mode.

*j.* Radiation therapy simulation systems. Radiation therapy simulation systems shall be exempt from all the requirements of 41.1(5) "a," "c," "d," and "g" provided that:

(1) Such systems are designed and used in such a manner that no individual other than the patient is in the X-ray room during periods of time when the system is producing X-rays; and

(2) Systems which do not meet the requirements of 41.1(5) "g" are provided with a means of indicating the cumulative time that an individual patient has been exposed to X-rays. Procedures shall require in such cases that the timer be reset between examinations.

*k.* Dose-area-product monitor requirements.

(1) All fluoroscopic equipment installed after July 1, 2002, and used for special procedures (e.g., pacemaker implantation, diagnostic cardiac procedures (catheterization), and therapeutic cardiac procedures (angioplasty-balloon; stent; directional coronary atherectomy; rotational atherectomy; laser atherectomy; radio frequency ablation; and intravascular brachytherapy)) shall be equipped with a dose-area-product monitor capable of recording the total radiation dose received by a patient when the fluoroscopic tube is used. Equipment used and installed prior to July 1, 2002, shall be retrofitted with the radiation exposure device by January 1, 2004.

(2) Each facility using fluoroscopic equipment for special procedures shall include in the patient's chart and in a log for agency review the patient radiation exposure received per procedure. Adult doses that exceed 300 rad and doses for children (under the age of 18) that exceed 100 rad must be reviewed by

the facility's radiation safety committee. The review must document the reason why a dose exceeded 300 rad for adults or 100 rad for children, and the reason must be documented in the committee's minutes. If a facility does not have a radiation safety committee, the facility must provide the agency, within 30 days of the event, documentation stating why the patient's dose exceeded 300 rad for adults or 100 rad for children. Also, if the patient doses noted above are exceeded, the patient's physician must do a follow-up examination of the patient to determine if there is any evidence of dose recorded reaction and to ensure that proper treatment is rendered.

(3) All fluoroscopic radiation detection devices in this subrule shall be calibrated annually or after repair or replacement.

*l.* Equipment operation.

(1) All imaging formed by the use of fluoroscopic X-ray systems shall be directly viewed and interpreted by a licensed practitioner of the healing arts.

(2) Overhead fluoroscopy shall not be used as a positioning tool for general purpose radiographic examinations.

(3) Facilities that use fluoroscopic X-ray systems shall maintain a record of cumulative fluoroscopic exposure time used and the number of spot films for each examination. This record shall indicate patient identification, type of examination, date of examination, and operator's name.

*m.* Additional requirements for stationary fluoroscopic systems used for cardiac catheterization procedures.

(1) Protective barriers shall be available for use by individuals whose presence is required in the room during activation of the X-ray tube(s). If a protective barrier includes or consists of a transparent viewing panel, the viewing panel shall afford protection of not less than 0.5 millimeter of lead equivalent.

(2) Protective aprons of not less than 0.25 millimeter of lead equivalent shall be worn in the fluoroscopy room by all individuals (except the patient). Any individual required to be in the room for short periods of time may not be required to wear a protective apron if exposure levels below minimum as seen on film badge reports can be verified. Individuals not using protective aprons should follow ALARA by using time and distance to reduce exposure. Any declared pregnant individual must meet the requirements of 641—40.22(136C).

*n.* Supervision of fluoroscopy. The use of fluoroscopy by radiologic technologists and radiologic students shall be performed under the direct supervision of a licensed practitioner or an advanced registered nurse practitioner (ARNP), pursuant to 655—subrule 7.2(2), for the purpose of localization to obtain images for diagnostic or therapeutic purposes. The use of fluoroscopy by radiologist assistants shall be as defined in 641—42.6(136C).

**41.1(6)** *Radiographic systems other than fluoroscopic, dental intraoral, veterinary, or computed tomography X-ray systems.*

*a.* Beam limitation. The useful beam shall be limited to the area of clinical interest. This shall be considered met if a positive beam-limiting device meeting manufacturer's specifications and the requirements of 41.1(6) "h"(2) have been properly used or if evidence of collimation is shown on at least three sides or three corners of the film (for example, projections from the shutters of the collimator, cone cutting at the corners, or borders at the film's edge.)

(1) General purpose stationary and mobile X-ray systems and veterinarian systems (other than portable) installed after July 1, 1998.

1. Only X-ray systems provided with means for independent stepless adjustment of at least two dimensions of the X-ray field shall be used.

2. A method shall be provided for visually defining the perimeter of the X-ray field.

- Illuminance shall be greater than 7.5 foot-candles or 80.3 LUX at 100 centimeters or maximum SID whichever is less.

- The total misalignment of the edges of the visually defined field with the respective edges of the X-ray field along either the length or width of the visually defined field shall not exceed 2 percent of the distance from the source to the center of the visually defined field when the surface upon which it appears is perpendicular to the axis of the X-ray beam.

3. The agency may grant an exemption on noncertified X-ray systems to 41.1(6)“a”(1)“1” and “2” provided the registrant makes a written application for such exemption and in that application demonstrates it is impractical to comply with 41.1(6)“a”(1)“1” and “2”; and the purpose of 41.1(6)“a”(1)“1” and “2” will be met by other methods.

(2) Additional requirements for stationary general purpose X-ray systems. In addition to the requirements of 41.1(6)“a”(1), stationary general purpose X-ray systems, both certified and noncertified, shall meet the following requirements:

1. A method shall be provided to indicate when the axis of the X-ray beam is perpendicular to the plane of the image receptor, to align the center of the X-ray field with respect to the center of the image receptor to within 2 percent of the SID, and to indicate the SID to within 2 percent;

2. The beam-limiting device shall indicate numerically the field size in the plane of the image receptor to which it is adjusted; and

3. Indication of field size dimensions and SIDs shall be specified in inches or centimeters, and shall be such that aperture adjustments result in X-ray field dimensions in the plane of the image receptor which correspond to those indicated by the beam-limiting device to within 2 percent of the SID when the beam axis is indicated to be perpendicular to the plane of the image receptor.

(3) X-ray systems designed for one image receptor size. Radiographic equipment designed for only one image receptor size at a fixed SID shall be provided with means to limit the field at the plane of the image receptor to dimensions no greater than those of the image receptor, and to align the center of the X-ray field with the center of the image receptor to within 2 percent of the SID, or shall be provided with means to both size and align the X-ray field such that the X-ray field at the plane of the image receptor does not extend beyond any edge of the image receptor.

(4) Systems designed for or provided with special attachments for mammography. Rescinded IAB 4/8/98, effective 7/1/98.

(5) X-ray systems other than those described in 41.1(6)“a”(1), (2), and (3), and veterinary systems installed prior to July 1, 1998, and all portable veterinary X-ray systems.

1. Means shall be provided to limit the X-ray field in the plane of the image receptor so that such field does not exceed each dimension of the image receptor by more than 2 percent of the SID when the axis of the X-ray beam is perpendicular to the plane of the image receptor.

2. Means shall be provided to align the center of the X-ray field with the center of the image receptor to within 2 percent of the SID, or means shall be provided to both size and align the X-ray field such that the X-ray field at the plane of the image receptor does not extend beyond any edge of the image receptor. Compliance shall be determined with the axis of the X-ray beam perpendicular to the plane of the image receptor.

3. 41.1(6)“a”(5)“1” and “2” may be met with a system that meets the requirements for a general purpose X-ray system as specified in 41.1(6)“a”(1) or, when alignment means are also provided, may be met with either:

- An assortment of removable, fixed-aperture, beam-limiting devices sufficient to meet the requirement for each combination of image receptor size and SID for which the unit is designed with each such device having clear and permanent markings to indicate the image receptor size and SID for which it is designed; or

- A beam-limiting device having multiple fixed apertures sufficient to meet the requirement for each combination of image receptor size and SID for which the unit is designed. Permanent, clearly legible markings shall indicate the image receptor size and SID for which each aperture is designed and shall indicate which aperture is in position for use.

b. Radiation exposure control devices.

(1) Timers.

1. Means shall be provided to initiate the radiation exposure by a deliberate action on the part of the operator, such as the depression of a switch. Radiation exposure shall not be initiated without such an action.

2. Means shall be provided to terminate the exposure at a preset time interval, preset product of current and time, a preset number of pulses, or a preset radiation exposure to the image receptor. In

addition, it shall not be possible to make an exposure when the timer is set to a “zero” or “off” position if either position is provided. Except for dental panoramic systems, termination of an exposure shall cause automatic resetting of the timer to its initial setting or to “zero.”

(2) X-ray control.

1. Manual exposure control. An X-ray control shall be incorporated into each X-ray system such that an exposure can be terminated by the operator at any time except for exposure of one-half second or less, or during serial radiography when means shall be provided to permit completion of any single exposure of the series in process.

2. Each X-ray control shall be located in such a way as to meet the following requirements: Stationary X-ray systems (except podiatry and veterinary units) shall be required to have the X-ray exposure switch permanently mounted in a protected area so that the operator is required to remain in that protected area during the entire exposure and so that the operator can view the patient while making any exposures; and mobile and portable X-ray systems which are:

- Used for greater than one week in the same location, i.e., a room or suite, shall meet the requirements of 41.1(6) “b”(2) “2”; or

- Used for greater than one hour and less than one week at the same location, i.e., a room or suite, or in a clinical setting for routine extremities only, or where moving the X-ray system from room to room is impractical, shall meet the requirement of the above paragraph or be provided with a 6.5 foot (1.98 m) high protective barrier which is placed at least 2.7 meters (9 feet) from the tube housing assembly. Written procedures must instruct the operator to remain in the protected area during the entire exposure. Stationary podiatric systems which do not meet the above requirements shall be provided with a 9-foot exposure button cord which allows the operator to remain behind a protective barrier during the entire exposure. If the protective barrier is moveable, written procedures must be on file at the facility, which dictate that the operator will remain behind the barrier during the entire exposure.

3. The X-ray control shall provide visual indication observable at or from the operator’s protected position whenever X-rays are produced. In addition, a signal audible to the operator shall indicate that the exposure has terminated.

(3) Automatic exposure controls. When an automatic exposure control is provided:

1. Indication shall be made on the control panel when this mode of operation is selected;

2. If the X-ray tube potential is equal to or greater than 50 kVp, the minimum exposure time for field emission equipment rated for pulsed operation shall be equal to or less than a time interval equivalent to 2 pulses;

3. The minimum exposure time for all equipment other than that specified in 41.1(6) “b”(3) “2” shall be equal to or less than one-sixtieth second or a time interval required to deliver 5 mAs, whichever is greater;

4. Either the product of peak X-ray tube potential, current, and exposure time shall be limited to not more than 60 kW per exposure, or the product of X-ray tube current and exposure time shall be limited to not more than 600 mAs per exposure except that, when the X-ray tube potential is less than 50 kVp, the product of X-ray tube current and exposure time shall be limited to not more than 2000 mAs per exposure; and

5. A visible signal shall indicate when an exposure has been terminated at the limits required by 41.1(6) “b”(3) “4,” and manual resetting shall be required before further automatically timed exposures can be made.

(4) Reproducibility. With a timer setting of 0.5 seconds or less, the average exposure period ( $\bar{T}$ ) shall be greater than or equal to five times the maximum exposure period ( $T_{\max}$ ) minus the minimum exposure period ( $T_{\min}$ ) when four timer tests are performed:

$$\bar{T} \geq 5 (T_{\max} - T_{\min})$$

(5) Exposure duration (timer) linearity. For systems having independent selection of exposure time settings, the average ratios ( $X_1$ ) of exposure to the indicated timer setting, in units of C kg<sup>-1</sup>s<sup>-1</sup> (mR/s),

obtained at any two clinically used timer settings shall not differ by more than 0.10 times their sum. This is written as:

$$(X_1 - X_2) \leq 0.1 (X_1 + X_2)$$

where  $X_1$  and  $X_2$  are the average  $C \text{ kg}^{-1}\text{s}^{-1}$  (mR/s) values.

c. Source-to-skin distance. All mobile or portable radiographic systems shall be provided with means to limit the source-to-skin distance to equal to or greater than 30 centimeters except for veterinary systems.

d. Exposure reproducibility. When all technique factors are held constant, including control panel selections associated with automatic exposure control systems, the coefficient of variation of exposure for both manual and automatic exposure control systems shall not exceed 0.05. This requirement applies to clinically used techniques.

e. Radiation from capacitor energy storage equipment in standby status. Radiation emitted from the X-ray tube when the system is fully charged and the exposure switch or timer is not activated shall not exceed a rate of 2 milliroentgens ( $0.516 \mu\text{C/kg}$ ) per hour at 5 centimeters from any accessible surface of the diagnostic source assembly, with the beam-limiting device fully open.

f. Accuracy. Deviation of measured technique factors from indicated values of kVp and exposure time shall not exceed the limits specified for that system by its manufacturer. In the absence of manufacturer's specifications, the deviation shall not exceed 10 percent of the indicated value for kVp and 20 percent for time.

g. mA/mAs linearity. The following requirements apply when the equipment is operated on a power supply as specified by the manufacturer for any fixed X-ray tube potential within the range of 40 percent to 100 percent of the maximum rated:

(1) Equipment having independent selection of X-ray tube current (mA). The average ratios ( $X_i$ ) of exposure to the indicated milliamperere-seconds product ( $C \text{ kg}^{-1}\text{mAs}^{-1}$  (or mR/mAs)) obtained at any two consecutive tube current settings shall not differ by more than 0.10 times their sum:

$$X_1 - X_2 \leq 0.10 (X_1 + X_2)$$

where  $X_1$  and  $X_2$  are the average values obtained at each of two consecutive tube current settings, or at two settings differing by no more than a factor of 2 where the tube current selection is continuous.

(2) Equipment having a combined X-ray tube current-exposure time product (mAs) selector, but not a separate tube current (mA) selector. The average ratios ( $X_i$ ) of exposure to the indicated milliamperere-seconds product, in units of mR/mAs (or  $C \text{ kg}^{-1}\text{mAs}^{-1}$ ), obtained at any two consecutive mAs selector settings shall not differ by more than 0.10 times their sum:

$$X_1 - X_2 \leq 0.10 (X_1 + X_2)$$

where  $X_1$  and  $X_2$  are the average values obtained at any two consecutive mAs selector settings, or at two settings differing by no more than a factor of 2 where the mAs selector provides continuous selection.

(3) Measuring compliance. Determination of compliance shall be based on 10 exposures taken within a time period of one hour, at each of the two settings. These two settings may include any two focal spot sizes except where one is equal to or less than 0.45 millimeters and the other is greater than 0.45 millimeters. For purposes of this requirement, focal spot size is the nominal focal spot size specified by the X-ray tube manufacturer.

h. Additional requirements applicable to certified systems only. Diagnostic X-ray systems incorporating one or more certified component(s) shall be required to comply with the following additional requirement(s) which relate to that certified component(s).

(1) Beam limitation for stationary and mobile general purpose X-ray systems.

1. There shall be provided a means of stepless adjustment of the X-ray field. The minimum field size at an SID of 100 centimeters shall be equal to or less than 5 centimeters by 5 centimeters.

2. When a light localizer is used to define the X-ray field, it shall provide an average illumination of not less than 160 lux or 15 foot-candles at 100 centimeters or at the maximum SID, whichever is less. The average illumination shall be based upon measurements made in the approximate center of each quadrant of the light field. Radiation therapy simulation systems manufactured on and after May 27, 1980, are exempt from this requirement.

3. The edge of the light field at 100 centimeters or at the maximum SID, whichever is less, shall have a contrast ratio, corrected for ambient lighting, of not less than 4 in the case of beam-limiting devices designed for use on stationary equipment, and a contrast ratio of not less than 3 in the case of beam-limiting devices designed for use on mobile equipment. The contrast ratio is defined as  $I_1/I_2$  where  $I_1$  is the illumination 3 millimeters from the edge of the light field toward the center of the field; and  $I_2$  is the illumination 3 millimeters from the edge of the light field away from the center of the field. Compliance shall be determined with a measuring instrument aperture of 1 millimeter in diameter.

(2) Beam limitation and alignment on stationary general purpose X-ray systems equipped with PBL. If PBL is being used, the following requirements shall be met:

1. PBL shall prevent the production of X-rays when

- Either the length or width of the X-ray field in the plane of the image receptor differs, except as permitted by 41.1(6) "h"(3), from the corresponding image receptor dimensions by more than 3 percent of the SID; or
- The sum of the length and width differences as stated in 41.1(6) "h"(2)"1" above without regard to sign exceeds 4 percent of the SID;

2. Compliance with 41.1(6) "h"(2)"1" shall be determined when the equipment indicates that the beam axis is perpendicular to the plane of the image receptor. Compliance shall be determined no sooner than 5 seconds after insertion of the image receptor;

3. The PBL system shall be capable of operation, at the discretion of the operator, such that the size of the field may be made smaller than the size of the image receptor through stepless adjustment of the field size. The minimum field size at an SID of 100 centimeters shall be equal to or less than 5 centimeters by 5 centimeters;

4. The PBL system shall be designed such that if a change in image receptor does not cause an automatic return to PBL function as described in 41.1(6) "h"(2)"1," then any change of image receptor size or SID must cause the automatic return.

(3) Beam limitation for portable X-ray systems. Beam limitation for portable X-ray systems shall meet the beam limitation requirements of 41.1(6) "a" or 41.1(6) "h"(2).

i. Tube stands for portable X-ray systems. A tube stand or other mechanical support shall be used for portable X-ray systems, so that the X-ray tube housing assembly need not be handheld during exposures.

j. Systems used in a clinical (nonsurgical) setting shall be restricted to one room within a location or suite which meets the requirements of 41.1(3) "d."

**41.1(7) Intraoral dental radiographic systems.** In addition to the provisions of 41.1(3) and 41.1(4), the requirements of 41.1(7) apply to X-ray equipment and associated facilities used for dental radiography. Requirements for extraoral dental radiographic systems are covered in 41.1(6). Only systems meeting the requirements of 41.1(7) shall be used.

a. *Source-to-skin distance.* X-ray systems designed for use with an intraoral image receptor shall be provided with means to limit source-to-skin distance to not less than:

- (1) 18 centimeters if operable above 50 kVp, or
- (2) 10 centimeters if not operable above 50 kVp.

b. *Beam limitation.* Radiographic systems designed for use with an intraoral image receptor shall be provided with means to limit the X-ray beam such that:

- (1) If the minimum source-to-skin distance (SSD) is 18 centimeters or more, the X-ray field, at the minimum SSD, shall be containable in a circle having a diameter of no more than 7 centimeters; and
- (2) If the minimum SSD is less than 18 centimeters, the X-ray field, at the minimum SSD, shall be containable in a circle having a diameter of no more than 6 centimeters.

(3) The position indicating device shall be shielded and open-ended. The shielding shall be equivalent to the requirements of 41.1(4) "c."

*c. Exposure control.*

(1) Exposure initiation.

1. Means shall be provided to initiate the radiation exposure by a deliberate action on the part of the operator, such as the depression of a switch. Radiation exposure shall not be initiated without such an action; and

2. It shall not be possible to make an exposure when the timer is set to a “zero” or “off” position if either position is provided.

(2) Exposure indication. Means shall be provided for visual indication observable at or from the operator’s protected position whenever X-rays are produced. In addition, a signal audible to the operator shall indicate that the exposure has terminated except in X-ray systems that cannot be altered to meet this requirement.

(3) Exposure termination.

1. Means shall be provided to terminate the exposure at a preset time interval, preset product of current and time, a preset number of pulses, or a preset radiation exposure to the image receptor. In addition:

2. Termination of exposure shall cause automatic resetting of the timer to its initial setting or to “zero.”

3. An X-ray control shall be incorporated into each X-ray system such that an exposure can be terminated by the operator at any time, except for exposures of one-half ( $\frac{1}{2}$ ) second or less.

(4) Exposure duration (timer) linearity. For systems having independent selection of exposure time settings, the average ratios ( $X_1$ ) of exposure to the indicated timer setting, in units of  $C\ kg^{-2}s^{-1}$  (mR/s), obtained at any two clinically used timer settings shall not differ by more than 0.10 times their sum. This is written as:

$$(X_1 - X_2) \leq 0.1 (X_1 + X_2)$$

where  $X_1$  and  $X_2$  are the average values.

(5) Each X-ray exposure switch shall be located in such a way as to meet the following requirements:

1. Stationary X-ray systems shall be required to have the X-ray exposure switch located in a protected area or have an exposure switch cord of sufficient length to permit the operator to activate the unit while in a protected area, e.g., corridor outside the operator. The procedures required under 41.1(3) “a”(4) must instruct the operator to remain in the protected area during the entire exposure.

2. Mobile and portable X-ray systems which are:

- Used for greater than one week in the same location, i.e., a room or suite, shall meet the requirements of 41.1(7) “c”(5) “1.”

- Used for greater than one hour and less than one week at the same location, i.e., a room or suite, shall meet the requirements of the above paragraph or be provided with a 6.5 foot (1.98 m) high protective barrier or means to allow the operator to be at least 9 feet (2.7 meters) from the tube housing assembly while making exposure.

3. Portable or hand-held dental X-ray systems designed with a backscatter shield may be used without the additional protective barrier, but the operator must wear a protective apron. The operator must stand directly behind the unit to allow the shield to function as designed.

*d. Reproducibility.* When the equipment is operated on an adequate power supply as specified by the manufacturer, the estimated coefficient of variation of radiation exposures shall be no greater than 0.05, for any specific combination of selected technique factors.

*e. mA/mS linearity.* The following requirements apply when the equipment is operated on a power supply as specified by the manufacturer for any fixed X-ray tube potential within the range of 40 percent to 100 percent of the maximum rated.

(1) Equipment having independent selection of X-ray tube current (mA). The average ratios ( $X_1$ ) of exposure to the indicated milliampere-seconds product, in units of  $C\ kg^{-1}\ mAs^{-1}$  (or mR/mAs), obtained at any two consecutive tube current settings shall not differ by more than 0.10 times their sum:

$$(X_1 - X_2) \leq 0.1 (X_1 + X_2)$$

where  $X_1$  and  $X_2$  are the average values obtained at each of two consecutive tube current settings, or at two settings differing by no more than a factor of 2 where the tube current selection is continuous.

(2) Equipment having a combined X-ray tube current-exposure time product (mAs) selector, but not a separate tube current (mA) selector. The average ratios ( $X_1$ ) of exposure to the indicated milliamperere-seconds product, in units of  $C\ kg^{-1}\ mAs^{-1}$  (or mR/mAs), obtained at any two consecutive mAs selector settings shall not differ by more than 0.10 times their sum:

$$(X_1 - X_2) \leq 0.1 (X_1 + X_2)$$

where  $X_1$  and  $X_2$  are the average values obtained at any two mAs selector settings, or at two settings differing by no more than a factor of 2 where the mAs selector provides continuous selection.

(3) Measuring compliance. Determination of compliance shall be based on 10 exposures taken within a time period of one hour, at each of the two settings. These two settings may include any two focal spot sizes except where one is equal to or less than 0.45 millimeters and the other is greater than 0.45 millimeters. For purposes of this requirement, focal spot size is the nominal focal spot size specified by the X-ray tube manufacturer.

*f. Accuracy.* Deviation of technique factors from indicated values for kVp and exposure time (if time is independently selectable) shall not exceed the limits specified for that system by its manufacturer. In the absence of manufacturer's specifications the deviation shall not exceed 10 percent of the indicated value for kVp and 20 percent for time.

*g. kVp limitations.* Dental X-ray machine with a nominal fixed kVp of less than 50 kVp shall not be used to make diagnostic dental radiographs of humans.

*h. Administrative controls.*

- (1) Patient and film holding devices shall be used when the techniques permit.
- (2) The tube housing and the PID shall not be hand-held during an exposure.
- (3) The X-ray system shall be operated in such a manner that the useful beam at the patient's skin does not exceed the requirements of 41.1(7) "b"(1).

(4) Dental fluoroscopy without image intensification shall not be used.

*i. Portable or hand-held dental X-ray systems.* Portable or hand-held dental X-ray systems designed with a backscatter shield shall:

- (1) Be used only where it is impractical to use a portable dental system;
- (2) Be used as the manufacturer indicates;
- (3) Not be used with the backscatter shield removed, if applicable; and
- (4) Be exempted from 41.1(4) "g."

**41.1(8)** Rescinded IAB 6/4/97, effective 7/9/97.

**41.1(9)** *Bone densitometry units.*

- a.* No additional shielding for the room is required.
- b.* Film badges, OSL devices, or TLDs must be issued for the first six months to all personnel operating the unit. If monitoring indicates no exposure, the IDPH may allow discontinuance of monitoring upon written request. When new procedures are started that have not been previously monitored, monitoring must be reinstated for six months and another request for discontinuance submitted to the agency.
- c.* Operators, other than physicians, must possess a health education background to include anatomy and physiology and must complete the manufacturer's training session pertaining to bone densitometry or equivalent. A permit to practice for operators is not required.
- d.* Specific operating procedures must be prepared and made available at the operator's position.
- e.* Bone densitometry on human patients shall be conducted only under a prescription of a licensed physician, a licensed physician assistant as defined in Iowa Code section 148C.1, subsection 6, or a

licensed registered nurse who is registered as an advanced registered nurse practitioner pursuant to Iowa Code chapter 152.

*f.* During the operation of the bone densitometry system:

(1) The operator, ancillary personnel, and members of the general public shall be positioned at least one meter from the patient and bone densitometry system during the examination.

(2) The operator shall advise the patient that the bone densitometry examination is a type of X-ray procedure.

*g.* Equipment shall be maintained and operated in accordance with the manufacturer's specifications. Records of maintenance shall be kept for inspection by the agency.

**41.1(10) Veterinary medicine radiographic installations.**

*a. Equipment.*

(1) The protective tube housing shall be equivalent to the requirements of 41.1(4) "c."

(2) Diaphragms or cones shall be provided for collimating the useful beam to the area of clinical interest and shall provide the same degree of protection as is required of the housing.

(3) The total filtration permanently in the useful beam shall not be less than 0.5 millimeters aluminum equivalent for machines operating up to 50 kVp, 1.5 millimeters aluminum equivalent for machines operating between 50 and 70 kVp, and 2.5 millimeters aluminum equivalent for machines operating above 70 kVp.

*b. Operator protection.*

(1) All wall, ceiling, and floor areas shall be equivalent to or provided with applicable protective barriers to ensure compliance with 641—40.15(136C) and 40.21(136C) and subrule 40.26(1).

(2) All stationary, mobile or portable X-ray systems shall be provided with either a 2 meter (6.5 feet) high protective barrier for operator protections during exposures, or shall be provided with means to allow the operator to be at least 2.7 meters (9 feet) from the tube housing assembly during exposures.

*c. Operating procedures.* Veterinary medicine radiographic installations are exempt from the requirements of 641—41.1(136C) except for 641—subrules 41.1(3) and 41.1(10).

(1) No individual other than the operator shall be in the X-ray room while exposures are being made unless such individual's assistance is required, and

(2) The operator shall stand behind the protective barrier of 9 feet from the useful beam and the animal during radiographic exposures, or

(3) When an animal must be held in position during radiography, mechanical supporting or restraining devices should be used. If the animal must be held by an individual, that individual shall be protected with appropriate shielding devices, such as protective gloves and apron, and shall be so positioned that no part of the holder's body will be struck by the useful beam. The exposure of any individual used for this purpose shall be monitored.

**41.1(11) Computed tomography X-ray systems.**

*a. Definitions.* In addition to the definitions provided in 641—38.2(136C), 641—40.2(136C), and 41.1(2), the following definitions shall be applicable to 41.1(11):

"Computed tomography dose index" means the integral from  $-7T$  to  $+7T$  of the dose profile along a line perpendicular to the tomographic plane divided by the product of the nominal tomographic section thickness and the number of tomograms produced in a single scan, that is:

$$\overline{\text{CTDI}} = \frac{1}{nT} \int_{-7T}^{+7T} D(z) dz$$

where:

- $z$  = Position along a line perpendicular to the tomographic plane.  
 $D(z)$  = Dose at position  $z$ .  
 $T$  = Nominal tomographic section thickness.  
 $n$  = Number of tomograms produced in a single scan.

This definition assumes that the dose profile is centered around  $z = 0$  and that, for a multiple tomogram system, the scan increment between adjacent scans is  $nT$ .

“*Contrast scale*” means the change in the linear attenuation coefficient per CTN relative to water, that is:

$$\overline{CS} = \frac{\mu_x - \mu_w}{\overline{CTN}_x - \overline{CTN}_w}$$

where:

$\mu_x$  = Linear attenuation coefficient of the material of interest.

$\mu_w$  = Linear attenuation coefficient of water.

$\overline{CTN}_x$  = of the material of interest.

$\overline{CTN}_w$  = of water.

“*CS*” (see “*Contrast scale*”).

“*CT conditions of operation*” means all selectable parameters governing the operation of a CT X-ray system including, but not limited to, nominal tomographic section thickness, filtration, and the technique factors as defined in 41.1(2).

“*CTDI*” (see “*Computed tomography dose index*”).

“*CT gantry*” means the tube housing assemblies, beam-limiting devices, detectors, and the supporting structures and frames which hold these components.

“*CTN*” (see “*CT number*”).

“*CT number*” means the number used to represent the X-ray attenuation associated with each elemental area of the CT image.

$$\overline{CTN} = \frac{k(\mu_x - \mu_w)}{\mu_w}$$

where:

$k$  = A constant. (The constant has a normal value of 1,000 when the Hounsfield scale of CTN is used.)

$\mu_x$  = Linear attenuation coefficient of the material of interest.

$\mu_w$  = Linear attenuation coefficient of water.

“*Dose profile*” means the dose as a function of position along a line.

“*Elemental area*” means the smallest area within a tomogram for which the X-ray attenuation properties of a body are depicted (see also “*Picture element*”).

“*Multiple tomogram system*” means a computed tomography X-ray system which obtains X-ray transmission data simultaneously during a single scan to produce more than one tomogram.

“*Noise*” means the standard deviation of the fluctuation in CTN expressed as a percentage of the attenuation coefficient of water. Its estimate ( $S_n$ ) is calculated using the following expression:

$$S_n = \frac{100 \cdot \overline{CS} \cdot s}{\mu_w}$$

where:

$\overline{CS}$  = Linear attenuation coefficient of the material of interest.

$\mu_w$  = Linear attenuation coefficient of water.

s = Estimated standard deviation of the CTN of picture elements in a specified area of the CT image.

*"Nominal tomographic section thickness"* means the full width at half-maximum of the sensitivity profile taken at the center of the cross-sectional volume over which X-ray transmission data are collected.

*"Picture element"* means an elemental area of a tomogram.

*"Reference plane"* means a plane which is displaced from and parallel to the tomographic plane.

*"Scan"* means the complete process of collecting X-ray transmission data for the production of a tomogram. Data can be collected simultaneously during a single scan for the production of one or more tomograms.

*"Scan increment"* means the amount of relative displacement of the patient with respect to the CT X-ray system between successive scans measured along the direction of such displacement.

*"Scan sequence"* means a preselected set of two or more scans performed consecutively under preselected CT conditions of operation.

*"Scan time"* means the period of time between the beginning and end of X-ray transmission data accumulation for a single scan.

*"Single tomogram system"* means a CT X-ray system which obtains X-ray transmission data during a scan to produce a single tomogram.

*"Tomographic plane"* means that geometric plane which is identified as corresponding to the output tomogram.

*"Tomographic section"* means the volume of an object whose X-ray attenuation properties are imaged in a tomogram.

b. Requirements for equipment.

(1) Termination of exposure.

1. Means shall be provided to terminate the X-ray exposure automatically by either deenergizing the X-ray source or shuttering the X-ray beam in the event of equipment failure affecting data collection. Such termination shall occur within an interval that limits the total scan time to no more than 110 percent of its preset value through the use of either a backup timer or devices which monitor equipment function.

2. A visible signal shall indicate when the X-ray exposure has been terminated through the means required by 41.1(11)"b"(1)"1."

3. The operator shall be able to terminate the X-ray exposure at any time during a scan, or series of scans under CT X-ray system control, of greater than one-half second duration.

(2) Tomographic plane indication and alignment.

1. For any single tomogram system, means shall be provided to permit visual determination of the tomographic plane or a reference plane offset from the tomographic plane.

2. For any multiple tomogram system, means shall be provided to permit visual determination of the location of a reference plane. This reference plane can be offset from the location of the tomographic planes.

3. If a device using a light source is used to satisfy 41.1(11)"b"(2)"1" or "2," the light source shall provide illumination levels sufficient to permit visual determination of the location of the tomographic plane or reference plane under ambient light conditions of up to 500 lux.

(3) Beam-on and shutter status indicators and control switches.

1. The CT X-ray control and gantry shall provide visual indication whenever X-rays are produced and, if applicable, whether the shutter is open or closed.

2. Each emergency button or switch shall be clearly labeled as to its function.

(4) Indication of CT conditions of operation. The CT X-ray system shall be designed such that the CT conditions of operation to be used during a scan or a scan sequence shall be indicated prior to the initiation of a scan or a scan sequence. On equipment having all or some of these conditions of operation at fixed values, this requirement may be met by permanent markings. Indication of CT conditions of operation shall be visible from any position from which scan initiation is possible.

(5) Extraneous radiation. When data are not being collected for image production, the radiation adjacent to the tube port shall not exceed that permitted by 41.1(4)"c."

(6) Maximum surface CTDI identification. The angular position where the maximum surface CTDI occurs shall be identified to allow for reproducible positioning of a CT dosimetry phantom.

(7) Additional requirements applicable to CT X-ray systems containing a gantry manufactured after September 3, 1985.

1. The total error in the indicated location of the tomographic plane or reference plane shall not exceed 5 millimeters.

2. If the X-ray production period is less than one-half second, the indication of X-ray production shall be actuated for at least one-half second. Indicators at or near the gantry shall be discernible from any point external to the patient opening where insertion of any part of the human body into the primary beam is possible.

3. The deviation of indicated scan increment versus actual increment shall not exceed plus or minus 1 millimeter with any mass from 0 to 100 kilograms resting on the support device. The patient support device shall be incremented from a typical starting position to the maximum incremented distance or 30 centimeters, whichever is less, and then returned to the starting position. Measurement of actual versus indicated scan increment may be taken anywhere along this travel.

4. Premature termination of the X-ray exposure by the operator shall necessitate resetting of the CT conditions of operation prior to the initiation of another scan.

c. Facility design requirements.

(1) Aural communication. Provision shall be made for two-way aural communication between the patient and the operator at the control panel.

(2) Viewing systems.

1. Windows, mirrors, closed-circuit television, or an equivalent shall be provided to permit continuous observation of the patient during irradiation and shall be so located that the operator can observe the patient from the control panel.

2. When the primary viewing system is by electronic means, an alternate viewing system (which may be electronic) shall be available for use in the event of failure of the primary viewing system.

d. Surveys, calibrations, spot checks, and operating procedures.

(1) Surveys.

1. All CT X-ray systems shall have a survey made by, or under the direction of, a qualified expert. In addition, such surveys shall be done after any change in the facility or equipment which might cause a significant increase in radiation hazard.

2. The registrant shall obtain a written report of the survey from the qualified expert, and a copy of the report shall be made available to the agency upon request.

(2) Radiation calibrations.

1. The calibration of the radiation output of the CT X-ray system shall be performed by, or under the direction of, a qualified expert who is physically present at the facility during such calibration.

2. The calibration of a CT X-ray system shall be performed at intervals specified by a qualified expert and after any change or replacement of components which, in the opinion of the qualified expert, could cause a change in the radiation output.

3. The calibration of the radiation output of a CT X-ray system shall be performed with a calibrated dosimetry system. The calibration of such system shall be traceable to a national standard. The dosimetry system shall have been calibrated within the preceding two years.

4. CT dosimetry phantom(s) shall be used in determining the radiation output of a CT X-ray system. Such phantom(s) shall meet the following specifications and conditions of use: CT dosimetry phantom(s) shall be right circular cylinders of polymethyl methacrylate of density 1.19 plus or minus 0.01 grams per cubic centimeter. The phantom(s) shall be at least 14 centimeters in length and shall have diameters of 32.0 centimeters for testing CT X-ray systems designed to image any section of the body and 16.0 centimeters for systems designed to image the head or for whole body scanners operated in the head scanning mode; CT dosimetry phantom(s) shall provide means for the placement of a dosimeter(s) along the axis of rotation and along a line parallel to the axis of rotation 1.0 centimeter from the outer surface and within the phantom. Means for the placement of dosimeters or alignment devices at other locations may be provided; any effects on the doses measured due to the removal of phantom material

to accommodate dosimeters shall be accounted for through appropriate corrections to the reported data or included in the statement of maximum deviation for the values obtained using the phantom; and all dose measurements shall be performed with the CT dosimetry phantom placed on the patient couch or support device without additional attenuation materials present.

5. The calibration shall be required for each type of head, body, or whole-body scan performed at the facility.

6. Calibration shall meet the following requirements: The dose profile along the center axis of the CT dosimetry phantom for the minimum, maximum, and midrange values of the nominal tomographic section thickness used by the registrant shall be measurable. Where less than three nominal tomographic thicknesses can be selected, the dose profile determination shall be performed for each available nominal tomographic section thickness; the CTDI<sup>3</sup> along the two axes specified in 41.1(11)“d”(2)“4” shall be measured. (For the purpose of determining the CTDI, the manufacturer’s statement as to the nominal tomographic section thickness for that particular system may be utilized.) The CT dosimetry phantom shall be oriented so that the measurement point 1.0 centimeter from the outer surface and within the phantom is in the same angular position within the gantry as the point of maximum surface CTDI identified. The CT conditions of operation shall correspond to typical values used by the registrant; and the spot checks specified in 41.1(11)“d”(3) shall be made.

7. Calibration procedures shall be in writing. Records of calibrations performed shall be maintained for inspection by the agency.

(3) Spot checks.

1. The spot-check procedures shall be in writing and shall have been developed by a qualified expert.

2. The spot-check procedures shall incorporate the use of a CT dosimetry phantom which has a capability of providing an indication of contrast scale, noise, nominal tomographic section thickness, the resolution capability of the system for low and high contrast objects, and measuring the mean CTN for water or other reference material.

3. All spot checks shall be included in the calibration required by 41.1(11)“d”(2) and at time intervals and under system conditions specified by a qualified expert.

4. Spot checks shall include acquisition of images obtained with the CT dosimetry phantom(s) using the same processing mode and CT conditions of operation as are used to perform calibrations required by 41.1(11)“d”(2). The images shall be retained, until a new calibration is performed, in two forms as follows: photographic copies of the images obtained from the image display device; and images stored in digital form on a storage medium compatible with the CT X-ray system.

5. Written records of the spot checks performed shall be maintained for inspection by the agency.

(4) Operating procedures.

1. The CT X-ray system shall not be operated except by a licensed practitioner or an individual who has been specifically trained in its operation in accordance with 641—subrule 42.2(9).

2. Information shall be available at the control panel regarding the operation and calibration of the system. Such information shall include the following: dates of the latest calibration and spot checks and the location within the facility where the results of those tests may be obtained; instructions on the use of the CT dosimetry phantom(s) including a schedule of spot checks appropriate for the system, allowable variations for the indicated parameters, and the results of at least the most recent spot checks conducted on the system; the distance in millimeters between the tomographic plane and the reference plane if a reference plane is utilized; and a current technique chart available at the control panel which specifies for each routine examination the CT conditions of operation and the number of scans per examination.

3. If the calibration or spot check of the CT X-ray system identifies that a system operating parameter has exceeded a tolerance established by the qualified expert, use of the CT X-ray system on patients shall be limited to those uses permitted by established written instructions of the qualified expert.

**41.1(12) X-ray machines used for mammography.** Rescinded IAB 4/8/98, effective 7/1/98.  
[ARC 8659B, IAB 4/7/10, effective 5/12/10]

**641—41.2(136C) Use of radionuclides in the healing arts.****41.2(1) Purpose and scope.**

*a.* This rule establishes requirements and provisions for the use of radionuclides in the healing arts and for issuance of licenses authorizing the medical use of this material. These requirements and provisions provide for the protection of the public health and safety. The requirements and provisions of this rule are in addition to, and not in substitution for, the applicable portions of 641—Chapters 38 to 40. The requirements and provisions of these rules apply to applicants and licensees subject to this rule unless specifically exempted.

*b.* All references to any Code of Federal Regulations (CFR) in this chapter are those in effect as of September 2, 2009.

**41.2(2) Definitions.** For the purpose of this chapter, the definitions of 641—Chapters 38 to 40 may also apply. As used in 41.2(136C), the following definitions apply:

*“Area of use”* means a portion of a physical structure that has been set aside for the purpose of receiving, using, or storing radioactive material.

*“Authorized medical physicist”* means an individual who:

- a.* Meets the requirements of 41.2(74) and 41.2(77); or
- b.* Is identified as an authorized medical physicist or teletherapy physicist on:
  1. A specific medical use license issued by this agency, the NRC, or an agreement state;
  2. A medical use permit issued by an NRC master material licensee;
  3. A permit issued by an NRC or agreement state broad scope medical use licensee; or
  4. A permit issued by an NRC master material license broad scope medical use permittee.

*“Authorized nuclear pharmacist”* means a pharmacist who:

- a.* Has met the appropriate requirements of 41.2(77) and 41.2(78), or before May 3, 2006, meets the requirements in 10 CFR 35.980(a) and 10 CFR 35.59; or:
- b.* Is identified as an authorized nuclear pharmacist on:
  1. A specific license issued by the agency, NRC or agreement state that authorizes medical use or the practice of nuclear pharmacy;
  2. A permit issued by an NRC master material licensee that authorizes medical use or the practice of nuclear pharmacy;
  3. A permit issued by the NRC or agreement state broad scope medical use licensee that authorizes medical use or the practice of nuclear pharmacy; or
  4. A permit issued by an NRC master material license broad scope medical use permittee that authorizes medical use or the practice of nuclear pharmacy; or
- c.* Is identified as an authorized nuclear pharmacist by a commercial nuclear pharmacy that has been authorized to identify authorized nuclear pharmacists; or
- d.* Is designated as an authorized nuclear pharmacist in accordance with 641—39.4(29)“j”(2)“3.”

*“Authorized user”* means a physician, dentist, or podiatrist who has met the appropriate requirements of 41.2(67)“a,” 41.2(68)“a,” 41.2(69)“a,” 41.2(70)“a,” 41.2(72)“a,” 41.2(73)“a,” 41.2(81)“a,” or 41.2(82)“a,” or before May 3, 2006, meets the requirements in 10 CFR 35.910(a), 35.920(a), 35.930(c), 35.940(a), 35.950(a), or 35.960(a) and 10 CFR 35.59; or who is identified on:

1. A current Iowa, NRC, or agreement state license that authorizes the medical use of radioactive material;
2. A permit issued by an NRC master material licensee that is authorized to permit the medical use of radioactive material;
3. A permit issued by an NRC, agreement state, or Iowa-specific licensee of broad scope that is authorized to permit medical use of radioactive material; or
4. A permit issued by an NRC master material license broad scope permittee that is authorized to permit medical use of radioactive material.

*“Dedicated check source”* means a radioactive source that is used to ensure the constant operation of a radiation detection or measurement device over several months or years. This source may also be used for other purposes.

*“Management”* means the chief executive officer or that individual’s designee.

*“Medical institution”* means an organization in which several medical disciplines are practiced.

*“Mobile nuclear medicine service”* means the transportation and medical use of radioactive material.

*“Output”* means the exposure rate, dose rate, or a quantity related in a known manner to these rates from a teletherapy unit for a specified set of exposure conditions.

*“Pharmacist”* means an individual licensed by a state or territory of the United States, the District of Columbia, or the Commonwealth of Puerto Rico to practice pharmacy.

*“Radiation safety officer”* means an individual who, in addition to the definition in 641—38.2(136C), meets the requirements of 41.2(77) and 41.2(65)“a,” or 41.2(65)“c”(1), or before May 3, 2006, meets the requirements in 10 CFR 35.900(a) and 10 CFR 35.59; or is identified as a radiation safety officer on a specific medical use license issued by Iowa, the NRC, or agreement state or a medical use permit issued by an NRC master material licensee.

*“Teletherapy physicist”* means an individual identified as the qualified teletherapy physicist on an agency license.

*“Unit dosage”* means a dosage prepared for medical use for administration as a single dosage to a patient or human research subject without any further manipulation of the dosage after it is initially prepared.

*“Visiting authorized user”* means an authorized user who is not identified on the license of the licensee being visited.

**41.2(3) License required.**

a. No person shall manufacture, produce, acquire, receive, possess, use, or transfer radioactive material for medical use except in accordance with a specific license issued pursuant to these rules.

b. Unless prohibited by license condition, an individual may receive, possess, use, or transfer radioactive material in accordance with these rules under the supervision of an authorized user as provided in 41.2(11).

c. An individual may prepare unsealed radioactive material for medical use in accordance with these rules under the supervision of an authorized nuclear pharmacist or authorized user as provided in 41.2(11) unless prohibited by license condition.

d. A licensee may conduct research involving human subjects using radioactive material provided that the research is conducted, funded, supported, or regulated by another federal agency which has implemented the Federal Policy for the Protection of Human Subjects. Otherwise, a licensee shall apply for and receive approval of a specific amendment to its license before conducting such research. Both types of licensees shall, at a minimum, obtain informed consent from the human subjects and obtain prior review and approval of the research activities by an Institutional Review Board in accordance with the meaning of these terms as defined and described in the Federal Policy for the Protection of Human Subjects.

Nothing in this subrule relieves the licensee from complying with applicable FDA, federal, and other state requirements governing radioactive drugs or devices.

e. An applicant that satisfies the requirements of 641—paragraph 39.4(28)“b” may apply for a Type A specific license of broad scope.

**41.2(4) License amendments.** A licensee shall apply for and receive a license amendment:

a. Before using radioactive material for a method or type of medical use not permitted by the license issued under this rule;

b. Before permitting anyone, except a visiting authorized user described in 41.2(12), to work as an authorized user or authorized nuclear pharmacist under the license;

c. Before changing a radiation safety officer or teletherapy physicist;

d. Before receiving radioactive material in excess of the amount authorized on the license;

e. Before adding to or changing the address or addresses of use identified in the application or on the license; and

f. Before changing statements, representations, and procedures which are incorporated into the license.

**41.2(5) Notifications.**

a. A licensee shall provide to the agency a copy of the board certification, the NRC or agreement state license, or the permit issued by a licensee of broad scope for each individual no later than 30 days after the date that the licensee permits the individual to work as a visiting authorized user or a visiting authorized nuclear pharmacist.

b. A licensee shall notify the agency by letter no later than 30 days after:

(1) An authorized user, an authorized nuclear pharmacist, radiation safety officer, or teletherapy physicist permanently discontinues performance of duties under the license or has a name change; or

(2) The licensee's mailing address changes.

c. The licensee shall mail the documents required in this subrule to the Iowa Department of Public Health, Des Moines, Iowa.

d. Exemptions regarding Type A specific licenses of broad scope. A licensee possessing a Type A specific license of broad scope for medical use is exempt from the following:

(1) The provision of 41.2(4) "b";

(2) The provisions of 41.2(4) "e" regarding additions to or changes in the areas of use only at the addresses specified in the license;

(3) The provision of 41.2(5) "a";

(4) The provisions of 41.2(5) "b"(1) for authorized user or an authorized nuclear pharmacist.

**41.2(6) Maintenance of records.**

a. Each record required by this rule must be legible throughout the retention period specified by each subrule. The record may be original or reproduced copy or a microform, provided that the copy or microform is authenticated by authorized personnel and that the microform is capable of producing a clear copy throughout the required retention period.

b. The record may also be stored on electronic media with the capability for producing legible, accurate, and complete records during the required retention period. Records such as letters, drawings, and specifications must include all pertinent information such as stamps, initials, and signatures.

c. The licensee shall maintain adequate safeguards against tampering with and loss of records specified in 41.2(6) "a" and "b."

**41.2(7) ALARA program.**

a. Each licensee shall develop and implement a written program to maintain radiation doses and releases of radioactive material in effluents to unrestricted areas as low as reasonably achievable in accordance with 641—subrule 40.1(3).

b. To satisfy the requirement of 41.2(7) "a":

(1) The management, radiation safety officer, and all authorized users shall participate in the establishment, implementation, and operation of the program as required by these rules or the radiation safety committee; or

(2) For licensees that are not medical institutions, management and all authorized users shall participate in the program as required by the radiation safety officer.

c. The ALARA program shall include an annual review by the radiation safety committee for licensees that are medical institutions, or management and the radiation safety officer for licensees that are not medical institutions, of summaries of the types and amounts of radioactive material used, occupational dose reports, and continuing education and training for all personnel who work with or in the vicinity of radioactive material. The purpose of the review is to ensure that individuals make every reasonable effort to maintain occupational doses, doses to the general public, and releases of radioactive material as low as reasonably achievable, taking into account the state of technology, and the cost of improvements in relation to benefits.

d. The licensee shall retain a current written description of the ALARA program for the duration of the license. The written description shall include:

(1) A commitment by management to keep occupational doses as low as reasonably achievable;

(2) A requirement that the radiation safety officer brief management once each year on the radiation safety program;

(3) Personnel exposure investigational levels as established in accordance with 41.2(9) "b"(8) that, when exceeded, will initiate an investigation by the radiation safety officer of the cause of the exposure; and

(4) Personnel exposure investigational levels that, when exceeded, will initiate a prompt investigation by the radiation safety officer of the cause of the exposure and a consideration of actions that might be taken to reduce the probability of recurrence.

**41.2(8) Radiation safety officer:**

a. A licensee shall appoint a radiation safety officer responsible for implementing the radiation safety program. The licensee, through the radiation safety officer, shall ensure that radiation safety activities are being performed in accordance with approved procedures and regulatory requirements in the daily operation of the licensee's radioactive material program.

b. The radiation safety officer shall:

(1) Investigate overexposures, accidents, spills, losses, thefts, unauthorized receipts, uses, transfers, and disposals, and other deviations from approved radiation safety practice and implement corrective actions as necessary;

(2) Implement written policy and procedures for:

1. Authorizing the purchase of radioactive material;
2. Receiving and opening packages of radioactive material;
3. Storing radioactive material;
4. Keeping an inventory record of radioactive material;
5. Using radioactive material safely;
6. Taking emergency action if control of radioactive material is lost;
7. Performing periodic radiation surveys;
8. Performing checks and calibrations of survey instruments and other safety equipment;
9. Disposing of radioactive material;
10. Training personnel who work in or frequent areas where radioactive material is used or stored;

and

11. Keeping a copy of all records and reports required by the agency rules, a copy of these rules, a copy of each licensing request and license and amendments, and the written policy and procedures required by the rules; and

(3) For medical use not sited at a medical institution, approve or disapprove radiation safety program changes with the advice and consent of management prior to submittal to the agency for licensing action; or

(4) For medical use sited at a medical institution, assist the radiation safety committee in the performance of its duties.

**41.2(9) Radiation safety committee.** Each medical institution licensee shall establish a radiation safety committee to oversee the use of radioactive material.

a. The committee shall meet the following administrative requirements:

(1) Membership must consist of at least three individuals and shall include an authorized user of each type of use permitted by the license, the radiation safety officer, a representative of the nursing service, and a representative of management who is neither an authorized user nor a radiation safety officer. Other members may be included as the licensee deems appropriate.

(2) The committee shall meet at least once each calendar quarter.

(3) To establish a quorum and to conduct business, one-half of the committee's membership shall be present, including the radiation safety officer and the management's representative.

(4) The minutes of each radiation safety committee meeting shall include:

1. The date of the meeting;
2. Members present;
3. Members absent;
4. Summary of deliberations and discussions;
5. Recommended actions and the numerical results of all ballots; and
6. Document any reviews required in 41.2(7) "c" and 41.2(9) "b."

(5) The committee shall provide each member with a copy of the meeting minutes and retain one copy until the agency authorizes its disposition.

*b.* To oversee the use of licensed material, the committee shall:

(1) Be responsible for monitoring the institutional program to maintain occupational doses as low as reasonably achievable;

(2) Review:

1. Review, on the basis of safety and with regard to the training and experience standards of this rule, and approve or disapprove any individual who is to be listed as an authorized user, an authorized nuclear pharmacist, the radiation safety officer, or teletherapy physicist before submitting a license application or request for amendment or renewal;

2. Review on the basis of the board certification, the license, or the permit identifying an individual, and approve or disapprove any individual prior to allowing that individual to work as an authorized user or authorized nuclear pharmacist.

(3) Review on the basis of safety and approve or disapprove each proposed method of use of radioactive material;

(4) Review on the basis of safety, and approve with the advice and consent of the radiation safety officer and the management representative, or disapprove procedures and radiation safety program changes prior to submittal to the agency for licensing action;

(5) Review quarterly, with the assistance of the radiation safety officer, occupational radiation exposure records of all personnel working with radioactive material;

(6) Review quarterly, with the assistance of the radiation safety officer, all incidents involving radioactive material with respect to cause and subsequent actions taken;

(7) Review annually, with the assistance of the radiation safety officer, the radioactive material program; and

(8) Establish a table of investigational levels for occupational dose that, when exceeded, will initiate investigations and considerations of action by the radiation safety officer.

**41.2(10) *Authority and responsibilities for the radiation protection program.***

*a.* In addition to the radiation protection program requirements of 641—40.10(136C), a licensee's management shall approve in writing:

(1) Requests for a license application, renewal, or amendment before submittal to this agency;

(2) Any individual before allowing that individual to work as an authorized user, authorized nuclear pharmacist, or authorized medical physicist; and

(3) Radiation protection program changes that do not require a license amendment.

*b.* A licensee's management shall appoint a radiation safety officer, who agrees, in writing, to be responsible for implementing the radiation protection program. The licensee, through the radiation safety officer, shall ensure that the radiation safety activities are being performed in accordance with licensee-approved procedures and regulatory requirements.

*c.* For up to 60 days each year, a licensee may permit an authorized user or an individual qualified to be a radiation safety officer under 41.2(65) or 41.2(75) to function as a temporary radiation safety officer to perform the functions of radiation safety officer, as provided in 41.2(10) "g," if the licensee takes the actions required in 41.2(10) "b," "e," "g," and "h" and notifies this agency in accordance with 41.2(5).

*d.* A licensee may simultaneously appoint more than one temporary radiation safety officer in accordance with 41.2(10) "c" if needed to ensure that the licensee has a temporary radiation safety officer who satisfies the requirements to be a radiation safety officer for each of the different types of by-product material permitted on the license.

*e.* A licensee shall establish the authority, duties, and responsibilities of the radiation safety officer in writing.

*f.* Licensees that are authorized for two or more different types of uses of radioactive materials or two or more types of units under this rule shall establish a radiation safety committee to oversee all uses of radioactive material permitted by the license.

g. A licensee shall provide the radiation safety officer sufficient authority, organizational freedom, time, resources, and management prerogative to:

- (1) Identify radiation safety problems;
- (2) Initiate, recommend, or provide corrective solutions;
- (3) Verify implementation of corrective actions; and
- (4) Stop unsafe operations.

h. A licensee shall retain a record of actions taken under 41.2(10) in accordance with 641—40.80(136C).

**41.2(11) Supervision.**

a. A licensee that permits the receipt, possession, use, or transfer of radioactive material by an individual under the supervision of an authorized user as allowed by 41.2(3) shall, in addition to the requirements in 641—40.111(136C):

(1) Instruct the supervised individual in the licensee's written radiation protection procedures, written directive procedures, rules of this chapter, and license conditions appropriate to that individual's use of radioactive material;

(2) Review the supervised individual's use of radioactive material, provide reinstruction as needed and review records kept to reflect this use;

(3) Require the authorized user to be immediately available to communicate with the supervised individual;

(4) Require the authorized user to be able to be physically present and available to the supervised individual on one hour's notice (the supervising authorized user need not be present for each use of radioactive material); and

(5) Require that only those individuals certified and issued a current permit to practice in accordance with 641—Chapter 42 as a nuclear medicine technologist or a radiation therapist, as applicable, or an Iowa-licensed physician and designated by the authorized user, shall be permitted to administer radionuclides (sealed sources only for radiation therapists) or radiation to patients or human research subjects. For a nuclear medicine technologist or a radiation therapist, the individual's permit to practice shall be posted in the immediate vicinity of the general work area and be visible to the public.

b. A license shall require the supervised individual receiving, possessing, using or transferring radioactive material under 41.2(3) to:

(1) Follow the instructions of the supervising authorized user for the medical uses of by-product material;

(2) Follow the written radiation protection and written directive procedures established by the radiation safety officer; and

(3) Comply with these rules and the license conditions with respect to the use of radioactive material.

c. A licensee that permits the preparation of radioactive material for medical use by an individual under the supervision of an authorized nuclear pharmacist or physician who is an authorized user, as allowed by 41.2(3) "c," shall, in addition to the requirements in 641—40.111(136C):

(1) Instruct the supervised individual in the preparation of radioactive material for medical use and the principles of and procedures for radiation safety and in the licensee's written procedures for maintaining written directives, as appropriate to that individual's use of radioactive material;

(2) Require the supervised individual to follow the instructions of the supervising authorized user or authorized nuclear pharmacist regarding the preparation of radioactive material for medical use, written radiation protection procedures established by the licensee, the regulations of this chapter and license conditions; and

(3) Require the supervising authorized nuclear pharmacist or physician who is an authorized user to periodically review the work of the supervised individual as it pertains to preparing radioactive material for medical use and the records kept to reflect that work.

d. A licensee that supervises an individual is responsible for the acts and omissions of the supervised individual.

**41.2(12) *Visiting authorized user and visiting authorized nuclear pharmacist.***

a. A licensee may permit any visiting authorized user or visiting authorized nuclear pharmacist to use licensed material for medical use under the terms of the licensee's license for 60 days each year if:

(1) The visiting authorized user or visiting authorized nuclear pharmacist has the prior written permission of the licensee's management and, if the use occurs on behalf of an institution, the institution's radiation safety committee;

(2) The licensee has a copy of an agency, agreement state, licensing state or U.S. Nuclear Regulatory Commission license that identifies the visiting authorized user or visiting authorized nuclear pharmacist by name as an authorized user for medical use; and

(3) Only those procedures for which the visiting authorized user or visiting authorized nuclear pharmacist is specifically authorized by an agency (agreement state, licensing state or U.S. Nuclear Regulatory Commission) license are performed by that individual.

b. A licensee need not apply for a license amendment in order to permit a visiting authorized user or visiting authorized nuclear pharmacist to use licensed material as described in 41.2(12) "a."

c. A licensee shall retain copies of the records specified in 41.2(12) "a" for five years from the date of the last visit.

**41.2(13) *Mobile nuclear medicine service administrative requirements.***

a. The agency will only license mobile nuclear medicine services in accordance with this rule and other applicable requirements of these rules.

b. Mobile nuclear medicine service licensees shall retain for the duration of service a letter signed by the management of each location where services are rendered that authorizes use of radioactive material and clearly delineates the authority of the licensee and client.

c. If a mobile nuclear medicine service provides services that the client is also authorized to provide, the client is responsible for ensuring that services are conducted in accordance with the rules in this chapter while the mobile nuclear medicine service is under the client's direction.

d. A mobile nuclear medicine service shall not have radioactive material delivered directly from the manufacturer or the distributor to the client's address of use.

e. Mobile nuclear medicine service licensees shall also perform the following:

(1) Check instruments used to measure the activity of unsealed radioactive material for proper function before use at each client's address or on each day of use, whichever is more frequent. At a minimum, the check for proper function required by this rule must include a constancy check;

(2) Check survey instruments for proper operation with a dedicated check source before use at each client's address;

(3) Before leaving a client's address, survey all areas of use to ensure compliance with the requirements of 641—Chapters 40 and 41.

**41.2(14) *Records and reports of misadministrations and reportable medical events.***

a. When a misadministration or reportable medical event, as defined in 641—38.2(136C), occurs, the licensee shall notify the agency by telephone. The licensee shall also notify the referring physician of the affected patient or human research subject and the patient or human research subject or a responsible relative or guardian, unless the referring physician agrees to inform the patient or human research subject or believes, based on medical judgment, that telling the patient or human research subject or the patient's or human research subject's responsible relative or guardian would be harmful to one or the other, respectively. These notifications must be made within 24 hours after the licensee discovers the misadministration or reportable medical event. If the referring physician, patient or human research subject, or the patient's or human research subject's responsible relative or guardian cannot be reached within 24 hours, the licensee shall notify them as soon as practicable. The licensee is not required to notify the patient or human research subject or the patient's or human research subject's responsible relative or guardian without first consulting the referring physician; however, the licensee shall not delay medical care for the patient or human research subject because of this notification requirement including remedial care as a result of the misadministration or reportable medical event because of any delay in notification.

b. Written reports.

(1) The licensee shall submit a written report to the agency within 15 days after discovery of the misadministration or reportable medical event. The written report must include the licensee's name, the prescribing physician's name, a brief description of the event, why the event occurred, the effect on the patient or the human research subject, what improvements are needed to prevent recurrence, actions taken to prevent recurrence, whether the licensee notified the patient or the human research subject or the patient's or the human research subject's responsible relative or guardian (this individual will subsequently be referred to as "the patient or the human research subject"), and if not, why not, and if the patient or the human research subject was notified, what information was provided to that individual. The report must not include the patient's or the human research subject's name or other information that could lead to identification of the patient or the human research subject.

(2) If the patient or the human research subject was notified, the licensee shall also furnish, within 15 days after discovery of the misadministration or reportable medical event, a written report to the patient or the human research subject and the referring physician by sending either:

1. A copy of the report that was submitted to the agency; or

2. A brief description of both the event and the consequences as they may affect the patient or the human research subject, provided a statement is included that the report submitted to the agency can be obtained from the licensee.

c. Rescinded IAB 4/4/01, effective 5/9/01.

d. Each licensee shall retain a record of each misadministration for ten years and each reportable medical event for three years. The record shall contain the names of all individuals involved in the event, including the physician, allied health personnel, the patient or human research subject, and the patient's or human research subject's referring physician, the patient's or human research subject's social security number or identification number if one has been assigned, a brief description of the event, why it occurred, the effect on the patient or human research subject, what improvements are needed to prevent recurrence, and the action taken, if any, to prevent recurrence.

e. Aside from the notification requirement, nothing in 41.2(14) "a" to 41.2(14) "d" shall affect any rights or duties of licensees and physicians in relation to each other, patients or human research subjects, or responsible relatives or guardians.

f. Report and notification of a dose to an embryo/fetus or a nursing child.

(1) A licensee shall report any dose to an embryo/fetus that is greater than 5 rem (50 mSv) dose equivalent that is a result of an administration of by-product material or radiation from by-product material to a pregnant individual unless the embryo/fetus was specifically approved, in advance, by the authorized user.

(2) A licensee shall report any dose to a nursing child that is a result of an administration of by-product material to a breast-feeding individual that:

1. Is greater than 5 rem (50 mSv) total effective dose equivalent; or

2. Has resulted in unintended permanent functional damage to an organ or a physiological system of the child, as determined by a physician.

(3) The licensee shall notify this agency by telephone no later than the next calendar day after a dose to the embryo/fetus or nursing child that requires a report in 41.2(14) "f"(1) or (2).

(4) The licensee shall submit a written report to the agency within 15 days after discovery of a dose to the embryo/fetus or nursing child that requires a report in 41.2(14) "f"(1) or (2).

1. The written report must include:

- The licensee's name;
- The name of the prescribing physician;
- A brief description of the event;
- Why the event occurred;
- The effect, if any, on the embryo/fetus or the nursing child;
- What actions, if any, have been taken or are planned to prevent recurrence; and
- Certification that the licensee notified the pregnant individual or mother (or the mother's or child's responsible relative or guardian), and if not, why not.

2. The report must not contain the individual's or child's name or any other information that could lead to identification of the individual or child.

(5) The licensee shall provide notification of the event to the referring physician and also notify the pregnant individual or mother, both hereafter referred to as the mother, no later than 24 hours after discovery of an event that would require reporting under 41.2(14) "f"(1) or (2), unless the referring physician personally informs the licensee either that the physician will inform the mother or that, based on medical judgment, telling the mother would be harmful. The licensee is not required to notify the mother without first consulting with the referring physician. If the referring physician or mother cannot be reached within 24 hours, the licensee shall make the appropriate notifications as soon as possible thereafter. The licensee may not delay any appropriate medical care for the embryo/fetus or for the nursing child, including any necessary remedial care as a result of the event, because of any delay in notification. To meet the requirements of this paragraph, the notification may be made to the mother's or child's responsible relative or guardian instead of the mother. If a verbal notification is made, the licensee shall inform the mother, or the mother's or child's responsible relative or guardian, that a written description of the event can be obtained from the licensee upon request. The licensee shall provide such a written description if requested.

(6) A licensee shall:

1. Annotate a copy of the report provided to the agency with the:

- Name of the pregnant individual or the nursing child who is the subject of the event; and
- Social security number or other identification number, if one has been assigned, of the pregnant individual or the nursing child who is the subject of the event; and

2. Provide a copy of the annotated report to the referring physician, if other than the licensee, no later than 15 days after the discovery of the event.

**41.2(15) Suppliers.** A licensee shall use for medical use only:

a. Radioactive material manufactured, labeled, packaged, and distributed in accordance with a license issued pursuant to these rules or the equivalent regulations of another agreement state, a licensing state or the U.S. Nuclear Regulatory Commission; and

b. Reagent kits that have been manufactured, labeled, packaged, and distributed in accordance with an approval issued by the U.S. Food and Drug Administration;

c. Teletherapy sources manufactured and distributed in accordance with a license issued pursuant to these rules, or the equivalent regulations of another agreement state, a licensing state, or the U.S. Nuclear Regulatory Commission.

**41.2(16) Quality control of imaging equipment.** Each licensee shall establish written quality control procedures for all equipment used to obtain images from radionuclide studies. As a minimum, the procedures shall include quality control procedures recommended by equipment manufacturers or procedures which have been approved by the agency. The licensee shall conduct quality control procedures in accordance with written procedures.

**41.2(17) Possession, use, calibration, and check of dose calibrators.**

a. A medical use licensee authorized to administer radiopharmaceuticals shall possess a dose calibrator and use it to measure the amount of activity administered to each patient or human research subject.

b. A licensee shall:

(1) Check each dose calibrator for constancy with a dedicated check source at the beginning of each day of use. To satisfy the requirement of this section, the check shall be done on frequently used settings with a sealed source of not less than 10 microcuries (370 kBq) of radium-226 or 50 microcuries (1.85 MBq) of any other photon-emitting radionuclide with a half-life greater than 90 days;

(2) Test each dose calibrator for accuracy upon installation and at intervals not to exceed 12 months thereafter by assaying at least two sealed sources containing different radionuclides, the activity of which the manufacturer has determined within 5 percent of the stated activity, with minimum activity of 10 microcuries (370 kBq) for radium-226 and 50 microcuries (1.85 MBq) for any other photon-emitting radionuclide, and at least one of which has a principal photon energy between 100 keV and 500 keV;

(3) Test each dose calibrator for linearity upon installation and at intervals not to exceed three months thereafter over the range of use between 30 microcuries (1.1 megabecquerels) and the highest dosage that will be administered; and

(4) Test each dose calibrator for geometry dependence upon installation over the range of volumes and volume configurations for which it will be used. The licensee shall keep a record of this test for the duration of the use of the dose calibrator.

c. A licensee shall mathematically correct dosage readings for any geometry or linearity error that exceeds 10 percent if the dosage is greater than 10 microcuries (370 kBq) and shall repair or replace the dose calibrator if the accuracy or constancy error exceeds 10 percent.

d. A licensee shall also perform checks and tests required by 41.2(17) "b" following adjustment or repair of the dose calibrator.

e. A licensee shall retain a record of each check and test required by 41.2(17) for three years. The records required by 41.2(17) "b" shall include:

(1) For 41.2(17) "b"(1), the model and serial number of the dose calibrator, the identity and calibrated activity of the radionuclide contained in the check source, the date of the check, the activity measured, the instrument settings, and the initials of the individual who performed the check;

(2) For 41.2(17) "b"(2), the model and serial number of the dose calibrator, the model and serial number of each source used and the identity of the radionuclide contained in the source and its activity, the date of the test, the results of the test, the instrument settings, the identity of the individual performing the test, and the signature of the radiation safety officer;

(3) For 41.2(17) "b"(3), the model and serial number of the dose calibrator, the calculated activities, the measured activities, the date of the test, the identity of the individual performing the test, and the signature of the radiation safety officer; and

(4) For 41.2(17) "b"(4), the model and serial number of the dose calibrator, the configuration calibrated activity of the source measured, the activity of the source, the activity measured and the instrument setting for each volume measured, the date of the test, the identity of the individual performing the test, and the signature of the radiation safety officer.

**41.2(18) Calibration and check of survey instruments.**

a. A licensee shall ensure that the survey instruments used to show compliance with this rule have been calibrated before first use, annually, and following repair.

b. To satisfy the requirements of 41.2(18) "a," the licensee shall:

(1) Calibrate all required scale readings up to 1000 millirems (10 mSv) per hour with a radiation source;

(2) For each scale that shall be calibrated, calibrate two readings separated by at least 50 percent of scale rating; and

(3) Conspicuously note on the instrument the apparent dose rate from a dedicated check source as determined at the time of calibration, and the date of calibration.

c. To satisfy the requirements of 41.2(18) "b," the licensee shall consider a point as calibrated if the indicated exposure rate differs from the calculated exposure rate by not more than 20 percent and shall conspicuously attach a correction chart or graph to the instrument. A licensee may not use survey instruments if the difference between the indicated exposure rate and the calculated exposure rate is more than 20 percent.

d. A licensee shall check each survey instrument for proper operation with the dedicated check source before each use. The licensee is not required to keep records of these checks.

e. The licensee shall retain a record of each calibration required in 41.2(18) "a" for three years. The record shall include:

(1) A description of the calibration procedure; and

(2) A description of the source used and the certified dose rates from the source, the rates indicated by the instrument being calibrated, the correction factors deduced from the calibration data, the signature of the individual who performed the calibration, and the date of calibration.

f. To meet the requirements of 41.2(18) "a," "b," and "c," the licensee may obtain the services of individuals licensed by the agency, the U.S. Nuclear Regulatory Commission, an agreement state, or

a licensing state to perform calibrations of survey instruments. Records of calibrations which contain information required by 41.2(18) “e” shall be maintained by the licensee.

g. Rescinded IAB 8/1/07, effective 9/5/07.

**41.2(19) Assay of radiopharmaceutical dosages.** A licensee shall:

a. Assay, prior to medical use, the activity of each radiopharmaceutical dosage that contains more than 30 microcuries (1.1 megabecquerels) of a photon-emitting radionuclide;

b. Assay, before medical use, the activity of each radiopharmaceutical dosage of a photon-emitting radionuclide to verify that the dosage does not exceed 30 microcuries (1.1 MBq);

c. Measure, by direct measurement or by combination of measurements and calculations, the activity of each dosage of an alpha- or beta-emitting radionuclide prior to medical use, except for unit dosages obtained from a manufacturer or preparer licensed pursuant to 641—paragraph 39.4(29) “j” or equivalent NRC or agreement state requirements;

d. Not use a dosage if the dosage does not fall within the prescribed dosage range or if the dosage differs from the prescribed dosage by more than 20 percent unless otherwise directed by the authorized user; and

e. Retain a record of the assays required by 41.2(19) “a” for three years. To satisfy this requirement, the record shall contain the:

(1) Generic name, trade name, or abbreviation of the radiopharmaceutical, its lot number, and expiration dates and the radionuclide;

(2) Patient’s or human research subject’s name and identification number if one has been assigned;

(3) Prescribed dosage and activity of the dosage at the time of assay, or a notation that the total activity is less than 30 microcuries (1.1 megabecquerels);

(4) Date and time of the assay and administration; and

(5) Initials of the individual who performed the assay.

**41.2(20) Authorization for calibration and reference sources.** Any person authorized by 41.2(3) for medical use of radioactive material may receive, possess, and use the following radioactive material for check, calibration and reference use:

a. Sealed sources manufactured and distributed by persons specifically licensed pursuant to 641—Chapter 39 or equivalent provisions of the U.S. Nuclear Regulatory Commission, agreement state or licensing state and that do not exceed 15 millicuries (555 MBq) each;

b. Any radioactive material listed in 41.2(31) or 41.2(33) with a half-life of 100 days or less in individual amounts not to exceed 15 millicuries (555 MBq);

c. Any radioactive material listed in 41.2(31) or 41.2(33) with a half-life greater than 100 days in individual amounts not to exceed 200 microcuries (7.4 MBq) each; and

d. Technetium-99m in individual amounts not to exceed 50 millicuries (1.85 GBq).

**41.2(21) Requirements for possession of sealed sources and brachytherapy sources.**

a. A licensee in possession of any sealed source or brachytherapy source shall follow the radiation safety and handling instructions supplied by the manufacturer or equivalent instructions approved by the agency and shall maintain the instructions for the duration of source use in a legible form convenient to users.

b. A licensee in possession of a sealed source shall ensure that:

(1) The source is tested for leakage before its first use unless the licensee has a certificate from the supplier indicating that the source was tested within six months before transfer to the licensee; and

(2) The source is tested for leakage at intervals not to exceed six months or at intervals approved by the agency, another agreement state, a licensing state or the U.S. Nuclear Regulatory Commission.

c. To satisfy the leak test requirements of 41.2(21) “b,” the licensee shall ensure that:

(1) Leak tests are capable of detecting the presence of 0.005 microcurie (185 Bq) of radioactive material on the test sample or, in the case of radium, the escape of radon at the rate of 0.001 microcurie (37 Bq) per 24 hours;

(2) Test samples are taken from the source or from the surfaces of the device in which the source is mounted or stored on which radioactive contamination might be expected to accumulate; and

(3) Test samples are taken when the source is in the “off” position.

d. A licensee shall retain leak test records for five years. The records shall contain the model number, and serial number, if assigned, of each source tested, the identity of each source radionuclide and its estimated activity, the measured activity of each test sample expressed in microcuries (becquerels), a description of the method used to measure each test sample, the date of the test, and the signature of the radiation safety officer.

e. If the leak test reveals the presence of 0.005 microcurie (185 Bq) or more of removable contamination, the licensee shall:

(1) Immediately withdraw the sealed source from use and store it in accordance with the requirements of these rules; and

(2) File a report with the agency within five days of receiving the leak test results. The report shall describe the equipment involved, the model and serial number of the leaking source, the radionuclide and its estimated activity, the test results, the date of the test, and the action taken.

f. A licensee need not perform a leak test on the following sources:

(1) Sources containing only radioactive material with a half-life of less than 30 days;

(2) Sources containing only radioactive material as a gas;

(3) Sources containing 100 microcuries (3.7 MBq) or less of beta or photon-emitting material or 10 microcuries (370 kBq) or less of alpha-emitting material; [and]

(4) Seeds of iridium-192 encased in nylon ribbon; and

(5) Sources stored and not being used. The licensee shall, however, test each such source for leakage before any use or transfer unless it has been tested for leakage within six months before the date of use or transfer.

g. A licensee in possession of a sealed source or brachytherapy source shall conduct a physical inventory of all such sources at intervals not to exceed three months. The licensee shall retain each inventory record for five years. The inventory records shall contain the model number of each source, and serial number if one has been assigned, the identity of each source radionuclide and its estimated activity, the location of each source, date of the inventory, and the signature of the radiation safety officer.

h. A licensee in possession of a sealed source or brachytherapy source shall survey with a radiation survey instrument at intervals not to exceed three months all areas where such sources are stored. This does not apply to teletherapy sources in teletherapy units or sealed sources in diagnostic devices.

i. A licensee shall retain a record of each survey required in 41.2(21) "h" for three years. The record shall include the date of the survey, a sketch of each area that was surveyed, the measured dose rate at several points in each area expressed in millirems (microsieverts) per hour, the model number and serial number of the survey instrument used to make the survey, and the signature of the radiation safety officer.

**41.2(22) Syringe shields.**

a. A licensee shall keep syringes that contain radioactive material to be administered in a radiation shield.

b. Unless otherwise approved by this agency, a licensee shall require each individual who prepares or administers radiopharmaceuticals to use a syringe radiation shield unless the use of the shield is contraindicated for that patient or human research subject.

**41.2(23) Syringe labels.** Unless utilized immediately, a licensee shall conspicuously label each syringe, or syringe radiation shield that contains a syringe with a radiopharmaceutical, with the radiopharmaceutical name or its abbreviation, the type of diagnostic study or therapy procedure to be performed, or the patient's or human research subject's name.

**41.2(24) Vial shields.** A licensee shall require each individual preparing or handling a vial that contains a radiopharmaceutical to keep the vial in a vial radiation shield.

**41.2(25) Vial shield labels.** A licensee shall conspicuously label each vial radiation shield that contains a vial of a radiopharmaceutical with the radiopharmaceutical name or its abbreviation.

**41.2(26) Surveys for contamination and ambient radiation dose rate.**

a. A licensee shall survey with a radiation detection survey instrument at the end of each day of use all areas where radiopharmaceuticals are routinely prepared for use or administered.

b. A licensee shall survey with a radiation detection survey instrument at least once each week all areas where radiopharmaceuticals or radioactive wastes are stored.

c. A licensee shall conduct the surveys required by 41.2(26)“a” and “b” so as to be able to measure dose rates as low as 0.1 millirem (1  $\mu$ Sv) per hour.

d. A licensee shall establish dose rate action levels for the surveys required by 41.2(26)“a” and “b” and shall require that the individual performing the survey immediately notify the radiation safety officer if a dose rate exceeds an action level.

e. A licensee shall survey for removable contamination each day of use all areas where radiopharmaceuticals are routinely prepared for use or administered and each week where radioactive materials are stored.

f. A licensee shall conduct the surveys required by 41.2(26)“e” so as to be able to detect contamination on each wipe sample of 2000 disintegrations per minute (33.3 Bq).

g. A licensee shall establish removable contamination action levels for the surveys required by 41.2(26)“e” and shall require that the individual performing the survey immediately notify the radiation safety officer if contamination exceeds action levels.

h. A licensee shall retain a record of each survey required by 41.2(26)“a,” “b,” and “e” for two years. The record must include the date of the survey, a sketch of each area surveyed, action levels established for each area, the measured dose rate at several points in each area expressed in millirems (microsieverts) per hour or the removable contamination in each area expressed in disintegrations per minute (becquerels) per 100 square centimeters, the serial number and the model number of the instrument used to make the survey or analyze the samples, and the initials of the individual who performed the survey.

i. A licensee does not need to perform the surveys required in this subrule in an area where the patient or human research subject is confined and cannot be released under 41.2(27).

**41.2(27) Release of patients or human research subjects containing radiopharmaceuticals or permanent implants.**

a. The licensee may authorize the release from its control of any individual who has been administered unsealed radioactive materials or permanent implants containing radioactive material if the total effective dose equivalent to any other individual from exposure to the released individual is not likely to exceed 0.5 rem (5 mSv). (NUREG-1556, Vol. 9, “Consolidated Guidance About Materials Licenses: Program-Specific Guidance About Medical Licenses,” describes methods for calculating doses to other individuals and contains tables of activities not likely to cause doses exceeding 0.5 rem (5 mSv).)

b. The licensee shall provide the released individual with instructions, including written instructions, on actions recommended to maintain doses to other individuals as low as is reasonably achievable if the total effective dose equivalent to any other individual is likely to exceed 0.1 rem (1 mSv). If the dose to a breast-feeding infant or child could exceed 0.1 rem (1 mSv) assuming there were no interruption of breast feeding, the instructions shall also include:

- (1) Guidance on the interruption or discontinuation of breast feeding, and
- (2) Information on the consequences of failure to follow the guidance.

c. The licensee shall maintain a record of the basis for authorizing the release of an individual, for three years after the date of release, if the total effective dose equivalent is calculated by:

- (1) Using the retained activity rather than the activity administered,
- (2) Using an occupancy factor less than 0.25 at 1 meter,
- (3) Using the biological or effective half-life, or
- (4) Considering the shielding by tissue.

d. The licensee shall maintain a record for three years after the date of release that instructions were provided to a breast-feeding woman if the radiation dose to the infant or child from continued breast feeding could result in a total effective dose equivalent exceeding 0.5 rem (5 mSv). IDPH Regulatory Guide, Release of Patients Administered Radioactive Materials describes methods for calculating doses to other individuals and contains tables of activities not likely to cause doses exceeding 0.5 rem (5 mSv).

**41.2(28)** *Mobile nuclear medicine service technical requirements.* A licensee providing mobile nuclear medicine service shall:

- a.* Transport to each address of use only syringes or vials containing prepared radiopharmaceuticals or radiopharmaceuticals that are intended for reconstitution of radiopharmaceutical kits;
- b.* Bring into each location of use all radioactive material to be used and, before leaving, remove all unused radioactive material and associated radioactive waste;
- c.* Secure or keep under constant surveillance and immediate control all radioactive material when in transit or at a location of use;
- d.* Check survey instruments and dose calibrators as required in 41.2(17) “b”(1) “d” and “e” and 41.2(18) “d” and check all other transported equipment for proper function before medical use at each location of use;
- e.* Carry a calibrated survey meter in each vehicle that is being used to transport radioactive material and, before leaving a client location of use, survey all areas of radiopharmaceutical use with a radiation detection survey instrument to ensure that all radiopharmaceuticals and all associated radioactive waste have been removed; and
- f.* Retain a record of each survey required by 41.2(28) “e” for three years. The record must include the date of the survey, a plan of each area that was surveyed, the measured dose rate at several points in each area of use expressed in millirems (microsieverts) per hour, the model and serial number of the instrument used to make the survey, and the initials of the individual who performed the survey.

**41.2(29)** *Storage of volatiles and gases.*

- a.* A licensee shall store volatile radiopharmaceuticals and radioactive gases in the shippers’ radiation shield and container.
- b.* A licensee shall store and use a multidose container in a properly functioning fume hood.

**41.2(30)** *Decay-in-storage.*

- a.* A licensee may hold radioactive material with a physical half-life of less than or equal to 120 days for decay-in-storage before disposal without regard to its radioactivity if the licensee:
  - (1) Holds radioactive material for decay a minimum of ten half-lives;
  - (2) Monitors radioactive material at the container surface before disposal as ordinary trash and determines that its radioactivity cannot be distinguished from the background radiation level with a radiation detection survey instrument set on its most sensitive scale and with no interposed shielding;
  - (3) Removes or obliterates all radiation labels; and
  - (4) Separates and monitors each generator column individually with all radiation shielding removed to ensure that its contents have decayed to background radiation level before disposal.

*b.* For radioactive material disposed in accordance with 41.2(30) “a,” the licensee shall retain a record of each disposal for three years. The record must include the date of the disposal, the date on which the radioactive material was placed in storage, the radionuclides disposed, the model and serial number of the survey instrument used, the background dose rate, the radiation dose rate measured at the surface of each waste container, and the name of the individual who performed the disposal.

**41.2(31)** *Use of unsealed radioactive material for uptake, dilution, or excretion studies for which a written directive is not required.* Except for quantities that require a written directive under 41.2(87), a licensee may use for uptake, dilution, excretion and imaging studies any unsealed radioactive material prepared for medical use that is either:

- a.* Obtained from a manufacturer or preparer licensed pursuant to 641—paragraph 39.4(29) “j” or equivalent U.S. Nuclear Regulatory Commission or agreement state requirements; or
- b.* Prepared by:
  - (1) An authorized nuclear pharmacist,
  - (2) A physician who is an authorized user and who meets the requirements specified in 41.2(68) or 41.2(69) and has work experience in eluting generator systems appropriate for preparation of radioactive drugs for imaging and localization studies, measuring and testing the eluate for radionuclidic purity, and processing the eluate with reagent kits to prepare labeled radioactive drugs; or before May 3, 2006, who meets the requirements of 10 CFR 35.290; or

(3) An individual under the supervision, as specified in 41.2(11), of the authorized nuclear pharmacist in 41.2(31) “b”(1) or the physician who is an authorized user in 41.2(31) “b”(2); or

c. Obtained from and prepared by an NRC or agreement state licensee for use in research in accordance with Radioactive Drug Research Committee-approved protocol or an Investigational New Drug (IND) protocol accepted by FDA; or

d. Prepared by the licensee for use in research in accordance with a Radioactive Drug Research Committee-approved application or an Investigational New Drug (IND) protocol accepted by FDA.

**41.2(32) *Possession of survey instrument.*** A licensee authorized to use radioactive material for uptake, dilution, and excretion studies shall possess a portable radiation detection survey instrument capable of detecting dose rates over the range 0.1 millirem (1.0  $\mu$ Sv) per hour to 50 millirems (500  $\mu$ Sv) per hour. The instrument shall be operable and calibrated in accordance with 41.2(18).

**41.2(33) *Use of radiopharmaceuticals, generators, and reagent kits for imaging and localization studies.*** Except for the quantities that require written directive under 41.2(87), a licensee may use for imaging and localization studies any unsealed by-product material prepared for medical use that is either:

a. Obtained from a manufacturer or preparer licensed pursuant to 641—paragraph 39.4(29) “j” or equivalent NRC or agreement state requirements;

b. Prepared by an authorized nuclear pharmacist, a physician who is an authorized user and who meets the requirements specified in 41.2(68) or 41.2(69), or an individual under the supervision of either as specified in 41.2(11);

c. Obtained from and prepared by an NRC or agreement state licensee for use in research in accordance with Radioactive Drug Research Committee-approved protocol or an Investigational New Drug (IND) protocol accepted by FDA; or

d. Prepared by the licensee for use in research in accordance with a Radioactive Drug Research Committee-approved application or an Investigational New Drug (IND) protocol accepted by FDA.

**41.2(34) *Permissible molybdenum-99 concentration.***

a. A licensee shall not administer a radiopharmaceutical containing more than 0.15 microcurie of molybdenum-99 per millicurie of technetium-99m (0.15 kilobecquerel of molybdenum-99 per megabecquerel of technetium-99m).

b. A licensee preparing technetium-99m radiopharmaceuticals from molybdenum-99/technetium-99m generators shall measure the molybdenum-99 concentration in each eluate or extract.

c. A licensee who must measure molybdenum concentration shall retain a record of each measurement for three years. The record shall include, for each elution or extraction of technetium-99m, the measured activity of the technetium expressed in millicuries (megabecquerels), the measured activity of molybdenum expressed in microcuries (kilobecquerels), the ratio of the measures expressed as microcuries of molybdenum per millicurie of technetium (kilobecquerels of molybdenum per megabecquerel of technetium), the date of the test, and the initials of the individual who performed the test.

d. A licensee shall report immediately to the agency each occurrence of molybdenum-99 concentration exceeding the limits specified in 41.2(34) “a.”

**41.2(35) *Control of aerosols and gases.***

a. A licensee who administers radioactive aerosols or gases shall do so with a system that will keep airborne concentrations within the limits prescribed by 641—40.15(136C) and 641—40.26(136C) of these rules.

b. The system shall either be directly vented to the atmosphere through an air exhaust or provide for collection and decay or disposal of the aerosol or gas in a shielded container.

c. A licensee shall only administer radioactive gases in rooms that are at negative pressure compared to surrounding rooms.

d. Before receiving, using, or storing a radioactive gas, the licensee shall calculate the amount of time needed after a release to reduce the concentration in the area of use to the occupational limit listed in Appendix B of 641—Chapter 40. The calculation shall be based on the highest activity of gas handled in a single container and the measured available air exhaust rate.

e. A licensee shall post the time calculated in 41.2(35) “a” at the area of use and require that, in case of a gas spill, individuals evacuate the room until the posted time has elapsed.

f. A licensee shall check the operation of collection systems monthly and measure the ventilation rates in areas of use at intervals not to exceed six months. Records of these checks and measurements shall be maintained for three years.

g. A copy of the calculations required in 41.2(35) “d” shall be recorded and retained for the duration of the license.

**41.2(36) Possession of survey instruments.** A licensee authorized to use radioactive material for imaging and localization studies shall possess a portable radiation detection survey instrument capable of detecting dose rates over the range of 0.1 millirem (1  $\mu$ Sv) per hour to 50 millirems (500  $\mu$ Sv) per hour, and a portable radiation measurement survey instrument capable of measuring dose rates over the range of 1 millirem (10  $\mu$ Sv) per hour to 1000 millirems (10 mSv) per hour. The instruments shall be operable and calibrated in accordance with 41.2(18).

**41.2(37) Use of radiopharmaceuticals for therapeutic use or unsealed by-product material for which a written directive is required.** Material must be:

a. Obtained from a manufacturer or preparer licensed by the NRC or an agreement state to manufacture and prepare by-product material for medical use; or

b. Prepared by an authorized nuclear pharmacist, a physician who is an authorized user and who meets the requirements of 41.2(68) or 41.2(69), or an individual under the supervision of either as specified in 41.2(11); or

c. Obtained from and prepared by an NRC or agreement state licensee for use in research in accordance with the Investigational New Drug (IND) protocol accepted by FDA; or

d. Prepared by the licensee for use in research in accordance with an Investigational New Drug (IND) protocol accepted by FDA.

**41.2(38) Safety instruction.**

a. A licensee shall provide oral and written radiation safety instruction for all personnel caring for patients or human research subjects undergoing radiopharmaceutical therapy and hospitalized for compliance with 41.2(27). Refresher training shall be provided at intervals not to exceed one year.

b. To satisfy 41.2(38) “a,” the instruction shall describe the licensee’s procedures for:

(1) Patient or human research subject control;

(2) Visitor control;

(3) Contamination control;

(4) Waste control;

(5) Notification of the radiation safety officer, radiation safety officer designee, or authorized user in case of the patient’s or human research subject’s death or medical emergency; and

(6) Training requirements specified in 641—40.110(136C) and 40.116(136C) and adopted by reference and included herein.

c. A licensee shall keep a record of individuals receiving instruction required by 41.2(38) “a,” a description of the instruction, the date of instruction, and the name of the individual who gave the instruction. Such record shall be maintained for inspection by the agency for three years.

**41.2(39) Safety precautions.**

a. For each patient or human research subject receiving radiopharmaceutical therapy and hospitalized for compliance with 41.2(27), a licensee shall:

(1) Provide a private room with a private sanitary facility or a room, with a private sanitary facility, with another individual who also has received therapy with unsealed radioactive material and who also cannot be released under 41.2(27);

(2) Post the patient’s or human research subject’s door with a “Caution: Radioactive Material” sign and note on the door or on the patient’s or human research subject’s chart where and how long visitors may stay in the patient’s or human research subject’s room;

(3) Authorize visits by individuals under 18 years of age only on a case-by-case basis with the approval of the authorized user after consultation with the radiation safety officer;

(4) Promptly after administration of the dosage, measure the dose rates in contiguous restricted and unrestricted areas with a radiation measurement survey instrument to demonstrate compliance with the requirements of 641—subrule 40.26(1) which is adopted by reference and included herein and retain for three years a record of each survey that includes the time and date of the survey, a plan of the area or list of points surveyed, the measured dose rate at several points expressed in millirems ( $\mu\text{Sv}$ ) per hour, the instrument used to make the survey, and the initials of the individual who made the survey;

(5) Either monitor material and items removed from the patient's or human research subject's room to determine that any contamination cannot be distinguished from the natural background radiation level with a radiation detection survey instrument set on its most sensitive scale and with no interposed shielding, or handle these materials and items as radioactive waste;

(6) Provide the patient or human research subject with radiation safety guidance that will help to keep radiation dose to household members and the public as low as reasonably achievable before authorizing release of the patient or human research subject;

(7) Survey the patient's or human research subject's room and private sanitary facility for removable contamination with a radiation detection survey instrument before assigning another patient or human research subject to the room. The room must not be reassigned until removable contamination is less than 200 disintegrations per minute (3.33 Bq) per 100 square centimeters; and

(8) Measure the thyroid burden of each individual who helped prepare or administer a dosage of iodine-131 during the period which starts the first day after administration and ends the fourth day after administering the dosage, and retain for the period required by 641—paragraph 40.82(2)“c” which is adopted and included herein a record of each thyroid burden measurement, date of measurement, the name of the individual whose thyroid burden was measured, and the initials of the individual who made the measurements.

b. A licensee shall notify the radiation safety officer or the authorized user immediately if the patient or human research subject dies or has a medical emergency.

**41.2(40) Possession of survey instruments.** A licensee authorized to use radioactive material for radiopharmaceutical therapy shall possess a portable radiation detection survey instrument capable of detecting dose rates over the range of 0.1 millirem (1  $\mu\text{Sv}$ ) per hour to 50 millirems (500  $\mu\text{Sv}$ ) per hour, and a portable radiation measurement survey instrument capable of measuring dose rates over the range of 1 millirem (10  $\mu\text{Sv}$ ) per hour to 1000 millirems (10 mSv) per hour. The instruments shall be operable and calibrated in accordance with 41.2(18).

**41.2(41) Use of sealed sources for diagnosis.** A licensee shall use only sealed sources for diagnostic medical uses as approved in the Sealed Source and Device Registry.

**41.2(42) Availability of survey instrument.** A licensee authorized to use radioactive material as a sealed source for diagnostic purposes shall have available for use a portable radiation detection survey instrument capable of detecting dose rates over the range of 0.1 millirem (1  $\mu\text{Sv}$ ) per hour to 50 millirems (500  $\mu\text{Sv}$ ) per hour or a portable radiation measurement survey instrument capable of measuring dose rates over the range of 1 millirem (10  $\mu\text{Sv}$ ) per hour to 1000 millirems (10 mSv) per hour. The instrument shall be operable and calibrated in accordance with 41.2(18).

**41.2(43) Use of sources for brachytherapy.** A licensee shall use only brachytherapy sources for therapeutic medical uses:

a. As approved in the Sealed Source and Device Registry; or

b. In research in accordance with an active Investigational Device Exemption (IDE) application accepted by the FDA provided the requirements of 41.2(15) are met.

**41.2(44) Safety instruction.**

a. The licensee shall provide oral and written radiation safety instruction to all personnel caring for a patient or human research subject receiving implant therapy. Refresher training shall be provided at intervals not to exceed one year.

b. To satisfy 41.2(44)“a,” the instruction shall describe:

- (1) Size and appearance of the brachytherapy sources;
- (2) Safe handling and shielding instructions in case of a dislodged source;
- (3) Procedures for patient or human research subject control;

(4) Procedures for visitor control, to include routine visitation of hospitalized individuals in accordance with 641—40.26(136C) and visitation authorized in accordance with 641—40.26(136C);

(5) Procedures for notification of the radiation safety officer, radiation safety officer designee, or authorized user if the patient or human research subject dies or has a medical emergency; and

(6) Training requirements specified in 641—40.110(136C) and 40.116(136C) as adopted by reference and included herein.

c. A licensee shall maintain a record of individuals receiving instruction required by 41.2(44) “a,” a description of the instruction, the date of instruction, and the name of the individual who gave the instruction for three years.

**41.2(45) *Safety precautions.***

a. For each patient or human research subject receiving implant therapy a licensee shall:

(1) Not place the patient or human research subject in the same room with a patient who is not receiving radiation therapy unless the licensee can demonstrate compliance with the requirement of 641—40.26(136C) as adopted by reference and included herein at a distance of 1 meter from the implant;

(2) Post the patient’s or human research subject’s door with a “Caution: Radioactive Materials” sign and note on the door or the patient’s or human research subject’s chart where and how long visitors may stay in the patient’s or human research subject’s room;

(3) Authorize visits by individuals under 18 years of age only on a case-by-case basis with the approval of the authorized user after consultation with the radiation safety officer;

(4) Promptly after implanting the sources, survey the dose rates in contiguous restricted and unrestricted areas with a radiation measurement survey instrument to demonstrate compliance with 641—40.26(136C) as adopted by reference and included herein; and retain for three years a record of each survey that includes the time and date of the survey, a sketch of the area or list of points surveyed, the measured dose rate at several points expressed in millirems (mSv) per hour, the instrument used to make the survey, and the initials of the individual who made the survey;

(5) Provide the patient or human research subject with radiation safety guidance that will help keep the radiation dose to household members and the public as low as reasonably achievable before releasing the patient or human research subject if the patient or human research subject was administered a permanent implant; and

(6) Have applicable emergency response equipment available near each treatment room to respond to a source dislodged from the patient or lodged within the patient following removal of the source applicators.

b. A licensee shall notify the radiation safety officer, radiation safety officer designee, or authorized user immediately if the patient or human research subject dies or has a medical emergency.

**41.2(46) *Brachytherapy sources inventory.***

a. Each time brachytherapy sources are returned to an area of storage from an area of use, the licensee shall immediately count or otherwise verify the number returned to ensure that all sources taken from the storage area have been returned.

b. A licensee shall make a record of brachytherapy source utilization which includes:

(1) The names of the individuals permitted to handle the sources;

(2) The number and activity of sources removed from storage, the room number of use and patient’s or human research subject’s name, the time and date they were removed from storage, the number and activity of sources in storage after the removal, and the initials of the individual who removed the sources from storage; and

(3) The number and activity of sources returned to storage, the room number of use and patient’s or human research subject’s name, the time and date they were returned to storage, the number and activity of sources in storage after the return, and the initials of the individual who returned the sources to storage.

c. Immediately after implanting sources in a patient or human research subject and immediately after removal of sources from a patient or human research subject, the licensee shall make a radiation survey of the patient or human research subject and the area of use to confirm that no sources have been misplaced. The licensee shall make a record of each survey.

d. A licensee shall maintain the records required in 41.2(46) “b” and “c” for three years.

e. A licensee shall maintain accountability at all times for all brachytherapy sources in storage or use. As soon as possible after removing sources from a patient or a human research subject, a licensee shall return brachytherapy sources to a secure storage area.

**41.2(47) *Release of patients or human research subjects treated with temporary implants.***

a. Immediately after removing the last temporary implant source from a patient or human research subject, the licensee shall perform a radiation survey of the patient or human research subject with a radiation detection survey instrument to confirm that all sources have been removed and, for remote afterloaders, returned to the safe shielded position. The licensee shall not release from confinement for medical care a patient or human research subject treated by temporary implant until all sources have been removed.

b. A licensee shall maintain a record of patient or human research subject surveys which demonstrate compliance with 41.2(47) "a" for three years. Each record shall include the date of the survey, the name of the patient or human research subject, the dose rate from the patient or human research subject expressed as millirems (microsieverts) per hour and measured within 1 meter from the patient or human research subject, and the initials of the individual who made the survey.

**41.2(48) *Possession of survey instruments.*** A licensee authorized to use radioactive material for implant therapy shall possess a portable radiation detection survey instrument capable of detecting dose rates over the range of 0.1 millirem (1  $\mu$ Sv) per hour to 50 millirems (500  $\mu$ Sv) per hour, and a portable radiation measurement survey instrument capable of measuring dose rates over the range of 1 millirem (10  $\mu$ Sv) per hour to 1000 millirems (10 mSv) per hour. The instruments shall be operable and calibrated in accordance with 41.2(18).

**41.2(49) *Use of a sealed source in a remote afterloader unit, teletherapy unit, or gamma stereotactic radiosurgery unit.*** A licensee shall use sealed sources in photon emitting remote afterloader units, teletherapy units, or gamma stereotactic radiosurgery units for therapeutic medical uses as approved in the Sealed Source and Device Registry or in research in accordance with an active Investigational Device Exemption (IDE) application accepted by the FDA provided the requirements of 41.2(15) are met.

**41.2(50) *Installation, maintenance, adjustment, and repair.***

a. Only a person specifically licensed by the NRC or an agreement state shall install, maintain, adjust, or repair a remote afterloader unit, teletherapy unit, or gamma stereotactic radiosurgery unit that involves work on the source shielding, the source(s) driving unit, or other electronic or mechanical component that could expose the source(s), or reduce the shielding around the source(s), or compromise the radiation safety of the unit or the source(s).

b. Except for low-dose-rate remote afterloader units, only a person specifically licensed by the NRC or an agreement state shall install, replace, relocate, or remove a sealed source or source contained in other remote afterloader units, teletherapy units, or gamma stereotactic radiosurgery units.

c. For low-dose-rate remote afterloader units, only a person specifically licensed by the NRC or an agreement state or an authorized medical physicist shall install, replace, relocate, or remove a sealed source(s) contained in the unit.

d. A licensee shall retain a record of the installation, maintenance, adjustment, and repair of remote afterloader units, teletherapy units and gamma stereotactic radiosurgery units for three years. The record must include the date, description of the service, and the name of the individual who performed the work.

**41.2(51) *Amendments.*** In addition to the requirements specified in 41.2(4), a licensee shall apply for and receive a license amendment before:

- a. Making any change in the treatment room shielding;
- b. Making any change in the location of the teletherapy unit within the treatment room;
- c. Using the teletherapy unit in a manner that could result in increased radiation levels in areas outside the teletherapy treatment room;
- d. Relocating the teletherapy unit; or
- e. Allowing an individual not listed on the licensee's license to perform the duties of the teletherapy physicist.

**41.2(52)** *Safety procedures and instructions for remote afterloader units, teletherapy units, and gamma stereotactic radiosurgery units.*

a. A licensee shall:

(1) Secure the unit, the console, the console keys, and the treatment room when not in use or unattended;

(2) Permit only individuals approved by the authorized user, radiation safety officer, or authorized medical physicist to be present in the treatment room during treatment with the source;

(3) Prevent dual operation of more than one radiation producing device in a treatment room, if applicable; and

(4) Develop, implement, and maintain written procedures for responding to an abnormal situation when the operator is unable to place the source in the shielded position, or to remove the patient or human research subject from the radiation field with controls from outside the treatment room. These procedures must include:

1. Instructions for responding to equipment failures and the names of the individuals responsible for implementing corrective actions;

2. The process for restricting access to and posting of the treatment area to minimize the risk of inadvertent exposure; and

3. The names and telephone numbers of the authorized users, the authorized medical physicist, and the radiation safety officer to be contacted if the unit or console operates abnormally.

b. A copy of the procedures required by 41.2(52)“a”(4) must be physically located at the unit console.

c. A licensee shall post instructions at the unit console to inform the operator of:

(1) The location of the procedures required by 41.2(52)“a”(4); and

(2) The names and telephone numbers of the authorized users, the authorized medical physicist, and the radiation safety officer to be contacted if the unit or console operates abnormally.

d. A licensee shall provide instruction, initially and at least annually, to all individuals who operate the unit, appropriate to the individual’s assigned duties, in:

(1) The procedures identified in 41.2(52)“a”(4); and

(2) The operating procedures for the unit.

e. The licensee shall ensure that operators, authorized medical physicists, and authorized users participate in drills of emergency procedures, initially and at least annually.

f. A licensee shall retain a record for three years of individuals receiving instruction required by 41.2(52)“d,” a description of the instruction, the date of instruction, and the name of the individual who gave the instruction. A copy of the procedures required in 41.2(52)“a”(4) and 41.2(52)“d”(2) shall be retained for three years.

**41.2(53)** *Safety precautions for remote afterloader units, teletherapy units, and gamma stereotactic radiosurgery units.*

a. A licensee shall control access to the teletherapy room by a door at each entrance.

b. A licensee shall equip each entrance to the teletherapy room with an electrical interlock system that shall:

(1) Prevent the operator from turning the primary beam of radiation “on” unless each treatment room entrance door is closed;

(2) Turn the beam of radiation “off” immediately when an entrance door is opened; and

(3) Prevent the primary beam of radiation from being turned “on” following an interlock interruption until all treatment room entrance doors are closed and the beam “on-off” control is reset at the console.

c. A licensee shall require any individual entering the treatment room to ensure, through the use of appropriate monitors, that radiation levels have returned to ambient levels.

d. Except for low-dose-rate remote afterloader units, a licensee shall construct or equip each treatment room with viewing and intercom systems to permit continuous observation of the patient or human research subject from the treatment console during irradiation.

e. For licensed activities where sources are placed within the patient's or human research subject's body, the licensee shall only conduct treatments which allow for expeditious removal of a decoupled or jammed source.

f. In addition to the requirements specified in 41.2(53) "a" through "e," a licensee shall:

(1) For medium-dose-rate and pulsed-dose-rate remote afterloader units, require:

1. An authorized medical physicist and either an authorized user or a physician, under the supervision of an authorized user, who have been trained in the operation of and emergency response for the unit to be physically present during the initiation of all patient treatments involving the unit; and

2. An authorized medical physicist and either an authorized user or an individual, under the supervision of an authorized user, who have been trained to remove the source applicator in the event of an emergency involving the unit to be immediately available during continuation of all patient treatments involving the unit.

(2) For high-dose-rate remote afterloader units, require:

1. An authorized user and an authorized medical physicist to be physically present during the initiation of all patient treatments involving the unit; and

2. An authorized medical physicist and either an authorized user or a physician, under the supervision of an authorized user, who have been trained in the operation and emergency response for the unit, to be physically present during the continuation of all patient treatments involving the unit.

(3) For gamma stereotactic radiosurgery units, require an authorized user and an authorized medical physicist to be physically present throughout all patient treatments involving the unit. As used in this subparagraph, "physically present" means to be within hearing distance of normal voice.

(4) Notify the radiation safety officer, or the radiation safety officer designee, and an authorized user as soon as possible if the patient or human research subject has a medical emergency or dies.

g. A licensee shall have applicable emergency response equipment available near each treatment room to respond to a source remaining in the unshielded position or lodged within the patient following completion of the treatment.

**41.2(54) Possession of survey instrument.** A licensee authorized to use radioactive material in a teletherapy unit shall possess either a portable radiation detection survey instrument capable of detecting dose rates over the range of 0.1 millirem (1  $\mu$ Sv) per hour to 50 millirems (500  $\mu$ Sv) per hour or a portable radiation measurement survey instrument capable of measuring dose rates over the range of 1 millirem (10  $\mu$ Sv) per hour to 1000 millirems (10 mSv) per hour. The instruments shall be operable and calibrated in accordance with 41.2(18).

**41.2(55) Radiation monitoring device.**

a. A licensee shall have in each teletherapy room a permanent radiation monitor capable of continuously monitoring beam status.

b. Each radiation monitor shall be capable of providing visible notice of a teletherapy unit malfunction that results in an exposed or partially exposed source. The visible indicator of high radiation levels shall be observable by an individual entering the teletherapy room.

c. Each radiation monitor shall be equipped with a backup power supply separate from the power supply to the teletherapy unit. This backup power supply may be a battery system.

d. A radiation monitor shall be checked with a dedicated check source for proper operation each day before the teletherapy unit is used for treatment of patients or human research subjects.

e. A licensee shall maintain a record of the check required by 41.2(55) "d" for three years. The record shall include the date of the check, notation that the monitor indicates when the source is exposed, and the initials of the individual who performed the check.

f. If a radiation monitor is inoperable, the licensee shall require any individual entering the teletherapy room to use a survey instrument or audible alarm personal dosimeter to monitor for any malfunction of the source exposure mechanism. The instrument or dosimeter shall be checked with a dedicated check source for proper operation at the beginning of each day of use. The licensee shall keep a record as described in 41.2(55) "e."

g. A licensee shall promptly repair or replace the radiation monitor if it is inoperable.

**41.2(56) Viewing system.** A licensee shall construct or equip each teletherapy room to permit continuous observation of the patient or human research subject from the teletherapy unit console during irradiation.

**41.2(57) Dosimetry equipment.**

a. Except for low-dose-rate remote afterloader sources where the source output or activity is determined by the manufacturer, a licensee shall have a calibrated dosimetry system available for use. To satisfy this requirement, one of the following two conditions shall be met:

(1) The system must have been calibrated using a system or source traceable to the National Institute of Standards and Technology and published protocols accepted by nationally recognized bodies, or by a calibration laboratory accredited by the American Association of Physicists in Medicine. The calibration must have been performed within the previous two years and after any servicing that may have affected system calibration; or

(2) The system must have been calibrated within the previous four years; 18 to 30 months after that calibration, the system must have been intercompared with another dosimetry system that was calibrated within the past 24 months by the National Institute of Standards and Technology or by a calibration laboratory accredited by the American Association of Physicists in Medicine. The results of the intercomparison must indicate that the calibration factor of the licensee's system has not changed by more than 2 percent. The licensee may not use the intercomparison result to change the calibration factor. When intercomparing dosimetry systems to be used for calibrating sealed sources for therapeutic units, the licensee shall use a comparable unit with beam attenuators or collimators, if applicable, and sources of the same radionuclide as the source used at the licensee's facility.

b. The licensee shall have available for use a dosimetry system for spot-check measurements. To meet this requirement, the system may be compared with a system that has been calibrated in accordance with 41.2(57) "a." This comparison must have been performed within the previous year and after each servicing that may have affected system calibration. The spot-check system may be the same system used to meet the requirement in 41.2(57) "a."

c. The licensee shall maintain a record of each calibration, intercomparison, and comparison for the duration of the license. For each calibration, intercomparison, or comparison, the record shall include the date, the model numbers and serial numbers of the instruments that were calibrated, intercompared, or compared as required by 41.2(57) "a" and "b," the correction factors that were determined, the names of the individuals who performed the calibration, intercomparison, or comparison, and evidence that the intercomparison meeting was sanctioned by a calibration laboratory or radiologic physics center accredited by the American Association of Physicists in Medicine.

**41.2(58) Full calibration measurements on teletherapy units, remote afterloader units, and gamma stereotactic radiosurgery units.**

a. *Teletherapy units.*

(1) A licensee authorized to use a teletherapy unit for medical use shall perform full calibration measurements for each teletherapy unit:

1. Before the first medical use of the unit; and
2. Before medical use under the following conditions:
  - Whenever spot-check measurements indicate that the output differs by more than 5 percent from the output of the last full calibration corrected mathematically for radioactive decay;
  - Following replacement of the source or following reinstallation of the teletherapy unit in a new location;
  - Following any repair of the teletherapy unit that includes removal of the source or major repair of the components associated with the source exposure assembly; and
3. At intervals not exceeding one year.

(2) To satisfy the requirements of 41.2(58) "a"(1), full calibration measurements must include determination of:

1. The output within  $\pm 3$  percent for the range of field sizes and for the distance or range of distances used for medical use;
2. The coincidence of the radiation field and the field indicated by the light beam localizing device;

3. The uniformity of the radiation field and its dependence on the orientation of the useful beam;
4. Timer accuracy and linearity over the range of use;
5. On-off error; and
6. The accuracy of all distance measuring and localization devices in medical use.

(3) A licensee shall use the dosimetry system described in 41.2(57) to measure the output for one set of exposure conditions. The remaining radiation measurements required in 41.2(58) "a"(2)"1" may be made using the dosimetry system that indicates relative dose rates.

(4) A licensee shall make full calibration measurements required by 41.2(58) "a" in accordance with published protocols accepted by nationally recognized bodies.

(5) A licensee shall mathematically correct the outputs determined in 41.2(58) "a"(2)"1" for physical decay for intervals not exceeding one month for cobalt-60, six months for cesium-137, or at intervals consistent with 1 percent of all other radionuclides.

(6) Full calibration measurements required by 41.2(58) "a"(1) and physical decay corrections required in 41.2(58) "a"(5) must be performed by the authorized medical physicist.

(7) A licensee shall maintain a record of each calibration for the duration of the license. The record shall include the date of the calibration; the manufacturer's name, model number, and serial number for both the unit and the source; tables that describe the output of the unit over the range of field sizes and for the range of distances used in radiation therapy; a determination of the coincidence of the radiation field and the field indicated by the light beam localizing device; the measured timer accuracy for a typical treatment time; the calculated "on-off" error; the estimated accuracy of each distance measuring or localization device; and the signature of the authorized medical physicist.

*b. Remote afterloader units.*

(1) A licensee authorized to use a remote afterloader unit for medical use shall perform full calibration measurements for each unit:

1. Before the first medical use of the unit; and
2. Before medical use under the following conditions:
  - Following replacement of the source or following reinstallation of the unit in a new location outside the facility; and
  - Following any repair of the unit that includes removal of the source or major repair of the components associated with the source exposure assembly; and

3. At intervals not exceeding one quarter of a year for high-dose-rate, medium-dose-rate, and pulsed-dose-rate remote afterloader units with sources whose half-life exceeds 75 days; and

4. At intervals not exceeding one year for low-dose-rate remote afterloader units.

(2) To satisfy the requirements of 41.2(58) "b"(1), full calibration measurements must include, as applicable, determination of:

1. The output within  $\pm 5$  percent;
2. Source positioning accuracy to within  $\pm 1$  millimeter;
3. Source retraction with backup battery upon power failure;
4. Length of the source transfer tubes;
5. Timer accuracy and linearity over the typical range of use;
6. Length of the applicators; and
7. Function of the source transfer tubes, applicators, and transfer tube-applicator interfaces.

(3) A licensee shall use the dosimetry system described in 41.2(57) to measure the output.

(4) A licensee shall make full calibration measurements required by 41.2(58) "b"(1) in accordance with published protocols accepted by nationally recognized bodies.

(5) In addition to the requirements for full calibrations for low-dose-rate remote afterloader units in 41.2(58) "b"(2), a licensee shall perform an autoradiograph of the source to verify inventory and source arrangement at intervals not exceeding one quarter of a year.

(6) For low-dose-rate remote afterloader units, a licensee may use measurements provided by the source manufacturer that are made in accordance with 41.2(58) "b."

(7) A licensee shall mathematically correct the outputs determined in 41.2(58) "b"(2)"1" for physical decay intervals consistent with 1 percent physical decay.

(8) Full calibration measurements required by 41.2(58)“b”(1) and physical decay corrections required by 41.2(58)“b”(7) must be performed by the authorized medical physicist.

(9) A licensee shall retain a record of each calibration in accordance with 41.2(58)“a”(7).

*c. Gamma stereotactic radiosurgery units.*

(1) A licensee authorized to use a gamma stereotactic radiosurgery unit for medical use shall perform full calibration measurements on each unit:

1. Before the first medical use of the unit;

2. Before medical use under the following conditions:

- Whenever spot-check measurements indicate that the output differs by more than 5 percent from the output obtained at the last full calibration corrected mathematically for radioactive decay;

- Following replacement of the sources or following reinstallation of the gamma stereotactic radiosurgery unit in a new location; and

- Following any repair of the gamma stereotactic radiosurgery unit that includes removal of the sources or major repair of the components associated with the source assembly; and

3. At intervals not exceeding one year, with the exception that relative helmet factors need only be determined before the first medical use of a helmet and following any damage to a helmet.

(2) To satisfy the requirement of 41.2(58)“c”(1), full calibration measurements must include determination of:

1. The output within  $\pm 3$  percent;

2. Relative helmet factors;

3. Isocenter coincidence;

4. Timer accuracy and linearity over the range of use;

5. On-off error;

6. Trunnion centricity;

7. Treatment table retraction mechanism, using backup battery power or hydraulic backups with the unit off;

8. Helmet microswitches;

9. Emergency timing circuits; and

10. Stereotactic frames and localizing devices (trunnions).

(3) A licensee shall use the dosimetry system described in 41.2(57) to measure the output for one set of exposure conditions. The remaining radiation measurements required in 41.2(58)“c”(2)“1” may be made using a dosimetry system that indicates relative dose rates.

(4) A licensee shall make full calibration measurements required by 41.2(58)“c”(1) in accordance with published protocols accepted by nationally recognized bodies.

(5) A licensee shall mathematically correct the outputs determined in 41.2(58)“c”(2)“1” at intervals not exceeding one month for cobalt-60 and at intervals consistent with 1 percent physical decay for all other radionuclides.

(6) Full calibration measurements required by 41.2(58)“c”(1) and physical decay corrections required in 41.2(58)“c”(5) must be performed by the authorized medical physicist.

(7) A licensee shall retain a record of each calibration in accordance with 41.2(58)“a”(7).

**41.2(59) Periodic spot checks for teletherapy units, remote afterloader units, and gamma stereotactic radiosurgery units.**

*a. Teletherapy units.*

(1) A licensee authorized to use teletherapy units for medical use shall perform output spot checks on each teletherapy unit once in each calendar month that include determination of:

1. Timer accuracy and timer linearity over the range of use;

2. On-off error;

3. The coincidence of the radiation field and the field indicated by the light beam localizing device;

4. The accuracy of all distance measuring and localization devices used for medical use;

5. The output for one typical set of operating conditions measured with the dosimetry system described in 41.2(57); and

6. The difference between the measurement made in 41.2(59)“a”(1)“5” and the anticipated output expressed as a percentage of the anticipated output (i.e., the value obtained at last full calibration corrected mathematically for physical decay).

(2) A licensee shall perform measurements required by 41.2(59)“a”(1) in accordance with written procedures established by the authorized medical physicist. That individual need not actually perform the spot-check measurements.

(3) A licensee shall have the authorized medical physicist review the results of each spot check within 15 days. The authorized medical physicist shall notify the licensee as soon as possible in writing of the result of each spot check.

(4) A licensee authorized to use a teletherapy unit for medical use shall perform safety spot checks of each teletherapy facility once in each calendar month and after each source installation to ensure proper operation of:

1. Electrical interlocks at each teletherapy room entrance;
2. Electrical or mechanical stops installed for the purpose of limiting use of the primary beam of radiation (restriction of source housing angulation or elevation, carriage or stand travel and operation of the beam on-off mechanism);
3. Source exposure indicator lights on the teletherapy unit, on the control console, and in the facility;
4. Viewing and intercom systems;
5. Treatment room doors from inside and outside the treatment room; and
6. Electrically assisted treatment room doors with the teletherapy unit electrical power turned off.

(5) If the results of the spot checks required in 41.2(59)“a”(4) indicate the malfunction of any system, the licensee shall lock the control console in the off position and not use the unit except as may be necessary to repair, replace, or check the malfunctioning system.

(6) A licensee shall retain for three years a record of each spot check required in 41.2(59)“a.” The record must include:

1. The date of the spot check;
2. The manufacturer’s name, model number, and serial number of the teletherapy unit, source and instrument used to measure the output of the teletherapy unit;
3. An assessment of timer linearity and constancy;
4. The calculated on-off error;
5. A determination of the coincidence of the radiation field and the field indicated by the light beam localizing device;
6. The determined accuracy of each distance measuring and localization device;
7. The difference between the anticipated output and the measured output;
8. Notations indicating the operability of each entrance door electrical interlock, each electrical or mechanical source exposure indicator light, and the viewing and intercom system and doors; and
9. The name of the individual who performed the periodic spot check and the signature of the authorized medical physicist who reviewed the record of the spot check.

(7) A licensee shall retain a copy of the procedures required by 41.2(59)“a”(2) until the licensee no longer possesses the teletherapy unit.

*b. Remote afterloader units.*

(1) A licensee authorized to use a remote afterloader unit for medical use shall perform spot checks of each remote afterloader facility and on each unit:

1. Before the first use of a high-dose-rate, medium-dose-rate, or pulsed-dose-rate remote afterloader unit on a given day;
2. Before each patient treatment with a low-dose-rate remote afterloader unit; and
3. After each source installation.

(2) A licensee shall perform the measurements required by 41.2(59)“b”(1) in accordance with written procedures established by the authorized medical physicist. That individual need not actually perform the spot-check measurements.

(3) A licensee shall have the authorized medical physicist review the results of each spot check within 15 days. The authorized medical physicist shall notify the licensee as soon as possible in writing of the results of each spot check.

(4) To satisfy the requirements of 41.2(59)“b”(1), spot checks must, at a minimum, ensure proper operation of:

1. Electrical interlocks at each remote afterloader unit room entrance;
2. Source exposure indicator lights on the remote afterloader unit, on the control console, and in the facility;
3. Viewing and intercom systems in each high-dose-rate, medium-dose-rate, and pulsed-dose-rate remote afterloader facility;
4. Emergency response equipment;
5. Radiation monitors used to indicate the source position;
6. Timer accuracy;
7. Clock (date and time) in the unit's computer; and
8. Decayed source(s) activity in the unit's computer.

(5) If the results of the spot checks required in 41.2(59)“b”(4) indicate the malfunction of any system, the licensee shall lock the control console in the off position and not use the unit except as may be necessary to repair, replace, or spot check the malfunctioning system.

(6) A licensee shall retain for three years a record of each spot check required in 41.2(59)“b”(4). The record must include:

1. The date of the spot check;
2. The manufacturer's name, model number, and serial number for the remote afterloader unit and source;
3. An assessment of timer accuracy;
4. Notations indicating the operability of each entrance door electrical interlock, radiation monitors, source exposure indicator lights, viewing and intercom systems, and clock and decayed source activity in the unit's computer; and
5. The name of the individual who performed the periodic spot check and the signature of the authorized medical physicist who reviewed the record of the spot check.

(7) A licensee shall retain a copy of the procedures required in 41.2(59)“b”(2) until the licensee no longer possesses the remote afterloader unit.

*c. Gamma stereotactic radiosurgery units.*

(1) A licensee authorized to use a gamma stereotactic radiosurgery unit for medical use shall perform spot checks for the gamma stereotactic radiosurgery facility and on each unit:

1. Monthly;
2. Before the first use of the unit on a given day; and
3. After each source installation.

(2) A licensee shall:

1. Perform the measurements required by 41.2(59)“c”(1) in accordance with written procedures established by the authorized medical physicist. That individual need not actually perform the spot-check measurements.

2. Have the authorized medical physicist review the results of each spot check within 15 days. The authorized medical physicist shall notify the licensee as soon as possible in writing of the results of each spot check.

(3) To satisfy the requirements of 41.2(59)“c”(1)“1,” spot checks must, at a minimum:

1. Ensure proper operation of treatment table retraction mechanism, using backup battery power or hydraulic backups with the unit off; helmet microswitches; emergency timing circuits; and stereotactic frames and localizing devices (trunnions).

2. Determine:

• The output for one typical set of operating conditions measured with the dosimetry system described in 41.2(57);

- The difference between the measurement made in the above bulleted point and the anticipated output expressed as a percentage of the anticipated output (i.e., the value obtained at last full calibration corrected mathematically for physical decay);

- Source output against computer calculation;
- Timer accuracy and linearity over the range of use;
- On-off error; and
- Trunnion centricity.

(4) To satisfy the requirements of 41.2(59)“c”(1)“2” and “3,” spot checks must ensure proper functioning of:

1. Electrical interlocks at each gamma stereotactic radiosurgery room entrance;
2. Source exposure indicator lights on the gamma stereotactic radiosurgery unit, on the control console, and in the facility;
3. Viewing and intercom systems;
4. Timer termination;
5. Radiation monitors used to indicate room exposures; and
6. Emergency off buttons.

(5) A licensee shall arrange as soon as possible for the repair of any system identified in 41.2(59)“c”(3) that is not operating properly.

(6) If the results of the spot checks required in 41.2(59)“c”(4) indicate the malfunction of any system, the licensee shall lock the control console in the off position and not use the unit except as may be necessary to repair, replace, or check the malfunctioning system.

(7) A licensee shall retain for three years a record of each spot check required by 41.2(59)“c”(3) and (4). The record must include:

1. The date of the spot check;
2. The manufacturer’s name, model number, and serial number for the gamma stereotactic radiosurgery unit and the survey instrument used to measure the output of the unit;
3. An assessment of timer linearity and accuracy;
4. The calculated on-off error;
5. A determination of trunnion centricity;
6. The difference between the anticipated output and the measured output;
7. An assessment of source output against computer calculations;
8. Notations indicating the operability of radiation monitors, helmet microswitches, emergency timing circuits, on-off buttons, electrical interlocks, source exposure indicator lights, viewing and intercom systems, timer termination, treatment table retraction mechanism, and stereotactic frames and localizing devices (trunnions); and
9. The name of the individual who performed the periodic spot check and the signature of the authorized medical physicist who reviewed the record of the spot check.

(8) A licensee shall retain a copy of the procedures required in 41.2(59)“c”(2) until the licensee no longer possesses the gamma stereotactic radiosurgery unit.

**41.2(60) Radiation surveys for teletherapy facilities.**

a. In addition to the survey requirements in 641—40.36(136C), a person licensed under 641—41.2(136C) shall make surveys to ensure that the maximum radiation levels and average radiation levels from the surface of the main source safe with the source in the shielded position do not exceed the levels stated in the Sealed Source and Device Registry.

b. The licensee shall make the survey required in 41.2(60)“a” at installation of a new source, and following repairs to the source shielding, the source driving unit, or other electronic or mechanical component that could expose the source, reduce the shielding around the source, or compromise the radiation safety of the source.

c. A licensee shall maintain a record of the radiation measurements made following installation of a source for the duration of the license. The record shall include the date of the measurements, the reason the survey is required, the manufacturer’s name, model number and serial number of the teletherapy unit, the source, and the instrument used to measure radiation levels, each dose rate measured around the

teletherapy source while in the “off” position and the average of all measurements, a plan of the areas surrounding the treatment room that were surveyed, the measured dose rate at several points in each area expressed in millirems ( $\mu\text{Sv}$ ) per hour, the calculated maximum level of radiation over a period of one week for each restricted and unrestricted area, and the signature of the radiation safety officer.

**41.2(61) *Safety spot checks for teletherapy facilities.***

a. A licensee shall promptly check all systems listed in 41.2(59) “g” for proper function after each installation of a teletherapy source and after making any change for which an amendment is required by 41.2(51).

b. If the results of the safety spot checks required in 41.2(61) “a” indicate the malfunction of any system specified in 41.2(59), the licensee shall lock the control console in the “off” position and not use the unit except as may be necessary to repair, replace, or check the malfunctioning system.

c. A licensee shall maintain a record of the safety spot checks following installation of a source for three years. The record shall include notations indicating the operability of each entrance door interlock, each electrical or mechanical stop, each beam condition indicator light, the viewing system, doors, and the signature of the radiation safety officer.

**41.2(62) *Modification of teletherapy unit or room before beginning a treatment program.*** If the survey required by 41.2(60) indicates that any individual member of the public is likely to receive a dose greater than those permitted by 641—40.26(136C) before beginning the treatment program, the licensee shall:

a. Either equip the unit with stops or add additional radiation shielding to ensure compliance with 641—40.26(136C);

b. Perform the survey required by 41.2(60) again; and

c. Include in the report required by 41.2(63) the results of the initial survey, a description of the modification made to comply with 41.2(62) “a,” and the results of the second survey; or

d. Request and receive a license amendment under 641—40.26(136C) that authorizes radiation levels in unrestricted areas greater than those permitted by 641—40.26(136C).

**41.2(63) *Reports of teletherapy surveys, checks, tests, and measurements.*** A licensee shall furnish a copy of the records required in 41.2(60), 41.2(61), and 41.2(62) and the output from the teletherapy source expressed as rems (sieverts) per hour at 1 meter from the source as determined during the full calibration required in 41.2(58) to the agency within 30 days following completion of the action that initiated the record requirement.

**41.2(64) *Five-year inspection.***

a. A licensee shall have each teletherapy unit and gamma stereotactic radiosurgery unit fully inspected and serviced during teletherapy source replacement or at intervals not to exceed five years, whichever comes first, to ensure proper functioning of the source exposure mechanism.

b. This inspection and servicing shall be performed only by persons specifically licensed to do so by the agency, an agreement state, or the U.S. Nuclear Regulatory Commission.

c. A licensee shall maintain a record of the inspection and servicing for the duration of the license. The record shall contain the inspector’s name, the inspector’s license number, the date of inspection, the manufacturer’s name and model number and serial number for both the teletherapy unit and gamma stereotactic radiosurgery unit and source, a list of components inspected, a list of components serviced and the type of service, a list of components replaced, and the signature of the inspector.

**41.2(65) *Training for radiation safety officer.*** Except as provided in 41.2(75), the licensee shall require an individual fulfilling the responsibilities of the radiation safety officer as provided in 41.2(8) to be an individual who:

a. Is certified by a specialty board whose certification process has been recognized by this agency, NRC, or an agreement state and who meets the requirements in 41.2(65) “d” and “e.” (The names of the specialty boards that have been recognized by the agency, NRC, or agreement state must be posted on the NRC’s Web page.) To have its certification process recognized, a specialty board shall:

(1) Require all candidates for certification to:

1. Hold a bachelor’s or graduate degree from an accredited college or university in physical science or engineering or biological science with a minimum of 20 college credits in physical science;

2. Have five or more years of professional experience in health physics (graduate training may be substituted for no more than two years of the required experience) including at least three years in applied health physics; and

3. Pass an examination administered by diplomats of the specialty board, which evaluates knowledge and competence in radiation physics and instrumentation, radiation protection, mathematics pertaining to the use and measurement of radioactivity, radiation biology, and radiation dosimetry; or

(2) Require all candidates for certification to:

1. Hold a master's or doctor's degree in physics, medical physics, other physical science, engineering, or applied mathematics from an accredited college or university;

2. Have two years of either full-time practical training or supervised experience in medical physics either under the supervision of a medical physicist who is certified in medical physics by a specialty board recognized by the agency, NRC, or an agreement state, or in clinical nuclear medicine facilities providing either diagnostic or therapeutic services under the direction of physicians who meet the requirements for authorized users in 41.2(68) or 41.2(69); and

3. Pass an examination administered by diplomats of the specialty board that assesses knowledge and competence in clinical diagnostic radiological or nuclear medicine physics and in radiation safety; or

b. Has completed a structured educational program consisting of both:

(1) 200 hours of classroom and laboratory training in the following areas:

1. Radiation physics and instrumentation;

2. Radiation protection;

3. Mathematics pertaining to the use and measurement of radioactivity;

4. Radiation biology; and

5. Radiation dosimetry; and

(2) One year of full-time radiation safety experience under the supervision of the individual identified as the radiation safety officer on an agency, NRC, or agreement state license or permit issued by the NRC master material licensee that authorizes similar types of use of radioactive material involving the following:

1. Shipping, receiving, and performing related radiation surveys;

2. Using and performing checks for proper operation of instruments used to determine the activity of dosages, survey meters, and instruments used to measure radionuclides;

3. Securing and controlling radioactive material;

4. Using administrative controls to avoid mistakes in the administration of radioactive material;

5. Using procedures to prevent or minimize radioactive contamination and using proper decontamination procedures;

6. Using emergency procedures to control radioactive material; and

7. Disposing of radioactive material; or

c. (1) Is a medical physicist who has been certified by a specialty board whose certification process has been recognized by the agency, NRC, or an agreement state under 41.2(74) and has experience in radiation safety for similar types of use of radioactive material for which the licensee is seeking the approval of the individual as a radiation safety officer and who meets the requirements in 41.2(65) "d" and "e"; or

(2) Is an authorized user, authorized medical physicist, or authorized nuclear pharmacist identified on the licensee's license and has experience with the radiation safety aspects of similar types of use of radioactive material for which the individual has radiation safety officer responsibilities; and

d. Has obtained written attestation, signed by a preceptor radiation safety officer, that the individual has satisfactorily completed the requirements in 41.2(65) "e" and 41.2(65) "a"(1) "1" and "2" or 41.2(65) "a"(2) "1" and "2" or 41.2(65) "b"(1) or 41.2(65) "c"(1), and has achieved a level of radiation safety knowledge sufficient to function independently as a radiation safety officer for a medical use licensee; and

e. Has training in the radiation safety, regulatory issues, and emergency procedures for the types of use for which the licensee is seeking approval. This training requirement may be satisfied by completing

training that is supervised by a radiation safety officer, authorized medical physicist, authorized nuclear pharmacist, or authorized user, as appropriate, who is authorized for the type of use for which the licensee is seeking approval.

**41.2(66)** *Training for experienced radiation safety officer.* Rescinded IAB 3/29/06, effective 5/3/06.

**41.2(67)** *Training for uptake, dilution, and excretion studies.* Except as provided in 41.2(75), the licensee shall require an authorized user of unsealed radioactive material for the uses authorized under 41.2(31) to be a physician who:

*a.* Is certified by a medical specialty board whose certification process has been recognized by the agency, NRC, or an agreement state and who meets the requirements in 41.2(67) “*c.*” (The names of specialty boards that have been recognized by the agency, NRC, or agreement state must be posted on the NRC’s Web page.) To have its certification process recognized, a specialty board shall require all candidates for certification to:

(1) Complete 60 hours of training and experience in basic radionuclide handling techniques and radiation safety applicable to the medical use of unsealed radioactive material for uptake, dilution, and excretion studies as described in 41.2(67) “*c*”(1)“1” and “2”; and

(2) Pass an examination administered by diplomats of the specialty board that assesses knowledge and competence in radiation safety, radionuclide handling, and quality control; or

*b.* Is an authorized user under 41.2(68) or 41.2(69), or before May 3, 2006, meets the requirements in 10 CFR 35.190, 35.290, or 35.390, or meets equivalent agreement state requirements; or

*c.* (1) Has completed 60 hours of training and experience, including a minimum of 8 hours of classroom and laboratory training, in basic radionuclide handling techniques applicable to the medical use of unsealed radioactive material for uptake, dilution, and excretion studies. The training and experience must include:

1. Classroom and laboratory training in radiation physics and instrumentation; radiation protection; mathematics pertaining to the use and measurement of radioactivity, chemistry of radioactive material for medical use, and radiation biology; and

2. Work experience, under the supervision of an authorized user who meets the requirements in 41.2(67), 41.2(68), or 41.2(69), or before May 3, 2006, the requirements in 10 CFR 35.190, 35.290, or 35.390, or equivalent agreement state requirements, involving:

- Ordering, receiving, and unpacking radioactive materials safely and performing the related radiation surveys;

- Performing quality control procedures on instruments used to determine the activity of dosages and performing checks for proper operation of survey meters;

- Calculating, measuring, and safely preparing patient or human research subject dosages;

- Using administrative controls to prevent a medical event involving the use of unsealed radioactive material;

- Using procedures to contain spilled radioactive material safely and using proper decontamination procedures;

- Administering dosages of radioactive drugs to patients or human research subjects; and

(2) Has obtained written attestation, signed by a preceptor authorized user who meets the requirements in 41.2(67), 41.2(68), or 41.2(69), or before May 3, 2006, the requirements in 10 CFR 35.190, 35.290, or 35.390, or equivalent agreement state requirements, that the individual has satisfactorily completed the requirements in 41.2(67)“*a*”(1) or 41.2(67)“*c*”(1) and has achieved a level of competency sufficient to function independently as an authorized user for the medical uses authorized in 41.2(31).

**41.2(68)** *Training for imaging and localization studies.* Except as provided in 41.2(75), the licensee shall require the authorized user of unsealed radioactive material specified in 41.2(33) to be a physician who:

*a.* Is certified by a medical specialty board whose certification process has been recognized by the agency, NRC, or an agreement state and who meets the requirements in 41.2(68) “*c.*” (The names of specialty boards that have been recognized by the agency, NRC, or agreement state must be posted on

the NRC's Web page.) To have its certification process recognized, a specialty board shall require all candidates for certification to:

(1) Complete 700 hours of training and experience in basic radionuclide handling techniques and radiation safety applicable to the medical use of unsealed radioactive material for imaging and localization studies as described in 41.2(68) "c"(1)"1" and "2"; and

(2) Pass an examination administered by diplomats of the specialty board, which assesses knowledge and competence in radiation safety, radionuclide handling, and quality control; or

*b.* Is an authorized user under 41.2(69) and meets the requirements in 41.2(68) "c"(1)"2," seventh bulleted paragraph, or before May 3, 2006, meets the requirements in 10 CFR 35.290, or equivalent agreement state requirements; or

*c.* (1) Has completed 700 hours of training and experience, including a minimum of 80 hours of classroom and laboratory training, in basic radionuclide handling techniques applicable to the medical use of unsealed radioactive material for imaging and localization studies. The training and experience must include, at a minimum:

1. Classroom and laboratory training in the following areas:

- Radiation physics and instrumentation;
- Radiation protection;
- Mathematics pertaining to the use and measurement of radioactivity;
- Chemistry of radioactive material for medical use;
- Radiation biology, and

2. Work experience, under the supervision of an authorized user who meets the requirements in 41.2(68) or 41.2(68) "c"(1)"2," seventh bulleted paragraph, and 41.2(69), or before May 3, 2006, meets the requirements in 10 CFR 35.290, or equivalent agreement state requirements, involving:

- Ordering, receiving, and unpacking radioactive materials safely and performing the related radiation surveys;
- Performing quality control procedures on instruments used to determine the activity of dosages and performing checks for proper operation of survey meters;
- Calculating, measuring, and safely preparing patient or human research subject dosages;
- Using administrative controls to prevent a medical event involving the use of unsealed radioactive material;
- Using procedures to contain spilled radioactive material safely and using proper decontamination procedures;
- Administering dosages of radioactive drugs to patients or human research subjects; and
- Eluting generator systems appropriate for preparation of radioactive drugs for imaging and localization studies, measuring and testing the eluate for radionuclidic purity, and processing the eluate with reagent kits to prepare labeled radioactive drugs; and

(2) Has obtained written attestation, signed by a preceptor authorized user who meets the requirements in 41.2(68) or 41.2(69) and 41.2(68) "c"(1)"2," seventh bulleted paragraph, or before May 3, 2006, meets the requirements in 10 CFR 35.290, or equivalent agreement state requirements, that the individual has satisfactorily completed the requirements in 41.2(68) "a"(1) or 41.2(68) "c"(1) and has achieved a level of competency sufficient to function independently as an authorized user for the medical uses authorized under 41.2(31) and 41.2(33).

**41.2(69) Training for use of unsealed by-product material for which a written directive is required.** Except as provided in 41.2(75), the licensee shall require an authorized user of unsealed radioactive material for the uses authorized under 41.2(37) to be a physician who:

*a.* Is certified by a medical specialty board whose certification process has been recognized by the agency, NRC, or an agreement state and who meets the requirements in 41.2(69) "b"(1)"2," seventh bulleted paragraph, and 41.2(69) "b"(2). (The names of the specialty boards that have been recognized by the agency, NRC, or agreement state must be posted on the NRC's Web page.) To be recognized, a specialty board shall require all candidates for certification to:

(1) Successfully complete residency training in a radiation therapy or nuclear medicine training program or a program in a related medical specialty. These residency training programs must include

700 hours of training and experience as described in 41.2(69)“b”(1)“1” through 41.2(69)“b”(1)“2,” fifth bulleted paragraph. Eligible training programs must be approved by the Residency Review Committee of the Accreditation Council for Graduate Medical Education, the Royal College of Physicians and Surgeons of Canada, or the Committee on Post-Graduate Training of the American Osteopathic Association; and

(2) Pass an examination, administered by diplomats of the specialty board, which tests knowledge and competence in radiation safety, radionuclide handling, quality assurance, and clinical use of unsealed radioactive material for which a written directive is required; or

b. (1) Has completed 700 hours of training and experience, including a minimum of 200 hours of classroom and laboratory training, in basic radionuclide handling techniques applicable to the medical use of unsealed radioactive material requiring a written directive. The training and experience must include:

1. Classroom and laboratory training in the following areas:

- Radiation physics and instrumentation;
- Radiation protection;
- Mathematics pertaining to the use and measurement of radioactivity;
- Chemistry of radioactive material for medical use; and
- Radiation biology; and

2. Work experience, under the supervision of an authorized user who meets the requirements in 41.2(69), or before May 3, 2006, meets the requirements in 10 CFR 35.390, or equivalent agreement state requirements. A supervising authorized user who meets the requirements in 41.2(69)“b,” or before May 3, 2006, meets the requirements in 10 CFR 35.390(b) must also have experience in administering dosages in the same dosage category or categories (i.e., 41.2(69)“b”(1)“2,” seventh bulleted paragraph) as the individual requesting authorized user status. The work experience must involve:

- Ordering, receiving, and unpacking radioactive materials safely and performing the related radiation surveys;

- Performing quality control procedures on instruments used to determine the activity of dosages and performing checks for proper operation of survey meters;

- Calculating, measuring, and safely preparing patient or human research subject dosages;

- Using administrative controls to prevent a medical event involving the use of unsealed radioactive material;

- Using procedures to contain spilled radioactive material safely and using proper decontamination procedures;

- Reserved.

- Administering dosages of radioactive drugs to patients or human research subjects involving a minimum of three cases in each of the following categories for which the individual is requesting authorized user status:

- Oral administration of less than or equal to 33 millicuries (1.22 Gigabecquerels) of sodium iodide I-131, for which a written directive is required;

- Oral administration of greater than 33 millicuries (1.22 Gigabecquerels) of sodium iodide I-131 (experience with at least three cases in this category also satisfies the requirement in the above category);

- Parenteral administration of either any beta emitter or a photon-emitting radionuclide with a photon energy less than 150 keV for which a written directive is required; or

- Parenteral administration of any other radionuclide for which a written directive is required; and

(2) Has obtained written attestation that the individual has satisfactorily completed the requirements in 41.2(69)“a”(1) and 41.2(69)“b”(1)“2,” seventh bulleted paragraph, or 41.2(69)“b”(1), and has achieved a level of competency sufficient to function independently as an authorized user for the medical uses authorized under 41.2(37). The written attestation must be signed by a preceptor authorized user who meets the requirements in 41.2(69), or before May 3, 2006, meets the requirements in 10 CFR 35.390, or equivalent agreement state requirements. The preceptor authorized user who meets the requirements in 41.2(69)“b,” or before May 3, 2006, meets the requirements in 10 CFR

35.390(b), must have experience in administering dosages in the same dosage category or categories (i.e., 41.2(69) “b”(1)“2,” seventh bulleted paragraph) as the individual requesting authorized user status.

c. For training only for oral administration of sodium iodide I-131 requiring a written directive in quantities less than or equal to 33 millicuries (1.22 Gigabecquerels) or quantities greater than 33 millicuries (1.22 Gigabecquerels), see 41.2(81) or 41.2(82).

**41.2(70) Training for use of manual brachytherapy sources.** Except as provided in 41.2(75), the licensee shall require an authorized user of a manual brachytherapy source for the uses authorized in 41.2(43) to be a physician who:

a. Is certified by a medical specialty board whose certification process has been recognized by the agency, NRC, or an agreement state, and who meets the requirements in 41.2(70) “b”(3). (The names of the specialty boards that have been recognized by the agency, NRC, or agreement state must be posted on the NRC’s Web page.) To have its certification process recognized, a specialty board shall require all candidates for certification to:

(1) Successfully complete a minimum of three years of residency training in a radiation oncology program approved by the Residency Review Committee of the Accreditation Council for Graduate Medical Education or the Royal College of Physicians and Surgeons of Canada or the Committee on Post-Graduate Training of the American Osteopathic Association; and

(2) Pass an examination, administered by diplomats of the specialty board, that tests knowledge and competence in radiation safety, radionuclide handling, treatment planning, quality assurance, and clinical use of manual brachytherapy; or

b. (1) Has completed a structured educational program in basic radionuclide handling techniques applicable to the use of manual brachytherapy sources that includes:

1. 200 hours of classroom and laboratory training in the following areas:

- Radiation physics and instrumentation;
- Radiation protection;
- Mathematics pertaining to the use and measurement of radioactivity; and
- Radiation biology; and

2. 500 hours of work experience, under the supervision of an authorized user who meets the requirements in 41.2(70), or before May 3, 2006, meets the requirements in 10 CFR 35.490, or equivalent agreement state requirements at a medical institution, involving:

- Ordering, receiving, and unpacking radioactive materials safely and performing the related radiation surveys;
- Checking survey meters for proper operation;
- Preparing, implanting, and removing brachytherapy sources;
- Maintaining running inventories of material on hand;
- Using administrative controls to prevent a medical event involving the use of radioactive material; and

• Using emergency procedures to control radioactive material; and

(2) Has completed three years of supervised clinical experience in radiation oncology under an authorized user who meets the requirements in 41.2(70), or before May 3, 2006, meets the requirements in 10 CFR 35.490, or equivalent agreement state requirements, as part of a formal training program approved by the Residency Review Committee for Radiation Oncology of the Accreditation Council for Graduate Medical Education or the Royal College of Physicians and Surgeons of Canada or the Committee on Postdoctoral Training of the American Osteopathic Association. This experience may be obtained concurrently with the supervised work experience required in 41.2(70) “b”(1)“2”; and

(3) Has obtained written attestation, signed by a preceptor authorized user who meets the requirements in 41.2(70), or before May 3, 2006, meets the requirements in 10 CFR 35.490, or equivalent agreement state requirements, that the individual has satisfactorily completed the requirements in 41.2(70) “a”(1) or 41.2(70) “b”(1) and (2), and has achieved a level of competency sufficient to function independently as an authorized user of manual brachytherapy sources for the medical uses in 41.2(43).

**41.2(71) Training for ophthalmic use of strontium-90.** Except as provided in 41.2(75), the licensee shall require the authorized user of strontium-90 for ophthalmic radiotherapy to be a physician who:

*a.* Is an authorized user under 41.2(70), or before May 3, 2006, meets the requirements in 10 CFR 35.490 or 35.491, or equivalent agreement state requirements; or

*b.* (1) Has completed 24 hours of classroom and laboratory training applicable to the medical use of strontium-90 for ophthalmic radiotherapy. The training must include:

1. Radiation physics and instrumentation;
2. Radiation protection;
3. Mathematics pertaining to the use and measurement of radioactivity; and
4. Radiation biology; and

(2) Has completed supervised clinical training in ophthalmic radiotherapy under the supervision of an authorized user at a medical institution, clinic, or private practice that includes the use of strontium-90 for the ophthalmic treatment of five individuals. This supervised clinical training must involve:

1. Examination of each individual to be treated;
2. Calculation of the dose to be administered;
3. Administration of the dose; and
4. Follow-up and review of each individual's case history; and

(3) Has obtained written attestation, signed by a preceptor authorized user who meets the requirements in 41.2(70) or 41.2(71), or before May 3, 2006, meets the requirements in 10 CFR 35.490 or 35.491, or equivalent agreement state requirements, that the individual has satisfactorily completed the requirements in 41.2(71) "b"(1) and (2) and has achieved a level of competency sufficient to function independently as an authorized user of strontium-90 for ophthalmic use.

**41.2(72)** *Training for use of sealed sources for diagnosis.* Except as provided in 41.2(75), the licensee shall require the authorized user of a diagnostic sealed source for use in a device authorized under 41.2(41) to be a physician, dentist, or podiatrist who:

*a.* Is certified by a specialty board whose certification process includes all of the requirements in 41.2(72) "b" and "c" and whose certification has been recognized by the agency, NRC, or an agreement state. (The names of the specialty boards that have been recognized by the agency, NRC, or agreement state must be posted on the NRC's Web page.); or

*b.* Has completed eight hours of classroom and laboratory training in basic radionuclide handling techniques specifically applicable to the use of the device. The training must include:

- (1) Radiation physics and instrumentation;
- (2) Radiation protection;
- (3) Mathematics pertaining to the use and measurement of radioactivity; and
- (4) Radiation biology; and

*c.* Has completed training in the use of the device for the uses requested.

**41.2(73)** *Training for use of remote afterloader units, teletherapy units, and gamma stereotactic radiosurgery units.* Except as provided in 41.2(75), the licensee shall require an authorized user of a sealed source for use authorized in 41.2(49) to be a physician who:

*a.* Is certified by a medical specialty board whose certification process has been recognized by the agency, NRC, or an agreement state, and who meets the requirements in 41.2(73) "b"(3) and 41.2(73) "c." (The names of the specialty boards that have been recognized by the agency, NRC, or agreement state must be posted on the NRC's Web page.) To have its certification process recognized, a specialty board shall require all candidates for certification to:

(1) Successfully complete a minimum of three years of residency training in a radiation therapy program approved by the Residency Review Committee of the Accreditation Council for Graduate Medical Education or the Royal College of Physicians and Surgeons of Canada or the Committee on Post-Graduate Training of the American Osteopathic Association; and

(2) Pass an examination, administered by diplomats of the specialty board, which tests knowledge and competence in radiation safety, radionuclide handling, treatment planning, quality assurance, and clinical use of stereotactic radiosurgery, remote afterloaders, and external beam therapy; or

*b.* (1) Has completed a structured educational program in basic radionuclide techniques applicable to the use of a sealed source in a therapeutic medical unit that includes:

1. 200 hours of classroom and laboratory training in the following areas:

- Radiation physics and instrumentation;
- Radiation protection;
- Mathematics pertaining to the use and measurement of radioactivity; and
- Radiation biology; and

2. 500 hours of work experience, under the supervision of an authorized user who meets the requirements in 41.2(73), or before May 3, 2006, meets the requirements in 10 CFR 35.690, or equivalent agreement state requirements at a medical institution, involving:

- Reviewing full calibration measurements and periodic spot checks;
- Preparing treatment plans and calculating treatment doses and times;
- Using administrative controls to prevent a medical event involving the use of radioactive material;
- Implementing emergency procedures to be followed in the event of the abnormal operation of the medical unit or console;
- Checking and using survey meters; and
- Selecting the proper dose and how it is to be administered; and

(2) Has completed three years of supervised clinical experience in radiation therapy under an authorized user who meets the requirements in 41.2(73), or before May 3, 2006, meets the requirements in 10 CFR 35.690, or equivalent agreement state requirements, as part of a formal training program approved by the Residency Review Committee for Radiation Oncology of the Accreditation Council for Graduate Medical Education or the Royal College of Physicians and Surgeons of Canada or the Committee on Postdoctoral Training of the American Osteopathic Association. This experience may be obtained concurrently with the supervised work experience required by 41.2(73) "b"(1)"2"; and

(3) Has obtained written attestation that the individual has satisfactorily completed the requirements in 41.2(73) "a"(1) or 41.2(73) "b"(1) and (2), and 41.2(73) "c," and has achieved a level of competency sufficient to function independently as an authorized user of each type of therapeutic medical unit for which the individual is requesting authorized user status. The written attestation must be signed by a preceptor authorized user who meets the requirements in 41.2(73), or before May 3, 2006, the requirements in 10 CFR 35.690, or equivalent agreement state requirements for an authorized user for each type of therapeutic medical unit for which the individual is requesting authorized user status; and

c. Has received training in device operation, safety procedures, and clinical use for the type of use for which authorization is sought. This training requirement may be satisfied by satisfactory completion of a training program provided by the vendor for new users or by receiving training supervised by an authorized user or authorized medical physicist, as appropriate, who is authorized for the type of use for which the individual is seeking authorization.

**41.2(74) Training for an authorized medical physicist.** Except as provided in 41.2(75), the licensee shall require the authorized medical physicist to be an individual who:

a. Is certified by a specialty board whose certification process has been recognized by the agency, NRC, or an agreement state and who meets the requirements in 41.2(74) "b"(2) and 41.2(74) "c." (The names of the specialty boards that have been recognized by the agency, NRC, or agreement state must be posted on the NRC's Web page.) To have its certification process recognized, a specialty board shall require all candidates for certification to:

(1) Hold a master's or doctor's degree in physics, medical physics, other physical science, engineering, or applied mathematics from an accredited college or university;

(2) Have two years of either full-time practical training or supervised experience in medical physics:

1. Under the supervision of a medical physicist who is certified in medical physics by a specialty board recognized by the agency, NRC, or an agreement state; or

2. In clinical radiation facilities providing high-energy, external beam therapy (photons and electrons with energies greater than or equal to 1 million electron volts) and brachytherapy services under the direction of physicians who meet the requirements for authorized users in 41.2(70) or 41.2(73); and

(3) Pass an examination, administered by diplomats of the specialty board, that assesses knowledge and competence in clinical radiation therapy, radiation safety, calibration, quality assurance, and treatment planning for external beam therapy, brachytherapy, and stereotactic radiosurgery; or

b. (1) Holds a master's or doctor's degree in physics, medical physics, other physical science, engineering, or applied mathematics from an accredited college or university; and has completed one year of full-time training in medical physics and an additional year of full-time work experience under the supervision of an individual who meets the requirements for an authorized medical physicist for the type of use for which the individual is seeking authorization. This training and work experience must be conducted in clinical radiation facilities that provide high-energy, external beam therapy (photons and electrons with energies greater than or equal to 1 million electron volts) and brachytherapy services and must include:

1. Performing sealed source leak tests and inventories;
2. Performing decay corrections;
3. Performing full calibration and periodic spot checks of external beam treatment units, stereotactic radiosurgery units, and remote afterloading units, as applicable; and
4. Conducting radiation surveys around external beam treatment units, stereotactic radiosurgery units, and remote afterloading units, as applicable; and

(2) Has obtained written attestation that the individual has satisfactorily completed the requirements in 41.2(74)“a”(1) and (2) and 41.2(74)“c” or 41.2(74)“b”(1) and 41.2(74)“c,” and has achieved a level of competency sufficient to function independently as an authorized medical physicist for each type of therapeutic medical unit for which the individual is requesting authorized medical physicist status. The written attestation must be signed by a preceptor authorized medical physicist who meets the requirements in 41.2(74), or before May 3, 2006, the requirements in 10 CFR 35.51, or equivalent agreement state requirements for an authorized medical physicist for each type of therapeutic medical unit for which the individual is requesting authorized medical physicist status; and

c. Has training for the type of use for which authorization is sought that includes hands-on device operation, safety procedures, clinical use, and the operation of a treatment planning system. This training requirement may be satisfied by satisfactorily completing either a training program provided by the vendor or by training supervised by an authorized medical physicist who is authorized for the type of use for which the individual is seeking authorization.

**41.2(75) Training for experienced radiation safety officer, authorized medical physicist, nuclear pharmacist, authorized nuclear pharmacist, authorized users and teletherapy or medical physicists.**

a. (1) An individual identified as a radiation safety officer, teletherapy or medical physicist, or nuclear pharmacist on an agency, NRC or agreement state license or a permit issued by an NRC or agreement state broad scope licensee or master material license permit or by a master material license permittee of broad scope before January 1, 2003, does not need to comply with the training requirements of 41.2(65), 41.2(74), or 41.2(78).

(2) An individual identified as a radiation safety officer, an authorized medical physicist, or an authorized nuclear pharmacist on the agency, NRC, or agreement state license or permit issued by the agency, NRC, or agreement state broad scope licensee or issued by master material license permit or issued by a master material license permittee of broad scope between January 1, 2003, and May 3, 2006, need not comply with the training requirements of 41.2(65), 41.2(74), or 41.2(78).

b. (1) Physicians, dentists, or podiatrists identified as authorized users for the medical use of radioactive material on a license issued by the agency, the NRC, or agreement state, a permit issued by an NRC master material licensee, a permit issued by an NRC broad scope licensee, or a permit issued by an NRC master material license broad scope permittee before January 1, 2003, who perform only those medical uses for which they were authorized before that date need not comply with the training requirements of 41.2(67), 41.2(68), 41.2(69), 41.2(70), 41.2(71), 41.2(72), 41.2(73), 41.2(81), 41.2(82), or 41.2(89).

(2) Physicians, dentists, or podiatrists identified as authorized users for the medical use of radioactive material issued by the agency, the NRC, or agreement state, a permit issued by an NRC master material licensee, a permit issued by an NRC broad scope licensee, or a permit issued by an NRC

master material license broad scope permittee who perform only those medical uses for which they were authorized between January 1, 2003, and May 3, 2006, need not comply with the training requirements of 41.2(67), 41.2(68), 41.2(69), 41.2(70), 41.2(71), 41.2(72), 41.2(73), 41.2(81), 41.2(82), or 41.2(89).

**41.2(76) *Physician training in a three-month program.*** Rescinded IAB 8/1/07, effective 9/5/07.

**41.2(77) *Recentness of training.*** The training and experience specified in 41.2(65) to 41.2(78) and 41.2(81), 41.2(82), and 41.2(89) shall have been obtained within the seven years preceding the date of application or the individual shall have had related continuing education and continuing applicable experience since the required training and experience were completed.

**41.2(78) *Training for an authorized nuclear pharmacist.*** Except as provided in 41.2(75), the licensee shall require the authorized nuclear pharmacist to be a pharmacist who:

*a.* Is certified as a nuclear pharmacist by a specialty board whose certification process includes all of the requirements of 41.2(78) "*b.*" (The names of the specialty boards that have been recognized by the agency, NRC, or agreement state must be posted on the NRC's Web page.) To have its certification process recognized, a specialty board shall require all candidates for certification to:

(1) Have graduated from a pharmacy program accredited by the American Council on Pharmaceutical Education (ACPE) or have passed the Foreign Pharmacy Graduate Examination Committee (FPGEC) examination;

(2) Hold a current, active license to practice pharmacy;

(3) Provide evidence of having acquired at least 4,000 hours of combined training and experience in nuclear pharmacy practice. Academic training may be substituted for no more than 2,000 hours of the required training and experience; and

(4) Pass an examination in nuclear pharmacy administered by diplomats of the specialty board that assesses knowledge and competency in procurement, compounding, quality assurance, dispensing, distribution, health and safety, radiation safety, provision of information and consultation, monitoring patient outcomes, research and development; or

*b.* Has completed 700 hours in a structured education program consisting of both:

(1) 200 hours of classroom and laboratory training in the following areas:

1. Radiation physics and instrumentation;

2. Radiation protection;

3. Mathematics pertaining to the use and measurement of radioactivity;

4. Chemistry of radioactive material for medical use; and

5. Radiation biology; and

(2) Supervised practical experience in a nuclear pharmacy involving:

1. Shipping, receiving, and performing related radiation surveys;

2. Using and performing checks for proper operation of instruments used to determine the activity of dosages, survey meters and, if appropriate, instruments used to measure alpha- or beta-emitting radionuclides;

3. Calculating, assaying, and safely preparing dosages for patients or human research subjects;

4. Using administrative controls to avoid medical events in the administration of by-product material; and

5. Using procedures to prevent or minimize radioactive contamination and using proper decontamination procedures; and

*c.* Has obtained written attestation, signed by a preceptor authorized nuclear pharmacist, that the individual satisfactorily completed the requirements in 41.2(78) "*a*"(1), (2), and (3), or 41.2(78) "*b*"(1) and has achieved a level of competency sufficient to function independently as an authorized nuclear pharmacist.

**41.2(79) *Training for experienced nuclear pharmacists.*** Rescinded IAB 8/1/07, effective 9/5/07.

**41.2(80) *Training for nuclear medicine technologists.*** Rescinded IAB 4/2/03, effective 5/7/03.

**41.2(81) *Training for the oral administration of sodium iodide I-131 requiring a written directive in quantities less than or equal to 33 millicuries (1.22 Gigabecquerels).*** Except as provided in 41.2(75), the licensee shall require an authorized user for the oral administration of sodium iodide I-131 requiring a

written directive in quantities less than or equal to 33 millicuries (1.22 Gigabecquerels) to be a physician who:

*a.* Is certified by a medical specialty board whose certification process includes all of the requirements in 41.2(81)“c”(1) and (2) and whose certification process has been recognized by the agency, NRC, or an agreement state and who meets the requirements in 41.2(81)“c”(3). (The names of the specialty boards that have been recognized by the agency, NRC, or agreement state must be posted on the NRC’s Web page.); or

*b.* Is an authorized user under 41.2(69)“a” or “b” for uses in the oral administration of less than or equal to 33 millicuries (1.22 Gigabecquerels) of sodium iodide I-131 for which a written directive is required, or oral administration of greater than 33 millicuries (1.22 Gigabecquerels) of sodium iodide I-131, or before May 3, 2006, who meets the requirements in 10 CFR 35.390, 35.392, or 35.394, or meets equivalent agreement state requirements; or

*c.* (1) Has successfully completed 80 hours of classroom and laboratory training, applicable to the medical use of sodium iodide I-131 for procedures requiring a written directive. The training must include:

1. Radiation physics and instrumentation;
2. Radiation protection;
3. Mathematics pertaining to the use and measurement of radioactivity;
4. Chemistry of radioactive material for medical use; and
5. Radiation biology; and

(2) Has work experience, under the supervision of an authorized user who meets the requirements in 41.2(69)“a” or “b,” or 41.2(82), or before May 3, 2006, meets the requirements in 10 CFR 35.390, 35.392, or 35.394, or equivalent agreement state requirements. A supervising authorized user who meets the requirements in 41.2(69)“b” must also have experience in administering dosages as follows: oral administration of less than or equal to 33 millicuries (1.22 Gigabecquerels) of sodium iodide I-131, for which a written directive is required; or oral administration of greater than 33 millicuries (1.22 Gigabecquerels) of sodium iodide I-131. The work experience must involve:

1. Ordering, receiving, and unpacking radioactive materials safely and performing the related radiation surveys;
2. Performing quality control procedures on instruments used to determine the activity of dosages and performing checks for proper operation of survey meters;
3. Calculating, measuring, and safely preparing patient or human research subject dosages;
4. Using administrative controls to prevent a medical event involving the use of radioactive material;
5. Using procedures to contain spilled radioactive material safely and using proper decontamination procedures; and

6. Administering dosages to patients or human research subjects that include at least three cases involving the oral administration of less than or equal to 33 millicuries (1.22 Gigabecquerels) of sodium iodide I-131; and

(3) Has obtained written attestation that the individual has satisfactorily completed the requirements in 41.2(81)“c”(1) and (2), and has achieved a level of competency sufficient to function independently as an authorized user for medical uses authorized under 41.2(37). The written attestation must be signed by a preceptor authorized user who meets the requirements in 41.2(69), 41.2(81), or 41.2(82), or before May 3, 2006, meets the requirements in 10 CFR 35.390, 35.392, or 35.394, or equivalent agreement state requirements. A preceptor authorized user who meets the requirements in 41.2(69)“b” must also have experience in administering dosages as follows: oral administration of less than or equal to 33 millicuries (1.22 Gigabecquerels) of sodium iodide I-131, for which a written directive is required; or oral administration of greater than 33 millicuries (1.22 Gigabecquerels) of sodium iodide I-131.

**41.2(82)** *Training for the oral administration of sodium iodide I-131 requiring a written directive in quantities greater than 33 millicuries (1.22 Gigabecquerels).* Except as provided in 41.2(75), the

licensee shall require an authorized user for the oral administration of sodium iodide I-131 requiring a written directive in quantities greater than 33 millicuries (1.22 Gigabecquerels) to be a physician who:

a. Is certified by a medical specialty board whose certification process includes all of the requirements in 41.2(82)“c”(1) and (2), and whose certification has been recognized by the agency, NRC, or agreement state, and who meets the requirements in 41.2(82)“c”(3). (The names of the specialty boards that have been recognized by the agency, NRC, or agreement state must be posted on the NRC’s Web page.); or

b. Is an authorized user under 41.2(69)“a” or “b” for oral administration of greater than 33 millicuries (1.22 Gigabecquerels) of sodium iodide I-131, or before May 3, 2006, meets the requirements in 10 CFR 35.390 or 35.394, or meets equivalent agreement state requirements; or

c. (1) Has successfully completed 80 hours of classroom and laboratory training, applicable to the medical use of sodium iodide I-131 for procedures requiring a written directive. The training must include:

1. Radiation physics and instrumentation;
2. Radiation protection;
3. Mathematics pertaining to the use and measurement of radioactivity;
4. Chemistry of radioactive material for medical use; and
5. Radiation biology; and

(2) Has work experience, under the supervision of an authorized user who meets the requirements in 41.2(69)“a” or “b,” or 41.2(82), or before May 3, 2006, meets the requirements in 10 CFR 35.390 or 35.394, or equivalent agreement state requirements. A supervising authorized user who meets the requirements in 41.2(69)“b” must also have experience in oral administration of greater than 33 millicuries (1.22 Gigabecquerels) of sodium iodide I-131. The work experience must involve:

1. Ordering, receiving, and unpacking radioactive materials safely and performing the related radiation surveys;
2. Performing quality control procedures on instruments used to determine the activity of dosages and performing checks for proper operation of survey meters;
3. Calculating, measuring, and safely preparing patient or human research subject dosages;
4. Using administrative controls to prevent a medical event involving the use of radioactive material;
5. Using procedures to contain spilled radioactive material safely and using proper decontamination procedures; and
6. Administering dosages to patients or human research subjects that include at least three cases involving the oral administration of greater than 33 millicuries (1.22 Gigabecquerels) of sodium iodide I-131; and

(3) Has obtained written attestation that the individual has satisfactorily completed the requirements in 41.2(82)“c”(1) and (2), and has achieved a level of competency sufficient to function independently as an authorized user for medical uses authorized in 41.2(37). The written attestation must be signed by a preceptor authorized user who meets the requirements in 41.2(69) or 41.2(82), or before May 3, 2006, meets the requirements in 10 CFR 35.390 or 35.394, or equivalent agreement state requirements. A preceptor authorized user who meets the requirements in 41.2(69)“b” must also have experience in oral administration of greater than 33 millicuries (1.22 Gigabecquerels) of sodium iodide I-131.

**41.2(83) Provisions for the protection of human research subjects.**

a. A licensee may conduct research involving human research subjects only if the licensee uses the radioactive materials authorized on its specific license for the uses authorized on its license.

b. If the research is conducted, funded, supported, or regulated by another federal agency that has implemented Federal Policy for the Protection of Human Subjects (Federal Policy), the licensee shall, before conducting research:

- (1) Obtain review and approval of the research from an “Institutional Review Board,” as defined and described in the Federal Policy; and

(2) Obtain “informed consent,” as defined and described in the Federal Policy, from the human research subjects.

c. If the research will not be conducted, funded, supported, or regulated by another federal agency that has implemented the Federal Policy, the licensee shall, before conducting research, apply for and receive a specific amendment to its medical use license. The amendment request must include a written commitment that the licensee will, before conducting research:

(1) Obtain review and approval of the research from an “Institutional Review Board,” as defined and described in the Federal Policy; and

(2) Obtain “informed consent,” as defined and described in the Federal Policy, from the human research subjects.

d. Nothing in this subrule relieves a licensee from complying with the other requirements of these rules.

**41.2(84) Calibration measurements of brachytherapy sources.**

a. Before the first medical use of a brachytherapy source on or after January 1, 2003, a licensee shall have:

(1) Determined the source output or activity using a dosimetry system that meets the requirements of 41.2(57);

(2) Determined the source positioning accuracy within applicators; and

(3) Used published protocols currently accepted by nationally recognized bodies to meet the requirements of 41.2(84)“a.”

b. A licensee may use measurements that are provided by the source manufacturer or by a calibration laboratory accredited by the American Association of Physicists in Medicine and that are made in accordance with 41.2(84)“a”(1) and (2).

c. A licensee shall mathematically correct the outputs or activities determined in 41.2(84)“a” for physical decay at intervals consistent with 1 percent physical decay.

d. A licensee shall retain a record of each calibration for three years after the last use of the source. The record must include:

(1) The date of the calibration;

(2) The manufacturer’s name, model number, and serial number for the source and the instruments used to calibrate the source;

(3) The source output or activity;

(4) The source positioning accuracy within the applicators; and

(5) The signature of the authorized medical physicist.

**41.2(85) Decay of strontium-90 sources for ophthalmic treatment.**

a. Only an authorized medical physicist shall calculate the activity of each strontium-90 source that is used to determine the treatment times for ophthalmic treatments. The decay must be based on the activity determined under 41.2(84).

b. A licensee shall retain a record of the activity of each strontium-90 source in accordance with 41.2(84).

**41.2(86) Therapy-related computer systems.** The licensee shall perform acceptance testing on the treatment planning system of therapy-related computer systems in accordance with published protocols accepted by nationally recognized bodies. At a minimum, the acceptance must include, as applicable, verification of:

a. The source-specific input parameters required by the dose calculation algorithm;

b. The accuracy of dose, dwell time, and treatment time calculations at representative points;

c. The accuracy of isodose plots and graphic displays;

d. The accuracy of the software used to determine sealed source positions from radiographic images; and

e. The accuracy of electronic transfer of the treatment delivery parameters to the treatment delivery unit from the treatment planning system.

**41.2(87) Written directives.** Each licensee or registrant shall meet the following objectives:

a. Prior to administration, a written directive must contain the patient's or human research subject's name and the following information:

(1) For any administration of quantities greater than 30 microcuries of either sodium iodide I-125 or I-131: the dosage;

(2) For a therapeutic administration of a radiopharmaceutical other than sodium iodide I-125 or I-131: the radiopharmaceutical, dosage, and route of administration;

(3) For gamma stereotactic radiosurgery: target coordinates, collimator size, plug pattern, and total dose;

(4) For teletherapy: the total dose, dose per fraction, number of fractions, treatment site, and overall treatment period;

(5) For high-dose-rate remote afterloading brachytherapy: the radioisotope, treatment site, and total dose; or

(6) For all other brachytherapy, including low-, medium-, and pulsed-dose-rate remote afterloaders:

1. Prior to implantation: treatment site, the radioisotope, number of sources, and source strengths; and

2. After implantation but prior to completion of the procedure: the radioisotope, treatment site, number of sources, and total source strength and exposure time (or, equivalently, the total dose);

(7) For therapeutic use of radiation machines, see 41.3(14);

b. Prior to each administration, the patient's or human research subject's identity is verified by more than one method as the individual named in the written directive;

c. The final plans of treatment and related calculations for brachytherapy, teletherapy, and gamma stereotactic radiosurgery are in accordance with the respective written directives;

d. Each administration is in accordance with the written directive through checking both manual and computer-generated dose calculations and verifying that any computer-generated dose calculations are correctly transferred into the consoles of the medical units authorized by 641—Chapter 41;

e. Any unintended deviation from the written directive is identified and evaluated, and appropriate action is taken;

f. If, because of the emergent nature of the patient's or human research subject's condition, a delay in order to provide a written directive jeopardizes the patient's or human research subject's health, an oral directive is acceptable. The information contained in the oral directive must be documented as soon as possible in writing in the patient's or human research subject's record. A written directive must be prepared within 48 hours of the oral directive; and

g. A copy of the written directive in auditable form shall be retained for three years after the date of administration.

h. A written revision to an existing written directive may be made if the revision is dated and signed by an authorized user before the administration of the dosage of unsealed by-product material, the brachytherapy dose, the gamma stereotactic radiosurgery dose, the teletherapy dose, or the next fractional dose.

**41.2(88)** *Other medical uses of by-product material or radiation from by-product material.* A licensee may use by-product material or a radiation source approved for medical use which is not specifically addressed in 641—41.2(136C)(e.g., Y-90 microspheres, liquid brachytherapy, intravascular brachytherapy) if:

a. The applicant or licensee has submitted the information required by the agency; and

b. The applicant or licensee has received written approval from the agency in a license or license amendment and uses the material in accordance with the regulations and specific conditions the agency considers necessary for the medical use of the material.

**41.2(89)** *Training for the parenteral administration of unsealed by-product material requiring a written directive.* Except as provided in 41.2(75), the licensee shall require an authorized user for the parenteral administration requiring a written directive to be a physician who:

a. Is an authorized user under 41.2(69), or before May 3, 2006, meets the requirements in 10 CFR 35.390, for uses listed in 41.2(89), or meets equivalent agreement state requirements; or

b. Is an authorized user under 41.2(70) or 41.2(73), or before May 3, 2006, meets the requirements in 10 CFR 35.490 or 35.690, or meets equivalent agreement state requirements, and who meets the requirements in 41.2(89)“d”; or

c. Is certified by a medical specialty board whose certification process has been recognized by the NRC or an agreement state under 41.2(70) or 41.2(73), or before May 3, 2006, meets the requirements in 10 CFR 35.490 or 35.690, and who meets the requirements in 41.2(89)“d”; or

d. (1) Has successfully completed 80 hours of classroom and laboratory training, applicable to parenteral administrations, for which a written directive is required, of either any beta emitter or any photon-emitting radionuclide with a photon energy less than 150 keV or parenteral administration of any other radionuclide for which a written directive is required. The training must include:

1. Radiation physics and instrumentation;
2. Radiation protection;
3. Mathematics pertaining to the use and measurement of radioactivity;
4. Chemistry of radioactive material for medical use; and
5. Radiation biology; and

(2) Has work experience, under the supervision of an authorized user who meets the requirements in 41.2(69) or 41.2(89), or before May 3, 2006, meets the requirements in 10 CFR 35.390, or equivalent agreement state requirements, in the parenteral administration for which a written directive is required, of either any beta emitter or any photon-emitting radionuclide with a photon energy less than 150 keV or parenteral administration of any other radionuclide for which a written directive is required. A supervising authorized user who meets the requirements in 41.2(69) or before May 3, 2006, meets the requirements in 10 CFR 35.390 must have experience in administering dosages of either any beta emitter or any photon-emitting radionuclide with a photon energy less than 150 keV or parenteral administration of any other radionuclide for which a written directive is required. The work experience must involve:

1. Ordering, receiving, and unpacking radioactive materials safely, and performing the related radiation surveys;
2. Performing quality control procedures on instruments used to determine the activity of dosages, and performing checks for proper operation of survey meters;
3. Calculating, measuring, and safely preparing patient or human research subject dosages;
4. Using administrative controls to prevent a medical event involving the use of unsealed radioactive material;
5. Using procedures to contain spilled radioactive material safely, and using proper decontamination procedures; and
6. Administering dosages to patients or human research subjects, that include at least three cases involving the parenteral administration for which a written directive is required, of either any beta emitter or any photon-emitting radionuclide with a photon energy less than 150 keV or at least three cases involving the parenteral administration of any other radionuclide for which a written directive is required; and

(3) Has obtained written attestation that the individual has satisfactorily completed the requirements in 41.2(89)“b” or “c,” and has achieved a level of competency sufficient to function independently as an authorized user for the parenteral administration of unsealed by-product material requiring a written directive. The written attestation must be signed by a preceptor authorized user who meets the requirements in 41.2(69) or 41.2(89), or before May 3, 2006, meets the requirements in 10 CFR 35.390, or equivalent agreement state requirements. A preceptor authorized user who meets the requirements in 41.2(69), or before May 3, 2006, meets the requirements in 10 CFR 35.390, must have experience in administering dosages of either any beta emitter or any photon-emitting radionuclide with a photon energy less than 150 keV or at least three cases involving the parenteral administration of any other radionuclide for which a written directive is required.

[ARC 7983B, IAB 7/29/09, effective 9/2/09]

**641—41.3(136C) Therapeutic use of radiation machines.****41.3(1) Scope and applicability.**

a. This subrule establishes requirements, for which the registrant is responsible, for use of therapeutic radiation machines.

b. The use of therapeutic radiation machines shall be by, or under the supervision of, a physician who meets the training/experience criteria established by 41.3(5).

c. Unless specifically required otherwise by 641—41.3(136C), all registrants are subject to the requirements of 641—Chapters 38 to 40.

**41.3(2) Definitions.** In addition to the definitions provided in 641—38.2(136C) and 641—40.2(136C), the following definitions are specific to 641—41.3(136C).

*“Accessible surface”* means surface of equipment or of an equipment part that can be easily or accidentally touched by persons without the use of a tool.

*“Added filtration”* means any filtration which is in addition to the inherent filtration.

*“Beam-limiting device”* means a field defining collimator, integral to the therapeutic radiation machine, which provides a means to restrict the dimensions of the useful beam.

*“Beam-scattering foil”* means a thin piece of material (usually metallic) placed in the beam to scatter a beam of electrons in order to provide a more uniform electron distribution in the useful beam.

*“Bent beam linear accelerator”* means a linear accelerator geometry in which the accelerated electron beam must change direction by passing through a bending magnet.

*“Contact therapy system”* means a therapeutic radiation machine with a short target-to-skin distance (TSD), usually less than 5 centimeters.

*“Dose monitor unit (DMU)”* means a unit response from the beam monitoring system from which the absorbed dose can be calculated.

*“External beam radiation therapy”* means therapeutic irradiation in which the source of radiation is at a distance from the body.

*“Field flattening filter”* means a filter used to homogenize the absorbed dose rate over the radiation field.

*“Filter”* means material placed in the useful beam to change beam quality or its intensity profile in therapeutic radiation machines.

*“Gantry”* means that part of a radiation therapy system supporting and allowing movements of the radiation head around a center of rotation.

*“Interruption of irradiation”* means the stopping of irradiation with the possibility of continuing irradiation without resetting of operating conditions at the control panel.

*“Isocenter”* means the center of the sphere through which the useful beam axis passes while the gantry moves through its full range of motions.

*“Megavolt (MV) (mega electron volt (MeV))”* means the energy equal to that acquired by a particle with one electron charge in passing through a potential difference of 1 million volts in a vacuum. (Note: Current convention is to use MV for photons and MeV for electrons.)

*“Monitor unit (MU).”* See “Dose monitor unit.”

*“Moving beam radiation therapy”* means radiation therapy with continuous displacement of one or more mechanical axes relative to the patient during irradiation. It includes arc therapy, skip therapy, conformal therapy, intensity modulation, and rotational therapy.

*“Nominal treatment distance”* means:

1. For electron irradiation, the distance from the scattering foil, virtual source, or exit window of the electron beam to the entrance surface of the irradiated object along the central axis of the useful beam.

2. For X-ray irradiation, the virtual source or target to isocenter distance along the central axis of the useful beam. For nonisocentric equipment, this distance shall be that specified by the manufacturer.

*“Periodic quality assurance check”* means a procedure which is performed to ensure that a previous calibration continues to be valid.

*“Practical range of electrons”* corresponds to classical electron range where the only remaining contribution to dose is from bremsstrahlung X-rays. A further explanation may be found in “Clinical

Electron Beam Dosimetry: Report of AAPM Radiation Therapy Committee Task Group 25" (Medical Physics 18(1): 73-109, Jan/Feb 1991) and ICRU Report 35, "Radiation Dosimetry: Electron Beams with Energies Between 1 and 50 MeV," International Agency on Radiation Units and Measurements, September 15, 1984.

*"Radiation field."* See "Useful beam."

*"Radiation head"* means the structure from which the useful beam emerges.

*"Radiation therapy physicist"* means an individual qualified in accordance with 41.3(6).

*"Redundant beam monitoring system"* means a combination of two dose monitoring systems in which each system is designed to terminate irradiation in accordance with a preselected number of dose monitor units.

*"Shadow tray"* means a device attached to the radiation head to support auxiliary beam blocking material.

*"Stationary beam radiation therapy"* means radiation therapy without displacement of one or more mechanical axes relative to the patient during irradiation.

*"Target"* means that part of an X-ray tube or accelerator onto which is directed a beam of accelerated particles to produce ionizing radiation or other particles.

*"Tenth-value layer (TVL)"* means the thickness of a specified material which attenuates X-radiation or gamma radiation to an extent such that the air kerma rate, exposure rate or absorbed dose rate is reduced to one-tenth of the value measured without the material at the same point.

*"Therapeutic radiation machine"* means X-ray or electron-producing equipment designed and used for external beam radiation therapy.

*"Virtual source"* means a point from which radiation appears to originate.

**41.3(3)** Registration or license requirements. No person shall receive, possess, use, transfer, own, or acquire therapeutic radiation machines except as authorized in a registration issued pursuant to 641—39.1(136C) to 39.4(136C).

**41.3(4)** General administrative requirements for facilities using therapeutic radiation machines.

*a.* Administrative controls. The registrant shall be responsible for directing the operation of the therapeutic radiation machines which have been registered with the agency. The registrant or the registrant's agent shall ensure that the requirements of 41.3(136C) are met in the operation of the therapeutic radiation machine(s).

*b.* A therapeutic radiation machine which does not meet the provisions of these regulations shall not be used for irradiation of patients unless authorized by the agency.

**41.3(5)** Training for external beam radiation therapy authorized users. The registrant for any therapeutic radiation machine subject to 41.3(17) or 41.3(18) shall require the authorized user to be a physician who:

*a.* Is certified in:

- (1) Radiology or therapeutic radiology by the American Board of Radiology; or
- (2) Radiation oncology by the American Osteopathic Board of Radiology; or
- (3) Radiology, with specialization in radiotherapy, as a British "Fellow of the Faculty of Radiology" or "Fellow of the Royal College of Radiology"; or
- (4) Therapeutic radiology by the Canadian Royal College of Physicians and Surgeons; or

*b.* Is in the active practice of therapeutic radiology, and has completed 200 hours of instruction in basic radiation techniques applicable to the use of an external beam radiation therapy unit, 500 hours of supervised work experience, and a minimum of three years of supervised clinical experience.

*c.* To satisfy the requirement for instruction in 41.3(5) "b" above, the classroom and laboratory training shall include:

- (1) Radiation physics and instrumentation;
- (2) Radiation protection;
- (3) Mathematics pertaining to the use and measurement of ionization radiation; and
- (4) Radiation biology.

*d.* To satisfy the requirement for supervised work experience in 41.3(4) "b" above, training shall be under the supervision of an authorized user and shall include:

- (1) Reviewing the full calibration measurements and periodic quality assurance checks;
- (2) Evaluating prepared treatment plans and calculation of treatment times/patient treatment settings;

- (3) Using administrative controls to prevent misadministrations;
- (4) Implementing emergency procedures to be followed in the event of the abnormal operation of an external beam radiation therapy unit or console; and

- (5) Checking and using radiation survey meters.

*e.* To satisfy the requirement for a period of supervised clinical experience, training shall include one year in a formal training program approved by the Residency Review Committee for Radiology of the Accreditation Council for Graduate Medical Education or the Committee on Postdoctoral Training of the American Osteopathic Association and an additional two years of clinical experience in therapeutic radiology under the supervision of an authorized user. The supervised clinical experience shall include:

- (1) Examining individuals and reviewing their case histories to determine their suitability for external beam radiation therapy treatment, and any limitations/contraindications;

- (2) Selecting proper dose and how it is to be administered;

- (3) Calculating the external beam radiation therapy doses and collaborating with the authorized user in the review of patients' progress; consideration of the need to modify originally prescribed doses or treatment plans as warranted by patients' reaction to radiation; and

- (4) Postadministration follow-up and review of case histories.

*f.* Notwithstanding the requirements of 41.3(5) "b," the registrant for any therapeutic radiation machine subject to 41.3(17) and 41.3(18) may also submit the training of the prospective authorized user physician for agency review.

*g.* A physician shall not act as an authorized user for any therapeutic radiation machine until such time as said physician's training has been reviewed and approved by the registrant.

**41.3(6)** Training for radiation therapy physicist. The registrant for any therapeutic radiation machine subject to 41.3(17) or (18) shall require the radiation therapy physicist to:

*a.* Be registered with the agency, under the provisions of 641—subrule 39.3(3) of these regulations, as a provider of radiation services in the area of calibration and compliance surveys of external beam radiation therapy units; and

*b.* Be certified by the American Board of Radiology in:

- (1) Therapeutic radiological physics; or

- (2) Roentgen-ray and gamma-ray physics; or

- (3) X-ray and radium physics; or

- (4) Radiological physics; or

*c.* Be certified by the American Board of Medical Physics in radiation oncology physics; or

*d.* Be certified by the Canadian College of Physicists in Medicine; or

*e.* Hold a master's or doctor's degree in physics, biophysics, radiological physics, or health physics, and have completed one year of full-time training in therapeutic radiological physics and also one year of full-time work experience under the supervision of a radiation therapy physicist at a medical institution. To meet this requirement, the individual shall have performed the tasks listed in 41.3(16) "a," 41.3(17) "c" and "d," and 41.3(18) "e" and "f" under the supervision of a radiation therapy physicist during the year of work experience.

*f.* Rescinded IAB 4/3/02, effective 5/8/02.

**41.3(7)** Qualifications of operators.

*a.* Individuals who will be operating a therapeutic radiation machine for medical use shall be adequately instructed in the safe operating procedures, be competent in the safe use of the equipment in accordance with 641—Chapter 42 as applicable, and hold a current permit to practice in radiation therapy.

*b.* Each operator's permit to practice under 641—Chapter 42 shall be posted in the immediate vicinity of the general work area and visible to the public.

**41.3(8)** Written safety procedures and rules shall be developed by a radiation therapy physicist and shall be available in the control area of a therapeutic radiation machine, including any restrictions

required for the safe operation of the particular therapeutic radiation machine. The operator shall be able to demonstrate familiarity with these rules. All individuals associated with the operation of a therapeutic radiation machine shall be instructed in and shall comply with procedures for maintaining written directives.

**41.3(9)** Individuals shall not be exposed to the useful beam except for medical therapy purposes and unless such exposure has been ordered in writing by a physician. This provision specifically prohibits deliberate exposure of an individual for training, demonstration or other non-healing arts purposes.

**41.3(10)** Records of visiting authorized users. Notwithstanding the provisions of 41.3(5), a registrant may permit any physician to act as a visiting authorized user for up to 60 days per calendar year under the following conditions:

- a. The visiting authorized user has the prior written permission of the registrant's management and, if the use occurs on behalf of an institution, the institution's radiation safety committee;
- b. The visiting authorized user meets the requirements of 41.3(5); and
- c. The registrant maintains copies of all records specified in 41.3(5) for five years from the date of the last visit.

**41.3(11)** Information and maintenance record and associated information. The registrant shall maintain the following information in a separate file or package for each therapeutic radiation machine for inspection by the agency:

- a. Report of acceptance testing;
- b. Records of all surveys, calibrations, and periodic quality assurance checks of the therapeutic radiation machine required by 41.3(136C), as well as the name(s) of person(s) who performed such activities;
- c. Records of maintenance or modifications, or both, performed on the therapeutic radiation machine after July 9, 1997, as well as the name(s) of person(s) who performed such services;
- d. Signature of person authorizing the return of therapeutic radiation machine to clinical use after service, repair, or upgrade.
- e. Records of training specified in 41.3(5) and 41.3(6).

**41.3(12)** Records retention. All records required by 641—41.3(136C) shall be retained until disposal is authorized by the agency unless another retention period is specifically authorized in 41.3(136C). All required records shall be retained in an active file from at least the time of generation until the next agency inspection. Any required record generated before the last agency inspection may be microfilmed or otherwise archived as long as a complete copy can be retrieved until such time the agency authorizes final disposal.

**41.3(13)** Form of records. Rescinded IAB 4/5/00, effective 5/10/00.

**41.3(14)** Written directives. Each registrant shall meet the following:

a. A written directive must be dated and signed by an authorized user prior to the administration of radiation.

(1) If, because of the patient's condition, a delay in the order to provide a written revision to an existing directive would jeopardize the patient's health, an oral revision to an existing written directive will be acceptable, provided that the oral revision is documented as soon as possible in writing in the patient's record and a revised written directive is signed by an authorized user within 48 hours of the oral revision.

(2) The written directive must contain the patient or human research subject's name, the type and energy of the beam, the total dose, dose per fraction, treatment site, and number of fractions.

(3) A written revision to an existing written directive may be made provided that the revision is dated and signed by an authorized user prior to the administration of the external beam dose, or the next fractional dose.

(4) The registrant shall retain a copy of the written directive for three years.

b. Procedures for administration. The registrant shall have written procedures that provide the following information:

(1) Prior to the administration of each course of radiation treatment, the patient's or human research subject's identity is verified by more than one method as the individual named in the written directive;

- (2) Each administration is in accordance with the written directive;
- (3) External beam radiation therapy final plans of treatment and related calculations are in accordance with the respective written directives by:
  1. Checking both manual and computer-generated dose calculations to verify that they are correct and in accordance with the written directive; and
  2. Verifying that any computer-generated calculations are correctly transferred into the consoles of authorized therapeutic medical units;
- (4) Any unintended deviation from the written directive is identified, evaluated and appropriate action is taken; and
- (5) The registrant retains a copy of the procedures for administrations for the duration of the registration.

**41.3(15) Reports and notifications of misadministrations.**

*a.* A registrant shall report any event resulting from intervention of a patient or human research subject in which the administration of external beam radiation results, or will result, in unintended permanent functional damage to an organ or a physiological system as determined by a physician.

*b.* Other than events that result from intervention by a patient or human research subject, a registrant shall report any event in which the administration of an external beam radiation therapy dose results in:

(1) A dose that differs from the prescribed dose by more than 5 rem (0.05 sievert) effective dose equivalent, 50 rem (0.5 sievert) to an organ or tissue, or 50 rem (0.5 sievert) shallow dose equivalent to the skin, and either:

1. The total dose delivered differs from the prescribed dose by 20 percent or more; or
2. The fractionated dose delivered differs from the prescribed dose for a single fraction by 50 percent or more.

(2) A dose that exceeds 5 rem (0.05 sievert) effective dose equivalent, 50 rem (0.5 sievert) to an organ or tissue, or 50 rem (0.5 sievert) shallow dose equivalent to the skin from either of the following:

1. An administration of the wrong treatment modality;
2. An administration to the wrong individual or human research subject.

(3) A dose to the skin or an organ or tissue other than the treatment site that exceeds by 50 rem (0.5 sievert) to an organ or tissue and 50 percent or more of the dose expected from the administration defined in the written directive.

*c.* The registrant shall notify the agency by telephone no later than the next calendar day after the discovery of a misadministration.

*d.* The registrant shall submit a written report to the agency within 15 days after the discovery of a misadministration. The written report shall include:

- (1) The registrant's name;
- (2) The name of the prescribing physician;
- (3) A brief description of the event;
- (4) Why the event occurred;
- (5) The effect, if any, on the individual or individuals who received the misadministration;
- (6) Actions, if any, that have been taken, or are planned, to prevent recurrence;
- (7) Certification that the registrant notified the individual or the individual's responsible relative or guardian, and if not, why not.

*e.* The report to the agency shall not contain the individual's name or any other information that could lead to the identification of the individual.

*f.* The registrant shall provide notification of the event to the referring physician and also notify the individual who is the subject of the misadministration no later than 24 hours after its discovery, unless the referring physician personally informs the registrant either that the referring physician will inform the individual or that, based on medical judgment, the physician's telling the individual would be harmful. The registrant is not required to notify the individual without first consulting the referring physician. If the referring physician or the affected individual cannot be reached within 24 hours, the registrant shall notify the individual as soon as possible thereafter. The registrant may not delay any

appropriate medical care for the individual, including any necessary remedial care as a result of the misadministration, because of any delay in notification. To meet the requirements of this paragraph, the notification of the individual who is the subject of the misadministration may be made instead to that individual's responsible relative or guardian. If a verbal notification is made, the registrant shall inform the individual, or appropriate responsible relative or guardian, that a written description of the event may be obtained from the registrant upon request. The registrant shall provide such a written description if requested.

*g.* Aside from the notification requirement, nothing in this subrule affects any rights or duties of registrants and physicians in relation to each other, to individuals affected by the misadministration, or to individuals' responsible relatives or guardians.

*h.* A copy of the record required in this subrule shall be provided to the referring physician, if other than the registrant, within 15 days after discovery of the misadministration.

*i.* Records of misadministrations. A registrant shall retain a record of misadministrations reported in this subrule for three years. The record must contain the following:

- (1) The registrant's name and the names of the individuals involved;
- (2) The social security number or other identification number, if one has been assigned, of the individual who is the subject of the misadministration;
- (3) A brief description of the event; why it occurred; and the effect, if any, on the individual;
- (4) The actions, if any, taken or planned to prevent recurrence; and
- (5) Whether the registrant notified the individual or the individual's responsible relative or guardian, and, if not, whether such failure to notify was based on guidance from the referring physician.

**41.3(16)** General technical requirements for facilities using therapeutic radiation machines.

*a.* Protection surveys.

(1) The registrant shall ensure that radiation protection surveys of all new facilities, and existing facilities not previously surveyed, are performed with an operable radiation measurement survey instrument calibrated within the past 12 months. The radiation protection survey shall be performed by, or under the direction of, a radiation therapy physicist or a certified health physicist and shall verify that, with the therapeutic radiation machine in a "BEAM-ON" condition, with the largest clinically available treatment field and with a scattering phantom in the useful beam of radiation:

1. Radiation levels in restricted areas are not likely to cause personnel exposures in excess of the limits specified in 641—subrule 40.15(1); and

2. Radiation levels in unrestricted areas do not exceed the limits specified in 641—paragraphs 40.26(1) "a" and "b."

(2) In addition to the requirements of 41.3(16) "a" (1), a radiation protection survey shall also be performed prior to any subsequent medical use and:

1. After making any change in the treatment room shielding;
2. After making any change in the location of the therapeutic radiation machine within the treatment room;
3. After relocating the therapeutic radiation machine; or
4. Before using the therapeutic radiation machine in a manner that could result in increased radiation levels in areas outside the external beam radiation therapy treatment room.

(3) The survey record shall indicate all instances where the facility, in the opinion of the radiation therapy physicist or a certified health physicist, is in violation of applicable regulations. The survey record shall also include the date of the measurements, the reason the survey is required, the manufacturer's name, model number and serial number of the therapeutic radiation machine, the instrument(s) used to measure radiation levels, a plan of the areas surrounding the treatment room that were surveyed, the measured dose rate at several points in each area expressed in microsieverts or millirems per hour, the calculated maximum level of radiation over a period of one week for each restricted and unrestricted area, and the signature of the individual responsible for conducting the survey.

(4) If the results of the surveys required by 41.3(16) "a"(1) or (2) indicate any radiation levels in excess of the respective limit specified in 41.3(16) "a"(1), the registrant shall lock the control in the "OFF" position and not use the unit:

1. Except as may be necessary to repair, replace, or test the therapeutic radiation machine, the therapeutic radiation machine shielding, or the treatment room shielding; or

2. Until the registrant has received a specific exemption in writing from the agency.

*b.* Modification of radiation therapy unit or room before beginning a treatment program. If the survey required by 41.3(16) "a" indicates that an individual in an unrestricted area may be exposed to levels of radiation greater than those permitted by 641—paragraphs 40.26(1) "a" and "b," before beginning the treatment program the registrant shall:

- (1) Either equip the unit with beam direction interlocks or add additional radiation shielding to ensure compliance with 641—paragraphs 40.26(1) "a" and "b";

- (2) Perform the survey required by 41.3(16) "a" again; and

- (3) Include in the report required by 41.3(16) "d" the results of the initial survey, a description of the modification made to comply with 41.3(5) "b"(1), and the results of the second survey; or

- (4) Request and receive written authorization from the agency that authorizes radiation levels in unrestricted areas greater than those permitted by 641—paragraphs 40.26(1) "a" and "b."

*c.* Dosimetry equipment.

- (1) The registrant shall have a calibrated dosimetry system available for use. The system shall have been calibrated by the National Institute for Standards and Technology (NIST) or by an American Association of Physicists in Medicine (AAPM) Accredited Dosimetry Calibration Laboratory (ADCL). The calibration shall have been performed within the previous 24 months and after any servicing that may have affected system calibration.

1. For beams with energies greater than 1 MV (1 MeV), the dosimetry system shall have been calibrated for Cobalt-60.

2. For beams with energies equal to or less than 1 MV (1 MeV), the dosimetry system shall have been calibrated at an energy (energy range) appropriate for the radiation being measured.

- (2) The registrant shall have available for use a dosimetry system for quality assurance check measurements. To meet this requirement, the system may be compared with a system that has been calibrated in accordance with 41.3(16) "c"(1). This comparison shall have been performed within the previous 12 months and after each servicing that may have affected system calibration. The quality assurance check system may be the same system used to meet the requirement in 41.3(16) "c"(1).

- (3) The registrant shall maintain a record of each dosimetry system calibration, intercomparison, and comparison for the duration of the license or registration. For each calibration, intercomparison, or comparison, the record shall include the date, the model numbers and serial numbers of the instruments that were calibrated, intercompared, or compared as required by 41.3(16) "c"(1) and (2), the correction factors that were determined, the names of the individuals who performed the calibration, intercomparison, or comparison, and evidence that the intercomparison was performed by, or under the direct supervision and in the physical presence of, a radiation therapy physicist.

*d.* Reports of external beam radiation therapy surveys and measurements. The registrant for any therapeutic radiation machine subject to 41.3(17) or 41.3(18) shall furnish a copy of the records required in 41.3(16) "a" and "b" to the agency within 30 days following completion of the action that initiated the record requirement.

**41.3(17)** Therapeutic radiation machines of less than 500 kV.

*a.* Equipment requirements.

- (1) Leakage radiation. When the X-ray tube is operated at its maximum rated tube current for the maximum kV, the leakage air kerma rate shall not exceed the value specified at the distance specified for that classification of therapeutic radiation machine:

1. 5-50 kV systems. The leakage air kerma rate measured at any position 5 centimeters from the tube housing assembly shall not exceed 100 mrad (1 mGy) in any one hour.

2. >50 and <500 kV systems. The leakage air kerma rate measured at a distance of one meter from the target in any direction shall not exceed 1 rad (1 cGy) in any one hour. This air kerma rate

measurement may be averaged over areas no larger than 100 square centimeters. In addition, the air kerma rate at a distance of 5 centimeters from the surface of the tube housing assembly shall not exceed 30 rad (30 cGy) per hour.

3. For each therapeutic machine, the registrant shall determine, or obtain from the manufacturer, the leakage radiation existing at positions specified in 41.3(17) "a"(1)"1" and 41.3(17) "a"(1)"2" for the specified operating conditions. Records on leakage radiation measurements shall be maintained at the facility for inspection by the agency.

(2) Permanent beam-limiting devices. Permanent diaphragms or cones used for limiting the useful beam shall provide at least the same degree of attenuation as required for the tube housing assembly.

(3) Adjustable or removable beam-limiting devices.

1. All adjustable or removable beam-limiting devices, diaphragms, cones or blocks shall not transmit more than 5 percent of the useful beam for the most penetrating beam used;

2. When adjustable beam-limiting devices are used, the position and shape of the radiation field shall be indicated by a light beam.

(4) Filter system. The filter system shall be so designed that:

1. Filters cannot be accidentally displaced at any possible tube orientation;

2. For equipment installed after July 9, 1997, an interlock system prevents irradiation if the proper filter is not in place;

3. The air kerma rate escaping from the filter slot shall not exceed 1 rad (1 cGy) per hour at one meter under any operating conditions; and

4. Each filter shall be marked as to its material of construction and its thickness.

(5) Tube immobilization.

1. The X-ray tube shall be so mounted that it cannot accidentally turn or slide with respect to the housing aperture; and

2. The tube housing assembly shall be capable of being immobilized for stationary portal treatments.

(6) Source marking. The tube housing assembly shall be so marked that it is possible to determine the location of the source to within 5 millimeters, and such marking shall be readily accessible for use during calibration procedures.

(7) Beam block. Contact therapy tube housing assemblies shall have a removable shield of material, equivalent in attenuation to 0.5 millimeters of lead at 100 kV, which can be positioned over the entire useful beam exit port during periods when the beam is not in use.

(8) Timer. A suitable irradiation control device shall be provided to terminate the irradiation after a preset time interval.

1. A timer which has a display shall be provided at the treatment control panel. The timer shall have a preset time selector and an elapsed time or time remaining indicator;

2. The timer shall be a cumulative timer which activates with an indication of "BEAM-ON" and retains its reading after irradiation is interrupted or terminated. After irradiation is terminated and before irradiation can be reinitiated, it shall be necessary to reset the elapsed time indicator;

3. The timer shall terminate irradiation when a preselected time has elapsed, if any dose monitoring system present has not previously terminated irradiation;

4. The timer shall permit accurate presetting and determination of exposure times as short as one second;

5. The timer shall not permit an exposure if set at zero;

6. The timer shall not activate until the shutter is opened when irradiation is controlled by a shutter mechanism unless calibration includes a timer error correction to compensate for mechanical lag; and

7. Timer shall be accurate to within 1 percent of the selected value or one second, whichever is greater.

(9) Control panel functions. The control panel, in addition to the displays required by other provisions in 41.3(6), shall have:

1. An indication of whether electrical power is available at the control panel and if activation of the X-ray tube is possible;

2. An indication of whether X-rays are being produced;
3. Means for indicating X-ray tube potential and current;
4. The means for terminating an exposure at any time;
5. A locking device which will prevent unauthorized use of the therapeutic radiation machine; and
6. For therapeutic radiation machines manufactured after July 9, 1997, a positive display of specific filter(s) in the beam.

(10) Multiple tubes. When a control panel may energize more than one X-ray tube:

1. It shall be possible to activate only one X-ray tube at any time;
2. There shall be an indication at the control panel identifying which X-ray tube is activated; and
3. There shall be an indication at the tube housing assembly when that tube is energized.

(11) Target-to-skin distance (TSD). There shall be a means of determining the central axis TSD to within one centimeter and of reproducing this measurement to within two millimeters thereafter.

(12) Shutters. Unless it is possible to bring the X-ray output to the prescribed exposure parameters within five seconds after the X-ray "ON" switch is energized, the beam shall be attenuated by a shutter(s) having a lead equivalency not less than that of the tube housing assembly. In addition, after the unit is at operating parameters, the shutter(s) shall be controlled by the operator from the control panel. An indication of shutter position shall appear at the control panel.

(13) Low filtration X-ray tubes. Each therapeutic radiation machine equipped with a beryllium or other low-filtration window shall be clearly labeled as such upon the tube housing assembly and shall be provided with a permanent warning device on the control panel that is activated when no additional filtration is present, to indicate that the dose rate is very high.

b. Facility design requirements for therapeutic radiation machines capable of operating in the range 50 kV to 500 kV. In addition to shielding adequate to meet requirements of 41.3(19), the treatment room shall meet the following design requirements:

(1) Aural communication. Provision shall be made for continuous two-way aural communication between the patient and the operator at the control panel.

(2) Viewing systems. Provision shall be made to permit continuous observation of the patient during irradiation and the viewing system shall be so located that the operator can observe the patient from the control panel. The therapeutic radiation machine shall not be used for patient irradiation unless at least one viewing system is operational.

(3) Additional requirements. Treatment rooms which contain a therapeutic radiation machine capable of operating above 150 kV shall meet the following additional requirements:

1. All protective barriers shall be fixed except for entrance doors or beam interceptors;
2. The control panel shall be located outside the treatment room or in a totally enclosed booth, which has a ceiling, inside the room;
3. Interlocks shall be provided such that all entrance doors, including doors to any interior booths, shall be closed before treatment can be initiated or continued. If the radiation beam is interrupted by any door opening, it shall not be possible to restore the machine to operation without closing the door and reinitiating irradiation by manual action at the control panel; and
4. When any door referred to in 41.3(17)"b"(3)"3" is opened while the radiation machine is activated, the air kerma rate at a distance of one meter from the source shall be reduced to less than 1 mGy (100 mrad) per hour.

c. Full calibration measurements.

(1) Full calibration of a therapeutic radiation machine subject to 41.3(17) shall be performed by, or under the direct supervision of, a radiation therapy physicist:

1. Before the first medical use following installation or reinstallation of the therapeutic radiation machine;
2. At intervals not exceeding one year; and
3. Before medical use under the following conditions:
  - Whenever quality assurance check measurements indicate that the radiation output differs by more than 5 percent from the value obtained at the last full calibration and the difference cannot be reconciled; and

- Following any component replacement, major repair, or modification of components that could significantly affect the characteristics of the radiation beam.

4. Notwithstanding the requirements of 41.3(17)“c”(1):

- Full calibration of therapeutic radiation machines with multienergy capabilities is required only for those modes or energies that are not within their acceptable range; and

- If the repair, replacement or modification does not affect all energies, full calibration shall be performed on the affected energy that is in most frequent clinical use at the facility. The remaining energies may be validated with quality assurance check procedures against the criteria in 41.3(17)“b”(3).

- (2) To satisfy the requirement of 41.3(17)“c”(1), full calibration shall include all measurements recommended for annual calibration by NCRP Report 69, “Dosimetry of X-ray and Gamma Ray Beams for Radiation Therapy in the Energy Range 10 keV to 50 MeV” (1981).

- (3) The registrant shall maintain a record of each calibration for the duration of the registration. The record shall include the date of the calibration, the manufacturer’s name, model number, and serial number for both the therapeutic radiation machine and the X-ray tube, the model numbers and serial numbers of the instruments used to calibrate the therapeutic radiation machine, and the signature of the radiation therapy physicist responsible for performing the calibration.

- d. Periodic quality assurance checks.

- (1) Periodic quality assurance checks shall be performed on therapeutic radiation machines, subject to 41.3(17), which are capable of operation at greater than or equal to 50 kV.

- (2) To satisfy the requirement of 41.3(17)“d”(1), quality assurance checks shall meet the following requirements:

1. The registrant shall perform quality assurance checks in accordance with written procedures established by the radiation therapy physicist; and

2. The quality assurance check procedures shall specify the frequency at which tests or measurements are to be performed. The quality assurance check procedures shall specify that the quality assurance check shall be performed during the calibration specified in 41.3(17)“c”(1). The acceptable tolerance for each parameter measured in the quality assurance check, when compared to the value for that parameter determined in the calibration specified in 41.3(17)“c”(1), shall be stated.

- (3) The cause for a parameter exceeding a tolerance set by the radiation therapy physicist shall be investigated and corrected before the system is used for patient or human research subject irradiation;

- (4) Whenever a quality assurance check indicates a significant change in the operating characteristics of a system, as specified in the radiation therapy physicist’s quality assurance check procedures, the system shall be recalibrated as required in 41.3(17)“c”(1);

- (5) The registrant shall use the dosimetry system described in 41.3(16)“c”(2) to make the quality assurance check required in 41.3(17)“d”;

- (6) The registrant shall have the radiation therapy physicist review and sign the results of each radiation output quality assurance check within one month of test completion;

- (7) The registrant shall ensure that safety quality assurance checks of therapeutic radiation machines subject to 41.3(17) are performed at intervals not to exceed one month;

- (8) Notwithstanding the requirements of 41.3(17)“d”(6) and (7), the registrant shall ensure that no therapeutic radiation machine is used to administer radiation to humans unless the quality assurance checks required by 41.3(17)“d”(6) and (7) have been performed within the 30 days prior to administration;

- (9) To satisfy the requirement of 41.3(17)“d”(7), safety quality assurance checks shall ensure proper operation of:

1. Electrical interlocks at each external beam radiation therapy room entrance;
2. The “BEAM-ON” and termination switches;
3. Beam condition indicator lights on the access door(s), control console, and in the radiation therapy room;
4. Viewing systems;
5. If applicable, electrically operated treatment room doors from inside and outside the treatment room.

(10) The registrant shall maintain a record of each quality assurance check required by 41.3(17) “d”(1) and (7) for three years. The record shall include the date of the quality assurance check, the manufacturer’s name, model number, and serial number for the therapeutic radiation machine, the manufacturer’s name, model number and serial number of the instrument(s) used to measure the radiation output of the therapeutic radiation machine, and the signature of the individual who performed the periodic quality assurance check.

*e.* Operating procedures.

(1) Therapeutic radiation machines shall not be left unattended unless secured by means identified in 41.3(17) “a”(9)“5”;

(2) When a patient must be held in position for radiation therapy, mechanical supporting or restraining devices shall be used;

(3) The tube housing assembly shall not be held by an individual during operation unless the assembly is designed to require such holding and the peak tube potential of the system does not exceed 50 kV. In such cases, the holder shall wear protective gloves and apron of not less than 0.5 millimeters lead equivalency at 100 kV;

(4) A copy of the current operating and emergency procedures shall be maintained at the therapeutic radiation machine control console; and

(5) No individual other than the patient shall be in the treatment room during exposures from therapeutic radiation machines operating above 150 kV. At energies less than or equal to 150 kV, any individual, other than the patient, in the treatment room shall be protected by a barrier sufficient to meet the requirements of 641—40.26(136C).

(6) The therapeutic radiation machine shall not be used for irradiation of patients unless the requirements of 41.3(17) “c” and “d” have been met.

*f.* Possession of survey instrument(s). Each facility location authorized to use a therapeutic radiation machine in accordance with 41.3(17) shall have at its disposal appropriately calibrated portable monitoring equipment. As a minimum, such equipment shall include a portable radiation measurement survey instrument capable of measuring dose rates over the range 1 mrem (10 µSv) per hour to 1000 mrem (10 mSv) per hour. The survey instrument(s) shall be operable and calibrated at intervals not to exceed 12 months for the radiation measured.

**41.3(18)** Therapeutic radiation machines—photon therapy systems (500 kV and above) and electron therapy systems (500 keV and above).

*a.* Equipment requirements.

(1) Leakage radiation outside the maximum useful beam in photon and electron modes.

1. The absorbed dose due to leakage radiation (excluding neutrons) at any point outside the maximum-sized useful beam, but within a circular plane of radius two meters which is perpendicular to and centered on the central axis of the useful beam at the nominal treatment distance (i.e., patient plane), shall not exceed a maximum of 0.2 percent and an average of 0.1 percent of the absorbed dose on the central axis of the beam at the nominal treatment distance. Measurements shall be averaged over an area not exceeding 100 square centimeters at a minimum of 16 points uniformly distributed in the plane;

2. Except for the area defined in 41.3(18) “a”(1)“1,” the absorbed dose due to leakage radiation (excluding neutrons) at one meter from the electron path between the electron source and the target or electron window shall not exceed 0.5 percent of the absorbed dose on the central axis of the beam at the nominal treatment distance. Measurements shall be averaged over an area not exceeding 100 square centimeters;

3. For equipment manufactured after July 9, 1997, the neutron absorbed dose outside the useful beam shall be in compliance with International Electrotechnical Agency (IEC) Document 601-2-1 (most current revision); and

4. For each therapeutic radiation machine, the registrant shall determine, or obtain from the manufacturer, the leakage radiation existing at the positions specified in 41.3(18) “a”(1)“1” to “3” for the specified operating conditions. Records of leakage radiation measurements shall be maintained for inspection by the agency.

(2) Leakage radiation through beam-limiting devices.

1. Photon radiation. All adjustable or interchangeable beam-limiting devices shall attenuate the useful beam such that at the nominal treatment distance, the maximum absorbed dose anywhere in the area shielded by the beam-limiting device(s) shall not exceed 2 percent of the maximum absorbed dose on the central axis of the useful beam measured in a 10-centimeter by 10-centimeter radiation field;

2. Electron radiation. All adjustable or interchangeable electron applicators shall attenuate the radiation including, but not limited to, photon radiation generated by electrons incident on the beam-limiting device and electron applicator and other parts of the radiation head, such that the absorbed dose in a plane perpendicular to the central axis of the useful beam at the nominal treatment distance shall not exceed:

- A maximum of 2 percent and average of 0.5 percent of the absorbed dose on the central axis of the useful beam at the nominal treatment distance. This limit shall apply beyond a line seven centimeters outside the periphery of the useful beam; and
- A maximum of 10 percent of the absorbed dose on the central axis of the useful beam at the nominal treatment distance. This limit shall apply beyond a line two centimeters outside the periphery of the useful beam.

(3) Measurement of leakage radiation.

1. Photon radiation. Measurements of leakage radiation through the beam-limiting devices shall be made with the beam-limiting devices closed and any residual aperture blocked by at least two-tenth value layers of suitable absorbing material. In the case of overlapping beam-limiting devices, the leakage radiation through each set shall be measured independently at the depth of maximum dose. Measurements shall be made using a radiation detector with an area not exceeding ten square centimeters;

2. Electron radiation. Measurements of leakage radiation through the electron applicators shall be made with the electron beam directed into the air and using a radiation detector with an area up to but not exceeding one square centimeter suitably protected against radiation which has been scattered from material beyond the radiation detector. Measurements shall be made using one centimeter of water equivalent buildup material.

(4) Filters/wedges.

1. Each wedge filter which is removable from the system shall be clearly marked with an identification number. For removable wedge filters, the nominal wedge angle shall appear on the wedge or wedge tray (if permanently mounted to the tray). If the wedge or wedge tray is significantly damaged, the wedge transmission factor shall be redetermined;

2. If the absorbed dose rate information required by 41.3(18)“a”(9) relates exclusively to operation with a field-flattening filter or beam-scattering foil in place, such filter or foil shall be removable only by the use of tools;

3. For equipment manufactured after July 9, 1997, which utilizes a system of wedge filters, interchangeable field-flattening filters, or interchangeable beam-scattering foils:

- Irradiation shall not be possible until a selection of a filter or a positive selection to use “no filter” has been made at the treatment control panel, either manually or automatically;
- An interlock system shall be provided to prevent irradiation if the filter selected is not in the correct position;
- A display shall be provided at the treatment control panel showing the wedge filter(s), interchangeable field-flattening filter(s), and interchangeable beam-scattering foil(s) in use; and
- An interlock shall be provided to prevent irradiation if any filter or beam-scattering foil selection operation carried out in the treatment room does not agree with the filter or beam-scattering foil selection operation carried out at the treatment control panel.

(5) Stray radiation in the useful beam. For equipment manufactured after July 9, 1997, the registrant shall determine during acceptance testing, or obtain from the manufacturer, data sufficient to ensure that X-ray stray radiation in the useful electron beam, absorbed dose at the surface during X-ray irradiation and stray neutron radiation in the useful X-ray beam are in compliance with International Electrotechnical Agency (IEC) Document 601-2-1 (most current revision).

(6) Beam monitors. All therapeutic radiation machines subject to 41.3(18) shall be provided with redundant beam monitoring systems. The sensors for these systems shall be fixed in the useful beam during treatment to indicate the dose monitor unit rate.

1. Equipment manufactured after July 9, 1997, shall be provided with at least two independently powered integrating dose meters. Alternatively, common elements may be used if the production of radiation is terminated upon failure of any common element.

2. Equipment manufactured on or before July 9, 1997, shall be provided with at least one radiation detector. This detector shall be incorporated into a useful beam monitoring system. The detector and the system into which that detector is incorporated shall meet the following requirements:

- Each detector shall be removable only with tools and, if movable, shall be interlocked to prevent incorrect positioning;

- Each detector shall form part of a beam monitoring system from whose readings in dose monitor units the absorbed dose at a reference point can be calculated;

- Each beam monitoring system shall be capable of independently monitoring, interrupting, and terminating irradiation; and

3. For equipment manufactured after July 9, 1997, the design of the beam monitoring systems shall ensure that the:

- Malfunctioning of one system shall not affect the correct functioning of the other system(s); and

- Failure of any element common to both systems which could affect the correct function of both systems shall terminate irradiation or prevent the initiation of radiation.

4. Each beam monitoring system shall have a legible display at the treatment control panel. For equipment manufactured after July 9, 1997, each display shall:

- Maintain a reading until intentionally reset;

- Have only one scale and no electrical or mechanical scale multiplying factors;

- Utilize a design such that increasing dose is displayed by increasing numbers; and

- In the event of power failure, the beam monitoring information required in 41.3(18)“a”(6)“4” displayed at the control panel at the time of failure shall be retrievable in at least one system for a 20-minute period of time.

(7) Beam symmetry.

1. Bent-beam linear accelerators with beam-flattening filter(s) subject to 41.3(18) shall be provided with auxiliary device(s) to monitor beam symmetry;

2. The device(s) referenced in 41.3(18)“a”(7)“1” shall be able to detect field asymmetry greater than 10 percent, and shall be configured to terminate irradiation if field asymmetry cannot be maintained at 10 percent or less.

(8) Selection and display of dose monitor units.

1. The preselected number of dose monitor units shall be displayed at the treatment control panel until reset manually;

2. After termination of irradiation, it shall be necessary to reset the dosimeter display before subsequent treatment can be initiated; and

3. For equipment manufactured after July 9, 1997, after termination of irradiation, it shall be necessary for the operator to reset the preselected dose monitor units before irradiation can be initiated.

4. Irradiation shall not be possible until a new selection of a number of dose monitor units has been made at the treatment control panel.

(9) Air kerma rate/absorbed dose rate. For equipment manufactured after July 9, 1997, a system shall be provided from whose readings the air kerma rate or absorbed dose rate at a reference point can be calculated. (The radiation detectors specified in 41.3(18)“a”(6) may form part of this system.) In addition:

1. The dose monitor unit rate shall be displayed at the treatment control panel;

2. If the equipment can deliver under any conditions an air kerma rate or absorbed dose rate at the nominal treatment distance more than twice the maximum value specified by the manufacturer, a device shall be provided which terminates irradiation when the air kerma rate or absorbed dose rate exceeds a

value twice the specified maximum. The dose rate at which the irradiation will be terminated shall be a record maintained by the registrant;

3. If the equipment can deliver under any fault condition(s) an air kerma rate or absorbed dose rate at the nominal treatment distance more than ten times the maximum value specified by the manufacturer, a device shall be provided to prevent the air kerma rate or absorbed dose rate anywhere in the radiation field from exceeding twice the specified maximum value and to terminate irradiation if the excess absorbed dose at the nominal treatment distance exceeds 400 rad (4 Gy); and

4. For each therapeutic radiation machine, the registrant shall determine, or obtain from the manufacturer, the maximum value(s) specified in 41.3(18) "a"(7)"2" and "3" for the specified operating conditions. Records of these maximum value(s) shall be maintained at the installation for inspection by the agency.

(10) Termination of irradiation by the beam monitoring system or systems during stationary beam radiation therapy.

1. Each primary system shall terminate irradiation when the preselected number of dose monitor units has been detected by the system;

2. If the original design of the equipment included a secondary dose monitoring system, that system shall be capable of terminating irradiation when not more than 15 percent or 40 dose monitor units above the preselected number of dose monitor units set at the control panel has been detected by the secondary dose monitoring system; and

3. For equipment manufactured after July 9, 1997, an indicator on the control panel shall show which monitoring system has terminated irradiation.

(11) Termination switches. It shall be possible to terminate irradiation and equipment movement or go from an interruption condition to termination condition at any time from the operator's position at the treatment control panel.

(12) Interruption switches. If a therapeutic radiation machine has an interrupt mode, it shall be possible to interrupt irradiation and equipment movements at any time from the treatment control panel. Following an interruption it shall be possible to restart irradiation by operator action without any reselection of operating conditions. If any change of a preselected value is made during an interruption, irradiation and equipment movements shall be automatically terminated.

(13) Timer. A suitable irradiation control device shall be provided to terminate the irradiation after a preset time interval.

1. A timer shall be provided which has a display at the treatment control panel. The timer shall have a preset time selector and an elapsed time indicator;

2. The timer shall be a cumulative timer which activates with an indication of "BEAM-ON" and retains its reading after irradiation is interrupted or terminated. After irradiation is terminated and before irradiation can be reinitiated, it shall be necessary to reset the elapsed time indicator;

3. The timer shall terminate irradiation when a preselected time has elapsed, if the dose monitoring systems have not previously terminated irradiation.

(14) Selection of radiation type. Equipment capable of both X-ray therapy and electron therapy shall meet the following additional requirements:

1. Irradiation shall not be possible until a selection of radiation type (X-rays or electrons) has been made at the treatment control panel;

2. The radiation type selected shall be displayed at the treatment control panel before and during irradiation;

3. An interlock system shall be provided to ensure that the equipment can principally emit only the radiation type which has been selected;

4. An interlock system shall be provided to prevent irradiation with X-rays, except to obtain a verification image, when electron applicators are fitted;

5. An interlock system shall be provided to prevent irradiation with electrons when accessories specific for X-ray therapy are fitted; and

6. An interlock system shall be provided to prevent irradiation if any selected operations carried out in the treatment room do not agree with the selected operations carried out at the treatment control panel.

(15) Selection of energy. Equipment capable of generating radiation beams of different energies shall meet the following requirements:

1. Irradiation shall not be possible until a selection of energy has been made at the treatment control panel;

2. The nominal energy value selected shall be displayed at the treatment control panel until reset manually for the next irradiation. After termination of irradiation, it shall be necessary to reset the nominal energy value selected before subsequent treatment can be initiated; and

3. Irradiation shall not be possible until the appropriate flattening filter or scattering foil for the selected energy is in its proper location.

4. For equipment manufactured after July 9, 1997, the selection of energy shall be in compliance with International Electrotechnical Commission (IEC) Document 60601-2-1.

(16) Selection of stationary beam radiation therapy or moving beam radiation therapy. Therapeutic radiation machines capable of both stationary beam radiation therapy and moving beam radiation therapy shall meet the following requirements:

1. Irradiation shall not be possible until a selection of stationary beam radiation therapy or moving beam radiation therapy has been made at the treatment control panel;

2. The mode of operation shall be displayed at the treatment control panel;

3. An interlock system shall be provided to ensure that the equipment can operate only in the mode which has been selected;

4. An interlock system shall be provided to prevent irradiation if any selected parameter in the treatment room does not agree with the selected parameter at the treatment control panel;

5. Moving beam radiation therapy shall be controlled to obtain the selected relationships between incremental dose monitor units and incremental movement. For equipment manufactured after July 9, 1997:

- An interlock system shall be provided to terminate irradiation if the number of dose monitor units delivered in any ten degrees of rotation or one centimeter of linear motion differs by more than 20 percent from the selected value;

- Where angle terminates the irradiation in moving beam radiation therapy, the dose monitor units delivered shall differ by less than 5 percent from the dose monitor unit value selected;

- An interlock shall be provided to prevent motion of more than five degrees or one centimeter beyond the selected limits during moving beam radiation therapy;

- An interlock shall be provided to require that a selection of direction be made at the treatment control panel in all units which are capable of both clockwise and counterclockwise moving beam radiation therapy.

- Moving beam radiation therapy shall be controlled with both primary position sensors and secondary position sensors to obtain the selected relationships between incremental dose monitor units and incremental movement.

6. Where the beam monitoring system terminates the irradiation in moving beam radiation therapy, the termination of irradiation shall be as required by 41.3(18) "a"(10); and

7. For equipment manufactured after July 9, 1997, an interlock system shall be provided to terminate irradiation if movement:

- Occurs during stationary beam radiation therapy; or

- Does not start or stops during moving beam radiation therapy unless such stoppage is a preplanned function.

b. Facility design requirements for therapeutic radiation machines operating above 500 kV. In addition to shielding adequate to meet requirements of 41.3(19), the following design requirements are made:

(1) Protective barriers. All protective barriers shall be fixed, except for access doors to the treatment room or movable beam interceptors.

(2) Control panel. In addition to other requirements specified in 41.3(136C), the control panel shall also:

1. Be located outside the treatment room;
2. Provide an indication of whether electrical power is available at the control panel and if activation of the radiation is possible;
3. Provide an indication of whether radiation is being produced; and
4. Include an access control (locking) device which will prevent unauthorized use of the therapeutic radiation machine.

(3) Viewing systems. Windows, mirrors, closed-circuit television or an equivalent viewing system shall be provided to permit continuous observation of the patient following positioning and during irradiation and shall be so located that the operator may observe the patient from the treatment control panel. The therapeutic radiation machine shall not be used for patient irradiation unless at least one viewing system is operational.

(4) Aural communications. Provision shall be made for continuous two-way aural communication between the patient and the operator at the control panel. The therapeutic radiation machine shall not be used for irradiation of patients unless continuous two-way aural communication is possible.

(5) Room entrances. Treatment room entrances shall be provided with warning lights in a readily observable position near the outside of all access doors, which will indicate when the useful beam is "ON" and when it is "OFF".

(6) Entrance interlocks. Interlocks shall be provided such that all access controls are activated before treatment can be initiated or continued. If the radiation beam is interrupted by any access control, it shall not be possible to restore the machine to operation without resetting the access control and reinitiating irradiation by manual action at the control panel.

(7) Beam interceptor interlocks. If the shielding material in any protective barrier requires the presence of a beam interceptor to ensure compliance with 641—paragraphs 40.26(1)"a" and "b," interlocks shall be provided to prevent the production of radiation, unless the beam interceptor is in place, whenever the useful beam is directed at the designated barrier(s).

(8) Emergency cutoff switches. At least one emergency power cutoff switch shall be located in the radiation therapy room and shall terminate all equipment electrical power including radiation and mechanical motion. This switch is in addition to the termination switch required by 41.3(18)"a"(11). All emergency power cutoff switches shall include a manual reset so that the therapeutic radiation machine cannot be restarted from the unit's control console without resetting the emergency cutoff switch.

(9) Safety interlocks. All safety interlocks shall be designed so that any defect or component failure in the safety interlock system prevents or terminates operation of the therapeutic radiation machine.

(10) Surveys for residual radiation. Surveys for residual activity shall be conducted on all therapeutic radiation machines capable of generating photon and electron energies above 10 MV prior to machining, removing, or working on therapeutic radiation machine components which may have become activated due to photoneutron production.

(11) Possession of survey instrument(s). Each facility location authorized to use a therapeutic radiation machine in accordance with 41.3(18) shall have at its disposal appropriately calibrated portable monitoring equipment. As a minimum, such equipment shall include a portable radiation measurement survey instrument capable of measuring dose rates over the range 1 mrem (10  $\mu$ Sv) per hour to 1000 mrem (10 mSv) per hour. The survey instrument(s) shall be operable and calibrated at intervals not to exceed 12 months for the radiation measured.

c. Radiation therapy physicist support.

(1) The services of a radiation therapy physicist shall be required in facilities having therapeutic radiation machines with energies of 500 kV and above. The radiation therapy physicist shall be responsible for:

1. Full calibration(s) required by 41.3(18)"e" and protection surveys required by 41.3(16)"a";
2. Supervision and review of dosimetry;
3. Beam data acquisition and transfer for computerized dosimetry, and supervision of its use;

4. Quality assurance, including quality assurance check review required by 41.3(18)“f”(5) of these regulations;

5. Consultation with the authorized user in treatment planning, as needed; and

6. Performing calculations/assessments regarding misadministrations.

(2) If the radiation therapy physicist is not a full-time employee of the registrant, the operating procedures required by 41.3(18)“d” shall also specifically address how the radiation therapy physicist is to be contacted for problems or emergencies, as well as the specific actions, if any, to be taken until the radiation therapy physicist can be contacted.

d. Operating procedures.

(1) No individual, other than the patient, shall be in the treatment room during treatment or during any irradiation for testing or calibration purposes;

(2) Therapeutic radiation machines shall not be made available for medical use unless the requirements of 41.3(16)“a,” 41.3(18)“e,” and 41.3(18)“f” have been met;

(3) Therapeutic radiation machines, when not in operation, shall be secured to prevent unauthorized use;

(4) When adjustable beam-limiting devices are used, the position and shape of the radiation field shall be indicated by a light field;

(5) If a patient must be held in position during treatment, mechanical supporting or restraining devices shall be used; and

(6) A copy of the current operating and emergency procedures shall be maintained at the therapeutic radiation machine control console.

e. Acceptance testing, commissioning, and full calibration measurements.

(1) Acceptance testing, commissioning, and full calibration of a therapeutic radiation machine subject to 41.3(18) shall be performed by, or under the direct supervision of, a radiation therapy physicist:

1. Acceptance testing and commissioning shall be performed in accordance with “AAPM Code of Practice for Radiotherapy Accelerators: AAPM Report No. 47,” prepared by Radiation Therapy Task Group 45, and the manufacturer’s contractual specifications and shall be conducted before the first medical use following installation or reinstallation of the therapeutic radiation machine;

2. Full calibration shall include measurement of all parameters listed in Appendix D of 641—Chapter 41 and shall be performed in accordance with “AAPM Code of Practice for Radiotherapy Accelerators: AAPM Report No. 47,” prepared by Radiation Therapy Task Group 45. Although it shall not be necessary to complete all elements of a full calibration at the same time, all parameters (for all energies) shall be completed at intervals not to exceed 12 calendar months, unless a more frequent interval is required by this agency.

3. The radiation therapy physicist shall perform all elements of a full calibration necessary to determine that all parameters are within acceptable limits:

- Whenever quality assurance check measurements indicate that the radiation output differs by more than 5 percent from the value obtained at the last full calibration and the difference cannot be reconciled. Therapeutic radiation machines with multienergy or multimode capabilities or both shall only require measurements for those modes or energies that are not within their acceptable range; and

- Following any component replacement, major repair, or modification of components that could significantly affect the characteristics of the radiation beam. If the repair, replacement or modification does not affect all modes or energies, measurements shall be performed on the affected mode/energy that is in most frequent clinical use at the facility. The remaining energies/modes may be validated with quality assurance check procedures against the criteria in 41.3(18)“e”(1)“3.”

(2) The registrant shall use the dosimetry system described in 41.3(16)“c” to measure the radiation output for one set of exposure conditions.

(3) The registrant shall maintain a record of each calibration in an auditable form for the duration of the registration. The record shall include the date of the calibration, the manufacturer’s name, model number, and serial number for the therapeutic radiation machine, the model numbers and serial numbers of the instruments used to calibrate the therapeutic radiation machine, and the signature of the radiation therapy physicist responsible for performing the calibration.

*f.* Periodic quality assurance checks.

(1) Periodic quality assurance checks shall be performed on all therapeutic radiation machines subject to 41.3(18) at intervals as specified in Appendix D of 641—Chapter 41;

(2) To satisfy the requirement of 41.3(18)“*f*”(1), quality assurance checks shall include determination of central axis radiation output and a representative sampling of periodic quality assurance checks contained in Appendix D of 641—Chapter 41. Representative sampling shall include all referenced periodic quality assurance checks at intervals not to exceed 12 consecutive calendar months;

(3) The registrant shall use a dosimetry system which has been intercompared within the previous 12 months with the dosimetry system described in 41.3(16)“*c*”(1) to make the periodic quality assurance checks required in 41.3(18)“*f*”(2);

(4) The registrant shall perform periodic quality assurance checks required by 41.3(18)“*f*”(1) in accordance with procedures established by the radiation therapy physicist;

(5) The registrant shall review the results of each periodic radiation output check according to the following procedures:

1. The authorized user and radiation therapy physicist shall be immediately notified if any parameter is not within its acceptable tolerance. The therapeutic radiation machine shall not be made available for subsequent medical use until the radiation therapy physicist has determined that all parameters are within their acceptable tolerances;

2. If all quality assurance check parameters appear to be within their acceptable range, the quality assurance check shall be reviewed and signed by either the authorized user or radiation therapy physicist within three treatment days; and

3. The radiation therapy physicist shall review and sign the results of each radiation output quality assurance check at intervals not to exceed one month.

(6) Therapeutic radiation machines subject to 41.3(18) shall have safety quality assurance checks of each external beam radiation therapy machine performed at intervals not to exceed one week;

(7) To satisfy the requirement of 41.3(18)“*f*”(6), safety quality assurance checks shall ensure proper operation of:

1. Electrical interlocks at each external beam radiation therapy room entrance;

2. Proper operation of the “BEAM-ON,” interrupt and termination switches;

3. Beam condition indicator lights on the access doors, control console, and in the radiation therapy room;

4. Viewing systems;

5. Aural systems;

6. Electrically operated treatment room door(s) from inside and outside the treatment room;

7. At least one emergency power cutoff switch. If more than one emergency power cutoff switch is installed and not all switches are tested at once, each switch shall be tested on a rotating basis. Safety quality assurance checks of the emergency power cutoff switches may be conducted at the end of the treatment day in order to minimize possible stability problems with the therapeutic radiation machine;

(8) Rescinded IAB 4/11/07, effective 5/16/07.

(9) The registrant shall promptly repair any system identified in 41.3(18)“*f*”(7) that is not operating properly; and

(10) The registrant shall maintain a record of each quality assurance check required by 41.3(18)“*f*”(1) and 41.3(18)“*f*”(7) for three years. The record shall include the date of the quality assurance check, the manufacturer’s name, model number, and serial number for the therapeutic radiation machine, the manufacturer’s name, model number and serial number of the instrument(s) used to measure the radiation output of the therapeutic radiation machine, and the signature of the individual who performed the periodic quality assurance check.

**41.3(19) Shielding and safety design requirements.**

*a.* Each therapeutic radiation machine subject to 41.3(17) or 41.3(18) shall be provided with such primary or secondary barriers as are necessary to ensure compliance with 641—40.15(136C) and 641—40.26(136C).

b. Facility design information for all new installations of a therapeutic radiation machine or installations of a therapeutic radiation machine of higher energy into a room not previously approved for that energy shall be submitted for agency approval prior to actual installation of the therapeutic radiation machine. The minimum facility design information that must be submitted is contained in Appendix E of 641—Chapter 41.

**41.3(20) Calibration of survey instruments.**

a. The registrant shall ensure that the survey instruments used to show compliance with 645—41.3(136C) have been calibrated before first use, at intervals not to exceed 12 months, and following repair.

b. To satisfy the requirements of 41.3(20), the registrant shall:

(1) Calibrate all required scale readings up to 1000 mrem (10 mSv) per hour with an appropriate radiation source that is traceable to the National Institute of Standards and Technology (NIST);

(2) Calibrate at least two points on each scale to be calibrated. These points should be at approximately 1/3 and 2/3 of full scale;

(3) Consider a point as calibrated if the indicated dose rate differs from the calculated dose rate by not more than 10 percent; and

(4) Consider a point as calibrated if the indicated dose rate differs from the calculated dose rate by not more than 20 percent if a correction factor or graph is conspicuously attached to the instrument.

c. The registrant shall retain a record of each calibration required in 41.3(20) for three years. The record shall include:

(1) A description of the calibration procedure; and

(2) A description of the source used and the certified dose rates from the source, and the rates indicated by the instrument being calibrated, the correction factors deduced from the calibration data, the signature of the individual who performed the calibration, and the date of calibration.

d. The registrant may obtain the services of individuals licensed by this agency, the U.S. Nuclear Regulatory Commission, an agreement state, or a licensing state to perform calibrations of survey instruments. Records of calibrations that contain information required in 41.3(20) shall be maintained by the registrant.

**641—41.4(136C) Radiation safety requirements for analytical X-ray equipment.** Rescinded IAB 4/8/98, effective 7/1/98.

**641—41.5(136C) Radiation safety requirements for wireline service operations and subsurface tracer studies.** Rescinded IAB 4/8/98, effective 7/1/98.

**641—41.6(136C) X-ray machines used for screening and diagnostic mammography.**

**41.6(1) Definitions.** In addition to the definitions provided in 641—38.2(136C), 641—40.2(136C), and 641—41.1(136C), the following definitions shall be applicable to this rule.

*“Accreditation body”* means an entity that has been approved by FDA to accredit mammography facilities.

*“Action limits”* or *“action levels”* means the minimum and maximum values of a quality assurance measurement that can be interpreted as representing acceptable performance with respect to the parameter being tested. Values less than the minimum or greater than the maximum action limit or level indicate that corrective action must be taken by the facility. Action limits or levels are also sometimes called control limits or levels.

*“Adverse event”* means an undesirable experience associated with mammography activities. Adverse events include but are not limited to:

1. Poor image quality;

2. Failure to send mammography reports within 30 days to the referring physician or in a timely manner to the self-referred patient; and

3. Use of personnel who do not meet the applicable requirements of this chapter.

*“Air kerma”* means kerma in a given mass of air. The unit used to measure the quantity of air kerma is the Gray (Gy). For X-rays with energies less than 300 kiloelectronvolts (keV), 1 Gray of absorbed dose is delivered by 114 roentgens (R) of exposure.

*“Annually”* means within 10 to 14 months of previous occurrence.

*“Artifact”* means a substance or structure not naturally present in living tissue but of which an authentic image appears in a radiograph.

*“Automatic exposure control systems”* means automatic exposure control systems, often referred to as phototimers, which are designed to automatically determine and provide the exposure needed to produce an adequate density image by sampling the X-ray intensity after passage through the patient and image receptor.

*“Average glandular dose”* means the energy deposited per unit mass of glandular tissue averaged over all the glandular tissue in the breast, calculated from values of entrance exposure in air, the X-ray beam quality (half-value layer), and compressed breast thickness. For a 50 percent-50 percent adipose and glandular 4.2 centimeter breast, the average glandular dose shall not exceed 300 millirad (3 mGy). See also: “Dose.”

*“Breast implant”* means a prosthetic device implanted in the breast.

*“Calendar quarter”* means any one of the following time periods during a given year: January 1 through March 31, April 1 through June 30, July 1 through September 30, or October 1 through December 31.

*“Category 1”* means medical education activities that have been designated as Category 1 by the Accreditation Council for Continuing Medical Education (ACCME), the American Osteopathic Association (AOA), a state medical society, or an equivalent organization.

*“Certificate”* means the certificate described in 41.6(2) “a”(2).

*“Certification”* means the process of approval of a facility by the FDA or this agency to provide mammography services.

*“Clinical image”* means a mammogram.

*“Compression device”* means a firm plastic paddle used to help hold the breast stationary and eliminate blurring due to motion, to help separate structures within the breast, and to decrease the thickness of breast tissue, minimizing the amount of radiation used and the amount of scattered radiation reaching the film.

*“Computed radiography mammography”* means a type of digital mammography in which the digital image receptor must be removed from the X-ray unit for the image to be read and processed by a separate image receptor reader.

*“Consumer”* means an individual who chooses to comment or complain in reference to a mammography examination, including the patient or representative of the patient (e.g., family member or referring physician).

*“Contact hour”* means an hour of training received through direct instruction.

*“Continuing education unit”* or *“continuing education credit”* means one contact hour of training.

*“Craniocaudal view”* means one of two routine views for mammography. The detector system is placed caudad to (below) the breast and the vertical X-ray beam is directed from cranial to caudad (downward) through the breast.

*“Dedicated mammography equipment”* means X-ray systems designed specifically for breast imaging, providing optimum imaging geometry, a device for breast compression and low dose exposure that can generate reproducible images of high quality.

*“Direct detector technology”* means a digital mammogram captured using a material which converts the X-ray energies directly to an electric signal.

*“Direct instruction”* means:

1. Face-to-face interaction between instructor(s) and student(s), as when the instructor provides a lecture, conducts demonstrations, or reviews student performance; or
2. The administration and correction of student examinations by an instructor(s) with subsequent feedback to the student(s).

*“Direct supervision”* means that:

1. During joint interpretation of mammograms, the supervising interpreting physician reviews, discusses, and confirms the diagnosis of the physician being supervised and signs the resulting report before it is entered into the patient's records; or

2. During the performance of a mammography examination or survey of the facility's equipment and quality assurance program, the supervisor is present to observe and correct, as needed, the performance of the individual being supervised who is performing the examination or conducting the survey.

*"Dose"* means the amount of energy deposited per unit mass of tissue due to X-radiation. The newer unit of absorbed dose is the Gray: 1 Gray=1 Joule of energy deposited per kilogram of tissue. The older unit of absorbed dose is the rad: 1 rad=0.01 Gray, 1 centiGray, or 10 milliGray.

*"Exposure"* means the amount of X-radiation, quantitated by measuring the amount of ionization in air caused by the radiation. The units of exposure are Coulombs of charge ionized per kilogram of air. The older unit of exposure is the Roentgen: 1 Roentgen= $2.58 \times 10^{-4}$  Coulombs of charge per kilogram of air.

*"Facility"* means a hospital, outpatient department, clinic, radiology practice, mobile unit, office of a physician, or other facility that conducts mammography activities, including the following: operation of equipment to produce a mammogram, initial interpretation of the mammogram, and maintaining viewing conditions for that interpretation. This term does not include a facility of the Department of Veterans Affairs.

*"FDA"* means the Food and Drug Administration.

*"First allowable time"* means the earliest time a resident physician is eligible to take the diagnostic radiology boards from an FDA-designated certifying body. The "first allowable time" may vary with the certifying body.

*"Full field digital mammography"* means radiographic imaging of the breast using a digital image receptor with minimum dimensions of 18×23 cm to allow imaging the average size breast in a single exposure.

*"Grids"* means a set of thin lead strips spaced close to one another, interspaced by carbon fiber for mammographic grids. The grid is placed between the breast and the screen-film image receptor to reduce scattered radiation reaching the image receptor.

*"Image noise."* See "Radiographic noise."

*"Image receptor support device"* means, for mammography X-ray systems, that part of the system designed to support the image receptor during a mammographic examination and to provide a primary protective barrier.

*"Interpreting physician"* means a licensed radiologist who interprets mammograms and who meets the requirements set forth in 41.6(3) "a."

*"Kerma"* means the sum of the initial energies of all the charged particles liberated by uncharged ionizing particles in a material of given mass.

*"Laterality"* means the designation of either the right or left breast.

*"Lead interpreting physician"* means the interpreting physician assigned the general responsibility for ensuring that a facility's quality assurance program meets all of the requirements of this chapter. The administrative title and other supervisory responsibilities of the individual, if any, are left to the discretion of the facility.

*"Mammogram"* means a radiographic image produced through mammography.

*"Mammographic modality"* means a technology for radiography of the breast. Examples are screen-film mammography, xeromammography, and digital mammography.

*"Mammography"* means radiography of the breast but, for the purposes of 641—41.6(136C), does not include:

1. Radiography of the breast performed during invasive interventions for localization or biopsy procedures; or

2. Radiography of the breast performed with an investigational mammography device as part of a scientific study conducted in accordance with FDA investigational device exemption regulations; or

3. Radiography of the breast performed as part of either a breast localization procedure or a post-stereotactic clip placement localization procedure.

*"Mammography equipment evaluation"* means an on-site assessment of the mammography unit or image processor performance by a medical physicist for the purpose of making a preliminary determination as to whether the equipment meets all of the applicable standards.

*"Mammography medical outcomes audit"* means a systematic collection of mammography results and the comparison of those results with outcomes data.

*"Mammography unit(s)"* means an assemblage of components for the production of X-rays for use during mammography including, at a minimum: an X-ray generator, an X-ray control, a tube housing assembly, a beam limiting device, and the supporting structures for these components.

*"Mean optical density"* means the average of the optical densities measured using phantom thicknesses of 2, 4, and 6 centimeters with values of kilovolt peak (kVp) clinically appropriate for those thicknesses.

*"Medical physicist"* means a person trained in evaluating the performance of mammography equipment and facility quality assurance programs and who meets the qualifications for a medical physicist set forth in 41.6(3) "c."

*"Mediolateral view"* means one of the routine views for mammography in addition to the craniocaudal view. The detector system is placed lateral to the breast and the horizontal X-ray beam is directed from medial to lateral aspect through the breast.

*"MQSA"* means the Mammography Quality Standards Act of 1992.

*"Multi-reading"* means two or more physicians, at least one of whom is an interpreting physician, interpreting the same mammogram. A radiologist may count the current mammographic examination and one prior mammographic examination, provided the radiologist was not the interpreter of the prior mammographic examination. A separate tally shall be kept for the prior examinations.

*"Oblique mediolateral view"* means one of the standard two views of the breast. The detector system (cassette holder assembly) is angled 30-60 degrees from horizontal so that the cassette assembly is parallel to the pectoral muscle and the corner of the cassette holder fits comfortably into the axilla. The X-ray beam is directed from the supero-medial to the infero-lateral aspect of the breast.

*"Patient"* means any individual who undergoes a mammography evaluation in a facility, regardless of whether the person is referred by a physician or is self-referred.

*"Phantom"* means an artificial test object used to simulate radiographic characteristics of compressed breast tissue and containing components that radiographically model aspects of breast disease and cancer.

*"Phantom image"* means a radiographic image of a phantom.

*"Physical science"* means physics, chemistry, radiation science (including medical physics and health physics), and engineering.

*"Positive mammogram"* means a mammogram that has an overall assessment of findings that are either "suspicious" or "highly suggestive of malignancy."

*"Provisional certification"* means the six-month certification time period in which a facility has to complete the accreditation/certification process.

*"Qualified instructor"* means individuals whose training and experience adequately prepare them to carry out specified training assignments. Interpreting physicians, radiologic technologists, or medical physicists who meet the requirements of 41.6(3) would be considered qualified instructors in their respective areas of mammography. Radiological technologists who meet the requirements of 41.6(3) and have passed a state-approved mammography examination such as the examination given by the American Registry of Radiography Technologists would be considered qualified instructors in their respective areas of mammography. The examination would include, but not necessarily be limited to: breast anatomy and physiology, positioning and compression, quality assurance/quality control techniques, and imaging of patients with breast implants. Other examples of individuals who may be qualified instructors for the purpose of providing training to meet the regulations of this chapter include, but are not limited to, instructors in a post-high school training institution and manufacturers' representatives.

*“Quality control technologist”* means an individual meeting the requirements of 41.6(5) “a”(4) who is responsible for those quality assurance responsibilities not assigned to the lead interpreting physician or to the medical physicist.

*“Radiographic equipment”* means X-ray equipment used for the production of static X-ray images.

*“Radiologic technologist”* means an individual specifically trained in the use of radiographic equipment and in the positioning of patients for radiographic examinations and who meets the requirements set forth in 41.6(3) “b.”

*“Radiologist continuing experience”* means the number of mammograms interpreted by a radiologist in the past 24-month period. For the purpose of counting, a radiologist may count the current mammographic examination and one prior mammographic examination, provided the radiologist was not the interpreter of the prior mammographic examination. A separate tally shall be kept for the prior examinations.

*“Reinstatement”* means the process of recertification of a facility that has lost or voluntarily given up previous accreditation/certification.

*“Screen-film mammography”* means mammography performed with high-detailed intensifying screen(s) in close contact with the film.

*“Screening mammography”* means X-ray breast examination of asymptomatic individuals in an attempt to detect breast cancer when it is small, nonpalpable, and confined to the breast.

*“Serious adverse event”* means an adverse event that may significantly compromise clinical outcomes or an adverse event for which a facility fails to take appropriate corrective action in a timely manner.

*“Serious complaint”* means a report of a serious adverse event.

*“Soft copy review workstation”* means a configuration of two 5 megapixel monitors used for the interpretation of full field digital mammogram images.

*“Standard breast”* means a 4.2 centimeter (cm) thick compressed breast consisting of 50 percent glandular and 50 percent adipose tissue.

*“Supplier”* means the individual in control of a mammography facility whose basic responsibility is the overall quality of all mammograms conducted in that particular facility.

*“Survey”* means an on-site physics consultation and evaluation of a facility quality assurance program performed by a medical physicist.

*“Time cycle”* means the film development time.

*“Traceable to a national standard”* means an instrument is calibrated at either the National Institute of Standards and Technology (NIST) or at a calibration laboratory that participates in a proficiency program with NIST at least once every two years and the results of the proficiency test conducted within 24 months of calibration show agreement within  $\pm 3$  percent of the national standard in the mammography energy range.

*“Written report”* means interpreting physician’s technical narrative of a mammography evaluation.

*“Written statement”* means interpreting physician’s description of a mammography examination written in lay terms.

**41.6(2) Registration and application standards and requirements.**

**a. Registration and certificates.**

(1) Each radiation machine used to perform mammography shall be registered according to 641—subrule 39.3(2).

(2) A certificate issued by the FDA or this agency is required for lawful operation of all mammography facilities subject to the provisions of this subrule. To obtain a certificate from the FDA or this agency, facilities are required to meet the quality standards in 641—41.6(136C) and to be accredited and approved by an approved accreditation body.

**b. Each facility wishing to perform mammography shall apply for agency approval by providing or verifying the following information for each mammography machine:**

(1) The mammography unit meets the criteria for agency-approved mammography accreditation bodies.

(2) The mammography equipment and facility meet the general requirements of these rules for radiation machines.

(3) The radiation machine is specifically designed to perform mammography.

(4) The radiation machine is used according to these rules on patient radiation exposure and radiation dose levels.

(5) The radiation machine is operated by individuals meeting the requirements of this subrule.

(6) The entire mammography system is evaluated at least annually by a medical physicist.

(7) The equipment, personnel, procedures, and records are evaluated annually by a physician consultant.

(8) Provisional or reinstatement certification. A new facility beginning operation after September 30, 1994, is eligible to apply for provisional or reinstatement certification. This will enable the facility to perform mammography and to obtain the clinical images needed to complete the accreditation process. To apply for and receive provisional or reinstatement certification, a facility must meet the requirements of 641—41.6(136C). Provisional or reinstatement certification shall be effective for up to six months from the date of issuance and cannot be renewed. The facility may apply for one 90-day extension.

c. Suspension, revocation, or denial of mammography certification.

(1) Mammography certification may be suspended or revoked with cause if any facility or machine does not meet one or more of the standards of these rules, will not permit inspections or provide access to records or information in a timely fashion, or has been guilty of misrepresentation in obtaining the certification.

(2) The facility shall have opportunity for a hearing in connection with a denial, suspension or revocation of mammography certification in accordance with 641—Chapter 173.

(3) An emergency order suspending or revoking certification may be issued in accordance with 641—173.31(17A) if the agency finds the radiation unit or facility violates rules that seriously affect the health, safety, and welfare of the public. An opportunity for hearing shall be held within 20 working days after the issuance of the order. The order shall be effective during the proceedings.

(4) If certification is revoked, the radiation machine shall not be used for mammography until reinstated.

(5) If a facility's certification is revoked, no person who owned or operated that facility at the time the act occurred may own or operate a mammography facility in Iowa within two years of the date of revocation.

d. Reinstatement of mammography certification after revocation.

(1) An application for reinstatement shall be submitted and processed as an initial application. Appropriate corrective actions must be submitted with the application.

(2) The agency shall inspect the radiation machine within 60 days of the approved reinstatement application.

(3) A full certificate shall be issued only after the agency has inspected the radiation machine and determined that it meets the requirements of these rules.

e. Inspections. The agency shall conduct an inspection of each radiation machine no later than 14 months after initial mammography certification and at least annually thereafter.

f. The authorization of facilities is included in the accreditation process for facilities accredited by the state of Iowa. Determination of the quality of the mammograms produced by facilities accredited by the state of Iowa will be made. To make the determination, each facility will:

(1) Provide at the time of initial accreditation, new unit installation, or reaccreditation (at least every three years) thereafter, two original (not copies) mammography examinations which meet the following criteria for the clinical image review process by the agency:

1. One mammography examination, including craniocaudal and mediolateral oblique views of each breast, of a patient with predominantly fatty breast tissue,

2. One mammography examination, including craniocaudal and mediolateral oblique views of each breast, of a patient with predominantly glandular breast tissue, and

3. Each mammography examination must have been interpreted as a “negative” or “benign” examination.

(2) Provide randomly, at the request of agency mammography inspectors, two mammography examinations (mammograms) which meet the criteria in 41.6(2)“f”(1).

(3) Provide at the time of initial accreditation, new unit installation, or reaccreditation (at least every three years) thereafter, a phantom image taken with the unit being accredited within six months of the submission date for review by the agency.

(4) Be billed the fee for the quality review process as set forth in 641—subparagraph 38.8(1)“b”(2).

(5) Be provided with a written explanation of the results of the quality review process which will accompany the returned mammograms referred to in 41.6(2)“f”(3).

g. Facilities accredited by an approved accrediting body other than the state of Iowa must be authorized by the agency. Quality determination for these facilities will be made by the agency through a phantom image provided at the time of initial authorization, new unit authorization, or reauthorization (at least every three years) thereafter, taken with the unit being accredited within six months of the submission date.

h. Federal mammography regulations. All Iowa facilities performing mammography shall comply with the applicable regulations found in 21 CFR Part 900 which has an effective date of April 28, 1999. Persons certified to perform mammography in Iowa shall be responsible for ensuring compliance with the appropriate CFR regulations or Iowa administrative rules, whichever are more stringent.

i. Soft copy review workstation requirements. Soft copy review workstations used for final interpretation of mammogram images must be a configuration of two 5 megapixel monitors. The workstation must have a quality control program substantially the same as that outlined by the image receptor manufacturer's quality control manual or that outlined by the image receptor manufacturer's designated soft copy review workstation quality control manual.

**41.6(3) Mammography personnel.** The following requirements apply to all personnel involved in any aspect of mammography, including the production, processing, and interpretation of mammograms and related quality assurance activities:

a. *Interpreting physicians.* All radiologists interpreting mammograms shall meet the following qualifications:

(1) Initial qualifications. Unless the exemption in 41.6(3)“a”(3)“1” applies, before beginning to interpret mammograms independently, the interpreting radiologist shall:

1. Be licensed to practice medicine in Iowa;

2. Either:

- Be certified in an appropriate specialty area by a body determined by FDA to have procedures and requirements adequate to ensure that physicians certified by the body are competent to interpret radiological procedures, including mammography; or

- Have had at least three months of documented formal training in the interpretation of mammograms and in topics related to mammography. The training shall include instruction in radiation physics, including radiation physics specific to mammography, radiation effects, and radiation protection. The mammographic interpretation component shall be under the direct supervision of a radiologist who meets the requirements of 41.6(3)“a”; and

3. Have a minimum of 60 hours of documented medical education in mammography, which shall include: instruction in the interpretation of mammograms and education in basic breast anatomy, pathology, and physiology, technical aspects of mammography, and quality assurance and quality control in mammography. All 60 of these hours shall be Category 1 and at least 15 of the Category 1 hours shall have been acquired within the 36 months immediately prior to the date that the radiologist qualifies as an interpreting physician. Hours spent in residency specifically devoted to mammography will be considered as equivalent to Category 1 continuing medical education credits and will be accepted if documented in writing by the appropriate representative of the training institution;

4. Unless the exemption in 41.6(3)“a”(3)“2” applies, have interpreted or multi-read at least 240 mammographic examinations within the six-month period immediately prior to the date that the radiologist qualifies as an interpreting physician. This interpretation or multi-reading shall be under the direct supervision of an interpreting physician; and

5. Before an interpreting physician may begin independently interpreting mammograms produced by a new mammographic modality other than the modality in which the initial training was received, the interpreting physician shall have at least 8 hours of Category 1 continuing medical education credits in the new mammographic modality. An interpreting physician previously qualified to interpret full field digital mammography in another state will have six months to complete this requirement. The six-month time frame begins when the interpreting physician commences Iowa full field digital mammography interpretation.

(2) Continuing experience and education. All interpreting physicians shall maintain their qualifications by meeting the following requirements:

1. Following the second anniversary date of the end of the calendar quarter in which the requirements of 41.6(3)“a”(1) were completed, the interpreting physician shall have read or multi-read at least 960 mammographic examinations during the prior 24 months, during the 24-month period ending on the last day of the previous calendar quarter, or during any 24-month period between the two. The facility will choose one of these dates to determine the 24-month period.

2. Following the third anniversary date of the end of the calendar quarter in which the requirements of 41.6(3)“a”(1) were completed, the interpreting physician shall have taught or completed at least 15 Category 1 continuing education units in mammography during the prior 36 months, during the 36-month period ending on the last day of the previous calendar quarter, or during any 36-month period between the two. The facility will choose one of these dates to determine the 36-month period.

3. Units earned through teaching a specific course can be counted only once towards the 15 required by 41.6(3)“a”(2)“2” even if the course is taught multiple times during the previous 36 months.

4. Continuing qualifications must be met and a current state of Iowa medical license must be in effect whenever mammography interpretations are performed by the physician.

(3) Exemptions.

1. Those physicians who qualified as interpreting physicians under 41.6(3)“a” or FDA interim regulations prior to April 28, 1999, are considered to have met the initial requirements of 41.6(3)“a.” They may continue to interpret mammograms provided they continue to meet the licensure requirements of 41.6(3)“a”(1)“1” and the continuing experience and education requirements of this subrule.

2. Physicians who have interpreted or multi-read at least 240 mammographic examinations under the direct supervision of an interpreting physician in any six-month period during the last two years of a diagnostic radiology residency and who become appropriately board certified at the first allowable time, as defined by an eligible certifying body, are otherwise exempt from 41.6(3)“a”(1)“4.”

(4) Reestablishing qualifications. Interpreting physicians who fail to maintain the required continuing experience or continuing education requirements shall reestablish their qualifications before resuming the independent interpretation of mammograms, as follows:

1. Interpreting physicians who fail to meet the continuing experience requirements of 41.6(3)“a”(2)“1” shall:

- Interpret or multi-read at least 240 mammographic examinations under the direct supervision of an interpreting physician, or

- Interpret or multi-read a sufficient number of mammographic examinations, under the direct supervision of an interpreting physician, to bring the physician’s total to at least 960 examinations for the prior 24 months, whichever is less. The interpretations required under 41.6(3)“a”(4)“1” shall be done within the six months immediately prior to resuming independent interpretation. Consecutive or back-to-back requalification of mammography personnel, due to failure to meet continuing education or experience requirements, will be allowed once without proof of extenuating circumstances. This agency will determine the validity of such proof and render a decision after review of all pertinent information. Those individuals who are denied requalification will be allowed to resubmit for requalification following a 90-day waiting period.

2. Interpreting physicians who fail to meet the continuing education requirements of 41.6(3)“a”(2)“2” shall obtain a sufficient number of additional Category 1 continuing medical education credits in mammography to bring their total up to the required 15 credits in the previous 36 months before resuming independent interpretation.

*b. Radiologic technologists.* All mammographic examinations shall be performed by general radiographers who meet the following general requirements, mammography requirements, and continuing education and experience requirements:

(1) General requirements. Be permitted to operate as a general radiographer in Iowa; and

(2) Mammography requirements. Have qualified as a radiologic technologist under 41.6(3)“b” before April 28, 1999, or have completed at least 40 contact hours of documented training specific to mammography under the supervision of a qualified instructor after successful completion of at least a two-year radiography program. The hours of documented training shall include, but not necessarily be limited to:

1. Training in breast anatomy and physiology, positioning and compression, quality assurance/quality control techniques, and imaging of patients with breast implants;

2. The performance of a minimum of 25 examinations under the direct supervision of an individual qualified under 41.6(3)“b”; and

3. Before a radiologic technologist may begin independently performing mammographic examinations using a mammographic modality other than one of those for which the technologist received training under 41.6(3)“b”(2)“3,” the technologist shall have at least 8 hours of continuing education units in the new modality. The 8 hours may not be derived from the supervised examination of patients; and

(3) Continuing education requirements.

1. Following the third anniversary date of the end of the calendar quarter in which the requirements of 41.6(3)“b”(1) and (2) were completed, the radiologic technologist shall have taught or completed at least 15 continuing education units in mammography during the prior 36 months, during the 36-month period ending on the last day of the previous calendar quarter, or during any 36-month period between the two. The facility will choose one of these dates to determine the 36-month period.

2. Units earned through teaching a specific course can be counted only once towards the 15 required in 41.6(3)“b”(3)“1” even if the course is taught multiple times during the previous 36 months.

3. Requalification. A radiologic technologist who fails to meet the continuing education requirements of 41.6(3)“b”(3)“1” shall obtain a sufficient number of continuing education units in mammography to bring the total up to at least 15 in the previous 36 months. The continuing education for requalification cannot be obtained by performing supervised mammography examinations. The technologist may not resume performing unsupervised mammography examinations until the continuing education requirements are completed.

4. Continuing qualifications must be met and an Iowa permit to practice radiography must be in effect whenever mammogram procedures are performed by the radiologic technologist.

5. Only 50 percent of the total required mammography continuing education hours may be obtained through presenting, or acting as a trainer for, a continuing education or training program.

(4) Continuing experience requirements.

1. Following the second anniversary date on which the requirements of 41.6(3)“b”(1) and (2) were completed, the radiologic technologist shall have performed a minimum of 200 mammography examinations during the prior 24 months, during the 24-month period ending on the last day of the previous calendar quarter, or during any 24-month period between the two. The facility will choose one of these dates to determine the 24-month period.

2. Requalification. Radiologic technologists who fail to meet the continuing experience requirements of this subrule shall perform a minimum of 25 mammography examinations under the direct supervision of a qualified radiologic technologist before resuming the performance of unsupervised mammography examinations.

3. Continuing qualifications must be met and an Iowa permit to practice radiography must be in effect whenever mammogram procedures are performed by the radiologic technologist.

(5) Consecutive or back-to-back requalification of mammography personnel, due to failure to meet continuing education or experience requirements, will be allowed once without proof of extenuating circumstances. This agency will determine the validity of such proof and render a decision after review

of all pertinent information. Those individuals who are denied requalification will be allowed to resubmit for requalification following a 90-day waiting period.

*c. Medical physicists.* All medical physicists conducting surveys of mammography facilities and providing oversight of the facility quality assurance program under 41.6(3) “c”(2) shall meet the following:

- (1) Initial qualifications.
  1. Be Iowa approved; and
  2. Have a master’s degree or higher in a physical science from an accredited institution, with no less than 20 semester hours or 30 quarter hours of college undergraduate or graduate level physics;
  3. Have 20 contact hours of documented specialized training in conducting surveys of mammography facilities; and
  4. Have experience conducting surveys in at least one mammography facility and have a total of at least 10 mammography units. No more than one survey of a specific unit within a period of 60 days can be counted towards the total mammography unit survey requirement. After April 28, 1999, experience conducting surveys must be acquired under the direct supervision of a medical physicist who meets all the requirements of this subrule; or
- (2) Alternative initial qualifications.
  1. Have qualified as a medical physicist under FDA interim regulations and have retained that qualification by maintenance of the active status of any licensure, approval, or certification required under the interim regulations; and
  2. Prior to April 28, 1999, have:
    - A bachelor’s degree or higher in a physical science from an accredited institution with no less than 10 semester hours or equivalent of college undergraduate or graduate level physics.
    - Forty contact hours of documented specialized training in conducting surveys of mammography facilities.
    - Experience conducting surveys in at least one mammography facility and have a total of at least 20 mammography units. No more than one survey of a specific unit within a period of 60 days can be counted towards the total mammography unit survey requirement. The training and experience requirements must be met after fulfilling the degree requirement.
    - At least eight hours of training in surveying units of the new mammographic modality before independently performing mammographic surveys of a new mammographic modality other than one for which the physicist received training to qualify under this subrule.
- (3) Continuing qualifications.
  1. Continuing education. Following the third anniversary date on which the requirements of 41.6(3) “c”(1) or (2) were completed, the medical physicist shall have taught or completed at least 15 continuing education units in mammography during the prior 36 months, during the 36-month period ending on the last day of the previous calendar quarter, or during any 36-month period between the two. The facility shall choose one of these dates to determine the 36-month period. Units earned through teaching a specific course shall be counted only once towards the required 15 units in a 36-month period, even if the course is taught multiple times during the 36 months.
  2. Continuing experience. Following the second anniversary date on which the requirements of this subrule were completed, the medical physicist shall have surveyed at least two mammography facilities and a total of at least 6 mammography units during the prior 24 months, during the 24-month period ending on the last day of the previous calendar quarter, or during any 24-month period between the two. The facility shall choose one of these dates to determine the 24-month period. No more than one survey of a specific facility within a 10-month period or a specific unit within a period of 60 days shall be counted towards this requirement.
  3. Continuing qualifications must be met whenever medical physics services are provided by the medical physicist.
- (4) Reestablishing qualifications. Medical physicists who fail to maintain the required continuing qualifications of this subrule may not perform the MQSA surveys without the supervision of a qualified

medical physicist. Before independently surveying another facility, medical physicists must reestablish their qualifications as follows:

1. Medical physicists who fail to meet the continuing education requirements of this subrule shall obtain a sufficient number of continuing education units to bring their total units up to the required 15 in the previous three years.

2. Medical physicists who fail to meet the continuing experience requirements of this subrule shall complete a sufficient number of surveys under the direct supervision of a medical physicist who meets the qualifications of this subrule to bring their total surveys up to the required two facilities and 6 units in the previous 24 months. No more than one survey of a specific unit within a period of 60 days can be counted towards the total mammography unit survey requirement.

- d. Retention of personnel records.* Facilities shall maintain records to document the qualifications of all personnel who worked at the facility as interpreting physicians, general radiographers, or medical physicists. These records must be available for review by the MQSA inspectors. Records of personnel no longer employed by the facility should not be discarded until the next annual inspection has been completed and the agency has determined that the facility is in compliance with the MQSA personnel requirements.

**41.6(4) Obtaining and preserving records.**

- a.* The facility performing the current mammography examination must make all reasonable efforts to obtain the patient's recent mammography records, including original images or films, copies of written reports prepared by interpreting physicians, and other relevant information pertinent to previous mammograms that might be available from other facilities, for comparison with the current mammography records.

- b.* The facility must make, for each patient, a written report of each mammography examination performed. This report shall include:

- (1) The date the mammography procedure was performed.
    - (2) The date of the interpretation.
    - (3) The name of the interpreting physician.
    - (4) The name of the patient and an additional patient identifier.
    - (5) A description of the procedures performed.
    - (6) The name of the referring physician (if any) or other physician (if any) identified by the patient to receive the interpreting physician's written report.
    - (7) The date the interpreting physician's written report was sent to the appropriate physician or patient.

- (8) A separate and distinct section entitled, "Assessment" with the appropriate assessment term. One of the following terms in quotations or an approved equivalent must be included in the assessment:

1. "Negative": Nothing to comment upon (if the interpreting physician is aware of clinical findings or symptoms, despite the negative assessment, these shall be explained).

2. "Benign": Also a negative assessment.

3. "Probably benign": Finding(s) has a high probability of being benign.

4. "Suspicious": Finding(s) without all the characteristic morphology of breast cancer but indicating a definite probability of being malignant.

5. "Highly suggestive of malignancy": Finding(s) has a high probability of being malignant.

6. "Incomplete: Need additional imaging evaluation" shall be assigned as an assessment in cases where no final assessment category can be assigned due to incomplete workup, and reasons why no assessment can be made shall be stated by the interpreting physician.

- (9) Recommendations made to the health care provider about what additional actions, if any, should be taken. All clinical questions raised by the referring health care provider shall be addressed in the report to the extent possible, even if the assessment is negative or benign.

- c.* Preservation of records.

- (1) The facility must provide satisfactory assurances (as documented in its medical records) that the images or films of the first and subsequent mammography procedures and the related written reports of the interpreting physician for each patient are either placed in the patient's medical record kept by the

facility or sent for placement in the patient's medical record as directed by the patient's physician or the patient.

(2) Records retained by the facility must be retained for at least 60 calendar months following the date of service, as long as the patient continues consecutive mammograms. If no additional mammograms of the patient are performed, the records must be retained for at least ten years.

(3) If the facility should cease to exist before the end of the retention period, the records must be transferred to the patient or patient's physician or other mammographic facility.

(4) The facility shall upon request by, or on behalf of, the patient, permanently or temporarily, transfer the original mammograms and copies of the patient's reports to a medical institution, or to a physician or health care provider of the patient, or to the patient directly.

(5) Any fee charged to the patient for providing the services in subparagraph (4) above shall not exceed the documented costs associated with this service.

d. Communication of results to the patient. Each facility shall maintain a system to ensure that the results of each mammographic examination are communicated in lay terms to each patient in a time period not to exceed 30 days from the date of the mammography examination. If assessments are "Suspicious" or "Highly suggestive of malignancy" and the patient has not named a health care provider, the facility shall make reasonable attempts to ensure that the results are communicated to the patient as soon as possible.

(1) As soon as possible, but no later than 30 days from the date of the mammography examination, patients who do not name a health care provider to receive the mammography report shall be sent the report described in 41.6(4)"e"(1) in addition to a written notification of results in lay terms.

(2) Each facility that accepts patients who do not have a primary care provider shall maintain a system for referring such patients to a health care provider when clinically indicated.

e. Communication of results to health care providers. When the patient has a referring health care provider or the patient has named a health care provider, the facility shall:

(1) Provide a written report of the mammography examination, including all of the items listed in 41.6(4)"b," to the health care provider as soon as possible, but no later than 30 days from the date of the examination, and

(2) If the assessment is "Suspicious" or "Highly suggestive of malignancy," make reasonable attempts to communicate with the health care provider as soon as possible or, if the health care provider is unavailable, to a responsible designee of the health care provider.

f. Mammographic image identification. Each mammographic image shall have the following information indicated on it in a permanent, legible, and unambiguous manner and placed so as not to obscure anatomic structures:

(1) Name of patient and an additional patient identifier.

(2) Date of examination.

(3) View and laterality. This information shall be placed on the image in a position near the axilla. Standardized codes specified by the accreditation body and approved by the FDA shall be used to identify view and laterality.

(4) Facility name and location. At a minimum, the location shall include the city, state, and ZIP code of the facility.

(5) Technologist identification.

(6) Cassette/screen identification.

(7) Mammography unit identification, if there is more than one unit in the facility.

**41.6(5) *Quality assurance program.***

a. The facility shall ensure that the facility has an equipment quality assurance program specific to mammography and covering all components of the system to ensure consistently high-quality images with minimum patient exposure. Responsibility for the quality assurance program and for each of its elements shall be assigned to individuals who are qualified for their assignments and who shall be allowed adequate time to perform these duties.

(1) Lead interpreting physician. The facility shall identify a lead interpreting physician who shall have the general responsibility of ensuring that the quality assurance program meets all requirements

of these rules. No other individual shall be assigned or shall retain responsibility for quality assurance tasks unless the lead interpreting physician has determined that the individual's qualifications for, and performance of, the assignment are adequate.

(2) Interpreting physicians. All interpreting physicians interpreting mammograms for the facility shall:

1. Follow the facility procedures for corrective action when the images they are asked to interpret are of poor quality, and

2. Participate in the facility's medical outcomes audit program.

(3) Medical physicist. Each facility shall have the services of a medical physicist available to survey mammography equipment and oversee the equipment-related quality assurance practices of the facility. At a minimum, the medical physicist(s) shall be responsible for performing the surveys and mammography equipment evaluations and providing the facility with the applicable reports.

(4) Quality control technologist. Responsibility for all individual tasks within the quality assurance program not assigned to the lead interpreting physician or the medical physicist shall be assigned to a quality control technologist(s). The tasks are to be performed by the quality control technologist or by other personnel qualified to perform the tasks. When other personnel are utilized for these tasks, the quality control technologist shall ensure that the tasks are completed in such a way as to meet the requirements of 41.6(5) "e" through "k."

b. The facility shall ensure that a general review of the program is conducted at least annually and have available the services of a qualified medical physicist who is capable of establishing and conducting the program.

c. Under the direction of the lead interpreting physician, the medical physicist shall have responsibility for establishing and conducting the equipment quality assurance program. The program shall include:

- (1) Conducting or training others to conduct equipment performance monitoring functions.

- (2) Analyzing the monitoring results to determine if there are any problems requiring correction.

- (3) Ensuring that the facility has procedures in place for carrying out or arranging for the necessary corrective actions as well as for the calibrations and other preventive maintenance.

d. Calibration of equipment. All variable parameters of the equipment shall be calibrated:

- (1) When the equipment is first installed.

- (2) After any major changes or replacement of parts.

- (3) At least annually during use based on recommendations of the mammography imaging medical physicist.

- (4) When quality assurance tests indicate that calibration is needed.

e. Performance monitoring. The supplier shall routinely ensure that the performance of the mammography system is monitored. The parameters to be monitored for film-screen mammography shall include but not be limited to:

- (1) Processor performance (through daily sensitometric-densitometric means).

- (2) Half-value layer.

- (3) Output reproducibility and linearity.

- (4) Automatic exposure control reproducibility and linearity.

- (5) Adequacy of film storage (both before use and after exposure if processing does not occur immediately).

- (6) Availability and use of technique charts that shall include an indication of the kV-target-filter combination to be used with each image receptor.

- (7) Darkroom integrity, to be performed at least semiannually or when conditions have changed, shall include an inspection for light leaks, a fog test, and a safe light test.

- (8) Image quality. The minimum image quality achieved at a mammography facility shall be the ability to observe the image of at least four 0.75-mm fibrils, three 0.32-mm speck groups, and three 0.75-mm masses from an FDA-approved phantom (or equivalent) on the standard mammographic film used at the facility. No mammograms shall be performed if this minimum is not met.

f. Frequency of monitoring.

- (1) Processor performance shall be accomplished daily before processing patient films.
- (2) Image quality shall be monitored at least weekly with a phantom and every time the unit is altered including the replacement of parts.

(3) All other parameters shall be proportional to the expected variability of each parameter, but at least annually.

g. Evaluation of monitoring results. Full field digital mammography units must comply with the quality control test requirements outlined by the performance criteria in the appropriate manufacturer's quality control manual.

(1) Standards of image quality giving acceptable ranges of values for each of the parameters tested shall be established to aid in the evaluation. The standards of image quality related to dose shall include a requirement that the mean glandular dose for one craniocaudal view of a 4.2 cm compressed breast (50 percent adipose/50 percent glandular) or equivalent phantom shall not exceed 100 millirad for film-screen units with no grids, 300 millirad for film-screen units with grids, or 300 millirad for full field digital units.

(2) The monitoring results shall be compared routinely by the facility staff to the standards of image quality in 41.6(5) "k." If the results fall outside the acceptable range, the test shall be repeated. For film-screen mammography, if the results continue to be unacceptable, the source of the problem shall be identified and corrected before further examinations are conducted. For full field digital mammography, if any test results fall outside the performance criteria range listed for the unit, specific actions as directed in the appropriate quality control manual shall be followed.

h. Retake analysis program—film-screen and full field digital.

(1) A program shall be established as a further aid in detecting and correcting problems affecting image quality or exposure.

(2) All retakes shall be logged including date, technologist's name and reason for retake. A retake analysis shall be performed every 250 patients or quarterly, whichever comes first. If more than 250 mammograms are performed in one week, weekly analysis is acceptable.

(3) If the total repeat or reject rate changes from the previously determined rate by more than 2.0 percent of the total films included in the analysis, the reason(s) for the change shall be determined. Any corrective actions shall be recorded and the results of these corrective actions shall be assessed.

i. Medical outcomes audit. Each facility shall establish a system for reviewing outcome data from all mammography performed, including follow-up on the disposition of positive mammograms and correlation of surgical biopsy results with the interpreting physician's findings. This program shall be designed to ensure the reliability, clarity, and accuracy of the interpretation of mammograms.

(1) Analysis of these outcome data shall be made individually and collectively for all interpreting physicians at the facility. In addition, any cases of breast cancer among women imaged at the facility that subsequently become known to the facility shall prompt the facility to initiate follow-up on surgical and pathology results, or both, and review of the mammograms taken prior to the diagnosis of a malignancy. Responsibility for each requirement for monitoring shall be assigned to qualified personnel and documented in the facility's records.

(2) Frequency of audit analysis. The facility's first audit analysis shall be initiated no later than 12 months after the date the facility becomes certified, or 12 months after April 28, 1999, whichever date is the latest. This audit analysis shall be completed within an additional 12 months to permit completion of diagnostic procedures and data collection. Subsequent audit analyses will be conducted at least once every 12 months.

(3) Reviewing interpreting physician. Each facility shall designate at least one interpreting physician to review the medical outcomes audit data at least once every 12 months. This individual shall record the dates of the audit period(s) and shall be responsible for analyzing results based on this audit. This individual shall also be responsible for documenting the results and notifying other interpreting physicians of the results and the facility aggregate results. If follow-up actions are taken, the reviewing interpreting physician shall also be responsible for documenting the nature of the follow-up. The reviewing physician shall sign the medical audit as proof of the evaluation of the data.

j. Quality assurance records. The lead interpreting physician, quality control technologist, and medical physicist shall ensure that records concerning employee qualifications to meet assigned quality

assurance tasks, mammography technique and procedures, quality control (including monitoring data, problems detected by analysis of that data, corrective actions, and the effectiveness of the corrective actions), safety, and protection are properly maintained and updated. These quality control records shall be kept for each test specified in these rules until the next annual inspection has been completed and the facility is in compliance with the quality assurance requirements or until the test has been performed two additional times at the required frequency, whichever is longer.

*k.* Quality assurance—equipment.

(1) Daily quality control tests. Film processors used to develop mammograms shall be adjusted and maintained to meet the technical development specifications for the mammography film in use. A processor performance test shall be performed on each day that clinical films are processed before any clinical films are processed that day. The test shall include an assessment of base plus fog density, mid-density, and density difference, using the mammography film used clinically at the facility.

1. The base plus fog density shall be below plus 0.03 of the established operating level.
2. The mid-density shall be within plus or minus 0.15 of the established operating level.
3. The density difference shall be within plus or minus 0.15 of the established operating level.

(2) Weekly quality control tests. Facilities with screen-film systems shall perform an image quality evaluation test, using an FDA-approved phantom, at least weekly.

1. The optical density of the film at the center of an image of a standard FDA-accepted phantom shall be at least 1.20 when exposed under a typical clinical condition.
2. The optical density of the film at the center of the phantom image shall not change by more than plus or minus 0.20 from the established operating level.
3. The phantom image shall achieve at least the minimum score established by the accreditation body and accepted by the FDA.
4. The density difference between the background of the phantom and an added test object used to assess image contrast shall be measured and shall not vary by more than plus or minus 0.05 from the established operating level.

(3) Quarterly quality control tests. Facilities with screen-film systems shall perform the following quality control tests at least quarterly:

- Fixer retention in film. The residual fixer shall be no more than 5 micrograms per square centimeter.

(4) Semiannual quality control tests. Facilities with screen-film systems shall perform the following quality control tests at least semiannually:

1. Darkroom fog. The optical density attributable to darkroom fog shall not exceed 0.05 when a mammography film of the type used in the facility, which has a mid-density of no less than 1.2 OD, is exposed to typical darkroom conditions for two minutes while such film is placed on the countertop emulsion side up. If the darkroom has a safelight used for mammography film, it shall be on during this test.

2. Screen-film contact. Testing for screen-film contact shall be conducted using 40 mesh copper screen. All cassettes used in the facility for mammography shall be tested.

3. Compression device performance. The maximum compression force for the initial power drive shall be between 25 pounds (111 newtons) and 45 pounds (200 newtons).

(5) Annual quality control tests. Facilities with screen-film systems shall perform the following quality control tests at least annually:

1. Automatic exposure control (AEC) performance.

- The AEC shall be capable of maintaining film optical density (OD) within plus or minus 0.15 of the mean optical density when thickness of a homogenous material is varied over a range of 2 to 6 centimeters and the kVp is varied appropriately for such thicknesses over the kVp range used clinically in the facility.

- The optical density of the film in the center of the phantom image shall not be less than 1.20.

2. kVp accuracy and reproducibility.

- The kVp shall be accurate within plus or minus 5 percent of the indicated or selected kVp at the lowest clinical kVp that can be measured by a kVp test device, the most commonly used clinical kVp, and the highest available clinical kVp.

- At the most commonly used clinical settings of kVp, the coefficient of variation of reproducibility of the kVp shall be equal to or less than 0.02.

3. Focal spot condition. Facilities shall evaluate focal spot condition only by determining the system resolution.

- Each X-ray system used for mammography, in combination with the mammography screen-film combination used in the facility, shall provide a minimum resolution of 11 cycles/millimeters (mm) (line-pairs/mm) when a high contrast resolution bar test pattern is oriented with the bars perpendicular to the anode-cathode axis, and a minimum resolution of 13 line-pairs/mm when the bars are parallel to that axis.

- The bar pattern shall be placed 4.5 centimeters above the breast support surface, centered with respect to the chest wall edge of the image receptor, and with the edge of the pattern within 1 centimeter of the chest wall edge of the image receptor.

- When more than one target material is provided, the measurement above shall be made using the appropriate focal spot for each target material.

- When more than one SID is provided, the test shall be performed at the SID most commonly used clinically.

- Test kVp shall be set at the value used clinically by the facility for a standard breast and shall be performed in the AEC mode, if available. If necessary, a suitable absorber may be placed in the beam to increase exposure times. The screen-film cassette combination used by the facility shall be used to test for this requirement and shall be placed in the normal location used for clinical procedures.

- Focal spot dimensions. Measured values of the focal spot length (dimension parallel to the anode-cathode axis) and width (dimension perpendicular to the anode-cathode axis) shall be within tolerance limits specified in Table 1.

Table 1

| Focal Spot<br>Tolerance Limit<br>Nominal Focal Spot<br>Size (mm) | Maximum<br>Measured<br>Dimensions Width<br>(mm) | Length (mm) |
|------------------------------------------------------------------|-------------------------------------------------|-------------|
| 0.10                                                             | 0.15                                            | 0.15        |
| 0.15                                                             | 0.23                                            | 0.23        |
| 0.20                                                             | 0.30                                            | 0.30        |
| 0.30                                                             | 0.45                                            | 0.65        |
| 0.40                                                             | 0.60                                            | 0.85        |
| 0.60                                                             | 0.90                                            | 1.30        |

4. Beam quality and half-value layer (HVL). The HVL shall meet the specification of 41.1(4) and 41.1(6) for the minimum HVL. These values, extrapolated to the mammographic range, are shown in Table 2. Values not shown in Table 2 may be determined by linear interpolation or extrapolation.

Table 2

| X-ray Tube Voltage (kilovolt peak) and Minimum HVL<br>Designed Operating Range (kV) Below 50 |                                          |
|----------------------------------------------------------------------------------------------|------------------------------------------|
| Measured Operating<br>Voltage (kV)                                                           | Minimum HVL<br>(millimeters of aluminum) |
| 20                                                                                           | 0.20                                     |
| 25                                                                                           | 0.25                                     |
| 30                                                                                           | 0.30                                     |

5. Breast entrance air kerma and AEC reproducibility. The coefficient of variation for both air kerma and mAs shall not exceed 0.05.

6. Dosimetry. The average glandular dose delivered during a single cranio-caudal view of an FDA-accepted phantom simulating a standard breast shall not exceed 0.3 rad (3.0 milligray (mGy)) per exposure. The dose shall be determined with technique factors and conditions used clinically for a standard breast.

7. X-ray field/light field/image receptor/compression paddle alignment.

- All systems shall have beam-limiting devices that allow the entire chest wall edge of the X-ray field to extend to the chest wall edge of the image receptor and provide means to ensure that the X-ray field does not extend beyond any edge of the image receptor by more than 2 percent of the SID.

- The chest wall edge of the compression paddle shall not extend beyond the chest wall edge of the image receptor by more than 1 percent of the SID when tested with the compression paddle placed above the breast support surface at a distance equivalent to standard breast thickness. The shadow of the vertical edge of the compression paddle shall be not be visible on the image.

8. Uniformity of screen speed. Uniformity of screen speed of all the cassettes in the facility shall be tested and the difference between the maximum and minimum optical densities shall not exceed 0.30. Screen artifacts shall also be evaluated during this test.

9. System artifacts. System artifacts shall be evaluated with a high-grade, defect-free sheet of homogeneous material large enough to cover the mammography cassette and shall be performed for all cassette sizes used in the facility using a grid appropriate for the cassette size being tested. System artifacts shall also be evaluated for all available focal spot sizes and target filter combinations used clinically.

10. Radiation output.

- The system shall be capable of producing a minimum output of 800 milliRoentgen (mR) per second (7.0 mGy air kerma per second) when operating at 28 kVp in the standard (moly/moly) mammography mode at any SID where the system is designed to operate and when measured by a detector with its center located 4.5 centimeters above the breast support surface with the compression paddle in place between the source and the detector.

- The system shall be capable of maintaining the required minimum radiation output averaged over a 3.0 second period.

11. Decompression. If the system is equipped with a provision for automatic decompression after completion of an exposure or interruption of power to the system, the system shall be tested to confirm that it provides:

- An override capability to allow maintenance of compression;
- A continuous display of the override status; and
- A manual emergency compression release that can be activated in the event of power or automatic release failure.

(6) Quality control tests—other modalities. For systems with image receptor modalities other than screen-film, the quality assurance program shall be substantially the same as the quality assurance program recommended by the image receptor manufacturer, except that the maximum allowable dose shall not exceed the maximum allowable dose for screen-film systems in 41.6(5) “k”(5)“6.”

(7) Use of test results.

1. After completion of the tests specified in 41.6(5) “k,” the facility shall compare the test results to the corresponding specified action limits; or, for non-screen-film modalities, to the manufacturer’s recommended action limits; or, for post-move, preexamination testing of mobile units, to the limits established in the test method used by the facility.

2. If the test results fall outside the action limits, the source of the problem shall be identified, and corrective actions shall be taken before any further examinations are performed or any films are processed using the component of the mammography system that failed the test, if the failed test was that described in 41.6(5) “k.”

3. Full field digital unit corrective actions shall be made as prescribed in the appropriate manufacturer's quality control manual or in accordance with the appropriate FDA-approved alternative requirements.

(8) Surveys.

1. At least once a year, each facility shall undergo a survey by a medical physicist or by an individual under the direct supervision of a medical physicist. At a minimum, this survey shall include the performance of tests to ensure that the facility meets the quality assurance requirements of the annual tests described in 41.6(5) "k"(5) and (6), the weekly phantom image quality test described in 41.6(5) "k"(2) and the quarterly retake analysis results described in 41.6(5) "h."

2. The results of all tests conducted by the facility in accordance with 41.6(5) "k"(1) through (7) for film-screen units, as well as written documentation of any corrective actions taken and their results, shall be evaluated for adequacy by the medical physicist performing the survey. Surveys of full field digital mammography units shall be conducted as described in the appropriate manufacturer's quality control manual. The results of the tests, any corrective actions taken and their results shall be evaluated for adequacy by the medical physicist performing the survey.

3. The medical physicist shall prepare a survey report that includes a summary of this review and recommendations for necessary improvements.

4. The survey report shall be sent to the facility within 30 days of the date of the survey.

5. The survey report shall be dated and signed by the medical physicist performing or supervising the survey. If the survey was performed entirely or in part by another individual under the direct supervision of the medical physicist, that individual and the part of the survey that individual performed shall also be identified in the survey report.

(9) Mammography equipment evaluations. Additional evaluations of mammography units or image processors or any other applicable mammography system ancillary parts shall be conducted at new installations, at disassembly, at reassembly, at the same or a new location, or when major components are changed or repaired. These evaluations shall be used to determine whether the new or changed equipment meets the requirements of applicable standards in 41.6(5) and 41.6(6). All problems shall be corrected before the new or changed equipment is put into service for examinations or film processing. The mammography equipment evaluation shall be performed by a medical physicist or by an individual under the direct supervision of an Iowa-approved medical physicist.

(10) Facility cleanliness.

1. The facility shall establish and implement adequate protocols for maintaining darkroom, screen, and viewbox cleanliness.

2. The facility shall document that all cleaning procedures are performed at the frequencies specified in the protocols.

(11) Calibration of air kerma measuring instruments. Instruments used by medical physicists in their annual survey to measure the air kerma or air kerma rate from a mammography unit shall be calibrated at least once every two years and each time the instrument is repaired. The instrument calibration must be traceable to a national standard and calibrated with an accuracy of plus or minus 6 percent (95 percent confidence level) in the mammography energy range.

(12) Infection control. Facilities shall establish and comply with a system specifying procedures to be followed by the facility for cleaning and disinfecting mammography equipment after contact with blood or other potentially infectious materials. This system shall specify the methods for documenting facility compliance with the infection control procedures established and shall:

1. Comply with all applicable federal, state, and local regulations pertaining to infection control; and

2. Comply with the manufacturer's recommended procedures for the cleaning and disinfecting of the mammography equipment used in the facility; or

3. If adequate manufacturer's recommendations are not available, comply with generally accepted guidance on infection control, until such recommendations become available.

1. Mammography procedures and techniques for mammography of patients with breast implants.

(1) Each facility shall have a procedure to inquire whether or not the patient has breast implants prior to the actual mammographic examination.

(2) Except where contraindicated, or unless modified by a physician's directions, patients with breast implants undergoing mammography shall have mammographic views to maximize the visualization of breast tissue.

*m.* Consumer complaint mechanism. Each facility shall:

(1) Establish a written and documented system for collecting and resolving consumer complaints;

(2) Maintain a record of each serious complaint received by the facility for at least three years from the date the complaint was received;

(3) Provide the consumer with adequate directions for filing serious complaints with the facility's accreditation body and any other appropriate regulatory entity if the facility is unable to resolve a serious complaint to the consumer's satisfaction.

(4) Report unresolved serious complaints to the accreditation body in a manner and time frame specified by the accreditation body.

*n.* Clinical image quality. Clinical images produced by any certified facility must continue to comply with the standards for clinical image quality established by that facility's accreditation body.

*o.* Additional mammography review and patient notification.

(1) If the agency believes that mammography quality at a facility has been compromised and may present a serious risk to human health, the facility shall provide clinical images and other relevant information, as specified by the agency, for review by the accreditation body or other entity designated by the agency. This additional mammography review will help the agency to determine whether the facility is in compliance with rule 641—41.6(136C) and, if not, whether there is a need to notify affected patients, their physicians, or the public that the reliability, clarity, and accuracy of interpretation of mammograms has been compromised.

(2) If the agency determines that any activity related to the provision of mammography at a facility may present a serious risk to human health such that patient notification is necessary, the facility shall notify patients or their designees, their physicians, or the public of action that may be taken to minimize the effects of the risk. Such notification shall occur within a time frame and a manner specified by the agency.

**41.6(6) Equipment standards.** The equipment used to perform mammography shall meet the following standards:

*a.* Design: Be specifically designed for mammography. This prohibits systems that have been modified or equipped with special attachments for mammography.

*b.* Performance standards: Meet the Food and Drug Administration (FDA) performance standards for diagnostic X-ray systems and their major components found in 21 CFR 1020.30 and FDA standards for radiographic equipment in 21 CFR 1020.31.

*c.* Image receptor systems: Have image receptor systems and individual components which are appropriate for mammography and used according to the manufacturer's recommendations.

(1) Systems using screen-film image receptors shall provide, at a minimum, for operation for image receptors of 18 × 24 centimeters and 24 × 30 centimeters.

(2) Systems using screen-film image receptors shall be equipped with moving grids matched to all image receptor sizes provided.

(3) Systems used for magnification procedures shall be capable of operation with the grid removed from between the source and image receptor.

*d.* Light fields: For any system with a light beam that passes through the X-ray beam-limiting device, the light shall provide an average illumination of not less than 160 lux (15 foot candles) at 100 centimeters or the maximum source-image receptor distance (SID), whichever is less.

*e.* Magnification:

(1) Systems used to perform noninterventional problem-solving procedures shall have radiographic magnification capability available for use by the operator.

(2) Systems used for magnification procedures shall provide, at a minimum, at least one magnification value within the range of 1.4 to 2.0.

*f.* Tube-image receptor assembly:

(1) The assembly shall be capable of being fixed in any position where it is designed to operate. Once fixed in any such position, it shall not undergo unintended motion.

(2) The mechanism ensuring compliance with this subrule shall not fail in the event of power interruption.

*g.* Film/screen contact: Shall check film/screen contact when cassettes are first placed into use and semiannually thereafter.

*h.* Focal spot: The focal spot size, magnification factor and source to image receptor distance (SID) shall be appropriate for mammography and in the ranges shown below:

| SID         | Nominal Focal Spot Size |
|-------------|-------------------------|
| > 65 cm     | < or = to 0.6 mm        |
| 50 to 65 cm | < or = to 0.5 mm        |
| < 50 cm     | < or = to 0.4 mm        |

(1) When more than one focal spot is provided, the system shall indicate, prior to exposure, which focal spot is selected.

(2) When more than one target material is provided, the system shall indicate, prior to exposure, the preselected target material.

(3) When the target material or focal spot, or both, is selected by a system algorithm that is based on the exposure or on a test exposure, the system shall display, after the exposure, the target material or focal spot, or both, actually used during the exposure.

*i.* Compression devices: Shall have compression devices parallel to the imaging plane and able to immobilize and compress the breast with a force of at least 25 pounds per square inch and shall be capable of maintaining this compression for at least three seconds. Effective October 28, 2002, each system shall provide:

(1) An initial power-driven compression activated by hands-free controls operable from both sides of the patient; and

(2) Fine adjustment compression controls operable from both sides of the patient.

(3) Systems shall be equipped with different sized compression paddles that match the sizes of all full field image receptors provided for the system. Compression paddles for special purposes, including those smaller than the full size of the image receptor (for "spot compression"), may be provided. Such compression paddles for special purposes are not subject to 41.6(6) "i"(6) and (7).

(4) Except as provided in 41.6(6) "i"(5), the compression paddle shall be flat and parallel to the breast support table and shall not deflect from parallel by more than 1.0 cm at any point on the surface of the compression paddle when compression is applied.

(5) Equipment intended by the manufacturer's design not to be flat and parallel to the breast support table during compression shall meet the manufacturer's design specifications and maintenance requirements.

(6) The chest wall edge of the compression paddle shall be straight and parallel to the edge of the image receptor.

(7) The chest wall edge may be bent upward to allow for patient comfort but shall not appear on the image.

*j.* Grids: Shall have the capability for using antiscatter grids.

*k.* AEC: Shall have automatic exposure control such that:

(1) Each screen-film system shall provide an AEC mode that is operable in all combinations of equipment configuration provided, e.g., grid, nongrid; magnification, nonmagnification; and various target-filter combinations.

(2) The positioning or selection of the detector shall permit flexibility in the placement of the detector under the target tissue.

- The size and available positions of the detector shall be clearly indicated at the X-ray input surface of the breast compression paddle.

- The selected position of the detector shall be clearly indicated.
- (3) The system shall provide means for the operator to vary the selected optical density from the normal (zero) setting.
  - l.* Control panel: Shall have a control panel that:
    - (1) Gives a positive indication when X-rays are being produced.
    - (2) Gives an audible signal indicating termination of exposure.
    - (3) Has manual selection of milliamperere seconds (mAs) or at least one of its component parts (milliamperere (mA) or time, or both).
    - (4) Has the technique factors (peak tube potential in kilovolts (kV) and either tube current in mA and exposure time in seconds or the product of tube current and exposure time in mAs) to be used during an exposure indicated before the exposure begins, except when AEC is used, in which case the technique factors that are set prior to the exposure shall be indicated.
    - (5) Has a system that, following AEC mode use, shall indicate the actual kilovoltage peak (kVp) and mAs used during the exposure.
  - m.* mAs: Shall indicate, or provide a means of determining, the mAs resulting from each exposure made with automatic exposure control.
  - n.* Viewboxes: Shall have a viewbox that is checked periodically to ensure optimal conditions. When the mammogram is placed on the viewbox, the area surrounding the film must be masked to exclude extraneous light which may reduce image contrast.
  - o.* X-ray film: Shall use X-ray film that has been designated by the film manufacturer as appropriate for mammography and that is matched to the screen's spectral output as specified by the manufacturer.
  - p.* Intensifying screens: Shall use intensifying screens that have been designated by the screen manufacturer as appropriate for mammography.
  - q.* Chemicals: Shall use chemical solutions for processing mammography films that are capable of developing the films in a manner equivalent to the minimum requirements specified by the film manufacturer.
  - r.* Hot-lights: Shall make special lights for film illumination, i.e., hot-lights, capable of producing light levels greater than that provided by the viewbox, available to the interpreting physicians.
  - s.* Masking devices: Shall ensure that film masking devices that can limit the illuminated area to a region equal to or smaller than the exposed portion of the film are available to all interpreting physicians interpreting for the facility.
  - t.* Mobile units and vans—film-screen.
    - (1) A phantom image shall be produced, processed, and evaluated after each relocation and prior to examinations being conducted.
    - (2) If processing is not available, a check of the radiation output shall be made and compared to a preset standard for quality. Equipment shall be recalibrated as necessary to maintain quality of phantom image.
  - u.* Mobile units and vans—full field digital. Appropriate manufacturer's quality control manual procedures and criteria shall be met.
- 41.6(7) *Safety standards for mammography equipment.***
  - a.* Proper safety precautions shall be maintained and shall include, but not be limited to, adequate shielding for patients, personnel, and facilities. The equipment shall be operated only from a shielded position.
  - b.* Equipment operators shall be monitored in accordance with 641—40.37(136C).
  - c.* Annual inspections shall be conducted by an inspector from the agency to ensure compliance with these rules. Identified hazards shall be promptly corrected.
  - d.* Equipment shall be shockproof and grounded to protect against electrical hazards.
  - e.* Records of all inspections, reports, and consultations shall be maintained for at least seven years.

| 0.42                                    |     |     |     |     |     |     |     |     |     | 200 | 200 | 225                                  |
| 0.43                                    |     |     |     |     |     |     |     |     |     |     | 204 | 230                                  |
| 0.44                                    |     |     |     |     |     |     |     |     |     |     |     | 234                                  |
| 0.45                                    |     |     |     |     |     |     |     |     |     |     |     | 238                                  |

To convert from entrance exposure in air in Roentgen to mean glandular breast dose in millirads, multiply the entrance exposure by the factor shown in the table for the appropriate kVp and beam quality (HVL) combination. For example, a measured entrance exposure of 0.50 Roentgen from a Mo/Mo Target Filter system at 30 kVp with a measured HVL of 0.36-mm aluminum yields an average glandular dose of  $(0.50 \text{ R}) \times (174 \text{ mrad/R}) = 87 \text{ mrad}$  or 0.87 mGy.

Madison, WI: Medical Physics Publishing; 159-175, 1991. W/AI conversion factors are derived from fits to data from Stanton L et al. Dosage evaluation in mammography. Radiology 1984; 150:577-584.

**641—41.7(136C) X-ray machines used for stereotactically guided breast biopsy.**

**41.7(1) Definitions.** In addition to the definitions provided in rules 641—38.2(136C), 641—40.2(136C), and 641—41.1(136C), the following definitions are applicable to this rule.

*“Collaborative setting”* means a setting in which a qualified radiologist and surgeon (under 41.7(3)“a” or 41.7(3)“c”) are working together in consultation and in performing stereotactically guided breast biopsies with a common goal of the patient’s benefit.

*“Procedure”* means a stereotactically guided breast biopsy performed on a patient for diagnostic purposes.

*“Qualified training physician”* means a physician who is qualified under 41.7(3) to perform stereotactically guided breast biopsies and who has performed at least 24 procedures.

*“Stereotactically guided breast biopsy”* means a breast biopsy procedure performed with the utilization of a dedicated system which emits ionizing radiation and is designed specifically for that procedure.

*“Supervising physician”* means the physician designated by the facility/owner to:

1. Evaluate the equipment, personnel, procedures, and records annually; and
2. Establish and conduct the quality assurance program.

**41.7(2) Registration and application standards and requirements.**

a. Each radiation machine used to perform stereotactically guided breast biopsies shall be registered according to 641—subrule 39.3(2).

b. Each facility wishing to perform stereotactically guided breast biopsies shall apply to the agency for authorization by providing or verifying the following information for each machine:

(1) The stereotactically guided breast biopsy equipment and facility meet the general requirements of these rules for radiation machines.

(2) The radiation machine is specifically designed to perform stereotactically guided breast biopsies.

(3) The radiation machine is used according to these rules on patient radiation exposure and radiation dose levels.

(4) The radiation machine is operated by individuals meeting the requirements of this rule.

(5) The entire stereotactically guided breast biopsy system is evaluated annually by a medical physicist who meets the requirements of this rule.

(6) The equipment, personnel, procedures and records are evaluated annually by the supervising physician.

c. Suspension, revocation, or denial of authorization.

(1) Authorization may be suspended or revoked with cause if any machine does not meet one or more of the standards of these rules.

(2) The facility shall have an opportunity for a hearing in connection with a denial, suspension, or revocation of authorization.

(3) An emergency order suspending or revoking authorization may be issued if the agency finds the radiation machine or facility violates rules that seriously affect the health, safety and welfare of the public. An opportunity for hearing shall be held within 20 working days after the issuance of the order. The order shall be effective during the proceedings.

(4) If authorization is revoked, the radiation machine shall not be used until reinstated.

d. Reinstatement of authorization.

(1) An application for reinstatement shall be submitted and processed the same as an initial application.

(2) The agency shall inspect the radiation machine within 60 days of the approved reinstatement application. If the reinstatement is after a revocation, appropriate corrective action shall be submitted with the application.

(3) A full reinstatement shall be issued only after the agency has inspected the radiation machine and facility and determined that they meet the requirements of these rules.

e. Inspections. The agency shall conduct an inspection of each radiation machine no later than 14 months after initial authorization and at least annually thereafter.

**41.7(3) Physicians.** Physicians must be qualified according to the setting and their role in performing stereotactically guided breast biopsies as outlined below.

a. Requirements for a radiologist in a collaborative setting are as follows:

- (1) Initial training and qualifications.
  1. Must be qualified according to 41.6(3)“a.”
  2. Shall have performed at least 12 stereotactically guided breast biopsies prior to July 1, 1998, or at least 3 hands-on stereotactically guided breast biopsies under a physician who is qualified under 41.7(3) and has performed at least 24 stereotactically guided breast biopsies.
  3. Shall have at least three hours of Category 1 CME or three hours of training approved by the agency in stereotactically guided breast biopsy.
  4. Shall be responsible for mammographic interpretation, be experienced as noted in 41.7(3)“a”(1)“2” above and be experienced in the specific recommendations for each biopsy and lesion identification at time of each biopsy performed by that physician.
  5. Shall be responsible for the supervision of the radiologic technologist during the procedure.
- (2) Maintenance of proficiency and CME requirements.
  1. Perform at least 12 stereotactically guided breast biopsies per year . If experience is not maintained, the physician must requalify by performing 3 procedures under direct supervision of a qualified training physician or an agency-approved manufacturer applications specialist before resuming unsupervised procedures.
  2. Obtain at least three hours of Category 1 CME or three hours of training approved by the agency in stereotactically guided breast biopsy every 36 months. If education is not maintained, the physician must requalify by obtaining additional CME credits to reach 3 CME credits in the prior 36 months before resuming unsupervised procedures. These CMEs cannot be obtained by the performance of supervised procedures.
  3. Continuing qualifications must be met and a current state of Iowa medical license must be in effect whenever procedures are performed independently by the physician.
- b. Requirements for a physician other than a qualified radiologist in a collaborative setting are as follows:
  - (1) Initial training and qualifications.
    1. Must be licensed to practice medicine in Iowa.
    2. Must have at least three hours of Category 1 CME or three hours of training approved by the agency in stereotactically guided breast biopsy which includes instruction on triangulation for lesion location.
    3. Must have performed at least 12 stereotactically guided breast biopsies prior to May 9, 2001, or at least 3 hands-on stereotactically guided breast biopsy procedures under a physician who is both qualified to perform stereotactic biopsy procedures according to 41.7(3) and has performed at least 24 stereotactically guided breast biopsies.
    4. Shall be responsible for post-biopsy management of the patient.
    5. Shall be responsible for supervision of the radiologic technologist during the procedure.
  - (2) Maintenance of proficiency and CME requirements.
    1. Perform or participate in at least 12 stereotactically guided breast biopsies per year or requalify by performing 3 procedures under direct supervision of a qualified training physician or an agency–approved manufacturer applications specialist before resuming unsupervised procedures.
    2. Obtain at least three hours of Category 1 CME or three hours of training approved by the agency in stereotactically guided breast biopsy every 36 months. If education is not maintained, the physician must requalify by obtaining additional CME credits to reach 3 CME credits in the prior 36 months before resuming unsupervised procedures. These CMEs cannot be obtained by the performance of supervised procedures.
    3. Continuing qualifications must be met and a current state of Iowa medical license must be in effect whenever unsupervised procedures are performed by the physician.
- c. Requirements for a radiologist performing stereotactically guided breast biopsy independently are as follows:
  - (1) Initial training and requirements.
    1. Must be qualified according to 41.6(3)“a.”

2. Initially, must have at least three hours of Category 1 CME or three hours of training approved by the agency in stereotactically guided breast biopsy.

3. Initially, must obtain at least 15 hours of CME in breast imaging including benign and malignant breast diseases.

4. Must have performed at least 12 stereotactically guided breast biopsies prior to July 1, 1998, or at least 3 hands-on stereotactically guided breast biopsy procedures under a physician who is both qualified according to 41.7(3) and has performed at least 24 stereotactically guided breast biopsies.

5. Must be responsible for mammographic interpretation.

6. Must be responsible for patient selection.

7. Must be responsible for the supervision of the radiologic technologist during the procedure.

8. Must be responsible for post-biopsy management of the patient which may include referral to a surgeon for a follow-up on certain lesions.

- (2) Maintenance of proficiency and CME requirements.

1. Perform at least 12 stereotactically guided breast biopsies per year or requalify by performing 3 procedures under direct supervision of a qualified training physician or an agency-approved manufacturer applications specialist.

2. Obtain at least three hours of Category 1 CME or three hours of training approved by the agency in stereotactically guided breast biopsy every 36 months which includes post-biopsy management of the patient. If education is not maintained, the physician must requalify by obtaining additional CME credits to reach 3 CME credits in the prior 36 months before resuming unsupervised procedures. These CMEs cannot be obtained by the performance of supervised procedures.

3. Continuing qualifications must be met and a current state of Iowa medical license must be in effect whenever unsupervised procedures are performed by the physician.

- d.* Requirements for a physician other than a qualified radiologist (under 41.7(3) “c”) performing stereotactically guided breast biopsy independently are as follows:

- (1) Initial training and requirements.

1. Must be licensed to practice medicine in Iowa.

2. Must have evaluated at least 480 mammograms in the prior 24 months in consultation with a physician who is qualified according to 41.6(3) “a.”

3. Initially, must have at least 15 hours of Category 1 CME or 15 hours of training approved by the agency in stereotactically guided breast imaging and biopsy or three years’ experience having performed at least 36 stereotactically guided breast biopsies.

4. Must have four hours of Category 1 CME in medical radiation physics.

5. Must have performed at least 12 stereotactically guided breast biopsies prior to May 9, 2001, or at least 3 hands-on stereotactically guided breast biopsy procedures under a physician who is both qualified according to 41.7(3) and has performed at least 24 stereotactically guided breast biopsies.

6. Must be responsible for patient selection.

7. Must be responsible for the supervision of the radiologic technologist during the procedure.

8. Must be responsible for post-biopsy management of the patient.

- (2) Maintenance of proficiency and CME requirements.

1. Continue to evaluate at least 480 mammograms every 24 months in consultation with a physician who is qualified according to 41.6(3) “a.”

2. Perform at least 12 stereotactically guided breast biopsies per year or requalify by performing 3 procedures under direct supervision of a qualified training physician or an agency-approved manufacturer applications specialist.

3. Obtain at least three hours of Category 1 CME or three hours of training approved by the agency in stereotactically guided breast biopsy every 36 months. If education is not maintained, the physician must requalify by obtaining additional CME credits to reach 3 CME credits in the prior 36 months before resuming unsupervised procedures. The CME credits for requalification cannot be obtained by performing procedures.

4. Continuing qualifications must be met and a current state of Iowa medical license must be in effect whenever unsupervised procedures are performed by the physician.

**41.7(4) Medical physicist.**

- a. Must be qualified according to 41.6(3)“c.”
- b. Must have performed three hands-on stereotactically guided breast biopsy system physics surveys prior to July 1, 1998; or one hands-on stereotactically guided breast biopsy system physics survey under the guidance of a medical physicist qualified through 41.7(4)“a” and 41.7(4)“b.”
- c. Maintenance of proficiency and continuing education requirements.
  - (1) Have performed at least one stereotactically guided breast biopsy system physics survey per year after the initial qualifications are met or requalify by performing one survey supervised by a qualified medical physicist; and
  - (2) Following the third anniversary in which the requirements of this subrule were met, have obtained at least three hours of continuing education in stereotactically guided breast biopsy system physics during the previous 36 months or requalify by obtaining additional CME credits to reach 3 CME credits in the prior 36 months.

**41.7(5) Radiologic technologist.**

- a. Must be qualified according to 41.6(3)“b.”
- b. Must meet the following initial requirements:
  - (1) Five hands-on stereotactically guided breast biopsy procedures on patients under the supervision of a physician or technologist qualified under rule 641— 41.7(136C).
  - (2) Three hours of continuing education in stereotactically guided breast biopsy. The required continuing education cannot be obtained through the performance of supervised stereotactically guided breast biopsy procedures.
- c. Maintenance of proficiency and continuing education and experience requirements.
  - (1) Following the first anniversary in which the requirements of this subrule were met, have performed at least 12 stereotactically guided breast biopsies per year or requalify by performing 3 stereotactically guided breast biopsies under the supervision of a physician or radiologic technologist qualified under 41.7(3) or 41.7(5)..
  - (2) Following the third anniversary in which the requirements of this subrule were met, have at least three hours of continuing education in stereotactically guided breast biopsy system physics during the previous 36 months or requalify by obtaining additional CME credits to reach 3 CME credits in the prior 36 months. The CMEs cannot be obtained by the performance of supervised procedures.
  - (3) If a stereotactic radiologic technologist performs only stereotactic procedures, the radiologic technologist must perform at least 100 stereotactic procedures during the prior 24 months.during the 24-month period ending on the last day of the previous calendar quarter, or any 24-month period between the two. In this case, all requirements for radiologic technologists must be met with the exception of 41.6(3)“b”(4)“1.”
  - (4) Only 50 percent of the total required stereotactic continuing education hours may be obtained through presenting or acting as a trainer for a continuing education or training program.

**41.7(6) Obtaining and preserving records.**

- a. The facility must make, for each procedure, a record of the service provided including:
  - (1) The date of the procedure.
  - (2) The name of the patient and one additional patient identifier.
  - (3) The name of the radiologic technologists and physicians performing the procedure.
  - (4) A description of the service provided.
  - (5) The name of the referring physician, if any.
- b. Records retained by the medical facility must be retained for at least ten years.

**41.7(7) Quality assurance program.**

- a. The facility shall have an equipment quality assurance program specific to stereotactically guided breast biopsy systems and covering all components of the system to ensure high-quality images with minimum patient exposure.
- b. The facility shall ensure that a general review of the program is conducted at least annually and have available the services of a qualified medical physicist who is capable of establishing and conducting the program.

- c. The facility shall name a supervising stereotactic biopsy physician who shall be responsible for:
- (1) Quality assurance activities including the medical audit,
  - (2) Oversight of the quality control program, and
  - (3) Supervision of the radiologic technologist(s) and the medical physicist.
- d. Under the direction of the supervising physician, the medical physicist shall have the responsibility for establishing and conducting the equipment quality assurance program. The program shall include:
- (1) Conducting equipment performance monitoring functions, initially and then at least annually, to include:
    1. Evaluation of biopsy unit assembly. Any failed items must be corrected within 30 days of the survey unless the medical physicist deems that the failure poses a serious injury risk to the patient, at which time the failure needs to be corrected before further procedures are performed.
    2. Collimation.
      - Digital – X-ray field must not extend beyond the image receptor by more than 5 mm on any side.
      - Film-screen – On all sides other than the chest wall side, the X-ray field must be within the image receptor. The chest wall side must not extend beyond the image receptor by more than 2 percent.
      - Any failures must be corrected within 30 days of the survey.
    3. Evaluation of focal spot.
      - Digital – Focal spot must not degrade from initial measurement. If reduction in lp/mm is found, focal spot must be corrected within 30 days of survey.
      - Film-screen – Film-screen must show 13 lp/mm parallel to the anode-cathode axis and 11 lp/mm perpendicular to the anode-cathode axis. Failure to meet the performance criteria must be corrected within 30 days of survey.
    4. kVp accuracy/reproducibility. kVp accuracy/reproducibility must be accurate to within +/- 5% of nominal kVp setting. Failures must be corrected before further procedures are performed.
    5. Half-value layer measurement. HVL shall be greater than kVp/100 (in units of mm Al). Failures must be corrected before further procedures are performed.
    6. Exposure reproducibility. Exposure must be reproducible to within +/- 15% of mean exposure. Failures must be corrected before further procedures are performed.
    7. Breast entrance exposure, average glandular dose. Average glandular dose must be less than 300 millirad (3 milliGray) per exposure of a 50 percent glandular/50 percent adipose 4.5 centimeter breast. Failures must be corrected before further procedures are performed.
    8. Image quality evaluation.
      - Digital – Phantom image must meet the criteria of 5 fibers, 4 speck groups and 3 masses for the ACR accreditation phantom or 3 fibers, 3 speck groups and 2.5 masses for the mini phantom unless otherwise stated by the phantom manufacturer.
      - Film-screen – Phantom image must meet the criteria of 4 fibers, 3 speck groups and 3 masses for the ACR phantom or 2 fibers, 2 speck groups and 2 masses for the mini phantom unless otherwise stated by the phantom manufacturer. The background density must be within +/- .20 of the established aim, and the density differences must be within +/- .05 of the established aim.
      - Failures must be corrected before further procedures are performed.
    9. Artifact evaluation. Any significant black or white artifacts seen in the image detector field must be corrected within 30 days of the survey.
    10. Digital field uniformity. For units with region of interest (ROI) capability, the SNR in each corner must be within +/- 15% of the SNR in the center. Failures must be corrected within 30 days of the survey.
    11. Localization simulation (gelatin phantom) test. Localization accuracy must be within 1 mm of target, and the test must include a portion of the test “lesion” in the sample chamber. Failures must be corrected before further procedures are performed.
  - (2) Analyzing the monitoring results to determine if there are any problems requiring correction.

(3) Ensuring that the facility has procedures in place for carrying out or arranging for the necessary corrective actions as well as for the calibrations and other preventative maintenance.

*e.* The supervising physician shall have the responsibility for establishing and conducting the quality control program in a facility with a fixed unit. In the case of a mobile stereotactic unit, the owner or designee shall assume the responsibility for establishing and conducting the quality assurance program. The program shall include:

(1) Localization accuracy (daily before use and before using the localization unit after it is adjusted). Each coordinate must be within manufacturer specifications for the intended target value. Failures must be corrected before further procedures are performed.

(2) Visual checklist (monthly). Any failed items must be corrected within 30 days.

(3) Phantom image (weekly).

1. Digital – Phantom image must meet the criteria of 5 fibers, 4 speck groups and 3 masses for the ACR accreditation phantom or 3 fibers, 3 speck groups and 2.5 masses for the mini phantom unless otherwise stated by the phantom manufacturer.

2. Film-screen – Phantom image must meet the criteria of 4 fibers, 3 speck groups and 3 masses for the ACR phantom or 2 fibers, 2 speck groups and 2 masses for the mini phantom unless otherwise stated by the phantom manufacturer. The background density must be within  $\pm .20$  of the established aim, and the density difference must be within  $\pm .05$  of the established aim.

3. Failures must be corrected before further procedures are performed.

(4) Compression (semiannually). The maximum auto drive compression force shall not exceed 45 pounds. Failures must be corrected within 30 days.

(5) Processor sensitometry (daily before use with systems utilizing film).

*f.* Each facility shall establish a medical audit program to ensure the accuracy and appropriateness of the procedures performed. This program shall include an imaging-pathology correlation for each biopsy performed, an ongoing analysis of biopsy results and periodic review of the utilization of the procedure. The program must include the number of biopsies performed, the number of cancers found, the number of benign lesions found, and the number of biopsies repeated.

*g.* Additional medical physicist evaluations of stereotactic units shall be conducted whenever a new unit is installed, a unit is disassembled and reassembled at the same or a new location, or major components of a stereotactic unit are changed or repaired. These evaluations shall be used to determine whether the new or changed equipment meets the requirements of applicable standards in 41.7(7). All problems shall be corrected before the new or changed equipment is put into service for examinations. The stereotactic equipment evaluation shall be performed by a medical physicist qualified under 41.7(4) or by an individual under the direct supervision of a medical physicist qualified under 41.7(4).

**41.7(8) *Equipment standards.***

*a.* Be specifically designed for stereotactically guided breast biopsy.

*b.* Meet the Food and Drug Administration (FDA) standards found in 21 CFR.

**41.7(9) *Safety standards.***

*a.* Proper safety precautions shall be maintained and shall include, but not be limited to, adequate shielding for patients, personnel and facilities. The equipment shall be operated only from a shielded position.

*b.* Equipment operators shall wear personnel monitors to monitor their radiation exposure.

*c.* Annual inspections shall be conducted by an inspector from the agency to ensure compliance with these rules. Identified hazards shall be promptly corrected.

*d.* Equipment shall be shockproof and grounded to protect against electrical hazards.

*e.* Records of all inspections, reports and consultations shall be maintained for at least seven years.

This rule is intended to implement Iowa Code chapter 136C.

## CHAPTER 41—APPENDIX A

INFORMATION ON RADIATION SHIELDING  
REQUIRED FOR PLAN REVIEWS (EXCLUDING THERAPY MACHINES)

In order for the agency to provide an evaluation and verification that national standards have been met on shielding requirements for a radiation installation, the following information shall be submitted.

1. The plans should show, as a minimum, the following:

(a) The normal location of the X-ray system's radiation port; the port's travel and traverse limits; general direction(s) of the useful beam; locations of any windows and doors; the location of the operator's booth; and the location of the X-ray control panel.

(b) The structural composition and thickness or lead equivalent of all walls, doors, partitions, floor, and ceiling of the room(s) concerned.

(c) The dimensions of the room(s) concerned.

(d) The type of occupancy of all adjacent areas inclusive of space above and below the room(s) concerned. If there is an exterior wall, show distance to the closest area(s) where it is likely that individuals may be present.

(e) The make and model of the X-ray equipment, the energy waveform (single phase, three phase, etc.) and the maximum technique factors.

(f) The type of examination(s) or treatment(s) which will be performed with the equipment.

2. Information on the anticipated workload of the X-ray system(s) in mA-minutes per week.

3. If the services of a qualified expert have been utilized to determine the shielding requirements, a report, including all basic assumptions used, shall be submitted with the plans.

## CHAPTER 41—APPENDIX B

DESIGN REQUIREMENTS FOR AN  
OPERATOR'S BOOTH1. Space requirements:

(a) The operator shall be allotted not less than 7.5 square feet (0.697 m) of unobstructed floor space in the booth.

(b) The operator's booth may be any geometric configuration with no dimension of less than 2 feet (0.61 m).

(c) The space shall be allotted excluding any encumbrance by the X-ray control panel, such as overhang, cables, or other similar encroachments.

(d) The booth shall be located or constructed such that unattenuated direct scatter radiation originating on the examination table or at the wall cassette will not reach the operator's station in the booth.

2. Structural requirements:

(a) The booth walls shall be permanently fixed barriers of at least 7 feet (2.13 m) high.

(b) When a door or movable panel is used as an integral part of the booth structure, it must have an interlock which will prevent an exposure when the door or panel is not closed.

(c) Shielding shall be provided to meet the requirements of 641—Chapter 40.

3. X-ray control placement:

The X-ray control for the system shall be fixed within the booth; and

(a) Shall be at least 40 inches (1.02 m) from any point subject to direct scatter, leakage or primary beam radiation.

(b) Shall allow the operator to use the majority of the available viewing windows or mirrors.

4. Viewing system requirements:

(a) Each booth shall have at least one viewing device which will:

(1) Be so placed that the operator can view the patient during any exposure, and

(2) The device shall be so placed that the operator can have full view of any occupant of the room and should be so placed that the operator can view any entry into the room. If any door which allows access to the room cannot be seen from the booth, then outside that door there shall be an "X-ray" warning sign that will be lighted anytime the rotor of the X-ray tube is activated. Alternatively, that door must have an interlock controlling the exposure which will prevent the exposure if the door is not closed.

(b) When the viewing system is a window, the following requirements also apply:

(1) The viewing area shall be at least 1 square foot (0.0929 m<sup>2</sup>).

(2) Regardless of size or shape, at least 0.09 m<sup>2</sup> (1 sq ft) of window area must be centered no less than 0.6 m (2 feet) from the open edge of the booth and no less than 1.5 m (5.0 feet) from the floor.

(3) The material constituting the window shall have the same lead equivalence as that required in the booth's wall in which it is mounted.

(c) When the viewing system is by mirrors, the mirror(s) shall be so located as to accomplish the general requirements of Appendix B, 4(a).

(d) When the viewing system is by electronic means:

(1) The camera shall be so located as to accomplish the general requirements of Appendix B, 4(a), and

(2) There shall be an alternate viewing system as a backup for the primary system.

## CHAPTER 41—APPENDIX C

INFORMATION TO BE SUBMITTED BY PERSONS  
PROPOSING TO CONDUCT HEALING  
ARTS SCREENING

Persons requesting that the agency approve a healing arts screening program shall submit the following information and evaluation:

1. Name and address of the applicant and, where applicable, the names and addresses of agents within this state.

2. Diseases or conditions for which the X-ray examinations are to be used in diagnoses.

3. A detailed description of the X-ray examinations proposed in the screening program.

4. Description of the population to be examined in the screening program, i.e., age, sex, physical condition, and other appropriate information. Any person conducting a screening program for cardiac scoring shall conduct screening only on either women over age 45 or men over age 50 who meet any two of the following criteria: family history, smoker, high blood pressure, high cholesterol, obesity (at least 20 pounds overweight), diabetes.

5. An evaluation of any known alternate methods not involving ionizing radiation which could achieve the goals of the screening program and why these methods are not used instead of the X-ray examinations.

6. An evaluation by a qualified expert of the X-ray system(s) to be used in the screening program. The evaluation by the qualified expert shall show that such system(s) does satisfy all requirements of these regulations. The evaluation shall include a measurement of patient exposures from the X-ray examinations to be performed.

7. A description of the diagnostic film quality control program.

8. A copy of the technique chart for the X-ray examination procedures to be used.

9. The qualifications of each individual who will be operating the X-ray system(s).

10. The qualifications of the individual who will be supervising the operators of the X-ray system(s). The extent of supervision and the method of work performance evaluation shall be specified.

11. The name and address of the physician who will interpret the radiograph(s) and a copy of the physician's license to practice in Iowa.

12. A description of the procedures to be used in advising the individuals screened and their private practitioners of the healing arts of the results of the screening procedure and any further medical needs indicated.

13. A description of the procedures for the retention or disposition of the radiographs and other records pertaining to the X-ray examinations.

14. An indication of the frequency of screening and the duration of the entire screening program.

15. Documentation justifying the reason for the screening. The applicant must submit data which supports the efficacy of the screening test in diagnosing the disease or condition being screened. Data which will be acceptable to the department includes, but is not limited to, the following: (1) the recommendation of a nationally recognized certifying medical or government body; (2) the recommendation of one of the following national organizations: American Cancer Association, American Lung Association, American Heart Association; or (3) medical literature from peer-reviewed journals supporting the screening.

16. The procedures for preventing pregnant individuals from participating in the screening or justification for allowing pregnant individuals to participate.

17. The dates of the screening to include beginning and ending dates.

18. A copy of IRB for a research project or information justifying the research project.

## APPENDIX D

### QA for Therapeutic Radiation Machines

| Frequency | Procedure                                                   | Tolerance <sup>a</sup>                    |
|-----------|-------------------------------------------------------------|-------------------------------------------|
| Daily     | <u>Dosimetry</u>                                            |                                           |
|           | X-ray output constancy                                      | 3%                                        |
|           | Electron output constancy <sup>b</sup>                      | 3%                                        |
|           | <u>Mechanical</u>                                           |                                           |
|           | Localizing lasers                                           | 2mm                                       |
|           | Distance indicator (ODI)                                    | 2mm                                       |
|           | <u>Safety</u>                                               |                                           |
|           | Door interlocks                                             | functional                                |
|           | Audiovisual monitors                                        | functional                                |
| Monthly   | <u>Dosimetry</u>                                            |                                           |
|           | X-ray output constancy <sup>c</sup>                         | 2%                                        |
|           | Electron output constancy <sup>c</sup>                      | 2%                                        |
|           | Backup monitor constancy                                    | 2%                                        |
|           | X-ray central axis dosimetry parameter (PDD, TAR) constancy | 2%                                        |
|           | Electron central axis dosimetry parameter constancy (PDD)   | 2mm @ therapeutic depth                   |
|           | X-ray beam flatness constancy                               | 2%                                        |
|           | Electron beam flatness constancy                            | 3%                                        |
|           | X-ray and electron symmetry                                 | 3%                                        |
|           | <u>Safety Interlocks</u>                                    |                                           |
|           | Wedge, electron cone interlocks                             | functional                                |
|           | <u>Mechanical</u>                                           |                                           |
|           | Light/radiation field coincidence                           | 2mm or 1% on a side <sup>d</sup>          |
|           | Gantry/collimator angle indicators                          | 1 degree                                  |
|           | Wedge position                                              | 2mm (or 2% change in transmission factor) |
|           | Tray position                                               | 2mm                                       |
|           | Applicator position                                         | 2mm                                       |
|           | Field size indicators                                       | 2mm                                       |
|           | Cross-hair centering                                        | 2mm diameter                              |
|           | Treatment couch position indicators                         | 2mm/1deg                                  |
|           | Latching of wedges, blocking tray                           | functional                                |
|           | Jaw symmetry <sup>e</sup>                                   | 2mm                                       |
|           | Field Light intensity                                       | functional                                |
| Annual    | <u>Dosimetry</u>                                            |                                           |
|           | X-ray/electron output calibration constancy                 | 2%                                        |
|           | Field size dependence of X-ray output constancy             | 2%                                        |

<sup>a</sup> The tolerances listed in the tables should be interpreted to mean that if a parameter either: (1) exceeds the tabulated value (e.g., the measured isocenter under the gantry exceeds 2 mm diameter); or (2) that the change in the parameter exceeds the nominal value (e.g., the output changes by more than 2%), then an action is required. The distinction is emphasized by the use of the term constancy for the latter case. Moreover, for constancy, percent values  $\pm$  the deviation of the parameter with respect to its nominal value; distances are referenced to the isocenter or nominal SSD.

<sup>b</sup> All electron energies need not be checked daily, but all electron energies are to be checked at least twice weekly.

<sup>c</sup> A constancy check with a field instrument using temperature pressure corrections.

<sup>d</sup> Whichever is greater. Should also be checked after change of light field source.

<sup>e</sup> Jaw symmetry is defined as the difference in distance of each jaw from the isocenter.

| Frequency | Procedure                                                    | Tolerance <sup>a</sup> |
|-----------|--------------------------------------------------------------|------------------------|
|           | Output factor constancy for electron applicators             | 2%                     |
|           | Central axis parameter constancy (PDD, TAR)                  | 2%                     |
|           | Off-axis factor constancy                                    | 2%                     |
|           | Transmission factor constancy for all treatment accessories  | 2%                     |
|           | Wedge transmission factor constancy <sup>f</sup>             | 2%                     |
|           | Monitor chamber linearity                                    | 1%                     |
|           | X-ray output constancy vs. gantry angle                      | 2%                     |
|           | Electron output constancy vs. gantry angle                   | 2%                     |
|           | Off-axis factor constancy vs. gantry angle                   | 2%                     |
|           | Arc mode                                                     | Mfrs. specs.           |
|           | <u>Safety Interlocks</u>                                     |                        |
|           | Follow manufacturer's test procedures                        | functional             |
|           | <u>Mechanical</u>                                            |                        |
|           | Collimator rotation isocenter                                | 2mm diameter           |
|           | Gantry rotation isocenter                                    | 2mm diameter           |
|           | Couch rotation isocenter                                     | 2mm diameter           |
|           | Coincidence of collimetry, gantry, couch axes with isocenter | 2mm diameter           |
|           | Coincidence of radiation and mechanical isocenter            | 2mm diameter           |

<sup>f</sup> Most wedges' transmission factors are field size and depth dependent.

<sup>a</sup> The tolerances listed in the tables should be interpreted to mean that if a parameter either: (1) exceeds the tabulated value (e.g., the measured isocenter under the gantry exceeds 2 mm diameter); or (2) that the change in the parameter exceeds the nominal value (e.g., the output changes by more than 2%), then an action is required. The distinction is emphasized by the use of the term constancy for the latter case. Moreover, for constancy, percent values  $\pm$  the deviation of the parameter with respect to its nominal value; distances are referenced to the isocenter or nominal SSD.

## APPENDIX E

INFORMATION ON RADIATION SHIELDING REQUIRED  
FOR PLAN REVIEWS FOR THERAPY MACHINES

## I. All therapeutic radiation machines.

A. Basic facility information including: name, telephone number and agency registration number of the individual responsible for preparation of the shielding plan; name and telephone number of the facility supervisor; and the street address (including room number if applicable) of the external beam radiation therapy facility. The plan should also indicate whether this is a new structure or a modification to existing structure(s).

B. All wall, floor, and ceiling areas struck by the useful beam shall have primary barriers.

C. Secondary barriers shall be provided in all wall, floor, and ceiling areas not having primary barriers.

## II. Therapeutic machines up to 150 kV (photons only).

In addition to the requirements listed in Section I above, therapeutic radiation machine facilities which produce only photons with a maximum energy less than or equal to 150 kV shall submit shielding plans which contain, as a minimum, the following additional information:

A. Equipment specifications, including the manufacturer and model number of the therapeutic radiation machine, as well as the maximum technique factors.

B. Maximum design workload for the facility including total weekly radiation output (expressed in gray (rad) or air kerma at one meter), total beam-on time per day or week, the average treatment time per patient, along with the anticipated number of patients to be treated per day or week.

C. A facility blueprint/drawing indicating: scale (0.25 inch = 1 foot is typical); direction of north; normal location of the therapeutic radiation machine's radiation port(s); the port's travel and traverse limits; general direction(s) of the useful beam; locations of any windows and doors; and the location of the therapeutic radiation machine control panel. If the control panel is located inside the external beam radiation therapy treatment room, the location of the operator's booth shall be noted on the plan and the operator's station at the control panel shall be behind a protective barrier sufficient to ensure compliance with 641—40.15(136C).

D. The structural composition and thickness or lead/concrete equivalent of all walls, doors, partitions, floor, and ceiling of the room(s) concerned.

E. The type of occupancy of all adjacent areas inclusive of space above and below the room(s) concerned. If there is an exterior wall, show distance to the closest area(s) where it is likely that individuals may be present.

F. At least one example calculation which shows the methodology used to determine the amount of shielding required for each physical condition (i.e., primary and secondary leakage barriers, restricted and unrestricted areas, entry door(s)) and shielding material in the facility.

(1) If commercial software is used to generate shielding requirements, identify the software used and the version/revision date.

(2) If the software used to generate shielding requirements is not in the open literature, submit quality control sample calculations to verify the result obtained with the software.

## III. Therapeutic radiation machines over 150 kV.

In addition to the requirements listed in Section I above, therapeutic radiation machine facilities which produce photons or electrons with a maximum energy in excess of 150 kV or electrons shall submit shielding plans which contain, as a minimum, the following additional information:

A. Equipment specifications including the manufacturer and model number of the therapeutic radiation machine, and gray (rad) at the isocenter and the energy(s) and type(s) of radiation produced (i.e., photon, electron). The target to isocenter distance shall be specified.

B. Maximum design workload for the facility including total weekly radiation output (expressed in gray (rad) at one meter), total beam-on time per day or week, the average treatment time per patient, along with the anticipated number of patients to be treated per day or week.

C. Facility blueprint/drawing (including both floor plan and elevation views) indicating relative orientation of the therapeutic radiation machine, scale (0.25 inch = 1 foot is typical), type(s), thickness and minimum density of shielding material(s), direction of north, the locations and size of all penetrations through each shielding barrier (ceiling, walls and floor), as well as details of the door(s) and maze.

D. The structural composition and thickness or concrete equivalent of all walls, doors, partitions, floor, and ceiling of the room(s) concerned.

E. The type of occupancy of all adjacent areas inclusive of space above and below the room(s) concerned. If there is an exterior wall, show distance to the closest area(s) where it is likely that individuals may be present.

F. Description of all assumptions that were in shielding calculations including, but not limited to, design energy (i.e., room may be designed for 6 MV unit although only a 4 MV unit is currently proposed), workload, presence of integral beam-stop in unit, occupancy and use(s) of adjacent areas, fraction of time that useful beam will intercept each permanent barrier (walls, floor and ceiling) and “allowed” radiation exposure in both restricted and unrestricted areas.

G. At least one example calculation which shows the methodology used to determine the amount of shielding required for each physical condition (i.e., primary and secondary leakage barriers, restricted and unrestricted areas, small angle scatter, entry door(s) and maze) and shielding material in the facility.

(1) If commercial software is used to generate shielding requirements, also identify the software used and the version/revision date.

(2) If the software used to generate shielding requirements is not in the open literature, submit quality control sample calculations to verify the result obtained with the software.

#### IV. Neutron shielding.

In addition to the requirements listed in Section III above, therapeutic radiation machine facilities which are capable of operating above 10 MV shall submit shielding plans which contain, as a minimum, the following additional information:

A. The structural composition, thickness, minimum density and location of all neutron shielding material.

B. Description of all assumptions that were used in neutron shielding calculations including, but not limited to, neutron spectra as a function of energy, neutron fluency rate, absorbed dose and dose equivalent (due to neutrons) in both restricted and unrestricted areas.

C. At least one example calculation which shows the methodology used to determine the amount of neutron shielding required for each physical condition (i.e., restricted and unrestricted areas, entry door(s) and maze) and neutron shielding material utilized in the facility.

(1) If commercial software is used to generate shielding requirements, also identify the software used and the version/revision date.

(2) If the software used to generate shielding requirements is not in the open literature, submit quality control sample calculations to verify the result obtained with the software.

D. The method(s) and instrumentation which will be used to verify the adequacy of all neutron shielding installed in the facility.

CHAPTER 42  
MINIMUM CERTIFICATION STANDARDS FOR DIAGNOSTIC RADIOGRAPHERS,  
NUCLEAR MEDICINE TECHNOLOGISTS, AND RADIATION THERAPISTS

[Prior to 12/2/87, Health Department[470] Ch 42]

**641—42.1(136C) Purpose and scope.**

**42.1(1) *Applicability.*** Except as otherwise specifically provided, these rules apply to all individuals who operate as a diagnostic radiographer, nuclear medicine technologist, radiologist assistant, podiatric radiographer, or radiation therapist as defined below.

The provisions of this chapter are in addition to, and not in substitution for, any other applicable portions of 641—Chapters 38 to 41.

**42.1(2) *Definitions.*** For the purpose of this chapter, the definitions of 641—Chapter 38 may also apply.

*“Approved course of study”* means a curriculum and associated training and testing materials which the department has determined are adequate to train students to meet the requirements of this chapter.

*“ARRT”* means the American Registry of Radiologic Technologists.

*“Chest”* is defined as the lung fields including the cardiac shadow, as taught in the approved limited radiography curriculum. Radiography of the shoulder, clavicle, scapula, ribs, thoracic spine and sternum for diagnostic evaluation of these body structures or chest radiography using anything other than a vertical cassette holder is not allowed under this body part classification for limited diagnostic radiographers. Limited diagnostic radiographers already approved in chest radiography may perform oblique, apical lordotic, and decubitus chest views under this definition upon completion of additional training approved by this agency.

*“Clinical education”* means the direct participation of the student in radiographic exposures as part of the approved course of study.

*“Clinical podiatric sponsor”* means a person who is licensed under Iowa Code chapter 149 and who is supervising a podiatric radiography student.

*“Continuing education course”* means a planned program of continuing education having sufficient scope and depth of a given subject area directly related to the field of diagnostic radiography, nuclear medicine, or radiation therapy to form an educational unit that is planned, coordinated, administered, and evaluated in terms of educational objectives and that provides a defined level of knowledge or specific performance skill. This concept involves the organized presentation of a body of knowledge so that the subject matter is comprehensively covered in sufficient detail to meet the educational objectives of the course.

*“Contrast media”* means material intentionally administered to the human body to define a part(s) which is not normally visualized radiographically.

*“Diagnostic radiographer”* means an individual, other than a licensed practitioner, podiatric radiographer, or dental assistant with radiography qualification, who applies X-radiation to the human body for diagnostic purposes while under the supervision of a licensed practitioner or registered nurse under 641—subparagraph 41.1(3) “a”(7). The types are as follows:

1. “General diagnostic radiographer” applies X-radiation to any part of the human body.
2. “Limited diagnostic radiographer” applies X-radiation to only the following body parts: chest, extremities (upper and lower), spine, or sinus. This individual is restricted to performing radiography in that area of the facility specifically designed for X-ray. This individual may not perform pediatric radiography (children under three years of age) without additional training in pediatric radiography taken as a part of the basic limited training or a specifically approved training program (see 42.2(6)).
3. “Limited in-hospital radiographer” applies X-radiation as permitted in 42.3(1) “c.”

*“Diagnostic radiography”* means the science and art of applying X-radiation to human beings for diagnostic purposes other than in dental radiography. It shall include adjustment or manipulation of X-ray equipment and appurtenances including image receptors, positioning of patients and processing of films so as to materially affect the radiation exposure of patients.

*“Directly related”* means covering a subject listed in the training requirements for a specific certification.

*“Formally educated”* means completion of a formal course of training and testing approved by the agency.

*“In vitro”* means a procedure in which the radioactive material is not administered to a human being.

*“In vivo”* means a procedure in which the radioactive material is administered to a human being.

*“Lower extremities”* refers to those body parts from the distal phalanges of the foot to the head of the femur and its articulation with the pelvic girdle as taught in the approved limited radiographer curriculum. True hip radiographs are prohibited under this category for limited diagnostic radiographers. This definition applies to 641—Chapter 42 only.

*“Nuclear medicine procedure”* means any procedure utilizing radiopharmaceuticals for diagnosis or treatment of disease in human beings and any duties performed by the technologist during sealed source procedures and includes, but is not limited to:

1. Administration of any radiopharmaceutical to human beings for diagnostic purposes.
2. Administration of radioactive material to human beings for therapeutic purposes.
3. Use of radioactive material for diagnostic purposes involving transmission or excitation.
4. Quality control and quality assurance.

*“Nuclear medicine technologist”* means an individual, other than a licensed physician, who performs nuclear medicine procedures while under the supervision of a physician who is authorized by NRC or Iowa to possess and use radioactive materials.

*“Podiatric radiographer”* means an individual employed in a podiatry office who performs podiatric radiography but not CT or fluoroscopy.

*“Podiatric radiography”* means the application of X-radiation to the human foot and ankle for diagnostic purposes only.

*“Quality assurance”* means all aspects of a nuclear medicine program that ensure the quality of imaging and therapy procedures.

*“Quality control”* means specific tests and measurements that ensure the purity, quantity, product identity, and biologic safety of radiopharmaceuticals.

*“Radiation therapist”* means a person, other than a licensed physician, who performs radiation therapy technology under the supervision of a radiation oncologist.

*“Radiation therapy technology”* means the science and art of performing simulation radiography or applying ionizing radiation emitted from X-ray machines, particle accelerators, or radioactive materials in the form of sealed sources to human beings for therapeutic purposes.

*“Radiologist assistant”* means an advanced-level radiographer, other than a licensed practitioner, who works under the supervision of a radiologist to enhance patient care by assisting the radiologist in the diagnostic imaging environment.

*“Simulation radiography”* means the science and art of applying radiation to human beings for the purpose of localizing treatment fields and for treatment planning.

*“Simulation therapist”* means an individual, other than a physician, who applies radiation to human beings for the purpose of localizing treatment fields and for treatment planning.

*“Sinus”* as used in the limited radiographer curriculum refers to the paranasal sinuses only.

*“Special category course”* means those programs still related to health care but indirectly related to diagnostic radiography, nuclear medicine technology, or radiation therapy. Such programs are: advanced CPR, educator’s programs, management programs, personal improvement, for example.

*“Spine”* refers to the cervical, thoracic (dorsal), lumbar vertebrae and their articulations. It may also include the sacrum or coccyx and the sacral articulation with the pelvic girdle. True pelvis radiographs performed with the image receptor positioned perpendicular to the long axis of the torso are prohibited under this limited category. Lumbo-pelvic or full spine radiography may be performed if the long axis of the image receptor is positioned parallel with the long axis of the spine as taught in the approved limited radiographer curriculum.

*“Student”* means an individual enrolled in and participating in an approved course of study.

*“Supervision”* means responsibility for and control of quality, radiation safety and protection, and technical aspects of the application of ionizing radiation to human beings for diagnostic or therapeutic purposes. Indirect supervision is being physically present in the immediate vicinity and able to assist if needed. Direct supervision is physically observing and critiquing the actual procedure and giving immediate assistance if required.

*“Upper extremities”* refers to those body parts from the distal phalanges of the hand to the head of the humerus. These projections may include the acromioclavicular or glenoid-humeral areas as taught in the approved limited radiographer curriculum. True shoulder radiography that includes both distal and proximal ends of the clavicle is prohibited under this category for limited diagnostic radiographers. This definition applies to 641—Chapter 42 only.

**641—42.2(136C) General requirements.**

**42.2(1) Application process.** Any individual seeking certification under 641—Chapter 42 shall:

- a. Meet minimum eligibility requirements:
  - (1) Graduation from high school or its equivalent.
  - (2) Attainment of 18 years of age.
  - (3) Ability to adequately perform necessary duties without constituting a hazard to the health or safety of patients or operators.
- b. Satisfactorily complete an agency-approved training program.
- c. Satisfactorily complete an agency-approved examination.
- d. Upon completion of “b” and “c,” apply to the agency for a permit to practice, and pay the fees as specified in 641—subrule 38.8(6).
- e. Submit an annual renewal application which includes the fees specified in 641—subrule 38.8(6).
- f. Report continuing education as required in 42.2(3).
- g. Post the permit at the individual’s place of employment.
- h. As a diagnostic radiographer, work only under the supervision of a licensed practitioner as defined in 641—38.2(136C); as a nuclear medicine technologist, work only under the supervision of an authorized user as defined in 641—41.2(136C); or as a radiation therapist, work only under the supervision of a licensed physician or authorized user as defined in 641—41.2(136C).
- i. Submit a written report of any misdemeanor or felony, any disciplinary action brought against the individual in connection with a certificate or license issued from a certifying or licensing entity, or any disciplinary action brought against the individual by an employer or patient.
- j. For podiatric radiographers only, follow the application process in 42.7(4).

**42.2(2) Disciplinary grounds and actions.** The procedures for administrative enforcement actions are found in 641—38.9(136C) and 38.10(136C). The following shall be grounds for disciplinary action involving possible probation, suspension, revocation, or denial of certification, levying of fines or other sanctions:

- a. Operating as a diagnostic radiographer, podiatric radiographer, radiologist assistant, nuclear medicine technologist, or radiation therapist without meeting the requirements of this chapter.
- b. Allowing any individual excluding a licensed practitioner as defined in 641—38.2(136C) to operate as a diagnostic radiographer, podiatric radiographer, radiologist assistant, nuclear medicine technologist, or radiation therapist if that individual cannot provide proof of certification by the agency.
- c. Failing to report to the agency any individual whom the certificate holder knows is in violation of this rule.
- d. Submitting false information in order to obtain certification or renewal certification as a diagnostic radiographer, podiatric radiographer, radiologist assistant, nuclear medicine technologist, or radiation therapist.
- e. Any action that the department determines may jeopardize the public, other staff, or certificate holder’s health and safety. These actions shall include but not be limited to:
  - (1) Any medical condition which may impair or limit the individual’s ability to perform diagnostic radiography, nuclear medicine procedures, or radiation therapy;

- (2) Activity related to illegal or improper use of drugs or other chemical substances;
- (3) A misdemeanor or felony which may impair or limit the individual's ability to perform diagnostic radiography, nuclear medicine procedures, or radiation therapy;
- (4) Any disciplinary action brought against the individual in connection with a certificate or license issued from a certifying or licensing entity;
- (5) Being found guilty of incompetence or negligence during the certificate holder's performance as a certificate holder;
- (6) Performing diagnostic radiography, radiation therapy, or nuclear medicine procedures without either supervision or a written order of a licensed practitioner;
- (7) Interpreting and rendering a diagnosis based on a diagnostic image for a physician, a patient, the patient's family, or the public.
- f. Performing procedures not allowed under the individual's current certification.
- g. Failing to pay fees or costs required to meet the requirements of this chapter. Penalties for working without a current permit will be considered on a case-by-case basis.
- h. Failure to respond to an audit request or failure to provide proper documentation.
- i. Submitting false information to a facility that might place the facility in noncompliance with 641—Chapters 38 to 41.
- j. Violating any of the rules of 641—Chapters 38 to 42.

**42.2(3) Continuing education.**

a. Each individual who is certified under these rules shall, during a two-year period, obtain continuing education credit as follows:

(1) General diagnostic radiographer: 24 clock hours, 1.0 hour must be in radiation protection. Subjects must be directly related to general diagnostic radiography as defined in 42.1(2) and approved by the agency.

1. Individuals holding an additional category in CT, as specified in 42.2(9), must complete 6.0 of the 24.0 hours in CT-related courses.

2. Individuals not holding the additional category in CT may not submit continuing education hours in CT.

(2) Limited in-hospital diagnostic radiographer: 24 clock hours, 1.0 hour must be in radiation protection.

(3) Limited diagnostic radiographer: 12 clock hours, 1.0 hour must be in radiation protection.

(4) General nuclear medicine technologist: 24 hours total.

1. One clock hour in principles of radiation protection and exposure each year, a total of two hours each two-year period.

2. One clock hour in quality assurance each year, a total of two hours each two-year period.

3. The remaining 20 clock hours of continuing education in each two-year period must be in subjects directly related to nuclear medicine procedures as defined in 42.1(2) and approved by the agency.

• Individuals holding an additional category in CT, as specified in 42.2(9), must complete 6.0 of the 24.0 hours in CT-related courses.

• Individuals not holding the additional category in CT may not submit continuing education hours in CT.

(5) Limited nuclear medicine technologists: 12 hours total, 1.0 hour must be radiation protection and 1.0 hour must be in quality assurance.

(6) Radiation therapist, dosimetrist, simulation therapist: 24.0 clock hours, 1.0 hour must be in radiation protection. Continuing education courses must be directly related to radiation therapy as defined in 42.1(2) and approved by the agency.

1. Individuals holding an additional category in CT, as specified in 42.2(9), must complete 6.0 of the 24.0 hours in CT-related courses.

2. Individuals not holding an additional category in CT may not submit continuing education hours in CT.

(7) Rescinded IAB 8/1/07, effective 9/5/07.

(8) Radiologist assistant: See 641—42.6(136C).

(9) Podiatric radiographer: See 42.7(5).

*b.* Continuing education course approval.

(1) Information must be submitted in writing and must provide sufficient detail to show that the course meets the relevancy requirements of these rules and the agency guidelines.

(2) Following its review, the agency will, in consultation with or under predetermined guidance of the technical advisory committee, approve, disapprove, or request additional information on the proposed course.

(3) The agency may audit any continuing education course to verify the adequacy of program content and delivery.

(4) Courses must be at least one clock hour in length and if lasting more than one hour, will be assigned credit in half-hour increments to the closest half-hour.

(5) No continuing education credit is approved for passing an initial certification examination or for basic CPR, hands-on practice, mandatory abuse reporting, or ultrasound or MRI courses that are less than 50 percent directly related to radiography, nuclear medicine, or radiation therapy.

(6) One-half hour of credit will be granted for each hour of formal demonstration of equipment by the application specialist. Content must be company-specific but not site-specific. Credit is limited to 50 percent of the total hours required.

(7) Courses will be approved for a three-year period and may be given anytime within the three-year period.

*c.* Continuing education credit will be awarded under provisions of 42.2(3) by the department to individuals:

(1) Who have successfully completed a continuing education course which has been approved by the department.

(2) Who present a department-approved continuing education course to individuals certified in the presenter's field. Credit granted shall be at a rate of two times the amount of time it takes to present the course up to a maximum of 50 percent of the total hours required.

(3) Only once during a two-year period for the same continuing education course.

(4) Who complete 12.0 hours of tumor boards each two-year reporting period. Tumor board credit is limited to general radiographers, nuclear medicine technologists, and radiation therapists.

(5) Who complete all credit hours in self-studies. A self-study may not be repeated in subsequent reporting periods.

(6) Who pass an advanced ARRT certification examination in a permit-related area. Twenty-four hours will be granted.

*d.* Continuing education must be directly related to the area of practice of the operator attending the program. Twenty-five percent of the total hours required may be in "special category."

*e.* Proof of continuing education must be maintained for at least three years. Proof of continuing education may be a sign-in sheet, certificate, or answer sheet. It must be signed and dated by the presenter, program representative, or the individual's supervisor. Individuals authorized for mammography must meet the records requirements in 641—41.6(136C) and 641—41.7(136C).

*f.* All continuing education requirements shall be completed during the two-year period prior to the certification continuing education due date.

*g.* Late submission of continuing education requirements.

(1) For any individual who completes the required continuing education before the continuing education due date but fails to submit the required proof within 30 days after the continuing education due date, the certification shall be terminated and the renewal fee will not be refunded.

(2) Any individual who fails to complete the required continuing education before the continuing education due date but submits a written plan of correction to obtain the required hours and the fee required in 641—paragraph 38.8(6)"c" shall be allowed no more than 60 days after the original continuing education due date to complete the plan of correction and submit the documentation of completion of continuing education requirements. After 60 days, the certification shall be terminated and the individual shall not function as a diagnostic radiographer, radiation therapist, nuclear medicine technologist, radiologist assistant, or podiatric radiographer in Iowa.

(3) Once certification has been terminated, any individual who requests permission to reestablish certification within six months of the initial continuing education due date must submit proof of continuing education hours and shall submit a late fee as set forth in 641—paragraph 38.8(6) “c” in addition to the annual fee set forth in 641—paragraph 38.8(6) “a” in order to obtain reinstatement of certification.

**42.2(4) *Recertification.***

a. If an individual allows the certification to expire for any reason or if any individual voluntarily terminates certification, the following will apply:

(1) Any individual who wishes to regain certification and makes application within six months of the termination date will be allowed to do so with no additional training or testing required but must complete any delinquent continuing education.

(2) Any individual who wishes to regain certification after the six-month period will need to meet the current educational and testing requirements for that particular certification. Proof of possession of a previous certification may satisfy the training portion of this requirement.

(3) Any individual who has not renewed certification for at least two years and wants to regain certification, or who has not applied for certification within two years of the completion date of the original training course, will need to complete a recertification program approved by the department of not less than 24 contact hours for general certifications and 12 contact hours for limited certifications which specifically applies to the area of certification.

(4) Podiatric radiographers must meet the requirements of 42.7(6).

b. *Recertification programs.*

(1) The recertification program must review those basic principles necessary to ensure minimum competency in the certification area and must also include the satisfactory completion of a written examination. Both the program and the examination must acquire prior approval from the department. Courses designed for use in the recertification program will not qualify for continuing education credit for those individuals required to attend in order to recertify.

(2) If no approved programs are available, the department may require attendance for a minimum of 24 contact hours for general certifications and 12 hours for limited certifications at specific continuing education programs. The continuing education must be confined to subjects which apply to the area of certification limitation, if any, and would have to be completed within a specified time period.

c. *Exemptions.* Any or all of the above-mentioned requirements may be waived for an individual who has been actively employed in the certification area in another state, country, or federal institution or who can prove circumstances above and beyond the norm. These cases will be reviewed on an individual basis and the decision of the department shall be final.

d. *Training programs.* Rescinded IAB 4/3/02, effective 5/8/02.

e. Upon the completion of the recertification training, the following must be submitted:

(1) A statement of competency from the trainer.

(2) A statement of permission to allow a representative of the department to comprehensively evaluate whether the individual meets the training standard.

**42.2(5) *Fees.*** Rescinded IAB 4/11/07, effective 5/16/07.

**42.2(6) *Training programs.***

a. Any individual wishing to train an individual as a diagnostic radiographer, nuclear medicine technologist, or radiation therapist must submit a training program to the agency for approval. This provision includes individuals providing clinical training for out-of-state students. For radiologist assistants, see 641—42.6(136C). For podiatric radiographers, see 641—42.7(136C). No training may be started until written approval from the agency is received. The training request must provide, at a minimum, the following:

(1) An outline of the didactic and clinical studies to meet the requirements of 42.3(1), 42.4(2), or 42.5(2), as applicable.

(2) Listed body parts to be taught if this is a limited radiography training program. Procedures are limited to chest, extremities, spinal, or sinus radiography.

(3) Proof that:

1. The instructor of a general training program meets the requirements of this chapter as a two-year educated diagnostic radiographer, nuclear medicine technologist, or radiation therapist holding a current Iowa general permit to practice and having at least two years of current experience or is a licensed physician trained in the specific area of the training program.

2. The instructor of a limited training program meets the following:

- The principal instructor of a limited training program is a general radiographer holding a current Iowa permit to practice and having at least two years of current experience or is a licensed physician trained in the specific area of the training program.

- The on-site clinical instructor is a general radiographer holding a current Iowa permit to practice and having at least two years of current experience or is a limited radiographer holding a current Iowa permit to practice in the area of instruction and having at least two years of current experience. On-site clinical instructors shall be supervised by the principal instructor.

(4) A time schedule of the training program. The projected completion date of the clinical portion of the program or course of study shall be within a time period equal to or less than twice that required for the original program or course of study.

(5) A description of the testing to be used to determine proficiency of the didactic portion and the mechanism to be used to determine clinical competency. All clinical competency testing shall be conducted by the principal instructor.

(6) A statement of permission to allow a representative of the agency to periodically evaluate the progress of the student. The agency will evaluate all non-school students.

(7) A statement that the student will be directly supervised until the student's competency is documented and indirectly supervised after the student's competency is documented.

b. Upon the completion of the training program, the following must be submitted to the agency:

(1) A statement of competency from the trainer for each area completed.

(2) A statement of permission to allow a representative of the agency to comprehensively evaluate whether the individual meets the training standard.

c. Additional training for limited radiographers wishing to perform pediatric radiography. Training requires a general radiographer to submit to the agency a training program that includes the additional anatomy and physiology, positioning, radiation protection, technique, and film critique necessary for pediatrics. The training must include both chest and extremities but no spinal radiography. The program must include didactic instruction plus film critique time. Upon completion of training, the general radiographer must submit a letter of competency to the agency. No additional testing will be required.

**42.2(7) Requirements for operators of dual imaging devices.**

a. When a unit is operated as a stand-alone nuclear medicine imaging device, the operator must have a permit to practice as a nuclear medicine technologist and meet the requirements of 641—42.4(136C).

b. When the unit is operated as a stand-alone CT imaging device, the operator must have a permit to practice as a general diagnostic radiographer, nuclear medicine technologist, or radiation therapist and meet the requirements of 42.2(9).

c. When a unit is operated in dual mode as a SPECT/CT or PET/CT device, the operator must have a permit to practice as a nuclear medicine technologist and meet the requirements of 42.2(9).

**42.2(8) Examinations.** All individuals seeking certification under 641—Chapter 42 must pass a written examination before the permit can be issued. The individual is allowed to practice under the direct supervision of a licensed practitioner, an authorized user listed on a radioactive materials license, or a permitted individual with the permit in the same or higher category until the permit is issued provided the test is pending. Individuals who fail the examination three times will be required to satisfactorily complete the training course again.

**42.2(9) Specific requirements for CT certification.**

a. Operators of CT units must meet the following requirements:

(1) Hold certification as a general diagnostic radiographer, radiation therapist, or nuclear medicine technologist;

(2) Complete the manufacturer's training or an agency-approved equivalent training course. Training must include equipment operation, contrast media, sectional anatomy, and CT radiation protection and be at least 15.0 hours in length. Initial training may be used as continuing education in the reporting period taken if approved by the agency. Passing the ARRT certification examination in CT will meet the training requirement; and

(3) Complete 6.0 hours of continuing education in CT-related subjects each two-year reporting period. These hours may be a part of the 24.0 hours of continuing education required in 42.2(3) "a"(1), (4), and (6).

b. Proof of initial training shall be forwarded to the agency for review.

c. "CT" must be on the individual's permit in order for the individual to perform CT scans.

**641—42.3(136C) Specific requirements for diagnostic radiographers.**

**42.3(1) Training requirements.**

a. General diagnostic radiographer. Successful completion of a Joint Review Committee on Education in Radiologic Technology approved course of study, certification by the American Registry of Radiologic Technologists or the American Registry of Clinical Radiography Technologists, or equivalent agency-approved training courses designed to prepare the student to demonstrate competency in the following areas:

(1) Radiation protection of patients and workers, including monitoring, shielding, units of measurement and permissible levels, biological effects of radiation, and technical consideration in reducing radiation exposure and frequency of retakes;

(2) Technique and quality control to achieve diagnostic objectives with minimum patient exposure, including X-ray examinations, X-ray production, films, screens, holders and grids, technique conversions, film processing, artifacts, image quality, film systems and control of secondary radiation for the specified category;

(3) Patient care including, but not limited to, aseptic techniques, emergency procedures and first aid, and contrast media;

(4) Positioning, including normal and abnormal anatomy and projections;

(5) Radiographic equipment and operator maintenance to include X-ray tubes, grids, standardization of equipment, generators, preventive maintenance, basic electricity, film processors and maintenance, collimators, X-ray control consoles, tilt tables, ancillary equipment, fluoroscopes and electrical and mechanical safety;

(6) Special techniques, including stereo, body section radiography, pelvimetry, image intensification, photo timing and mobile units; and

(7) Clinical experience sufficient to demonstrate competency in the application of the above as specified in the "Standards for an Accredited Education Program in Radiologic Sciences" as adopted by the Joint Review Committee on Education on Radiologic Technology. Clinical experience for each area must be directly supervised by a formally educated general radiographer until competency for the area is completed. After competency is completed, indirect supervision is permitted. All retakes and portable radiography must be directly supervised.

b. Limited diagnostic radiographer.

(1) Completion of an approved course of study to prepare the student to demonstrate competency in the following areas:

1. Radiation protection of patients and workers including monitoring, shielding, units of measurement and permissible levels, biological effects of radiation, and technical considerations in reducing radiation exposure and frequency of retakes;

2. Technique and quality control to achieve diagnostic objectives with minimum patient exposure to include X-ray examination, X-ray production, films, screens, holders and grids, technique conversions, film processing, artifacts, image quality, film systems and control of secondary radiation for the specified category;

3. Patient care including, but not limited to, aseptic techniques, emergency procedures and first aid;

4. Positioning, including normal and abnormal anatomy and projections for the specific category;
5. Radiographic equipment and operator maintenance to include X-ray tubes, grids, standardization of equipment, generators, preventive maintenance, basic electricity, film processors and maintenance, collimators, X-ray control consoles, tilt tables, ancillary equipment, and electrical and mechanical safety;

6. Special techniques limited to those required by the specific category; and

7. Clinical experience sufficient to demonstrate competency in the application of the above as specified by the department. Clinical experience must be directly supervised by a two-year educated general radiographer, licensed physician, chiropractor, or podiatrist who physically observes and critiques the actual X-ray procedures.

8. Rescinded IAB 8/1/07, effective 9/5/07.

(2) Training required for limited radiographers who wish to perform pediatric radiography. The training program must:

1. Be submitted to the agency for approval before training starts.

2. Be taught by a general radiographer.

3. Include 4.0 hours of additional anatomy and physiology, positioning, radiation protection, and technique that are specific to pediatric radiography.

4. Include clinical and film critiques in pediatric chest and extremities radiography, but not spinal radiography.

5. Upon completion, verify each participant's competency, in writing, to the agency.

c. Limited in-hospital diagnostic radiographer. An individual employed in a diagnostic radiography facility which has a workload of less than 5000 examinations per year and which provides 24-hour service in a hospital will be permitted to apply X-radiation to any part of the human body at that facility if the individual completes a training program recognized by the department, as outlined in 42.1(4) "b"(1) and submits a letter from a board-certified or board-eligible radiologist who verifies in writing the specific procedures the individual is competent to perform. The training program must cover the areas outlined in 42.1(4) "b," the anatomy and physiology of the entire body, positioning and techniques relative to the procedures to be performed, and appropriate clinical training which includes all parts of the human body. Training received under this subrule is specific to the facility and must be reevaluated by the department before an individual may transfer to another facility.

d. Graduates of programs recognized by the Iowa department of public health in consultation with the professional societies and boards of examiners for appropriate courses of study in diagnostic radiography will be considered to meet the requirements of this rule.

**42.3(2) School accreditation.** Rescinded IAB 4/11/07, effective 5/16/07.

**42.3(3) Examinations.**

a. All individuals seeking to perform diagnostic radiography must, in addition to meeting the requirements in subrule 42.3(1), take and satisfactorily pass a written examination. Examination must include the following subject matter for each category of radiographer:

- (1) General diagnostic radiographer and limited in-hospital radiographer: radiation protection, radiation physics, radiographic and fluoroscopic techniques, special procedures, patient care, positioning, equipment maintenance, anatomy, contrast media, physiology, quality control, radiographic processing and clinical experience.

- (2) Limited diagnostic radiographer: radiation protection, radiation physics, radiographic techniques, patient care, positioning, equipment maintenance, anatomy, physiology, quality control, and radiographic processing and clinical experience for the specific permit to practice requested.

- (3) Contents of the examinations will be established and periodically revised by the department in consultation with the technical advisory committee.

b. Examinations will be given by the department at least annually, or as necessary, at course of study location or other location determined by the department.

c. The agency may accept, in lieu of its own examination, evidence of satisfactory performance in an examination given by an appropriate organization or testing service provided that the agency finds the organization or service to be competent to examine applicants in the discipline of radiography.

For purposes of this subrule, individuals who have passed the general radiography examination with the American Registry of Radiologic Technologists or American Registry of Clinical Radiography Technologists meet the testing requirements of 42.3(3). Individuals who have passed the limited radiography examination with the American Registry of Chiropractic Radiography Technologists meet the testing requirements of 42.3(3) for limited radiography in spines and extremities.

*d.* Any individual certified under these rules and exempted from examination is exempted from examination requirements as long as the initial certification remains in effect.

**42.3(4) Exemptions.**

*a.* Students enrolled in and participating in an approved program or approved course of study for diagnostic radiography, or an approved school of medicine, osteopathy, podiatry, and chiropractic who, as a part of their course of study, apply ionizing radiation to a human being while under the supervision of a licensed practitioner.

*b.* Licensed practitioners as defined in 641—Chapter 38.

*c.* Individuals who operate processors only.

**641—42.4(136C) Specific requirements for nuclear medicine technologists.**

**42.4(1) Specific eligibility requirements.**

*a.* Any individual who is registered in nuclear medicine technology with the American Registry of Radiologic Technologists meets the education and testing requirements of this rule.

*b.* Rescinded IAB 3/30/05, effective 5/4/05.

**42.4(2) Training requirements.**

*a.* General nuclear medicine technologist. Successful completion of a Joint Review Committee on Educational Programs in Nuclear Medicine approved course of study or equivalent agency-approved training courses designed to prepare the student to demonstrate competency in the following:

- (1) Basic anatomy, physiology, and pathology.
- (2) Intravenous injections and radiopharmaceutical chemistry.
- (3) Radiation physics and mathematics.
- (4) Nuclear instrumentation.
- (5) Radiation biology.
- (6) Radiation protection and radiation protection standards and codes.
- (7) Laboratory procedures and techniques (in vivo and in vitro).
- (8) Clinical application of radiopharmaceuticals used for diagnostic and therapeutic uses and duties performed by the technologist during sealed source procedures.
- (9) Records and administrative procedures.
- (10) Medical ethics.
- (11) Patient care.

*b.* Limited nuclear medicine technologist. Successful completion of a department-approved training program that prepares the student to demonstrate competency in a specified area. Each program shall include the items in 42.4(2) “*a*” that are specific to the limited area. Included are laboratory technologists who perform nuclear medicine procedures unless the material handled is regulated under 641—paragraph 39.4(22) “*i*.”

*c.* Graduates of programs recognized by the department in consultation with the professional societies and others as being adequate and appropriate courses of study in nuclear medicine technology may be considered to meet the requirements of this subrule.

*d.* Clinical experience must be directly supervised by a certified nuclear medicine technologist or by a physician who appears as an authorized user on an Iowa, agreement state, or U.S. Nuclear Regulatory Commission radioactive materials license. Quality assurance and quality control experience may be directly supervised by a pharmacist who appears as an authorized nuclear pharmacist on an Iowa, U.S. Nuclear Regulatory Commission, or agreement state radioactive materials license.

**42.4(3) Examinations.**

*a.* Any individual, other than a licensed physician, seeking certification as a general nuclear medicine technologist shall, in addition to the requirements of 42.4(2) successfully complete a written

examination including the subject matter specified in 42.4(2)“a.” The following organizations offer approved general examinations:

- (1) American Registry of Radiologic Technologists.
- (2) Nuclear Medicine Technology Certification Board.

b. Any individual certified under these rules shall be exempt from the examination requirements as long as the original certification remains in effect.

c. Any individual, other than a licensed physician, seeking certification as a limited nuclear medicine technologist shall, in addition to the requirements of 42.4(2)“b,” successfully complete a written examination approved by the department which includes the subject matter specified in 42.4(2)“b.”

d. Any individual holding a temporary certification must successfully complete an approved examination within six months of the issuance date of the temporary certification.

**42.4(4) Exemptions.**

a. Students enrolled in and participating in an approved program or approved course of study for nuclear medicine technology or an approved school of medicine, osteopathy, podiatry, or chiropractic who, as a part of their course of study, administer radioactive material to a human being while under the supervision of a licensed physician who appears as an authorized user on an Iowa, agreement state, or NRC radioactive materials license.

b. A licensed physician who appears as an authorized user on an Iowa or NRC radioactive materials license.

**641—42.5(136C) Specific requirements for radiation therapists.**

**42.5(1) Specific eligibility requirements.** Each individual shall meet one of the following:

a. Any individual who is registered in radiation therapy with the American Registry of Radiological Technologists in radiation therapy meets the education and testing requirements of this rule.

b. Rescinded IAB 3/30/05, effective 5/4/05.

**42.5(2) Training requirements.**

a. General radiation therapist. Successful completion of a Joint Committee on Education in Radiologic Technology approved course of study or equivalent agency-approved training courses designed to prepare the student to demonstrate didactic and clinical competency in radiation therapy including, but not limited to, anatomy, physiology, radiation physics, radiation protection and exposure, quality assurance, radiation oncology treatment techniques, dosimetry, radiation oncology and pathology, radiology, oncologic patient care and management.

b. Limited radiation therapist. Successful completion of a training program approved by the department to prepare the student to demonstrate competency in a specified area only. This includes the simulation therapist. Each program shall include the items in 42.5(2)“a” that are specific to the limited area.

c. Graduates of programs recognized by the department in consultation with the professional societies and others as being adequate and appropriate courses of study in radiation therapy technology may be considered to meet the requirements of this subrule.

d. Clinical experience must be directly supervised by a radiation therapist or radiation oncologist.

**42.5(3) Examinations.**

a. Any individual, other than licensed physicians, seeking certification as a radiation therapist shall, in addition to the requirements of 42.5(2), satisfactorily complete a written examination in radiation therapy technology approved by the department. An approved examination is offered by the American Registry of Radiologic Technologists.

b. Any individual certified under these rules and exempted from examination is exempt from examination requirements as long as the initial certification remains in effect.

c. Any individual seeking to perform simulation radiography only must successfully complete an approved examination in either diagnostic radiography or radiation therapy.

*d.* Any individual holding a temporary certification must successfully complete an approved examination within six months of the issuance date of the temporary certification.

**42.5(4) Exemptions.**

*a.* Students enrolled in and participating in an approved program or approved course of study for radiation therapy technology or an approved school of medicine, osteopathy, podiatry, or chiropractic who, as a part of their course of study, administer radiation therapy to a human being while under the supervision of a licensed physician in the state of Iowa.

*b.* A licensed physician in the state of Iowa.

**641—42.6(136C) Specific eligibility requirements for radiologist assistant.**

**42.6(1)** Any person seeking a permit to practice as a radiologist assistant shall:

*a.* Hold a current permit to practice as a general radiographer in Iowa under 641—42.3(136C).

*b.* Have three years of experience as a general diagnostic radiographer. Experience in ultrasound, MRI, or nuclear medicine does not qualify.

*c.* Satisfactorily complete an advanced academic program approved by this agency and encompassing a nationally recognized radiologist assistant curriculum which has a radiologist-directed clinical preceptorship.

*d.* Satisfactorily complete a proficiency examination for radiologist assistants that is recognized by this agency.

*e.* Upon completion of the above, apply for a permit to practice as a radiologist assistant.

*f.* Work only under the supervision of a board-certified or board-eligible radiologist in medicine or osteopathy.

**42.6(2) Performance standards.**

*a.* A radiologist assistant may not interpret images, make diagnoses, or prescribe medications or therapies.

*b.* A radiologist assistant is limited to the clinical activities in Appendix A of this chapter.

**42.6(3) Continuing education.** A radiologist assistant must complete 12.0 hours of continuing education each year that must be specific to the discipline or speciality of the radiologist assistant's area of practice. Hours earned to meet this requirement shall not be used to satisfy the continuing education requirement for a general permit to practice.

**641—42.7(136C) Specific requirements for podiatric radiographers.**

**42.7(1) Training requirements.** Any person wishing to operate radiation-emitting equipment for purposes of podiatric radiography shall:

*a.* Complete an approved program or course of study that includes the following:

(1) Didactic training in podiatric radiological practices including radiation health, safety, and physics, lower extremity anatomy and physiology, positioning techniques, infection control, and equipment maintenance with efficiencies to minimize radiation exposure and frequency of retakes. The didactic training shall be at least 15 hours in length; and

(2) A radiographic clinical program sufficient to demonstrate proficiency to a podiatric sponsor. Training shall:

1. Include equipment maintenance, exposures and positioning, image processing, image evaluation for quality, and display and storage of radiographic images;

2. Include at least 50 total exposures. Exposures must be taken in at least 20 working days in a podiatric office or clinic;

3. Be directly supervised by a podiatrist, general radiographer, or certified podiatric radiographer; and

4. Not be started until notification of the desire to conduct a clinical training program has been submitted to this agency and verification of approval has been received by the podiatric sponsor; and

(3) Upon completion of the training in 42.7(1) "a," submit a form signed by the clinical podiatric sponsor certifying completion of and competency of 42.7(1) "a"(2); and

*b.* Pass a written examination approved by this agency; or

c. Meet the requirements of this rule after submission of proof that the individual holds a current certificate in podiatric radiography issued by another state, jurisdiction, agency or recognized professional registry provided that the agency finds that the standards, procedures, and examinations are equivalent to 641—42.7(136C).

**42.7(2) Examination.**

a. The examination shall be given by an agency-approved entity and proctored by appropriate personnel.

b. The passing score shall be 70 percent or greater.

c. Any individual who fails the examination in three tries must successfully repeat the didactic portion of the training program before testing again.

**42.7(3) Exemptions.**

a. Students enrolled and participating in an approved course of clinical study for podiatric radiographers or an approved school of medicine, osteopathy, or podiatry who, as part of their course of study, may apply ionizing radiation to a human being while under the supervision of a licensed practitioner.

b. Licensed practitioners as defined in 641—Chapter 38.

**42.7(4) Application for certification.** Any individual seeking certification under rule 641—42.7(136C) shall:

a. Graduate from high school or its equivalent;

b. Be at least 18 years of age;

c. Be able to adequately perform necessary duties without constituting a hazard to the health and safety of patients or operators;

d. Satisfactorily complete the agency-approved didactic and clinical training;

e. Satisfactorily complete the agency-approved examination;

f. Upon completion of “d” and “e,” apply to the agency for a permit to practice and pay a fee of \$25;

g. Submit an annual renewal application that includes the \$25 fee;

h. Submit copies of proof of completion of continuing education required in subrule 42.7(5);

i. Post the permit at the individual’s place of employment;

j. Work only under the supervision of a licensed practitioner as defined in 641—Chapter 38;

k. Submit a written report of any misdemeanor or felony, any disciplinary action brought against the individual in connection with a certificate or license issued from a certifying or licensing entity, or any disciplinary action brought against the individual by an employer or patient.

**42.7(5) Continuing education requirements.**

a. Each individual certified under rule 641—42.7(136C) shall, during a two-year period, obtain two clock hours of continuing education.

b. Hours may be satisfied by attending courses in podiatric radiography approved by this agency or given by the American Podiatric Medical Association (APMA) or the Iowa Podiatric Medical Society (IPMS).

c. Proofs of completion shall be retained by the podiatric radiographer for four years.

d. For late submission of continuing education, the requirements in 42.2(3) “g” shall apply.

**42.7(6) Recertification.**

a. If an individual allows the certification to expire for any reason or if any individual voluntarily terminates certification, the following shall apply:

(1) Any individual who wishes to regain certification and makes application within six months of the termination date will be allowed to do so with no additional training or testing required but must complete any delinquent continuing education.

(2) Any individual who wishes to regain certification after two years must complete an approved training program and pass the required examination as required in 42.7(1) and 42.7(2).

b. Reserved.

**42.7(7)** Any licensed podiatrist who permits an individual to perform podiatric radiography contrary to this chapter shall be subject to discipline by the board of podiatric examiners pursuant to 645—Chapter 224.

### Appendix A

In order for the radiologist assistant to perform the following procedures, the radiologist must be immediately available to communicate with the radiologist assistant. The radiologist is ultimately responsible for the care provided by the radiologist assistant.

| Clinical Activities                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>Perform the following fluoroscopic examinations and procedures including contrast media administration and operation of the fluoroscopic unit. Examinations and procedures must follow written procedures established by the supervising radiologist.</p> <ol style="list-style-type: none"> <li>Upper GI.</li> <li>Esophagus.</li> <li>Small bowel studies.</li> <li>Barium enema.</li> <li>Cystogram.</li> <li>T-tube cholangiogram.</li> <li>Nasoenteric and oroenteric feeding tube placement.</li> <li>Port injection.</li> <li>Swallowing study.</li> <li>Hysterosalpingogram (imaging only).</li> <li>Fistulogram/sonogram.</li> <li>Loopogram.</li> <li>Shoulder or knee joint injection/aspiration (under fluoroscopy).</li> </ol> <p>In order to approve other procedures, the radiologist must submit a request in writing that specifies the scope of the procedure and verifies the competency of the radiologist assistant who will perform the procedure. The approval will be limited to the radiologist assistant named in the request.</p> |

These rules are intended to implement Iowa Code chapter 136C.

CHAPTER 43  
MINIMUM REQUIREMENTS FOR RADON TESTING AND ANALYSIS

**641—43.1(136B) Purpose and scope.** This chapter establishes requirements for the certification of radon measurement specialists and radon measurement laboratories. All persons performing measurements for radon or radon progeny in buildings, other than those which they own or occupy, and who provide the results of these measurements to the owner or occupant of these structures must be certified in accordance with the provisions of this chapter.

**641—43.2(136B) Definitions.** The following words and terms when used in this chapter shall have the following meanings, unless the context clearly indicates otherwise.

“*Act*” means the Iowa Radon Testing Act (Iowa Code chapter 136B).

“*Building*” means a structure enclosed with exterior walls or fire walls, built, erected and framed of component structural parts, and designed for the housing, shelter, enclosure and support of individuals.

“*Certified person*” means a certified radon measurement specialist or certified radon measurement laboratory as defined by this chapter.

“*Certified radon measurement laboratory (certified laboratory)*” means a commercial laboratory which may analyze samples or test for radon decay products and meets the provisions for certification in this chapter.

“*Certified radon measurement specialist (certified specialist)*” means an individual who performs radon or radon progeny measurements in buildings and provides professional or expert advice on radon and radon progeny measurements, radon entry routes, and other radon-related activities; is knowledgeable in the health risk associated from exposure to radon; and who meets the provisions for certification in this chapter.

“*Compensation*” means any form of monetary gain which in any way directly or indirectly results from a radon or radon progeny measurement being conducted.

“*Department*” means the Iowa department of public health.

“*EPA*” means the United States Environmental Protection Agency.

“*Laboratory*” means any person performing analysis, not at a testing site, on a passive device to measure radon or radon progeny (charcoal canister, alpha-track, electret, etc.).

“*NEHA*” means the National Environmental Health Association.

“*NRSB*” means the National Radon Safety Board.

“*Person*” means an individual, corporation, partnership, firm, association, trust, estate, public or private institution, group, agency, any other state or political subdivision or agency, and a legal successor, representative, agency or agencies of the entities listed in this paragraph.

“*Picocurie per liter*” means a quantity of radioactive material per liter of air that will produce 2.2 disintegrations per minute of radiation. It may be used as a measure of the concentration of radon gas in air. One curie is equivalent to one trillion picocuries.

“*Radon*” means the radioactive noble gas radon-222.

“*Radon progeny*” means the short-lived radionuclides formed as a result of the decay of radon-222, including polonium-218, lead-214, bismuth-214, and polonium-214.

“*Working level (WL)*” means the concentration of radon progeny that will result in 130,000 million electron volts of alphaparticle energy released per liter of air. Working level is a measure of radon decay product concentration in air.

**641—43.3(136B) General provisions.**

**43.3(1)** Except as provided in this chapter, no person may test for the presence of radon or radon progeny in the state of Iowa unless the person has been certified by the department of public health. This requirement also applies to persons whose place of business is located in Iowa, or in a state other than Iowa, and who offer radon testing to residents of Iowa either directly or through the mail.

**43.3(2)** Individual qualifications for radon measurement specialist. No individual may be certified as a radon measurement specialist unless all of the following conditions are met:

- a. Be at least 18 years of age at the time of application;
- b. Possess two years of relevant professional work experience. Relevant postsecondary education may be substituted for professional work experience. Relevant postsecondary education includes a college curriculum in architecture, engineering, building construction or the physical sciences. Relevant professional work experience includes house testing/evaluation for the presence of radon, design and installation of heating, ventilation and air-conditioning systems, design or construction of buildings, or related activities approved by the department of public health;

c. Use detection devices approved by EPA and the department to measure radon. The detection device must be obtained from an Iowa certified radon measurement laboratory. When a portable electronic detection device is used, the device must be calibrated on at least an annual basis by the manufacturer, or by persons acceptable to the department. The records of calibration must be maintained for review by the department or agents of the department.

**43.3(3)** Individual qualifications for radon measurement laboratory. No business may be certified as a radon measurement laboratory unless the business:

- a. Is successfully enrolled with either the NEHA or NRSB Radon/Radon Progeny Measurement Proficiency Program (RMPP), and
- b. Follows all applicable EPA and department protocols and guidelines.

**43.3(4)** No certification shall be approved unless the applicant demonstrates to the department that the following conditions are met:

- a. Has in place a quality assurance plan and quality control procedures, approved by the department, for all measurements and equipment;
- b. Has shown the ability or intention to comply with the Radon Testing and Abatement Act, Iowa Code chapter 136B, or this chapter, or has been able or willing to conduct radon-related activities forthrightly and honestly with the applicant's clients.

**43.3(5)** Requirements for continued certification shall include the following:

- a. A certified person located within the state of Iowa shall allow the department, its agents, employees, and contractors, upon presentation of appropriate credentials, to have access without undue delay to the person's facilities, offices and files for inspection and examination of records and equipment. The certified person shall also allow the department, its agents, employees, and contractors to accompany the person while performing any radon measurement, for the purpose of inspection of those activities, with the approval of the property owner or resident on whose property the activities are being performed.
- b. The certified person shall remain in compliance with the Act and this chapter.

#### **641—43.4(136B) Application for certification.**

**43.4(1)** An application for certification or renewal of certification as a radon measurement specialist or a radon measurement laboratory shall be filed on a form prescribed by the department and shall contain complete and accurate information.

- a. An application for a radon measurement specialist must include:

(1) Proof of successful completion of a department-approved training course on radon/radon progeny measurements. A certificate of attendance is required.

(2) Proof of successful completion of an examination approved by this department. A letter from NEHA or NRSB showing a passing score for the radon measurement specialist examination fulfills this requirement.

(3) Proof of two years of postsecondary education in architecture, natural science, engineering, or a related discipline. A college transcript must be included to fulfill this requirement or a detailed resume evidencing two years of relevant professional work experience, such as conducting professional home inspections; or the design and installation of heating, ventilation and air-conditioning systems; or the design or construction of buildings; or related activities approved by the department; or a combination of professional work experience and postsecondary education.

(4) A quality assurance/quality control (QA/QC) plan for all measurement devices and equipment. If laboratory devices are used, the names and addresses of the Iowa certified radon measurement

laboratories must be included. If a continuous radon monitor is used, the name of the manufacturer, model, and picture of the monitor must be included. The manufacturer of any device used must have EPA or other national agency approval which indicates the device has been approved for measuring radon. Only measurement devices from Iowa certified radon measurement laboratories or a continuous radon monitor that has been satisfactorily calibrated and approved by the Iowa radon program are allowed for use in performing radon measurements.

(5) Standard operating procedures (SOPs). Procedures must include information concerning the placement and pickup of devices used, who performs the tests, and what measures will be used to ensure all tests are in conformance with EPA protocols and procedures.

(6) A signed statement that the individual will follow all EPA radon measurement guidelines and protocols.

(7) A signed statement that the individual will submit radon test results every 30 days to the Iowa radon program within the department. The radon test results may be submitted on a form, a diskette, or through E-mail in a manner that is approved by the department.

(8) A signed statement that the individual will keep all records for a minimum of five years after the radon test is completed.

(9) A copy of the confidentiality waiver that reports results to the customer as outlined in Iowa Code section 136B.2.

(10) A signed statement that the individual will submit to the department within 14 working days any changes in the original application and that the individual will acquire at least eight hours of continuing education credits every two years before certification is renewed.

(11) The fee specified in 43.4(6).

b. An application for a radon measurement laboratory must include:

(1) Proof of successful participation in the NEHA or NRSB Radon/Radon Progeny Measurement Proficiency Program.

(2) A quality assurance plan and quality control procedures for all measurements and equipment.

(3) A signed statement that all EPA, NEHA and NRSB and any department measurement guidelines and protocols will be followed.

(4) Name(s) and address(es) of any retail operation(s) selling the laboratory's testing service(s) within Iowa.

(5) A signed statement that all changes in the original application will be submitted to the department within 14 working days.

(6) The fee specified in 43.4(6).

**43.4(2)** The department may require the applicant to submit supplementary statements containing additional information to enable the department to determine whether an application should be approved or denied, or whether a previously issued certification should be amended, suspended, or revoked.

**43.4(3)** Each application or supplementary statement shall be signed by either the applicant personally, or a person authorized in writing by the applicant to do so on the applicant's behalf.

**43.4(4)** A certification will be valid for one year following the date of issuance. No radon measurement covered by this chapter can be conducted after the expiration of the term of certification unless an application for renewal certification has been received by the department 30 days prior to the expiration date of certification and is pending approval. If the application is rejected, no radon test or measurement may be conducted by that applicant in the state of Iowa if a financial arrangement is involved.

**43.4(5)** Renewal of an annual certification must contain all the information requested in the Notice of Renewal for certification along with the fee specified in subrule 43.4(6). The application to renew credentials must also include a signed and dated continuing education form and a copy of a course certificate which indicates the name of the individual receiving continuing education, the amount of continuing education the individual has received, and the date the continuing education course was given.

**43.4(6)** Radon certification fees. Any person wishing to become certified as a radon measurement specialist or as a radon measurement laboratory is required to pay fees sufficient to defray the cost of administering this chapter. Fees which must be submitted are as follows:

- a.* Application fee.
  - (1) Each person with Iowa residency wishing certification under the provisions of 641—43.1(136B) shall pay a nonrefundable \$25 application fee.
  - (2) Each person without Iowa residency wishing certification under 641—43.1(136B) shall pay a nonrefundable \$100 application fee.
- b.* Annual certification fee.
  - (1) Each individual requesting certification and renewing certification as a radon measurement specialist must pay a nonrefundable annual fee of \$250.
  - (2) Each person requesting certification and renewing certification as a radon measurement laboratory must pay a nonrefundable annual fee of \$500.
- c.* Each person wishing to give reciprocal recognition of credentials from another jurisdiction must pay the appropriate fees in 43.4(6).
- d.* Returned check and late fees. Persons who fail to pay required fees to the department are subject to the following penalty(ies):
  - (1) \$15 for each insufficient funds check submitted for payment of radon testing fees.
  - (2) \$25 per month for failure to pay annual radon testing certification fees starting after the annual renewal date or date of expiration.
- e.* If payment is not received and the certification has been expired 30 days, certification will be revoked immediately. In order to regain certification, the person must reapply and pay the appropriate fees as outlined in this subrule.

**641—43.5(136B) Revocation of certification.**

**43.5(1)** The department will consider revoking or suspending any certification, in whole or in part, for:

- a.* Any misstatement in the application or in any supplementary statement;
- b.* Any condition revealed by the application, supplementary statement, report, record, or other evidence, which would warrant the department's refusal to grant a certification on an original application;
- c.* Any violation or failure to observe any of the applicable terms or provisions of certification, the public health law, or any other applicable rule, regulation, code or order;
- d.* Being discontinued or removed from the NEHA or NRSB Radon/Radon Progeny Measurement Proficiency Program;
- e.* Not fully cooperating with the department or its agents when field evaluations are being conducted;
- f.* Not attending a scheduled meeting or inspection set up by the department or its agents, when the certified person was previously notified and agreed to the time and location of the inspection;
- g.* Not submitting radon test data as required in 641—43.6(136B).

**43.5(2)** The department may deny, suspend, revoke, modify the certification of a person, impose a civil penalty, or refer the case to the office of the county attorney for possible criminal penalties pursuant to Iowa Code chapter 136B, or any combination thereof, when it finds that a certified person or a person who is not certified has committed any of the following acts:

- a.* Failing to submit required information or notifications in a timely manner;
- b.* Failing to maintain the required records;
- c.* Falsifying approval records, qualifications, or other information or documentation related to licensing approval;
- d.* Failing to comply with the training standards and requirements in 43.3(2);
- e.* Submitting in the application for approval or reapproval false or misleading statements which the department relied upon in approving the application;
- f.* Failing to comply with federal, state, or local statutes and regulations, including the requirements of this chapter;
- g.* Knowingly making misleading, deceptive, untrue, or fraudulent representations involving radon, or engaging in unethical conduct or practice harmful or detrimental to the public. Proof of actual injury need not be established;

*h.* Using untruthful or improbable statements in advertisements. Use of these statements includes, but is not limited to, the presentation of information to the public by training programs that is false, deceptive, or misleading, or that is promoted through fraud or misrepresentation;

*i.* Falsifying reports and records required by this chapter;

*j.* Accepting any fee by fraud or misrepresentation;

*k.* Revocation, suspension, or other disciplinary action taken by a certification or licensing authority of this state, another state, territory, or country; or failure by the firm or individual to report such action in writing within 30 days of the final action by such certification or licensing authority. A stay by an appellate court shall not negate this requirement; however, if such disciplinary action is overturned or reversed by a court of last resort, the report shall be expunged from the records of the board;

*l.* Failing to comply with the terms of a department order or the terms of a settlement agreement or consent order;

*m.* Representation by a firm or individual that the firm or individual is certified when the certification has been suspended or revoked or has not been renewed;

*n.* Failing to respond within 30 days of receipt of communication from the department that was sent by registered or certified mail;

*o.* Engaging in any conduct that subverts or attempts to subvert a department investigation;

*p.* Failing to comply with a subpoena issued by the department or failing to cooperate with a department investigation; or

*q.* Failing to pay costs assessed in any disciplinary action.

#### **641—43.6(136B) Reporting requirements.**

**43.6(1)** A certified person must submit to the department within 30 days after any radon/radon progeny testing, or at the request of the department prior to testing, the address or location of the building, the name and telephone number of the owner(s) of the building where the radon testing will be conducted and the results of any tests performed.

**43.6(2)** The results for each test conducted shall include, but not necessarily be limited to:

*a.* The method used for radon or radon decay product testing, media tested, and conditions under which the testing was or will be performed.

*b.* The level or floor of building where the test(s) was or will be conducted.

*c.* The results of the test(s) in picocuries/liter (pCi/l) of radon gas or working level (WL) of radon decay products.

*d.* The date on which the test was or will be conducted.

*e.* The purpose of the test.

**43.6(3)** Rescinded IAB 5/29/91, effective 5/10/91.

**43.6(4)** A certified person shall:

*a.* Cooperate with the department when conducting field evaluations.

*b.* Notify the department within 14 days of any changes in testing results or procedures.

*c.* Not disclose to any other person, except to the department, the address or owner of a nonpublic building that was tested for radon gas or radon progeny, unless the owner of the building waives this right of confidentiality in writing.

**641—43.7(136B) Training and continuing education programs.** Each person conducting radon-related activities shall complete a radon measurement training program approved by the department. All certified individuals must participate in a continuing education program every other year that consists of a minimum of eight hours of department-approved courses or seminars on either radon measurement or mitigation or both.

**641—43.8(136B) Exemptions.** Certification requirements shall not apply to:

1. Those persons who test for radon/radon decay products in buildings that they own.

2. Those persons testing for radon/radon decay products as part of scientific research approved by the department.
3. State officials conducting radon testing as part of the state's radon testing program or local officials acting on behalf of the state, and approved by the department.
4. Officials conducting radon testing as part of government programs in the United States or contractors working for the United States government.

**641—43.9(136B) Enforcement.**

**43.9(1)** A certified individual who measures for radon or radon progeny in the state of Iowa must meet the requirements of this chapter.

**43.9(2)** Any laboratory providing analysis services for radon detectors used in Iowa must meet the provisions of this chapter.

**43.9(3)** Any certified individual is prohibited from using radon measurement devices in Iowa obtained from a laboratory which is not certified under the provisions of this chapter.

**641—43.10(136B) Penalties.** It is unlawful for an individual to function as a radon measurement specialist or radon measurement laboratory in violation of the provisions of the Iowa radon testing Act or of any rule adopted pursuant to the Act. Persons convicted of violating the provisions of the Act or the rules adopted pursuant to the Act shall be guilty of a serious misdemeanor (Iowa Code section 136B.5).

**641—43.11(136B) Persons exempted from certification.** Persons providing radon or radon progeny measurement devices to the public, but not conducting physical tests for the presence of radon or radon progeny with the measurement devices may do so under the following conditions:

1. They must provide measurement devices obtained from a laboratory certified in Iowa.
2. A valid visible expiration date must be permanently affixed to each measurement device.
3. In addition to the required laboratory instructions regarding measurement procedures, each measurement device must be accompanied by clear directions on where to obtain additional information and interpretation for test results. The certified laboratory or a certified specialist must be included as one of the sources of information and interpretation.

These rules are intended to implement Iowa Code chapter 136B.

CHAPTER 44  
MINIMUM REQUIREMENTS FOR RADON MITIGATION

**641—44.1(136B) Purpose and scope.** This chapter establishes requirements for the credentialing of radon mitigation specialists. All persons performing abatement for radon or radon progeny in buildings, other than buildings which the persons occupy or are constructing for their own occupancy, must be credentialed in accordance with the provisions of this chapter. Credentialed mitigation specialists are responsible for ensuring that all radon mitigation systems for which they are responsible are installed following guidelines that are provided in this chapter.

**641—44.2(136B) Definitions.** The following words and terms when used in this chapter shall have the following meanings, unless the context clearly indicates otherwise.

*“Active mitigation system”* means any system or materials installed as an active part of a ventilation system used for the purpose of reducing radon or radon progeny concentrations by means of an in-line fan.

*“ASTMI E2121”* means the American Society for Testing Materials International E2121, Standard Practice for Radon Mitigation Systems in Existing Low-Rise Residential Buildings.

*“Credentialed radon mitigation specialist (mitigation specialist)”* means an individual who evaluates diagnostic tests to determine appropriate radon or radon progeny mitigation strategies for a building, designs mitigation systems, installs or supervises the installation of radon or radon progeny mitigation techniques on buildings, and meets the requirements for credentialing provided by this chapter.

*“Department”* means the Iowa department of public health.

*“Diagnostic tests”* means tests performed or procedures used to determine appropriate mitigation methods for a building.

*“EPA”* means the United States Environmental Protection Agency.

*“Mitigator”* means a person who installs mitigation systems for the purpose of abating radon levels within buildings.

*“Passive mitigation system”* means any system or materials installed for the purpose of reducing radon or radon progeny concentrations without the use of an in-line fan.

*“pCi/L”* means a measurement of radon in picocuries per liter.

*“Radon”* means the radioactive noble gas radon-222.

*“Radon progeny”* means the short-lived radionuclides formed as a result of the decay of radon-222.

*“RMS”* means EPA Radon Mitigation Standards.

*“Working level month (WLM)”* means a cumulative exposure to radon decay products calculated by multiplying the radon daughter concentration in units of working levels by the number of hours exposed and dividing by 170.

**641—44.3(136B) General provisions.**

**44.3(1)** Except as provided in this chapter, no person may mitigate for radon or radon progeny in Iowa for a fee or other remuneration unless such a person has been credentialed by the department.

**44.3(2)** Individual qualifications for radon mitigation specialist. No individual may be credentialed as a radon mitigation specialist unless all of the following conditions are met. The individuals shall:

- a. Be at least 18 years of age at the time of application.
- b. Possess three years of relevant professional work experience. Relevant postsecondary education may be substituted on a year-for-year basis for two of the three years of relevant professional work experience. Relevant postsecondary education includes a college curriculum in architecture, engineering, building construction, or the physical sciences. Relevant professional work experience includes the design or construction of buildings, or associated heating, ventilation, and air-conditioning systems, or closely related activities approved by the department.
- c. Have successfully completed a combined radon measurement/mitigation course approved by the department and a radon mitigation examination approved by the department.

**44.3(3)** All applicants for credentialing must comply with Iowa Code chapter 136B and submit the following to the department:

*a.* An acceptable mitigation worker protection plan to follow when performing mitigation installations which includes, but is not limited to:

- (1) Procedures to follow to keep radiation exposure to workers as low as is reasonably achievable.
- (2) Methods to follow to reduce or minimize the radon concentration in the work area.
- (3) Criteria for wearing properly fitted respirators anytime the radon decay product level is above one working level.

*b.* An acceptable quality assurance plan to follow when performing mitigation installations which includes, but is not limited to:

- (1) A description of all diagnostic tests performed to determine the mitigation strategy, names of the individuals performing the diagnostic tests, and any other related services offered.
- (2) Ensuring that all instruments are properly calibrated according to the manufacturer's recommendations.
- (3) A description of all mitigation materials and systems offered.

*c.* A complete and accurate application on a form prescribed by the department.

**44.3(4)** Requirements for continued credentialing shall include, at a minimum, the following conditions:

*a.* An Iowa credentialed person shall allow the department, its agents, employees, and contractors, upon presentation of appropriate credentials and with just cause, to have access during regular business hours without undue delay to their facilities, offices and files for inspection and examination of records and equipment. Credentialed persons shall also allow the department, its agents, employees, and contractors to accompany them while performing any radon abatement measures, for the purpose of inspection of those activities, with the approval of the property owner or resident on whose property the activities are being performed.

*b.* The credentialed person shall remain in compliance with the Iowa Radon Testing and Abatement Act and this chapter. Any material changes in the information provided in the original application, including changes in credentialed personnel, shall be reported in writing to the department within ten working days of the change.

*c.* The credentialed person shall comply with department standards and all the requirements as stated in EPA's Radon Mitigation Standards (RMS) EPA 402-R-93-078, October 1993 (Revised April 1994) and ASTM E2121. All "shoulds" in the above document shall be "shalls" according to department standards.

**44.3(5)** A credentialed person shall:

- a.* Fully cooperate with the department or its agents when field evaluations are conducted.
- b.* Be present during scheduled visits by the department.
- c.* Not disclose to any other person, except to the department or its agents, the addressee or owner of a nonpublic building, the radon levels present in the building or abatement measures needed or performed, unless the building owner waives this right of confidentiality in writing.
- d.* Ensure that each building is tested for radon levels before and after mitigation work is performed. Such tests shall be of sufficient type, duration and consistency and shall be performed at such times and under such ventilation conditions as to allow for comparison of before and after mitigation radon levels. Premitigation and postmitigation radon tests shall be performed independently by a measurement specialist or technician who is not employed by the same firm as the mitigation specialist performing the mitigation. Postmitigation radon tests shall be started no sooner than one day after mitigation is completed. This requirement is not binding if the building owner waives the procedure, on a form prescribed by the department, before the mitigation process has started.

**641—44.4(136B) Application for credentialing.**

**44.4(1)** An application for credentialing or renewal of credentials as a radon mitigation specialist shall be filed on a form prescribed by the department, shall contain complete and accurate information and shall be accompanied by the appropriate fees as outlined in subrule 44.4(6).

**44.4(2)** The department may require the applicant to submit supplementary statements containing additional information to enable the department to determine whether an application should be approved or denied, or whether a previously issued credential should be amended, suspended, or revoked.

**44.4(3)** Each application or supplementary statement shall be signed by either the applicant personally, or a person authorized in writing by the applicant to do so on the applicant's behalf.

**44.4(4)** A credential will be valid for one year following the date of issuance. No radon abatement covered by this chapter can be commenced after the expiration of the term of credentialing unless an application for renewal has been received by the department within 30 days of the notice of expiration and the renewal application is deemed complete and acceptable by the department. All radon mitigation work commenced prior to expiration of credentialing must be completed within 30 days of the expiration date if renewal is not accomplished. If the application is rejected, no radon abatement may be conducted by that applicant in the state of Iowa if a financial arrangement is involved.

**44.4(5)** An application to renew credentials must be on a form approved by the department and must include the number of mitigation systems installed for the renewal period and any changes in the initial credentialing application, along with the fee specified in subrule 44.4(6).

**44.4(6)** Radon mitigation credentialing. Any person wishing to become credentialed as a radon mitigation specialist shall be required to pay fees sufficient to defray the cost of administering this chapter.

*a.* Application fee.

(1) Each person with Iowa residency wishing certification under the provisions of 641—Chapter 44 shall pay a nonrefundable \$25 application fee.

(2) Each person without Iowa residency wishing certification under 641—Chapter 44 shall pay a nonrefundable \$100 application fee.

*b.* Annual credentialing fee. Each individual requesting credentialing must:

(1) Pay an initial fee of \$150 which is refundable if credentialing is not completed.

(2) Pay annually a renewal fee of \$150 or a mitigation system installation surcharge fee of \$40 per mitigation system installed (as defined in 641—44.2(136B)) costing more than \$200, whichever is greater. With each renewal, a credentialed person must submit legal documentation of the number of mitigation systems installed the previous credentialing year. If an individual decides not to renew credentials the following year, all surcharge fees are to be paid in full within 30 days of the date of expiration of the credentials.

*c.* Returned check and late fees.

(1) Persons who fail to pay required fees to the department are subject to the following penalty(ies):

1. \$15 for each insufficient funds check submitted for payment of radon mitigation fees.

2. \$25 per month for failure to pay annual radon mitigation credentialing fees starting after the annual renewal date or date of expiration.

(2) If payment is not received and the certification has been expired 30 days, certification will be revoked immediately. In order to regain certification, the individual must reapply and pay the appropriate fees as outlined in this subrule.

*d.* Applications for initial and renewal credentialing must be submitted along with the appropriate fees specified in this subrule to the Division of Environmental Health, Iowa Department of Public Health, Lucas State Office Building, Des Moines, Iowa 50319-0075. The fee must be in the form of a check or money order made payable to the Iowa Department of Public Health and must include on the check or money order an indication of the purpose of the fee (i.e., radon mitigation credentialing).

*e.* Each person wishing to receive reciprocal recognition of credentialing from another jurisdiction must pay the appropriate fees as outlined in this subrule.

**641—44.5(136B) Revocation of credentialing.** The department will follow the procedures set forth in Iowa Code chapter 17A when revoking or suspending any credentials, in whole or in part. The department may deny, suspend, revoke, or modify the credentials of a person, or may impose a civil penalty or may refer the case to the office of the county attorney for possible criminal penalties pursuant to Iowa Code chapter 136B when it finds that a credentialed person or a person who is not credentialed has committed any of the following acts:

1. Any material misstatement in the application or in any supplementary statement.
2. Any material misstatement in the renewal application or supplementary statement received upon renewal.
3. Any condition revealed by an inspection of the applicant, the application, supplementary statement, report, record, or other evidence, which would warrant refusal by the department's agents or employees to grant a credentialing on an original application.
4. Falsifying approval records, qualifications, or other information or documentation related to licensing approval.
5. Any violation or failure to observe any of the applicable terms or provisions of credentialing, the public health law, or any other applicable rule, radon testing rule, ordinance, regulation, code or order.
6. Not completing the installation of a radon mitigation system within 30 days of the start date or date contracted to start.
7. Failing to submit a complete and accurate renewal application form before the end of the renewal period which includes the fee specified in subrule 44.4(6).
8. Failing to correct any violation of EPA, ASTM, or department rules that was found during a previous inspection or any violation found on an initial inspection which, as determined by the department, jeopardizes the safety of the building or other occupants.
9. Accepting compensation for installing ineffective radon remedies or for not dropping radon levels below 4 pCi/L in the area or level of the building where a radon mitigation system was installed.
10. Accepting compensation for installing active or nonactive radon mitigation systems that are not acceptable to the department or that do not comply with the requirements of this chapter.
11. Failing to fully cooperate with the department or its agents when field evaluations are conducted.
12. Failing to attend a scheduled meeting or inspection set up by the department or its agents, when the person holding the credentials was previously notified and agreed to the time and location of the inspection.
13. Failing to submit required information or notifications in a timely manner.
14. Failing to maintain the required records in 641—44.6(136B), and in EPA's Radon Mitigation Standards (RMS) EPA 402-R-93-078, October 1993 (Revised April 1994), and ASTM E2121 (NOTE: EPA has incorporated E2121 by reference and retained EPA's Radon Mitigation Standards (RMS) in effect until at least 2007).
15. Failing to comply with the training standards and requirements in 641—44.7(136B).
16. Failing to comply with federal, state, or local statutes and regulations, including the requirements of this chapter.
17. Knowingly making misleading, deceptive, untrue, or fraudulent representations involving radon, or engaging in unethical conduct or practice harmful or detrimental to the public. Proof of actual injury need not be established.
18. Using untruthful or improbable statements in advertisements. Use of these statements includes, but is not limited to, the presentation of information to the public by training programs that is false, deceptive, or misleading or that is promoted through fraud or misrepresentation.
19. Falsifying reports and records required by this chapter.
20. Accepting any fee by fraud or misrepresentation.
21. Revocation, suspension, or other disciplinary action taken by a certification or licensing authority of this state, another state, territory, or country; or failure by the firm or individual to report such action in writing within 30 days of the final action by such certification or licensing authority. A stay by an appellate court shall not negate this requirement; however, if such disciplinary action is overturned or reversed by a court of last resort, the report shall be expunged from the record.
22. Failing to comply with the terms of a department order or the terms of a settlement agreement or consent order.
23. Representation by a firm or individual that the firm or individual is credentialed when the credential has been suspended or revoked or has not been renewed.

24. Failing to respond within 30 days of receipt of communication from the department or an agent of the department that was sent by registered or certified mail.
25. Engaging in any conduct that subverts or attempts to subvert a department investigation.
26. Failing to comply with a subpoena issued by the department or failure to cooperate with a department investigation.
27. Failing to pay costs assessed in any disciplinary action.

**641—44.6(136B) Additional record-keeping requirements.** A credentialed radon mitigation specialist shall maintain, for five years, a report of each mitigation activity which includes, but is not necessarily limited to:

1. The address or location of the building.
2. The name and phone number of the owner(s) of the building where the radon mitigation is conducted.
3. A written description of each mitigation system and materials installed, diagnostic test results and cost of each system.
4. The name of the certified radon measurement specialist or technician used to perform radon or radon progeny testing before and after radon mitigation of a building. This requirement does not apply if the building owner has waived the testing requirement set forth in 641—subrule 44.3(5) and the mitigation specialist maintains a copy of the signed waiver.
5. The results of any initial or follow-up radon or radon progeny measurements performed and the measurement methods utilized. This requirement does not apply if the building owner has waived the testing requirement set forth in 641—subrule 44.3(5) and the mitigation specialist maintains a copy of the signed waiver.
6. The results of the postmitigation radon measurements performed, including method of measurement and all pertinent dates. This requirement does not apply if the building owner has waived the testing requirement set forth in 641—subrule 44.3(5) and the mitigation specialist maintains a copy of the signed waiver.

**641—44.7(136B) Continuing education.** All credentialed individuals must participate in a continuing education program every other year that consists of a minimum of eight hours of department-approved courses or seminars on radon mitigation or measurement.

**641—44.8(136B) Exemptions.** Credentialing requirements shall not apply to:

1. Those persons who mitigate radon/radon decay products in buildings that they occupy for their own use.
2. Those persons mitigating radon/radon decay products as part of scientific research approved by the department.

**641—44.9(136B) Enforcement.** A credentialed individual who mitigates for radon or radon progeny in the state of Iowa must meet the requirements of Chapter 44.

**641—44.10(136B) Penalties.** It is unlawful for an individual to function as a radon mitigation specialist in violation of the provisions of the Iowa radon testing and abatement Act. Persons convicted of violating the provisions of the Iowa radon testing and abatement Act or 641—Chapter 44 shall be guilty of a serious misdemeanor.

These rules are intended to implement Iowa Code chapter 136B.

CHAPTER 45  
RADIATION SAFETY REQUIREMENTS FOR INDUSTRIAL  
RADIOGRAPHIC OPERATIONS

[Prior to 8/5/92, see 641—41.4(136C)]

**641—45.1(136C) General requirements for industrial radiography operations.**

**45.1(1) Purpose and scope.**

*a.* The rules in this chapter establish radiation safety requirements for using sources of radiation for industrial radiography. The requirements of this chapter are in addition to, and not in substitution for, other applicable requirements of 641—Chapters 38, 39, and 40. The rules in this chapter apply to all licensees or registrants who use sources of radiation for industrial radiography.

*b.* All references to any Code of Federal Regulations (CFR) in this chapter are those in effect as of May 3, 2006.

The provisions of 641—Chapter 38 are in addition to, and not in substitution for, any other applicable portions of 641—Chapters 39 to 45.

**45.1(2) Definitions.** For the purpose of this chapter, the definitions of 641—Chapter 38 may also apply. As used in this chapter, the following definitions apply:

*“Annual refresher safety training”* means a review conducted or provided by the licensee for its employees on radiation safety aspects of industrial radiography. The review may include, as appropriate, the results of internal inspections, new procedures or equipment, new or revised regulations, accidents or errors that have been observed, and should also provide opportunities for employees to ask safety questions.

*“Associated equipment”* means equipment that is used in conjunction with a radiographic exposure device to make radiographic exposures that drives, guides, or comes in contact with the source, e.g., guide tube, control tube, control (drive) cable, removable source stop, “J” tube and collimator when it is used as an exposure head.

*“Cabinet X-ray system”* means an X-ray system with the X-ray tube installed in an enclosure independent of existing architectural structures except the floor on which it may be placed. The cabinet X-ray system is intended to:

1. Contain at least that portion of a material being irradiated;
2. Provide radiation attenuation; and
3. Exclude personnel from its interior during generation of radiation. Included are all X-ray systems designed primarily for the inspection of carry-on baggage at airline, railroad, and bus terminals, and in similar facilities. An X-ray tube used within a shielded part of a building, or X-ray equipment which may temporarily or occasionally incorporate portable shielding, is not considered a cabinet X-ray system.

*“Certifiable cabinet X-ray system”* means an existing uncertified X-ray system that has been modified to meet certification requirements specified in 21 CFR 1020.40.

*“Certified cabinet X-ray system”* means an X-ray system which has been certified in accordance with 21 CFR 1010.2 as being manufactured and assembled pursuant to the provisions of 21 CFR 1020.40.

*“Certifying entity”* means an independent certifying organization meeting the requirements of Appendix A in 10 CFR Part 34 or an agreement state meeting the requirements in Appendix A, Parts II and III of 10 CFR Part 34.

*“Collimator”* means a small radiation shield of lead or other heavy metal that is placed on the end of a guide tube or directly onto a radiographic exposure device to restrict the size of the radiation beam when the sealed source is cranked into position to make a radiographic exposure.

*“Control (drive) cable”* means the cable that is connected to the source assembly and used to drive the source to and from the exposure location.

*“Control drive mechanism”* means a device that enables the source assembly to be moved to and from the exposure device.

*“Control tube”* means a protective sheath for guiding the control cable. The control tube connects the control drive mechanism to the radiographic exposure device.

*“Crank-out device”* means the cable, protective sheath, and handcrank used to move the sealed source from the shielded to the unshielded position to make an industrial radiographic exposure.

*“Enclosed radiography”* means industrial radiography conducted in an enclosed cabinet or room and includes cabinet radiography and shielded-room radiography.

*“Exposure head”* means a device that locates the gamma radiography sealed source in the selected working position. (An exposure head is also known as a source stop.)

*“Field station”* means a facility where licensed material may be stored or used and from which equipment is dispatched.

*“Fluoroscopic imaging assembly”* means a subsystem in which X-ray photons produce a fluoroscopic image. It includes the image receptors such as the image intensifier and spot-film device, electrical interlocks, if any, and structural material providing linkage between the image receptor and source assembly.

*“GED”* means general educational development.

*“Guide tube (projection sheath)”* means a flexible or rigid tube (i.e., “J” tube) for guiding the source assembly and the attached control cable from the exposure device to the exposure head. The guide tube may also include the connections necessary for attachment to the exposure device and to the exposure head.

*“Hands-on experience”* means experience in all of those areas considered to be directly involved in the radiography process.

*“I.D. card”* means the document issued by the agency, another Agreement State, a licensing state, or third-party certification to industrial radiographers following completion of requirements stated in 45.1(10)“b.”

*“Independent certifying organization”* means an independent organization that meets all of the criteria of Appendix A in 10 CFR Part 34.

*“Lay-barge radiography”* means industrial radiography performed on any water vessel used for laying pipe.

*“Lixiscope”* means a portable light-intensified imaging device using a sealed source.

*“Lock-out survey”* means a radiation survey performed to verify that a sealed source is in its shielded position. The lock-out survey is performed before moving the radiographic exposure device or source changer to a new location or when securing the radiographic exposure device or source changer.

*“Minimal threat”* means that during the operations of electronic devices capable of generating or emitting fields of radiation:

1. No deliberate exposure of an individual occurs;
2. The radiation is not emitted in an open beam configuration; and
3. No known physical injury to an individual has occurred.

*“Offshore”* means within the territorial waters of the United States.

*“Offshore platform radiography”* means industrial radiography conducted from an offshore platform over a body of water.

*“Permanent radiographic installation”* means an enclosed shielded room, cell, or vault, not located at a temporary job site, in which radiography is performed.

*“Practical examination”* means a demonstration through practical application of the safety rules and principles in industrial radiography including use of all appropriate equipment and procedures.

*“Radiation safety officer”* means an individual named by the licensee or registrant who has a knowledge of, responsibility for, and authority to enforce appropriate radiation protection rules, standards, and practices on behalf of the licensee or registrant and who meets the requirements of 45.1(10)“d.”

*“Radiographer”* means any individual who has successfully completed the training, testing, and documentation requirements of 45.1(10)“b,” who performs or personally supervises industrial radiographic operations, and is responsible to the licensee or registrant for ensuring compliance with the requirement of these rules and all license and certificate of registration conditions.

*“Radiographer certification”* means written approval received from a certifying entity stating that an individual has satisfactorily met certain established radiation safety, testing, and experience criteria.

*“Radiographer’s assistant”* means any individual who has successfully completed the training, testing, and documentation requirements of 45.1(10) “a” and who uses sources of radiation and related handling tools or radiation survey instruments under the direct supervision of a radiographer trainer.

*“Radiographer trainer (instructor)”* means any individual who instructs and supervises radiographer’s assistants during on-the-job training and who meets the requirements of 45.1(10) “c.”

*“Radiographic exposure device”* means any instrument containing a sealed source fastened or contained therein, in which the sealed source or shielding thereof may be moved or otherwise changed from a shielded to unshielded position for purposes of making a radiographic exposure (e.g., camera), or any other X-ray industrial system whereby a permanent or semipermanent image is recorded on an image receptor by action of ionizing radiation.

*“Radiographic operations”* means all activities associated with the presence of radioactive sources or radiation in a radiographic exposure device during use of the device or transport (except when being transported by a common or contract transport), to include surveys to confirm the adequacy of boundaries, setting up equipment and any activity inside restricted area boundaries.

*“Radiographic personnel”* means any radiographer or radiographer’s assistant.

*“Residential location”* means any area where structures in which people lodge or live are located, and the grounds on which such structures are located including, but not limited to, houses, apartments, condominiums, and garages.

*“Shielded position”* means the location within the radiographic exposure device or source changer where the sealed source is secured and restricted from movement.

*“Shielded-room radiography”* means industrial radiography conducted in a room shielded so that radiation levels at every location on the exterior meet the limitations specified in 641—40.26(136C).

*“Source assembly”* means an assembly that consists of the sealed source and a connector that attaches the source to the control cable. The source assembly may also include a stop ball used to secure the source in the shielded position.

*“Source changer”* means a device designed and used for replacement of sealed sources in radiographic exposure devices, including those source changers also used for transporting and storage of sealed sources.

*“Source container”* means a shielded device in which sealed sources are secured, transported, and stored.

*“Storage area”* means any location, facility, or vehicle which is used to store, to transport, or to secure a radiographic exposure device, a storage container, or a sealed source when it is not in use and which is locked or has a physical barrier to prevent accidental exposure, tampering with, or unauthorized removal of the device, container, or source.

*“Storage container”* means a shielded device in which sealed sources are secured, transported, and stored.

*“S-tube”* means a tube through which the radioactive source travels when inside a radiographic exposure device.

*“Temporary job site”* means any location where radiographic operations are conducted and where licensed material may be stored other than the location(s) listed in a specific license or certificate of registration.

*“Trainee status card”* means the document issued by the agency following completion of the requirements of 45.1(10) “a”(1) and (2).

*“Transport container”* means a package that is designed to provide radiation safety and security when sealed sources are transported and which meets all applicable requirements of the U.S. Department of Transportation.

*“Underwater radiography”* means industrial radiography performed when the radiographic exposure device and related equipment are beneath the surface of the water.

**45.1(3) Exemptions.**

a. Uses of certified and certifiable cabinet X-ray systems designed to exclude individuals are exempt from the requirements of this chapter, except for the requirements of 45.2(6) “b” and “c.”

b. Industrial uses of lixiscopes are exempt from the requirements in this chapter.

c. Radiation machines determined by the agency to constitute a minimal threat to human health and safety in accordance with 641—subrule 38.3(1) are exempt from the rules in this chapter, except for the requirements of this subrule.

**45.1(4) *Receipt, transfer, and disposal of sources of radiation.*** Each licensee and registrant shall maintain records showing the receipt, transfer, and disposal of sources of radiation. These records shall include the date, the name of the individual making the record, the radionuclide, number of curies or mass (for DU), and the make, model, and serial number of each source of radiation and device, as appropriate. Records shall be maintained for three years after they are made.

**45.1(5) *Radiation survey instruments.***

a. The licensee or registrant shall maintain sufficient calibrated and operable radiation survey instruments at each location where sources of radiation are present to make physical radiation surveys as required by this chapter and 641—subrule 40.36(1). Instrumentation required by this subrule shall have a range such that 2 millirems (0.02 millisievert) per hour through 1 rem (0.01 sievert) per hour can be measured.

b. Notwithstanding the requirements of 641—subrule 40.36(2) each radiation survey instrument shall be calibrated:

(1) At energies appropriate for use and at intervals not to exceed six months and after each instrument servicing;

(2) Such that accuracy within plus or minus 20 percent of the calibration source can be demonstrated at each point checked;

(3) At 2 points located approximately 1/3 and 2/3 of full-scale on each scale for linear scale instruments; at midrange of each decade, and at 2 points of at least 1 decade for logarithmic scale instruments; and at 3 points between 2 and 1000 mrem per hour for digital instruments; and

(4) By a person licensed or registered by the agency, another agreement state, or the U.S. Nuclear Regulatory Commission to perform such service.

c. Records of these calibrations shall be maintained for three years after the calibration date for inspection by the agency.

d. Each radiation survey instrument shall be checked with a radiation source at the beginning of each day of use and at the beginning of each work shift to ensure it is operating properly.

**45.1(6) *Quarterly inventory.*** Each licensee shall conduct a physical inventory at intervals not to exceed three months to account for all sealed sources and radiography exposure devices received and possessed. Sources of radiation include radiographic exposure devices containing depleted uranium. The records of the inventories shall be maintained for three years from the date of the inventory for inspection by the agency and shall include: the manufacturer, model number, serial number, radionuclide, number of curies, and location of each source of radiation; number of kilograms of depleted uranium shielding; date of the inventory; and name of the individual making the inventory.

**45.1(7) *Utilization logs.***

a. Each licensee shall maintain utilization logs of the use of each sealed source. The logs shall include:

(1) A unique description, which includes the make, model, and serial number of each radiographic exposure device containing a sealed source or transport or storage container in which the sealed source is located;

(2) The identity and signature of the radiographer to whom the sealed source is assigned;

(3) The plant or site where each sealed source is used; and

(4) The date(s) each sealed source is removed from storage and returned to storage.

b. Each registrant shall maintain current logs of the use of each source of radiation. The logs shall include:

(1) A unique identification, which includes the make, model and serial number of each source of radiation;

(2) The identity of the radiographer using the source of radiation;

(3) The date(s) each source of radiation is energized or used and the number of exposures made.

c. Utilization logs may be kept on clear, legible records containing all the information required by 45.1(7) “a” or “b.” Copies of utilization logs shall be maintained for agency inspection for three years from the date of the recorded event. The records shall be kept at the location specified by the license or certificate of registration.

**45.1(8) *Inspection and maintenance.***

a. Each licensee or registrant shall perform visual and operability checks on survey meters, radiographic exposure devices, transport and storage containers, associated equipment and source changers before use on each day the equipment is to be used to ensure that the equipment is in good working condition, that the sources are adequately shielded, and that required labeling is present. Survey instrument operability must be performed using check sources or other appropriate means.

b. Each licensee or registrant shall have written procedures and conduct a program, at intervals not to exceed three months, or prior to the first use thereafter, of inspection and maintenance of radiation machines, radiographic exposure devices, transport and storage containers, source changers, survey instruments, and associated equipment to ensure proper functioning of components important to safety. All appropriate parts shall be maintained in accordance with manufacturer’s specifications. Replacement components shall meet design specifications. This program shall cover, as a minimum, the items in Appendix B of this chapter.

c. Each licensee shall have a program and written procedures for the inspection and maintenance necessary to maintain the Type B packaging used to transport radioactive materials. The program must include procedures to ensure that Type B packages are shipped and maintained in accordance with the certificate of compliance or other approval.

d. If equipment problems are found, the equipment must be removed from service until repaired.

e. The record of equipment problems and of any maintenance performed under 45.1(8) must be retained for three years after the record is made. The record must include the date of check or inspection, name of inspector, equipment involved, any problems found, and what repair or maintenance, if any, was performed.

**45.1(9) *Permanent radiographic installations.*** Permanent radiographic installations having high radiation area entrance controls of the type described in 641—paragraphs 40.42(1) “b” and “c” shall also meet the following requirements:

a. Each entrance that is used for personnel access to the high radiation area shall have both visible and audible warning signals to warn of the presence of radiation. The visible signal shall be activated by radiation. The audible signal shall be activated when an attempt is made to enter the installation while the source is exposed.

b. The control device or alarm system shall be tested for proper operation at the beginning of each day of equipment use. If a control device or alarm system is operating improperly, it shall be immediately labeled as defective and repaired before industrial radiographic operations are resumed. Records of these tests shall be maintained for inspection by the agency for three years from the date of the event.

**45.1(10) *Training and testing for radiographic personnel.***

a. Radiographer’s assistant requirements. No licensee or registrant shall permit any individual to act as a radiographer’s assistant, as defined in this chapter, until:

(1) It has been documented on the appropriate agency form or equivalent that such individual has received copies of and has demonstrated an understanding of:

1. The subjects outlined in Appendix A, presented in a 40-hour course approved by the agency, another agreement state, or the U.S. Nuclear Regulatory Commission;

2. The rules contained in this chapter and the applicable sections of 641—Chapters 38, 39, and 40;

3. The appropriate conditions of license(s) or certificate(s) of registration;

4. The licensee’s or registrant’s operating and emergency procedures;

5. And developed competence to use, under the personal supervision of the radiographer, the licensee’s or registrant’s radiographic exposure devices, sealed sources, associated equipment, and radiation survey instruments that the assistant will use;

6. And has demonstrated competence in the use of radiographic exposure devices, sources, survey instruments and associated equipment described in 45.1(10)“a”(1) by successful completion of a practical examination covering this material.

(2) The individual possesses a current agency-issued trainee status card issued after completion of 45.1(10)“a”(1). Trainee status will be granted only once for each individual and is valid for no longer than two years.

b. Radiographer requirements. No licensee or registrant shall permit any individual to act as a radiographer:

(1) Until it has been documented to the agency that such individual:

1. Has completed the requirements of 45.1(10)“a”(1);

2. Has completed on-the-job training as a radiographic trainee supervised by one or more radiographic trainers. The on-the-job training shall be documented on the appropriate agency form or equivalent and shall include a minimum of two months (320 hours) of active participation in the performance of industrial radiography utilizing radioactive material or one month (160 hours) of active participation in the performance of industrial radiography utilizing radiation machines, or both. Individuals performing industrial radiography utilizing radioactive materials and radiation machines must complete both segments of the on-the-job training (three months or 480 hours). Active participation does not include safety meetings or classroom training;

3. Has demonstrated competence in the use of sources of radiation, radiographic exposure devices, related handling tools, and radiation survey instruments which may be employed in industrial radiographic assignments by successful completion of a practical examination covering this material;

(2) Unless the individual has successfully completed within the last five years the appropriate agency-administered examination prescribed in 45.1(10)“f”(2) or equivalent examination; and

(3) Unless the individual possesses a current I.D. card.

c. Radiographer trainer. No individual shall act as a radiographer trainer unless such individual:

(1) Has met the requirements of 45.1(10)“a”(1) and “b”;

(2) Has one year of documented experience as an industrial radiographer and possesses a current ID card issued at least one year prior to the application for a trainer card; and

(3) Is named on the specific license or certificate of registration issued by the agency and under which an individual is acting as a radiographer trainer, or

(4) Possesses a valid radiographer trainer card issued by the agency.

d. Radiation safety officer. The radiation safety officer shall ensure that radiation safety activities are being performed in accordance with approved procedures and regulatory requirements in the daily operation of the licensee’s program.

(1) A radiation safety officer (RSO) shall be designated for every industrial radiography license and certificate of registration issued by the agency.

(2) The RSO’s qualifications shall include:

1. Possession of a high school diploma or a certificate of high school equivalency based on the GED test;

2. Completion of the training and testing requirements of 45.1(10)“a”(1) and 45.1(10)“b”(1)“3,” (2), and (3);

3. 2000 hours of hands-on experience as a qualified radiographer in industrial radiographic operations; and

4. Formal training in the establishment and maintenance of a radiation protection program.

The agency will consider alternatives when the RSO has either appropriate training or experience, or both, in the field of ionizing radiation and, in addition, has adequate formal training with respect to the establishment and maintenance of a radiation safety protection program.

(3) The specific duties of the RSO include, but are not limited to, the following:

1. To establish and oversee operating, emergency, and ALARA procedures and to review them regularly to ensure that the procedures are current and conform with these rules;

2. To oversee and approve all phases of the training program for radiographic personnel so that appropriate and effective radiation protection practices are taught;

3. To ensure that required radiation surveys and leak tests are performed and documented in accordance with these rules, including any corrective measures when levels of radiation exceed established limits;

4. To ensure that personnel monitoring devices are calibrated and used properly by occupationally exposed personnel, that records are kept of the monitoring results, and that timely notifications are made as required by 641—Chapter 40;

5. To ensure that any required interlock switches and warning signals are functioning and that radiation signs, ropes, and barriers are properly posted and positioned;

6. To investigate and report to the agency each known or suspected case of radiation exposure to an individual or radiation level detected in excess of limits established by these rules and each theft or loss of source(s) of radiation, to determine the cause, and to take steps to prevent its recurrence;

7. To have a thorough knowledge of management policies and administrative procedures of the licensee or registrant;

8. To assume control and have the authority to institute corrective actions including shutdown of operations when necessary in emergency situations or unsafe conditions;

9. To maintain records as required by these rules (see Appendix C);

10. To ensure the proper storing, labeling, transport, and use of exposure devices and sources of radiation;

11. To ensure that quarterly inventory and inspection and maintenance programs are performed in accordance with 45.1(6), 45.1(8), 45.2(3), and 45.3(6) “b”; and

12. To ensure that personnel are complying with these rules, the conditions of the license or the registration, and the operating and emergency procedures of the licensee or registrant.

*e.* Training and testing records. Each licensee and registrant shall maintain, for agency inspection, training and testing records which demonstrate that the applicable requirements of 45.1(10) “a” and “b” are met for all industrial radiographic personnel. Records shall be maintained until disposal is authorized by the agency. The agency shall not release records for disposal unless the records have been maintained at least three years.

*f.* Applications and examinations.

(1) Application.

1. An application for taking the examination shall be on forms prescribed and furnished by the agency along with the fee required in 641—38.8(3).

2. An individual whose I.D. card has been suspended or revoked shall obtain prior approval from the agency to apply to take the examination.

(2) Examination. The examination shall be given for the purpose of determining the qualifications of applicants.

1. A written examination shall be held at such times and places as the agency shall determine. The scope of the examination and the methods of procedure, including determination of the passing score, shall be prescribed by the agency. The examination will emphasize the applicant’s ability to safely use sources of radiation and related equipment and the applicant’s knowledge of these rules.

2. A candidate failing an examination may apply for reexamination in accordance with 45.1(10) “f”(1) and will be reexamined. A candidate shall not retake the same version of the agency-administered examination.

3. The examination will be held at locations designated by the agency. The examination shall normally be offered quarterly. Dates, times, and locations of the examinations will be provided by the agency.

4. The examination will be in the English language.

5. To take the examination, an individual shall have a picture identification card (such as an Iowa driver’s license) at the time of the examination.

6. Calculators will be permitted during the examination; however, calculators or computers with preprogrammed data or formulas, including exposure calculations, will not be permitted.

7. The examination will be a “closed book” examination.

8. Examination material shall be returned to the agency at the end of the examination. No photographic or other copying of examination questions or materials shall be permitted. Disclosure by any individual of the contents of any examination prior to the administration is prohibited.

9. Any individual observed by an agency proctor to be compromising the integrity of the examination shall be required to surrender the examination, the answer sheet, and any work paper. Such individual will not be allowed to complete the examination, will forfeit the examination fee, and will leave the examination site to avoid disturbing other examinees. Such individual may resubmit an application and an additional examination fee to take the examination not earlier than three months later.

10. The names and scores of individuals taking the examination shall be a public record.

g. Identification procedures.

(1) I.D. card.

1. An I.D. card shall be issued to each person who successfully completes the requirements of 45.1(10) "b" and the examination prescribed in 45.1(10) "f"(2) or an equivalent examination.

2. Each person's I.D. card shall contain the person's photograph.

3. The I.D. card remains the property of the state of Iowa and may be revoked or suspended under the provisions of 45.1(10) "h."

4. Any individual who wishes to replace the I.D. card shall submit to the agency a written request for a replacement I.D. card, stating the reason a replacement I.D. card is needed and the fee required in 641—subrule 38.8(3). The individual shall maintain in possession a copy of the request while performing industrial radiographic operations until a replacement I.D. card is received from the agency.

(2) Expiration of I.D. card. Each I.D. card expires at the end of the day, in the month and year stated on the I.D. card.

(3) Renewal of I.D. card.

1. Applications for examination to renew an I.D. card shall be filed in accordance with 45.1(10) "f"(1).

2. The examination for renewal of an I.D. card shall be administered in accordance with 45.1(10) "f"(2).

3. A renewed I.D. card shall be issued in accordance with 45.1(10) "g"(1).

h. Revocation or suspension of an I.D. card.

(1) Any radiographer who violates these rules may be required to show cause at a formal hearing why the I.D. card should not be revoked or suspended.

(2) When an agency order has been issued for an industrial radiographer to cease and desist from the use of radioactive material or revoking or suspending the I.D. card, the industrial radiographer shall surrender the I.D. card to the agency until such time as the order is changed or the suspension expires.

(3) An agency's inspector may, in certain instances, confiscate any radiographer's I.D. card on the spot while conducting an inspection or investigation. If the inspector determines that the activities being conducted by the radiographer are significant enough to be classified as severity I, II, or III, as specified in 641—38.5(136C), and after obtaining the approval of agency management, the inspector may take any radiographer's I.D. card. The agency will then issue a cease and desist order to the radiographer's employer, forward the I.D. card(s) to the issuing entity, and notify the U.S. Nuclear Regulatory Commission and other agreement states.

i. Exemptions. Any person using a source of radiation to determine the presence of explosives in a package or the authenticity of a piece of art is exempt from the provisions of 45.1(10) "a" to "h."

j. Reciprocity.

(1) Reciprocal recognition by the agency of an individual radiographer certification will be granted provided that:

1. The individual holds a valid certification in the appropriate category and class issued by a certifying entity as defined in 45.1(2).

2. The requirements and procedures of the certifying entity issuing the certification require the same or comparable certification standards as those required by 45.1(10) "a" through "e"; and

3. The individual submits a legible copy of the certification to the agency prior to entry into Iowa.

(2) Enforcement actions with the agency, another agreement state, or the U.S. Nuclear Regulatory Commission or any sanctions by an independent certifying entity may be considered when reviewing a request for reciprocal recognition from a licensee, registrant, or certified radiographer.

(3) Certified radiographers who are granted reciprocity by the agency shall maintain the certification upon which the reciprocal recognition was granted, or prior to the expiration of such certification, shall meet the requirements of 45.1(10) “b.”

**45.1(11) *Internal audits.*** Except as provided in 45.1(11) “c,” the RSO or designee shall conduct an inspection program of the job performance of each radiographer and radiographer’s assistant to ensure that these rules, license requirements, and the licensee’s or registrant’s operating and emergency procedures are followed. The inspection program must:

a. Include observation of the performance of each radiographer and radiographer’s assistant during an actual industrial radiographic operation, at intervals not to exceed six months; and

b. Provide that, if a radiographer or radiographer’s assistant has not participated in an industrial radiographic operation for more than six months since the last audit, the radiographer or radiographer’s assistant must demonstrate understanding of the subjects contained in Appendix A of this chapter by a practical examination before the individual can next participate in a radiographic operation.

c. The agency may consider alternatives in those situations where the individual serves as both radiographer and RSO. In those operations where a single individual serves as both radiographer and RSO, and performs all radiography operations, an inspection program is not required.

d. Records of audits shall be maintained by the licensee or registrant for agency inspection for three years from the date of the audit.

**45.1(12) *Personnel monitoring control.***

a. The personnel monitoring program shall meet the applicable requirements of 641—Chapter 40.

b. When performing industrial radiographic operations:

(1) No licensee or registrant shall permit an individual to act as a radiographer, radiographer’s assistant, or radiographer trainer unless at all times during radiographic operations each individual wears, on the trunk of the body, a combination of direct-reading pocket dosimeter, an operating alarm ratemeter, and a film badge, an optically stimulated luminescent device (OSL device) or a thermoluminescent dosimeter (TLD) that is processed and evaluated by an accredited National Voluntary Laboratory Accreditation Program (NVLAP). For permanent radiographic installations where other appropriate alarming or warning devices are in routine use, the wearing of an alarm ratemeter is not required.

(2) Pocket dosimeters or electronic personal dosimeters shall meet the criteria in ANSI N322-1977 and shall have a range of zero to at least 200 millirems. Electronic personal dosimeters may only be used in place of ion-chamber pocket dosimeters.

(3) Pocket dosimeters or electronic personal dosimeters shall be recharged at the start of each work shift.

(4) Pocket dosimeters or electronic personal dosimeters shall be read and exposures recorded at the beginning and at the end of each work shift, and before each recharging.

(5) If an individual’s pocket dosimeter is discharged beyond its range (i.e., goes “off scale”), or if the electronic personal dosimeter reads greater than 200 millirem (2 millisievert), and the possibility of radiation exposure cannot be ruled out as the cause, industrial radiographic operations by that individual shall cease and the individual’s film badge, OSL device, or TLD shall be within 24 hours sent for processing. The individual shall not return to work with sources of radiation until a determination of the radiation exposure has been made. This determination must be made by the RSO or the RSO’s designee. The results of this determination must be included in the exposure records maintained in accordance with 641—Chapter 40.

(6) Each individual monitoring device shall be assigned to and worn by only one individual.

(7) Film badges, OSL devices and TLDs must be replaced at least monthly.

(8) If an individual monitoring device is lost or damaged, the worker shall cease work immediately until a replacement individual monitoring device is provided and the exposure is calculated for the time period from issuance to loss or damage of the individual monitoring device. The results of the calculated

exposure and the time period for which the individual monitoring device was lost or damaged must be included in the records maintained in 45.1(12)“c.”

c. Records of pocket dosimeter readings of personnel exposures and yearly operability checks required in 45.1(12)“d” shall be maintained for three years by the licensee or registrant for agency inspection. If the dosimeter readings were used to determine external radiation dose (i.e., no TLD or film badge exposure records exist), the records shall be maintained for three years after they are recorded. Records of estimates of exposures as a result of off-scale personal direct reading dosimeters, or lost or damaged film badges, OSLs, or TLDs, shall be maintained until the agency terminates the license.

d. Pocket dosimeters shall be checked for correct response to radiation at periods not to exceed one year. Acceptable dosimeters shall read within plus or minus 20 percent of the true radiation exposure. Records of this check shall be maintained for inspection by the agency for three years from the date of the event.

e. Reports received from the film badge, OSL device or TLD processor shall be kept for inspection by the agency until the agency terminates the license.

f. Each alarm ratemeter must:

(1) Be checked to ensure that the alarm functions properly (sounds) prior to use at the start of each shift. Records of alarm function checks shall be maintained for two years by the licensee or registrant for agency inspection;

(2) Be set to give an alarm signal at a preset dose rate of 500 mR/hr;

(3) Require special means to change the preset alarm function; and

(4) Be calibrated at periods not to exceed one year for correct response to radiation: Acceptable ratemeters must alarm within plus or minus 20 percent of the true radiation dose rate. Records of the alarming ratemeter calibrations shall be maintained for three years by the licensee or registrant for agency inspection.

**45.1(13) *Supervision of radiographer's assistant.*** Whenever a radiographer's assistant uses radiographic exposure devices, sealed sources or associated equipment or conducts radiation surveys required by 45.2(5) or 45.3(7) to determine that the sealed source has returned to the shielded position after an exposure, the radiographer's assistant shall be under the direct supervision of a radiographer instructor. The direct supervision must include:

a. The radiographer's physical presence at the site where the source(s) of radiation is being used;

b. The availability of the radiographer to give immediate assistance if required; and

c. The radiographer's direct observation of the radiographer's assistant's performance of the operations referred to in this subrule.

**45.1(14) *Access control.***

a. During each industrial radiographic operation, a radiographer or radiographer's assistant shall maintain continuous, direct visual surveillance of the operation to protect against unauthorized entry into a restricted area, radiation area or high radiation area, except at permanent radiographic installations where all entryways are locked to protect against unauthorized or accidental entry and the requirements of 45.1(9) are met.

b. Radiographic exposure devices shall not be left unattended except when in storage or physically secured against unauthorized removal.

**45.1(15) *Posting.***

a. Notwithstanding any provisions in 641—subrule 40.62(1) areas in which radiography is being performed shall be conspicuously posted as required by 641—subrules 40.61(1) and 40.61(2).

b. Whenever practicable, ropes or barriers shall be used in addition to appropriate signs to designate areas in accordance with 641—subrule 40.26(1) and to help prevent unauthorized entry.

c. During pipeline industrial radiography operations, sufficient radiation signs and other barriers shall be posted to prevent unmonitored individuals from entering the radiation area.

d. Notwithstanding the requirements of 45.1(15)“a,” a restricted area may be established in accordance with 641—subrule 40.26(1) and may be posted in accordance with 40.61(1) and 40.61(2), i.e., both signs may be posted at the same location at the boundary of the restricted area.

**45.1(16) Temporary job site requirements.**

a. Documents and records. Each licensee or registrant conducting industrial radiography at a temporary job site shall have the following records available at that site for inspection by the agency:

- (1) Appropriate license or certificate of registration or equivalent document;
- (2) The appropriate operating and emergency procedures;
- (3) The applicable agency rules;
- (4) Survey records required pursuant to 45.2(5) “d” and 45.3(7) “j” for the period of operation at the site;
- (5) Daily pocket dosimeter records for the period of operation at the site;
- (6) The daily alarming ratemeter records for the period of operation at the site; and
- (7) The latest radiation survey instrument calibration and leak test records for specific devices and sealed sources in use at the site. Acceptable records include tags or labels which are affixed to the device or survey meter and decay charts for sources which have been manufactured within the last six months.

b. Reserved.

**45.1(17) Specific requirements for radiographic personnel performing industrial radiography.**

a. At a job site, the following shall be supplied by the licensee or registrant:

- (1) At least one operable, calibrated radiation survey instrument;
- (2) A current whole body personnel monitor (TLD, OSL device or film badge) for each individual;
- (3) An operable, calibrated pocket dosimeter with a range of 0 to 200 milliroentgens ( $5.16 \times 10^{-5}$  C/kg) for each worker; and

(4) An operable, calibrated alarm ratemeter for each worker; and

(5) The appropriate barrier ropes and signs.

b. Each radiographer at a job site shall possess a valid I.D. card.

c. Each radiographer’s assistant at a job site shall possess a valid trainee status card issued by the agency.

d. Industrial radiographic operations shall not be performed if any of the items in 45.1(17) “a,” “b,” and “c” are not available at the job site or are inoperable.

e. No individual other than a radiographer or a radiographer’s assistant who is under the direct supervision of a radiographer trainer shall manipulate controls or operate equipment used in industrial radiographic operations.

f. During an inspection by the agency, the agency inspector may terminate an operation if any of the items in 45.1(17) “a” are not available and operable or if the required number of radiographic personnel are not present. Operations shall not be resumed until such conditions are met.

**45.1(18) Notification of incidents.**

a. The agency shall be notified of thefts or losses of sources of radiation, overexposures, and excessive levels in accordance with 641—40.95(136C) and 40.97(136C).

b. Each licensee or registrant shall submit a written report within 30 days to the agency whenever one of the following events occurs:

- (1) The source assembly cannot be returned to the fully shielded position and properly secured;
- (2) The source assembly becomes disconnected from the drive cable;
- (3) The failure of any component (critical to safe operation of the radiographic exposure device) to properly perform its intended function; or

(4) An indicator on a radiation-producing machine fails to show that radiation is being produced or an exposure switch fails to terminate production of radiation when turned to the off position.

c. The licensee or registrant shall include the following information in each report submitted in accordance with 45.1(18) “b”:

- (1) A description of the equipment problem;
- (2) Cause of each incident, if known;
- (3) Manufacturer and model number of equipment involved in the incident;
- (4) Location, time, and date of the incident;
- (5) Actions taken to establish normal operations;
- (6) Corrective actions taken or planned to prevent recurrence; and

(7) Names of personnel involved in the incident.

**45.1(19) *Copies of operating and emergency procedures.*** Each licensee or registrant shall maintain a copy of current operating and emergency procedures until the agency terminates the license. Superseded material must be retained for three years after the change is made.

**641—45.2(136C) Radiation safety requirements for the use of radiation machines in industrial radiography.**

**45.2(1) *Locking of sources of radiation.*** The control panel of each radiation machine shall be equipped with a locking device that will prevent the unauthorized use of an X-ray system or the accidental production of radiation. The radiation machine shall be kept locked and the key removed at all times except when under the direct visual surveillance of a radiographer.

**45.2(2) *Permanent storage precautions.*** Radiation machines shall be secured while in storage to prevent tampering or removal by unauthorized individuals.

**45.2(3) *Requirements for radiation machines used in industrial radiographic operations.***

a. Equipment used in industrial radiographic operations involving radiation machines manufactured after January 1, 1992, shall be certified at the time of manufacture to meet the criteria set forth by ANSI N537-1976.

b. The registrant's name and city or town where the main business office is located shall be prominently displayed with a durable, clearly visible label(s) on all vehicles used to transport radiation machines for temporary job site use.

**45.2(4) *Operating and emergency procedures.***

a. The registrant's operating and emergency procedures shall include instructions in at least the following:

- (1) Operation and safety instruction on the radiation machine(s) to be used;
- (2) Methods and occasions for conducting radiation surveys;
- (3) Methods for controlling access to radiographic areas;
- (4) Methods and occasions for locking and securing sources of radiation;
- (5) Personnel monitoring and the use of personnel monitoring equipment, including steps that must be taken immediately by radiography personnel in the event a pocket dosimeter is found to be off-scale;
- (6) Minimizing exposure of individuals in the event of an accident;
- (7) The procedure for notifying proper personnel in the event of an accident;
- (8) Maintenance of records; and
- (9) Inspection and maintenance of radiation machines.

b. Each registrant shall provide, as a minimum, two radiographic personnel when radiation machines are used for any industrial radiography conducted other than at a permanent radiographic installation (shielded room, bay, or bunker). If one of the personnel is a radiographer's assistant, the other shall be a radiographer trainer authorized by the certificate of registration.

c. No individual other than a radiographer or a radiographer's assistant who is under the direct supervision of a radiographer trainer shall manipulate controls or operate equipment used in industrial radiographic operations.

d. Rescinded IAB 4/8/98, effective 7/1/98.

**45.2(5) *Radiation surveys and survey records.***

a. No radiographic operation shall be conducted unless calibrated and operable radiation survey instrumentation, as described in 45.1(5), is available and used at each site where radiographic exposures are made.

b. A physical radiation survey shall be made after each radiographic exposure using radiation machines to determine that the machine is "off."

c. All potential radiation areas where industrial radiographic operations are to be performed shall be posted in accordance with 45.1(15), based on calculated dose rates, before industrial radiographic operations begin. An area survey shall be performed during the first radiographic exposure to confirm that 45.1(15) requirements have been met and that unrestricted areas do not have radiation levels in excess of the limits specified in 641—subrule 40.26(1).

d. Records shall be kept of the surveys required by 45.2(5) “b” and “c.” Such records shall be maintained for inspection by the agency for two years after completion of the survey. If the survey was used to determine an individual’s exposure, however, the records of the survey shall be maintained until the agency authorizes their disposition.

**45.2(6) *Special requirements and exemptions for enclosed radiography.***

a. Systems for enclosed radiography, including shielded-room radiography and cabinet radiography, designed to allow admittance of individuals shall:

(1) Comply with all applicable requirements of this chapter and 641—subrule 40.26(1). If such a system is a certified cabinet X-ray system, it shall comply with all applicable requirements of this chapter and 21 CFR 1020.40.

(2) Be evaluated at intervals not to exceed one year to ensure compliance with the applicable requirements as specified in 641—subrule 40.26(1). Records of these evaluations shall be maintained for inspection by the agency for a period of three years after the evaluation.

b. Certified and certifiable cabinet X-ray systems are exempt from the requirements of this chapter except that:

(1) Operating personnel must be provided with individual monitoring devices in accordance with the appropriate provisions of 641—40.37(136C).

(2) No registrant shall permit any individual to operate a cabinet X-ray system until such individual has received a copy of and instruction in the operating procedures for the unit and has demonstrated competence in its use. Records which demonstrate compliance with this subparagraph shall be maintained for inspection by the agency until disposition is authorized by the agency.

(3) Tests for proper operation of interlocks used to control entry to the high radiation area or alarm systems, where applicable, shall be conducted and recorded every three months. Records of these tests shall be maintained for agency inspection until disposal is authorized by the agency.

(4) The registrant shall perform an evaluation, at intervals not to exceed one year, to determine conformance with 641—subrule 40.26(1). If such a system is a certified cabinet X-ray system, it shall be evaluated at intervals not to exceed one year to determine conformance with 21 CFR 1020.40. Records of these evaluations shall be maintained for inspection by the agency for a period of two years after the evaluation.

c. Certified cabinet X-ray systems shall be maintained in compliance with 21 CFR 1020.40 unless prior approval has been granted by the agency pursuant to 641—38.3(136C).

**45.2(7) *Registration for industrial radiographic operations.***

a. Radiation machines used in industrial radiographic operations shall be registered in accordance with 641—Chapter 39.

b. In addition to the registration requirements in 641—Chapter 39, an application for a certificate of registration shall include the following information:

(1) A schedule or description of the program for training radiographic personnel which specifies:

1. Initial training,
2. Periodic training,
3. On-the-job training, and
4. Methods to be used by the registrant to determine the knowledge, understanding, and ability of radiographic personnel to comply with agency rules, registration requirements, and the operating and emergency procedures of the applicant.

(2) Written operating and emergency procedures, including all items listed in Appendix D.

(3) A description of the internal inspection system or other management control to ensure that radiographic personnel follow registration provisions, rules of the agency, and the applicant’s operating and emergency procedures.

(4) A list of permanent radiographic installations and descriptions of permanent storage and use locations.

(5) A description of the organization of the industrial radiographic program, including delegations of authority and responsibility for operation of the radiation safety program.

c. A certificate of registration will be issued if the requirements of 641—Chapter 39 and this subrule are met.

**641—45.3(136C) Radiation safety requirements for use of sealed sources of radiation in industrial radiography.**

**45.3(1)** *Limits on external radiation levels from storage containers and source changers.* The maximum exposure rate limits for storage containers and source changers are 200 millirem (2 millisieverts) per hour at any exterior surface, and 10 millirem (0.1 millisievert) per hour at 1 meter from any exterior surface with the sealed source in the shielded position.

**45.3(2)** *Locking of sources of radiation.*

a. Each source of radiation shall be provided with a lock or lockable outer container designed to prevent unauthorized or accidental removal of the sealed source. Either the exposure device or its container must be kept locked and, if applicable, the key removed, at all times when not under the direct surveillance of a radiographer or a radiographer's assistant except at permanent radiographic installations as stated in 45.1(14). Each sealed source storage container and source changer must have a lock or outer locked container designed to prevent unauthorized or accidental removal of the sealed source from its shielded position. Storage containers and source changers must be kept locked (and if the lock is a keyed lock, with the key removed at all times) when containing sealed sources except when the container is under the direct surveillance of a radiographer or radiographer's assistant.

b. Radiographic exposure devices, source changers, and storage containers, prior to being moved from one location to another and also prior to being secured at a given location, shall be locked and surveyed to ensure that the sealed source is in the shielded position.

c. The sealed source shall be secured in its shielded position by locking the exposure device or securing the remote control each time the sealed source is returned to its shielded position. Then a survey shall be performed to determine that the sealed source is in the shielded position pursuant to 45.3(7) "b."

**45.3(3)** *Storage precautions.*

a. Labeling, storage, and transportation.

(1) The licensee may not use a source changer or a container to store licensed material unless the source changer or the storage container has securely attached to it a durable, legible, and clearly visible label bearing the standard trefoil radiation caution symbol in conventional colors, i.e., magenta, purple or black on a yellow background, having a minimum diameter of 25 mm, and the wording: "CAUTION RADIOACTIVE MATERIAL, NOTIFY CIVIL AUTHORITIES (or name of company)," or "DANGER."

(2) The licensee may not transport licensed material unless the material is packaged, and the package is labeled, marked, and accompanied with appropriate shipping papers in accordance with 641—39.5(136C).

(3) Locked radiographic exposure devices and storage containers must be physically secured to prevent tampering or removal by unauthorized personnel. The licensee shall store licensed material in a manner which will minimize danger from explosion or fire.

(4) The licensee shall lock and physically secure the transport package containing licensed material in the transporting vehicle to prevent accidental loss, tampering, or unauthorized removal of the licensed material from the vehicle.

b. Radiographic exposure devices, source changers, or storage containers that contain radioactive material shall not be stored in residential locations. This requirement does not apply to storage of radioactive material in a vehicle in transit for use at temporary job sites, if the licensee complies with 45.3(3) "c," and if the vehicle does not constitute a permanent storage location as described in 45.1(9).

c. If a vehicle is to be used for storage of radioactive material, a vehicle survey shall be performed after securing radioactive material in the vehicle and before transport to ensure that radiation levels do not exceed the limits specified in 641—subrule 40.26(1) at the exterior surface of the vehicle.

d. A storage or use location is permanent if radioactive material is stored at the location for more than 90 days and any one or more of the following applies to the location:

(1) Telephone service is established by the licensee;

- (2) Industrial radiographic services are advertised for or from the location;
- (3) Industrial radiographic operations are conducted at other sites due to arrangements made from the location.

**45.3(4) *Performance requirements for radiography equipment.*** Equipment used in industrial radiographic operations must meet the following minimum criteria:

*a.* Each radiographic exposure device, source assembly or sealed source, and all associated equipment must meet the requirements specified in American National Standard N432-1980 “Radiological Safety for the Design and Construction of Apparatus for Gamma Radiography” (published as NBS Handbook 136, issued January 1981). This publication has been approved for incorporation by reference by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR Part 51. This publication may be purchased from the American National Standards Institute, Inc., 1430 Broadway, New York, New York 10018, telephone (212)642-4900. Copies of the document are available for inspection at the Iowa Department of Public Health, Bureau of Radiological Health, Lucas State Office Building, Des Moines, Iowa 50319.

*b.* In addition to the requirements specified in paragraph “*a*” of this subrule, the following requirements apply to radiographic exposure devices, source changers, source assemblies, sealed sources, and associated equipment.

(1) Each radiographic exposure device must have attached to it by the user a durable, legible, clearly visible label bearing the:

1. Chemical symbol and mass number of the radionuclide in the device;
2. Activity and the date on which this activity was last measured;
3. Model number (or product code) and serial number of the sealed source;
4. Manufacturer’s identity of the sealed source; and
5. Licensee’s name, address, and telephone number.

(2) Radiographic exposure devices intended for use as Type B transport containers must meet the applicable requirements of 641—39.5(136C).

(3) Modification of any radiographic exposure devices, source changers, and source assemblies and associated equipment is prohibited, unless the design of any replacement component, including source holder, source assembly, controls or guide tubes would not compromise the design safety features of the system.

*c.* In addition to the requirements specified in paragraphs “*a*” and “*b*” of this subrule, the following requirements apply to radiographic exposure devices, source assemblies, and associated equipment that allow the source to be moved out of the device for radiographic operation or source changing:

(1) The coupling between the source assembly and the control cable must be designed in such a manner that the source assembly will not become disconnected if cranked outside the guide tube. The coupling must be such that it cannot be unintentionally disconnected under normal and reasonably foreseeable abnormal conditions;

(2) The device must automatically secure the source assembly when it is cranked back into the fully shielded position within the device. This securing system may only be released by means of a deliberate operation on the exposure device;

(3) The outlet fittings, lock box, and drive cable fittings on each radiographic exposure device must be equipped with safety plugs or covers which must be installed during storage and transportation to protect the source assembly from water, mud, sand, or other foreign matter;

(4) Each sealed source or source assembly must have attached to it or engraved in it, a durable, legible, visible label with the words: “DANGER—RADIOACTIVE.” The label must not interfere with safe operation of the exposure device or associated equipment;

(5) The guide tube must be able to withstand a crushing test that closely approximates the crushing forces that are likely to be encountered during use, and be able to withstand a kinking resistance test that closely approximates the kinking forces that are likely to be encountered during use;

(6) Guide tubes must be used when moving the source out of the device;

(7) An exposure head or similar device designed to prevent the source assembly from passing out of the end of the guide tube must be attached to the outermost end of the guide tube during radiographic operations;

(8) The guide tube exposure head connection must be able to withstand the tensile test for control units specified in ANSI N432-1980;

(9) Source changers must provide a system for ensuring that the source will not be accidentally withdrawn from the changer when connecting or disconnecting the drive cable to or from a source assembly.

d. All newly manufactured radiographic exposure devices and associated equipment acquired by licensees after January 10, 1992, must comply with the requirements of this subrule.

e. All radiographic exposure devices and associated equipment in use after January 10, 1996, must comply with the requirements of this subrule.

f. Notwithstanding the requirements of 45.3(4) "a," equipment used in industrial radiographic operations need not comply with § 8.9.2(c) of the Endurance Test in American National Standards Institute N432-1980, if the prototype equipment has been tested using a torque value representative of the torque that an individual using the radiography equipment can realistically exert on the lever or crankshaft of the drive mechanism.

g. Engineering analysis may be submitted by an applicant or licensee to demonstrate the applicability of previously performed testing on similar individual radiography equipment components. Upon review, the agency may find this an acceptable alternative to actual testing of the component pursuant to the above-referenced standard.

**45.3(5) *Leak testing, repair, tagging, opening, modification, and replacement of sealed sources.***

a. The replacement of any sealed source fastened to or contained in a radiographic exposure device and leak testing, repair, tagging, opening, or any other modification of any sealed source shall be performed only by persons specifically authorized to do so by the agency, the U.S. Nuclear Regulatory Commission, or an agreement state.

b. Leak testing requirements.

(1) Each licensee that uses a sealed source shall have the source tested for leakage at intervals not to exceed 6 months. The leak testing of the source must be performed using a method approved by this agency. The wipe sample should be taken from the nearest accessible point to the sealed source where contamination might accumulate. The wipe sample must be analyzed for radioactive contamination. The analysis must be capable of detecting the presence of 0.005 microcuries (185 Bq) of radioactive material on the test sample and must be performed by a person specifically authorized by this agency to perform the analysis.

(2) The licensee shall maintain records of the leak tests results for sealed sources and devices containing depleted uranium (DU). The results must be stated in units of microcuries (becquerels). The licensee shall retain each record for three years after it is made or until the source in storage is removed.

(3) Unless a sealed source is accompanied by a certificate from the transferor that shows that it has been leak tested within 6 months before the transfer, it may not be used by the licensee until tested for leakage. Sealed sources that are in storage and not in use do not require leak testing, but must be tested before use or transfer to another person if the interval of storage exceeds 6 months.

c. Any test conducted under this subrule which reveals the presence of 0.005 microcuries (185 Bq) or more of removable radioactive material must be considered evidence that the sealed source is leaking. The licensee shall immediately withdraw from use the equipment involved and shall have it decontaminated and repaired or disposed of in accordance with agency rules. Within five days after obtaining the results of the test, the licensee shall file a report with the agency describing the equipment involved, the test results, and the corrective action taken.

d. Each exposure device using DU shielding and an "S" tube configuration must be tested for DU contamination at intervals not to exceed 12 months. The analysis must be capable of detecting the presence of 0.005 microcuries (185 Bq) of radioactive material on the test sample and must be performed by a person specifically authorized by the agency to perform the analysis. Should such testing reveal the presence of 0.005 microcuries (185 Bq) or more of removable DU contamination, the exposure

device must be removed from use until an evaluation of the wear on the S-tube has been made. Should the evaluation reveal that the S-tube is worn through, the device may not be used again. DU-shielded devices do not have to be tested for DU contamination while in storage and not in use. Before using or transferring such a device, however, the device must be tested for DU contamination if the interval of storage exceeds 12 months.

e. Each radiographic exposure device shall have permanently attached to it a durable label which has, as a minimum, the instruction: "Danger—Radioactive Material—Do Not Handle—Notify Civil Authorities if Found."

**45.3(6) *Operating and emergency procedures.***

a. The licensee's operating and emergency procedures shall include instructions in at least the following:

- (1) Handling and use of sources of radiation to be employed such that no individual is likely to be exposed to radiation doses in excess of the limits established in 641—Chapter 40;
- (2) Methods and occasions for conducting radiation surveys;
- (3) Methods for controlling access to radiographic areas;
- (4) Methods and occasions for locking and securing sources of radiation;
- (5) Personnel monitoring and the use of personnel monitoring equipment, including steps that must be taken immediately by radiography personnel in the event a pocket dosimeter is found to be off-scale;
- (6) Transportation to field locations, including packing of sources of radiation in the vehicles, posting of vehicles, and control of sources of radiation during transportation;
- (7) Minimizing exposure of individuals in the event of an accident;
- (8) The procedure for notifying proper personnel in the event of an accident;
- (9) Maintenance of records;
- (10) The inspection and maintenance of radiographic exposure devices, source changers, storage containers, and radiation machines;
- (11) The procedure(s) for identifying and reporting defects and noncompliance in 10 CFR Part 21; and
- (12) Source recovery procedure if the licensee will perform source recovery.

b. Rescinded IAB 4/8/98, effective 7/1/98.

c. Whenever radiography is performed at a location other than a permanent radiographic installation, the radiographer must be accompanied by at least one other qualified radiographer or a radiographer's assistant. If one of the personnel is a radiographer's assistant, the other shall be a radiographer trainer authorized by the license. The additional qualified individual shall observe the operations and be capable of providing immediate assistance to prevent unauthorized entry. Radiography shall not be performed if only one qualified individual is present.

d. Collimators shall be used in industrial radiographic operations which use crank-out devices except when physically impossible.

e. All radiographic operations conducted at locations of use authorized on the license must be conducted in a permanent radiographic installation, unless specifically authorized by the agency.

**45.3(7) *Radiation surveys and survey records.***

a. No radiographic operation shall be conducted unless calibrated and operable radiation survey instrumentation, as described in 45.1(5), is available and for each exposure device used at each site where radiographic exposures are made.

b. A survey with a calibrated and operable radiation survey instrument shall be made after each radiographic exposure to determine that the sealed source has been returned to its shielded position. The entire circumference of the radiographic exposure device shall be surveyed. If the radiographic exposure device has a source guide tube, the survey shall also include the entire length of the guide tube and collimator. The survey required by this subrule must be done before exchanging films, repositioning the exposure head or dismantling the equipment.

c. (1) All potential radiation areas where industrial radiographic operations are to be performed shall be posted in accordance with 641—40.61(136C), based on calculated dose rates, before industrial radiographic operations begin. An area survey shall be performed during the first radiographic exposure

(i.e., with the sealed source in the exposed position) to confirm that 641—40.61(136C) requirements have been met and that unrestricted areas do not have radiation levels in excess of the limits specified in 641—subrule 40.26(1).

(2) Each time the exposure device is relocated or the exposed position of the sealed source is changed, the requirements of 45.3(7) “c”(1) shall be met.

(3) The requirements of 45.3(7) “c”(2) do not apply to pipeline industrial radiographic operations when the conditions of exposure include, but are not limited to, the radiographic exposure device, duration of exposure, source strength, pipe size, and pipe thickness remain constant.

*d.* A lock-out survey, in which all accessible surfaces of the radiographic exposure device or source changer are surveyed, shall be made to determine that each sealed source is in its shielded position before securing the radiographic exposure device or source changer.

*e.* The sealed source shall be secured in its shielded position by locking the radiographic exposure device or source changer each time the sealed source is returned to its shielded position.

*f.* Each radiographic exposure device and source changer shall be locked and the key removed from any keyed lock prior to being moved or transported from one location to another and also prior to being stored at a given location.

*g.* If a vehicle is to be used for storage of radioactive material, a vehicle survey shall be performed after securing radioactive material in the vehicle and before transport to ensure that radiation levels do not exceed the limits specified in 641—subrule 40.26(1) at the exterior surface of the vehicle.

*h.* Surveys shall be performed on storage containers to ensure that radiation levels do not exceed the limits specified in 641—40.15(136C). These surveys shall be performed initially with the maximum amount of radioactive material present in the storage location and thereafter at the time of the quarterly inventory and whenever storage conditions change.

*i.* A survey meeting the requirements of 45.3(7) “b” shall be performed on the radiographic exposure device and the source changer after every sealed source exchange. A survey shall be made of the storage area as defined in 641—45.2(136C) whenever a radiographic exposure device is being placed in storage.

*j.* Records shall be kept of the surveys required by 45.3(7) “c,” “d,” “g,” “h,” and “i.” Such records shall be maintained for inspection by the agency for two years after completion of the survey. If the survey was used to determine an individual’s exposure, however, the records of the survey shall be maintained until the agency authorizes their disposition.

**45.3(8) Requirements for enclosed radiography.**

*a.* Systems for enclosed radiography, including shielded-room radiography designed to allow admittance of individuals shall comply with all applicable requirements of this chapter.

*b.* Procedures shall be evaluated at intervals not to exceed one year to ensure compliance with the applicable requirements as specified in 641—subrule 40.26(1). Records of these evaluations shall be maintained for inspection by the agency for a period of two years after the evaluation.

*c.* Tests for proper operation of high radiation area control devices or alarm systems, where applicable, shall be conducted, recorded, and maintained in accordance with 45.1(9) “b.”

**45.3(9) Underwater, offshore platform, and lay-barge radiography.**

*a.* Underwater, offshore platform, or lay-barge radiography shall not be performed unless specifically authorized in a license issued by the agency in accordance with 641—paragraph 39.4(27) “e.”

*b.* In addition to the other rules of this chapter, the following rules apply to the performance of lay-barge or offshore platform radiography:

(1) Cobalt-60 sources with activities in excess of 20 curies (nominal) and iridium-192 sources with activities in excess of 100 curies (nominal) shall not be used in the performance of lay-barge or offshore platform industrial radiography.

(2) Collimators shall be used for all industrial radiographic operations performed on lay-barge or offshore platforms.

**45.3(10) Prohibitions.** Industrial radiography performed with a sealed source which is not fastened to or contained in a radiographic exposure device (fishpole technique) is prohibited unless specifically authorized in a license issued by the agency.

**45.3(11) Licensing for industrial radiographic operations.** Rescinded IAB 4/5/00, effective 5/10/00.

**641—45.4(136C) Radiation safety requirements for the use of particle accelerators for nonhuman use.**

**45.4(1) Purpose and scope.**

*a.* This rule establishes procedures for the registration or licensing and the use of particle accelerators.

*b.* Unless specifically required otherwise by this rule, all registrants or licensees performing operations with a particle accelerator are subject to the requirements of 641—Chapters 38 to 40 and 641—45.1(136C).

*c.* The requirements of 45.1(10)“*b*”(2) and (3) and 45.1(10)“*d*”(1)“2” do not apply to nonradiographic uses.

**45.4(2) Definitions.** For purposes of this subrule, definitions in 641—Chapters 38 and 40 and subrule 45.1(2) may also apply. As used in this rule, the following definitions apply:

“*Cold pasteurization*” means the process of using radiation for destroying disease-causing microorganisms in commercial products.

“*Self-shielded particle accelerator*” means a particle accelerator with the accelerator installed in an enclosure independent of the existing architectural structures except the floor on which it may be placed. The enclosure must have been evaluated by a qualified expert and that evaluation approved by an appropriate regulatory authority through a device evaluation. The self-shielded accelerator is intended to contain at least that portion of material being irradiated, provide radiation attenuation, and exclude personnel from its interior during generation of radiation. A particle accelerator used within a shielded part of a building, or which may temporarily or occasionally incorporate portable shielding, is not a self-shielded particle accelerator.

“*Shielded facility*” means an accelerator facility where shielding is required to be constructed on site in order to assure compliance with the requirements of 641—Chapter 40, or where shielding supplied with the accelerator has been evaluated by qualified experts and that evaluation approved by an appropriate regulatory authority through a device evaluation.

**45.4(3) Registration or license requirements.** No person shall receive, possess, use, transfer, own, or acquire a particle accelerator except as authorized in a registration or license issued pursuant to 641—39.1(136C) to 39.4(136C) and the following requirements:

*a.* Accelerator facilities whose operations result in nuclear transformations that produce or are likely to produce radioactive material more than the exempt quantities and concentrations listed in Appendices A and B of 641—Chapter 39 shall be authorized by the issuance of a radioactive material license in accordance with 641—Chapter 39. Accelerator facilities that produce or are likely to produce radioactive material less than the exempt quantities and concentrations shall be authorized by registration.

*b.* For accelerator facilities required to be licensed in accordance with 45.4(3), those operations that would require personnel monitoring, pursuant to 641—40.37(136C), due to the presence of radioactive material, shall be performed only by a specific licensee. Such operations would normally include installation, testing and maintenance as well as routine operations.

**45.4(4) General requirements for the issuance of a registration or license for particle accelerators.** Along with the requirements of 641—39.1(136C) to 39.4(136C), an application for use of a particle accelerator will be approved only if the agency determines that:

*a.* The applicant is qualified by reason of training and experience to use the accelerator in question for the purpose requested in accordance with this rule and 641—Chapter 40 in such a manner as to minimize danger to public health and safety or property;

*b.* The applicant’s proposed or existing equipment, facilities, and operating and emergency procedures are adequate to protect health and minimize danger to public health and safety or property;

c. The issuance of the registration or license will not be inimical to the health and safety of the public, and the applicant satisfies any applicable special requirement in 45.4(4);

d. The applicant has appointed a radiation safety officer responsible for the day-to-day operation of the radiation safety program;

e. The applicant and the applicant's staff have experience in the use of particle accelerators and training sufficient for application to its intended uses;

f. The applicant has an adequate training program for operators of particle accelerators.

**45.4(5) *Personnel monitoring.*** In addition to the requirements of 641—Chapter 40, personnel monitoring shall be provided to and used by all individuals entering any area for which interlocks are required unless a survey of the area has determined that radiation levels are below that of a high radiation area; and

a. Power to an accelerator cannot be activated; or

b. An accelerated beam cannot be directed to the area.

**45.4(6) *Operations.***

a. No registrant shall permit any individual to act as an operator of a particle accelerator until such individual:

(1) Has been instructed in radiation safety and shall have demonstrated an understanding thereof;

(2) Has received copies of and instruction in this rule and the applicable requirements of 641—Chapter 40, pertinent registration and the registrant's operating and emergency procedures, and shall have demonstrated understanding thereof; and

(3) Has demonstrated competence to use the particle accelerator, related equipment, and survey instruments which will be employed.

b. The radiation safety officer or radiation safety committee, if applicable, shall have the authority to terminate the operations at a particle accelerator facility if such action is deemed necessary to minimize danger to public health and safety or property.

c. Along with the audit required in 641—subrule 40.10(3), each operator's performance during an actual accelerator operation shall be audited by the radiation safety officer or designee at intervals not to exceed six months. If an operator has not participated in an accelerator operation for more than six months since the last audit, the individual's performance shall be observed and recorded at the first opportunity the individual participates in an accelerator operation. Records of the audits shall be maintained by the registrant for the agency inspection for three years from the date of the audit.

d. Operators of particle accelerators used for industrial radiography shall meet the requirements of 45.1(10).

**45.4(7) *Shielding and safety design requirements.***

a. A qualified expert acceptable to the agency shall be consulted in the design of a particle accelerator installation and called upon to perform a radiation survey when the accelerator is first capable of producing radiation.

b. Each particle accelerator installation shall be provided with such primary and secondary barriers as are necessary to ensure compliance with 641—40.15(136C) and 641—40.26(136C).

c. In addition to the requirements of 45.4(8) "a" and "b," shielded facilities or self-shielded particle accelerators shall meet the following requirements:

(1) Authorization, by issuance of a construction permit, shall be granted upon a determination of adequacy being made pursuant to the review of an initial application of the shielding design, physical plant, and site specifications, and of the applicant's proposed equipment, uses and workloads. For a shielded facility, the applicant shall submit an evaluation of the shielding design by a qualified expert. For a self-shielded particle accelerator, the applicant need not submit an evaluation of a shielding design if an evaluation by an appropriate regulatory authority has been performed. The applicant may instead reference this evaluation. The applicant shall maintain a copy of the evaluation of shielding design for agency review.

(2) Authorization for installation and testing of an accelerator shall be given only after a determination of adequacy of testing protocols, testing safety procedures, staff training, and radiation detection instrumentation has been made; and

(3) Operational use of an accelerator shall be authorized only after determination of adequacy of the items listed in 45.4(4) has been made by the agency.

**45.4(8) Particle accelerator controls and interlock systems.**

a. Instrumentation, readouts, and controls on the particle accelerator control console shall be clearly identified, easily discernible and located outside the high radiation area.

b. Each entrance into a target area or other high radiation area shall be provided with two safety interlocks that shut down the machine when the barrier is breached.

c. Each safety interlock shall be on a circuit that allows it to operate independently of all other safety interlocks.

d. All safety interlocks shall be designed so that any defect or component failure in the safety interlock system prevents operation of the accelerator.

e. When a safety interlock system has been tripped, it shall only be possible to resume operation of the accelerator by manually resetting controls at the position where the safety interlock has been tripped and, lastly, at the main control console.

f. A scram button or other emergency power cutoff switch shall be located and easily identifiable in all high radiation areas. Such a cutoff switch shall include a manual reset so that the accelerator cannot be restarted from the accelerator control console without resetting the cutoff switch.

**45.4(9) Warning devices.**

a. Each location designated as a high radiation area, and each entrance to such location, shall be equipped with easily observable warning lights that operate when, and only when, radiation is being produced.

b. Each high radiation area shall have an audible warning device that shall be activated for 15 seconds prior to the possible creation of such high radiation area. Such warning device shall be clearly discernible in all high radiation areas.

c. Barriers, temporary or otherwise, and pathways leading to high radiation areas shall be posted in accordance with 641—40.61(136C).

**45.4(10) Operating and emergency procedures.**

a. Particle accelerators, when not in operation, shall be secured to prevent unauthorized use.

b. The safety interlock system shall not be used to turn off the accelerator beam except in an emergency.

c. All safety and warning devices, including interlocks, shall be checked for proper operation intervals not to exceed three months. Results of such tests shall be maintained at the accelerator facility for inspection by the agency for three years.

d. All incidents in which the interlock system fails to operate properly or where the operation is terminated by the interlock system shall be investigated and reported to the radiation safety officer or, if applicable, the radiation safety committee. Documentation shall be maintained for inspection by the agency for three years.

e. If, for any reason, it is necessary to intentionally bypass a safety interlock or interlocks, such action shall be:

- (1) Authorized by the radiation safety officer and, if applicable, the radiation safety committee;
- (2) Recorded in a permanent log and a notice posted at the accelerator control console; and
- (3) Terminated as soon as possible.

f. The registrant's operating and emergency procedures shall include the following:

- (1) Operation and safety instructions on the accelerator(s) to be used;
- (2) Methods for controlling access to restricted areas;
- (3) Methods and occasions for locking and securing sources of radiation;
- (4) Use of personnel monitoring equipment;
- (5) The procedure for notifying proper personnel in the event of an accident;
- (6) Maintenance of records;
- (7) Inspections and maintenance of the accelerator; and
- (8) Steps to be taken in the case of an emergency.

g. A copy of the current operating and emergency procedures shall be maintained at the accelerator control panel.

**45.4(11) Radiation monitoring requirements.**

a. A radiation protection survey shall be performed and documented by a qualified expert, acceptable to the agency, when changes have been made in shielding, operation, equipment, or occupancy of adjacent areas.

b. Accelerator facilities shall survey with a radiation detection instrument at intervals not to exceed 12 months. Records of this survey shall be maintained for agency review for three years.

c. Accelerator facilities registered or licensed pursuant to 45.4(3) "a" shall survey for removable contamination at intervals not to exceed six months to determine the degree of contamination.

d. Each time removable shields on self-shielded particle accelerators are opened, a visual survey of the shielding must be performed to observe physical damage. In addition, when these shields are returned to the closed position, a physical radiation survey shall be conducted upon initial reactivating of the accelerator. Records of this survey shall be maintained for agency review for three years.

e. Accelerator facilities registered or licensed pursuant to 45.4(3) "a" shall perform a survey with a radiation detection instrument and surveys for removable contamination before maintenance or servicing of its particle accelerator(s) or associated equipment located in the high radiation area.

f. Radiation levels in all high radiation areas shall be continuously monitored. The monitoring devices shall be electrically independent of the accelerator control and safety interlock systems and capable of providing a readout at the control panel.

g. Upon installation, all area monitoring equipment shall be tested to assure proper operation under operating conditions of the particle accelerator. All area monitors shall be calibrated at intervals not to exceed one year and after each servicing and repair.

h. Whenever applicable, accelerator facilities registered or licensed pursuant to 45.4(3) "a" shall perform surveys at intervals not to exceed six months to determine the amount of airborne particulate radioactivity present.

i. All surveys shall be made in accordance with the written procedures established by the radiation safety officer or a qualified expert who is acceptable to the agency.

j. Records of all radiation protection surveys, calibrations, and instrumentation tests shall be maintained at the accelerator facility for inspection by the agency.

**45.4(12) Radiation safety officer.**

a. Each registrant shall appoint a radiation safety officer that meets the following requirements:

(1) Possesses a high school diploma or a certificate of high school equivalency based on the GED test;

(2) Documents two years of radiation protection experience.

b. The specific duties of the RSO include, but are not limited to, the following:

(1) To establish and oversee operating, emergency, and ALARA procedures and to review them regularly to ensure that the procedures are current and conform with these rules;

(2) To oversee and approve all phases of the training program for accelerator operators so that appropriate and effective radiation protection practices are taught;

(3) To ensure that required radiation surveys are performed and documented in accordance with these rules, including any corrective measures when levels of radiation exceed established limits;

(4) To ensure that personnel monitoring devices are calibrated and used properly by occupationally exposed personnel, that records are kept of the monitoring results, and that timely notifications are made as required by 641—Chapter 40;

(5) To ensure that any required interlock switches and warning signals are functioning and that radiation signs, ropes, and barriers are properly posted and positioned;

(6) To investigate and report to the agency each known or suspected case of radiation exposure to an individual or radiation level detected in excess of limits established by these rules and each theft or loss of source(s) of radiation, to determine the cause, and to take steps to prevent its recurrence;

(7) To have a thorough knowledge of management policies and administrative procedures of the licensee or registrant;

- (8) To assume control and have the authority to institute corrective actions including shutdown of operations when necessary in emergency situations or unsafe conditions;
- (9) To maintain records as required by these rules;
- (10) To ensure the proper storing, labeling, and use of the accelerator;
- (11) To ensure that inspection and maintenance programs are performed in accordance with 45.1(6), 45.1(8), 45.4(10) “c”; and
- (12) To ensure that personnel are complying with these rules and the operating and emergency procedures of the registrant.

**641—45.5(136C) Radiation safety requirements for analytical X-ray equipment.**

**45.5(1) Purpose and scope.** This rule provides special requirements for analytical X-ray equipment. The requirements of this rule are in addition to, and not in substitution for, 641—Chapters 38, 39, and 40. The requirements of rules 641—45.1(136C) to 641—45.4(136C) do not apply.

**45.5(2) Definitions.** For the purpose of this subrule, definitions in 641—Chapter 38 may also apply. As used in this rule, the following definitions apply:

“*Analytical X-ray equipment*” means equipment used for X-ray diffraction or fluorescence analysis.

“*Analytical X-ray system*” means a group of components utilizing X-rays or gamma rays to determine the elemental composition or to examine the microstructure of materials.

“*Fail-safe characteristics*” means a design feature which causes beam port shutters to close, or otherwise prevents emergence of the primary beam, upon the failure of a safety or warning device.

“*Local components*” means part of an analytical X-ray system and includes X-ray areas that are struck by X-rays such as radiation source housings, port and shutter assemblies, collimators, sample holders, cameras, goniometers, detectors, and shielding, but does not include power supplies, transformers, amplifiers, readout devices, and control panels.

“*Normal operating procedures*” means step-by-step instructions necessary to accomplish the analysis. These procedures shall include sample insertion and manipulation, equipment alignment, routine maintenance by the registrant or licensee, and data recording procedures, which are related to radiation safety.

“*Open-beam configuration*” means an analytical X-ray system in which an individual could accidentally place some part of his body in the primary beam path during normal operation.

“*Primary beam*” means radiation which passes through an aperture of the source housing by a direct path from the X-ray tube or a radioactive source located in the radiation source housing.

**45.5(3) Equipment requirements.**

*a. Safety device.* A device which prevents the entry of any portion of an individual’s body into the primary X-ray beam path or which causes the beam to be shut off upon entry into its path shall be provided on all open-beam configurations. A registrant or licensee may apply to the agency for an exemption from the requirement of a safety device. Such application shall include:

- (1) A description of the various safety devices that have been evaluated;
- (2) The reason each of these devices cannot be used; and
- (3) A description of the alternative methods that will be employed to minimize the possibility of an accidental exposure, including procedures to ensure that operators and others in the area will be informed of the absence of safety devices.

*b. Warning devices.*

- (1) Open-beam configurations shall be provided with a readily discernible indication of:

1. X-ray tube “on-off” status located near the radiation source housing, if the primary beam is controlled in this manner; or

2. Shutter “open-closed” status located near each port on the radiation source housing, if the primary beam is controlled in this manner.

- (2) An easily visible warning light labeled with the words “X-RAY ON,” or words having a similar intent, shall be located:

1. Near any switch that energizes an X-ray tube and shall be illuminated only when the tube is energized; or

2. In the case of a radioactive source, near any switch that opens a housing shutter and shall be illuminated only when the shutter is open.

(3) Warning devices shall be labeled so that their purpose is easily identified. On equipment installed after the effective date of these rules, warning devices shall have fail-safe characteristics.

*c. Ports.* Unused ports on radiation source housings shall be secured in the closed position in a manner which will prevent casual opening.

*d. Labeling.* All analytical X-ray equipment shall be labeled with a readily discernible sign or signs bearing the radiation symbol and the words:

(1) "CAUTION—HIGH INTENSITY X-RAY BEAM," or words having a similar intent, on the X-ray source housing; and

(2) "CAUTION—RADIATION—THIS EQUIPMENT PRODUCES RADIATION WHEN ENERGIZED," or words having a similar intent, near any switch that energizes an X-ray tube if the radiation source is an X-ray tube; or

(3) "CAUTION—RADIOACTIVE MATERIAL," or words having a similar intent, on the source housing in accordance with 641—40.63(136C) if the radiation source is a radionuclide.

*e. Shutters.* On open-beam configurations, each port on the radiation source housing shall be equipped with a shutter that cannot be opened unless a collimator or a coupling has been connected to the port.

*f. Radiation source housing.* Each radiation source housing shall be subject to the following requirements:

(1) Each X-ray tube housing shall be equipped with an interlock that shuts off the tube if it is removed from the radiation source housing or if the housing is disassembled.

(2) Each radioactive source housing or port cover or each X-ray tube housing shall be so constructed that, with all shutters closed, the radiation measured at a distance of 5 centimeters from its surface is not capable of producing a dose in excess of 2.5 millirems (0.025 mSv) in one hour. For systems utilizing X-ray tubes, this limit shall be met at any specified tube rating.

*g. Generator cabinet.* Each X-ray generator shall be supplied with a protective cabinet which limits leakage radiation measured at a distance of 5 centimeters from its surface such that it is not capable of producing a dose in excess of 0.25 millirem (2.5 mSv) in one hour.

**45.5(4) Area requirements.**

*a. Radiation levels.* The local components of an analytical X-ray system shall be located and arranged and shall include sufficient shielding or access control such that no radiation levels exist in any area surrounding the local component group which could result in a dose to an individual present therein in excess of the dose limits given in 641—40.26(136C). For systems utilizing X-ray tubes, these levels shall be met at any specified tube rating.

*b. Surveys.*

(1) Radiation surveys, as required by 641—40.36(136C), of all analytical X-ray systems sufficient to show compliance with 45.5(4) "a" shall be performed:

1. Upon installation of the equipment, and at least once every 12 months thereafter;

2. Following any change in the initial arrangement, number, or type of local components in the system;

3. Following any maintenance requiring the disassembly or removal of a local component in the system;

4. During the performance of maintenance and alignment procedures if the procedures require the presence of a primary X-ray beam when any local component in the system is disassembled or removed;

5. Anytime a visual inspection of the local components in the system reveals an abnormal condition; and

6. Whenever personnel monitoring devices show a significant increase over the previous monitoring period or the readings are approaching the limits specified in 641—40.15(136C).

(2) Radiation survey measurements shall not be required if a registrant or licensee can demonstrate compliance with 45.5(4) "a" to the satisfaction of the agency.

*c. Posting.* Each area or room containing analytical X-ray equipment shall be conspicuously posted with a sign or signs bearing the radiation symbol and the words “CAUTION—X-RAY EQUIPMENT” or words having a similar intent in accordance with 641—subrule 40.61(1).

**45.5(5) Operating requirements.**

*a. Procedures.* Normal operating procedures shall be written and available to all analytical X-ray equipment workers. No individual shall be permitted to operate analytical X-ray equipment in any manner other than that specified in the procedures unless such individual has obtained written approval of the radiation safety officer.

*b. Bypassing.* No individual shall bypass a safety device or interlock unless such individual has obtained the approval of the radiation safety officer. Such approval shall be for a specified period of time. When a safety device or interlock has been bypassed, a readily discernible sign bearing the words “SAFETY DEVICE NOT WORKING,” or words having a similar intent, shall be placed on the radiation source housing.

*c. Repair or modification of X-ray tube systems.* Except as specified in 45.5(5) “b,” no operation involving removal of covers, shielding materials or tube housings or modifications to shutters, collimators, or beam stops shall be performed without ascertaining that the tube is off and will remain off until safe conditions have been restored. The main switch, rather than interlocks, shall be used for routine shutdown in preparation for repairs.

*d. Radioactive source replacement, testing, or repair.* Radioactive source housings shall be opened for source replacement, leak testing, or other maintenance or repair procedures only by individuals authorized to specifically conduct such procedures under a license issued by the U.S. Nuclear Regulatory Commission, an agreement state, or a licensing state.

**45.5(6) Personnel requirements.**

*a. Instruction.* No individual shall be permitted to operate or maintain analytical X-ray equipment unless such individual has received instruction in and demonstrated competence as to:

- (1) Identification of radiation hazards associated with the use of the equipment;
- (2) Significance of the various radiation warnings, safety devices, and interlocks incorporated into the equipment, or the reasons they have not been installed on certain pieces of equipment and the extra precautions required in such cases;
- (3) Proper operating procedures for the equipment;
- (4) Recognition of symptoms of an acute localized exposure; and
- (5) Proper procedures for reporting an actual or suspected exposure.

*b. Personnel monitoring.*

- (1) Finger or wrist dosimetry devices shall be provided to and shall be used by:
  1. Analytical X-ray equipment workers using systems having an open-beam configuration and not equipped with a safety device; and
  2. Personnel maintaining analytical X-ray equipment if the maintenance procedures require the presence of a primary X-ray beam when any local component in the analytical X-ray system is disassembled or removed.
- (2) Reported dose values shall not be used for the purpose of determining compliance with 641—subrule 40.2(1) unless evaluated by a qualified expert.

**641—45.6(136C) Radiation safety requirements for well-logging, wireline service operations and subsurface tracer studies.**

**45.6(1) Purpose.** This rule establishes radiation safety requirements for using sources of radiation for wireline service operations including mineral-logging, radioactive markers, and subsurface tracer studies. The requirements of this rule are in addition to, and not in substitution for, the requirements of 641—Chapters 38, 39, and 40. The requirements of 641—45.1(136C) to 641—45.5(136C) do not apply.

**45.6(2) Scope.** This rule applies to all licensees or registrants who use sources of radiation for wireline service operations including mineral-logging, radioactive markers, or subsurface tracer studies.

**45.6(3) Definitions.** For the purpose of this subrule, the definitions of 641—Chapter 38 may also apply. As used in this rule, the following definitions apply:

*“Energy compensation source (ECS)”* means a small sealed source, with an activity not exceeding 3.7 MBq (100 microcuries), used within a logging tool, or other tool components, to provide a reference standard to maintain the tool’s calibration when in use.

*“Fresh water aquifer”* means a geologic formation that is capable of yielding fresh water to a well or spring.

*“Injection tool”* means a device used for controlled subsurface injection of radioactive tracer material.

*“Logging assistant”* means any individual who, under the direct supervision of a logging supervisor, handles sealed sources or tracers that are not in logging tools or shipping containers or who performs surveys required by 45.6(22).

*“Logging supervisor”* means the individual who uses licensed material or provides direct supervision in the use of licensed material at a temporary job site and who is responsible to the licensee for ensuring compliance with the requirements of these rules and the conditions of the license.

*“Logging tool”* means a device used subsurface to perform well-logging.

*“Personal supervision”* means guidance and instruction by the logging supervisor who is physically present at the temporary job site, who is in personal contact with logging assistants, and who can give immediate assistance.

*“Radioactive marker”* means licensed material used for depth determination or direction orientation. For purposes of this rule, this term includes radioactive collar markers and radioactive iron nails.

*“Safety review”* means a periodic review on radiation safety aspects of well-logging provided by the licensee for its employees. The review may include, as appropriate, the results of internal inspections, new procedures or equipment, accidents or errors that have been observed, and opportunities for employees to ask safety questions.

*“Source holder”* means a housing or assembly into which a sealed source is placed to facilitate the handling and use of the source in well-logging operations.

*“Subsurface tracer study”* means the release of unsealed licensed material or a substance labeled with licensed material in a single well for the purpose of tracing the movement or position of the material or substance in the well or adjacent formation.

*“Surface casing”* for protecting fresh water aquifers means a pipe or tube used as a lining in a well to isolate fresh water aquifers from the well.

*“Temporary job site”* means a place where licensed materials are present for the purpose of performing well-logging or subsurface tracer studies.

*“Tritium neutron generator target source”* means a tritium source used within a neutron generator tube to produce neutrons for use in well-logging applications.

*“Uranium sinker bar”* means a weight containing depleted uranium used to pull a logging tool down toward the bottom of a well.

*“Well”* means a drilled hole in which well-logging may be performed. As used in this rule, “well” includes drilled holes for the purpose of oil, gas, mineral, groundwater, or geological exploration.

*“Well-logging”* means all operations involving the lowering and raising of measuring devices or tools which may contain licensed material or are used to detect licensed materials in wells for the purpose of obtaining information about the well or adjacent formations and which may be used in oil, gas, mineral, groundwater, or geological exploration.

*“Wireline”* means a cable containing one or more electrical conductors which is used to lower and raise logging tools in the well-bore.

*“Wireline service operation”* means any evaluation or mechanical service which is performed in the well-bore using devices on a wireline.

**45.6(4) Agreement with well owner or operator.**

a. A licensee may perform well-logging with a sealed source only after the licensee has a written agreement with the employing well owner or operator. This written agreement must identify who will meet the following requirements:

- (1) If a sealed source becomes lodged in the well, a reasonable effort will be made to recover it;

(2) A person may not attempt to recover a sealed source in a manner which, in the licensee's opinion, could result in its rupture;

(3) The radiation monitoring required in 45.6(8) and 45.6(17) will be performed;

(4) If the environment, any equipment, or personnel are contaminated with licensed material, they must be decontaminated before release from the site or release for unrestricted use; and

(5) If the sealed source is classified as irretrievable after reasonable efforts at recovery have been expended, the following requirements must be implemented within 30 days:

1. Each irretrievable well-logging source must be immobilized and sealed in place with a cement plug;

2. There must be a means to prevent inadvertent intrusion on the source, unless the source is not accessible to any subsequent drilling operations; and

3. A permanent identification plaque, constructed of long-lasting material, such as stainless steel, brass, bronze, or Monel, must be mounted at the surface of the well, unless the mounting of the plaque is not practical. The size of the plaque must be at least 17 cm (7 inches) square and 3 mm (1/8-inch) thick. The plaque must contain:

- The word "Caution";
- The radiation symbol (the color requirement in 641—40.60(136C) need not be met);
- The date the source was abandoned;
- The name of the well owner or well operator, as appropriate;
- The well name and well identification number(s) or other designation;
- An identification of the sealed source(s) by radionuclide and quantity;
- The depth of the source and depth to the top of the plug; and
- An appropriate warning such as, "Do not reenter this well."

b. The licensee shall retain a copy of the written agreement for three years after the completion of the well-logging operation.

c. A licensee may apply, pursuant to 641—38.3(136C), for agency approval, on a case-by-case basis, of proposed procedures to abandon an irretrievable well-logging source in a manner not otherwise authorized in 45.6(26) "a"(5).

d. A written agreement between the licensee and the well owner or operator is not required if the licensee and the well owner or operator are part of the same corporate structure or otherwise similarly affiliated. However, the licensee shall still otherwise meet the requirements in 45.6(26) "a"(1) through (5).

**45.6(5) Limits on levels of radiation.** Sources of radiation shall be used, stored, and transported in such a manner that the transportation requirements of 641—39.5(136C) and the dose limitation requirements of 641—Chapter 40 are met.

**45.6(6) Storage precautions.**

a. Each source of radiation shall be provided with a storage or transport container. The container shall be provided with a lock, or tamper seal for calibration sources, to prevent unauthorized removal of, or exposure to, the source of radiation.

b. Sources of radiation shall be stored in a manner which will minimize danger from explosion or fire.

**45.6(7) Transport precautions.** Transport containers shall be physically secured to the transporting vehicle to prevent accidental loss, tampering, or unauthorized removal.

**45.6(8) Radiation survey instruments.**

a. The licensee or registrant shall maintain sufficient calibrated and operable radiation survey instruments at each field station to make physical radiation surveys as required by this subrule and by 641—40.36(136C). Instrumentation shall be capable of measuring 0.1 milliroentgen (25.8 nanocoulombs/kg) per hour through at least 50 milliroentgens (12.9 microcoulombs/kg) per hour.

b. Each radiation survey instrument shall be calibrated:

- (1) At intervals not to exceed six months and after each instrument servicing;

(2) For linear scale instruments, at two points located approximately 1/3 and 2/3 of full-scale on each scale; for logarithmic scale instruments, at midrange of each decade, and at two points of at least one decade; and for digital instruments, at appropriate points; and

(3) So that accuracy within 20 percent of the true radiation level can be demonstrated on each scale.

c. Calibration records shall be maintained for a period of two years for inspection by the agency.

**45.6(9) *Leak testing of sealed sources.***

a. *Testing and record-keeping requirements.* Each licensee using sealed sources of radioactive material shall have the sources tested for leakage periodically. Records of leak test results shall be kept in units of microcuries (Bq) and maintained for three years after the leak test is performed.

b. *Method of testing.* Tests for leakage shall be performed only by persons specifically authorized to perform such tests by the NRC, an agreement state, or a licensing state. The wipe of a sealed source must be performed using a leak test kit or method approved by the NRC, an agreement state, or a licensing state. The wipe sample must be taken from the nearest assessable point to the sealed source where contamination might accumulate. The test sample shall be analyzed for radioactive contamination, and the analysis shall be capable of detecting the presence of 0.005 microcurie (185 Bq) of radioactive material on the test sample.

c. *Interval of testing.*

(1) Each sealed source of radioactive material (except an energy compensation source (ECS)) shall be tested at intervals not to exceed six months. In the absence of a certificate from a transferor indicating that a test has been made six months prior to the transfer, the sealed source shall not be put into use until tested. If, for any reason, it is suspected that a sealed source may be leaking, it shall be removed from service immediately and tested for leakage as soon as practical.

(2) Each ECS that is not exempt from testing in accordance with 45.6(9) "c"(1) must be tested at intervals not to exceed three years. In the absence of a certificate from a transferor that a test has been made within the three years before the transfer, the ECS may not be used until tested.

d. *Leaking or contaminated sources.*

(1) If the test in 45.6(9) "c" reveals the presence of 0.005 microcurie (185 Bq) or more of removable radioactive material, the licensee shall immediately withdraw the source from use and shall cause it to be decontaminated, repaired, or disposed of by an NRC, agreement state, or licensing state licensee that is authorized to perform these functions. The licensee shall check the equipment associated with the leaking source for radioactive contamination and, if contaminated, have it decontaminated or disposed of by an NRC, agreement state, or licensing state licensee that is authorized to perform these functions.

(2) A report describing the equipment involved, the test results, any contamination which resulted from the leaking source, and the corrective action taken up to the time of the report shall be filed with the agency within five days of receiving the test results.

e. *Exemptions.* The following sources are exempted from the periodic leak test requirements of 45.6(9) "a" to "d":

- (1) Hydrogen-3 (tritium) sources;
- (2) Sources of radioactive material with a half-life of 30 days or less;
- (3) Sealed sources of radioactive material in gaseous form;
- (4) Sources of beta- or gamma-emitting radioactive material with an activity of 100 microcuries (3.7 MBq) or less; and
- (5) Sources of alpha- or neutron-emitting radioactive material with an activity of 10 microcuries (0.370 MBq) or less.

**45.6(10) *Quarterly inventory.*** Each licensee or registrant shall conduct a quarterly physical inventory to account for all sources of radiation. Records of inventories shall be maintained for two years from the date of the inventory for inspection by the agency and shall include the quantities and kinds of sources of radiation, the location where sources of radiation are assigned, the date of the inventory, and the name of the individual conducting the inventory.

**45.6(11) *Utilization records.*** Each licensee or registrant shall maintain current records, which shall be kept available for inspection by the agency for two years from the date of the recorded event, showing the following information for each source of radiation:

- a. Make, model number, and a serial number or a description of each source of radiation used;
- b. The identity of the well-logging supervisor or field unit to whom assigned;
- c. Locations where used and dates of use; and
- d. In the case of tracer materials and radioactive markers, the utilization record shall indicate the radionuclide and activity used in a particular well.

**45.6(12) Design, performance, and certification criteria for sealed sources used in well-logging operations.**

- a. A licensee may use a sealed source for use in well-logging applications if:
  - (1) The sealed source is doubly encapsulated construction;
  - (2) The sealed source contains chemical and physical forms that are as insoluble and nondispersible as practical; and
  - (3) The sealed source meets the requirements of 45.6(12) “b,” “c,” and “d.”
- b. For a sealed source manufactured on or before July 14, 1989, a licensee may use the sealed source for use in well-logging applications if it meets the requirements of USASI N5.10-1968, “Classification of Sealed Radioactive Sources,” or the requirements in 45.6(12) “c” or “d.”
- c. For a sealed source manufactured after July 14, 1989, a licensee may use the sealed source for well-logging applications if it meets the oil-well-logging requirements of ANSI/HPS N43.6-1997, “Sealed Radioactive Sources—Classification.”
- d. For a sealed source manufactured after July 14, 1989, a licensee may use the sealed source for use in well-logging applications if the sealed source’s prototype has been tested and found to maintain its integrity after each of the following tests.
  - (1) Temperature. The test source must be held at -40 degrees C for 20 minutes, 600 degrees C for one hour, and then be subject to a thermal shock test with a temperature drop from 600 degrees C within 15 seconds.
  - (2) Impact test. A 5 kg steel hammer, 2.5 cm in diameter, must be dropped from a height of 1 m onto the test source.
  - (3) Vibration test. The test source must be subject to a vibration from 25 Hz to 500 Hz at 5 g amplitude for 30 minutes.
  - (4) Puncture test. A one gram hammer and pin, 0.3 cm pin diameter, must be dropped from a height of 1 m onto the test source.
  - (5) Pressure test. The test source must be subject to an external pressure of  $1.695 \times 10^7$  pascals (24,600 pounds per square inch absolute).
- e. The requirements in 45.6(12) “a,” “b,” “c,” and “d” do not apply to sealed sources that contain licensed material in gaseous form.
- f. The requirements of 45.6(12) “a,” “b,” “c,” and “d” do not apply to energy compensation sources (ECS). ECSs must be registered with the NRC, licensing state, or agreement state.

**45.6(13) Labeling.**

- a. Each source, source holder, or logging tool containing radioactive material shall bear a durable, legible, and clearly visible marking or label, which has, as a minimum, the standard radiation caution symbol, without the conventional color requirement, and the following wording:

DANGER<sup>1</sup>  
RADIOACTIVE

This labeling shall be on the smallest component transported as a separate piece of equipment.

- b. Each transport container shall have permanently attached to it a durable, legible, and clearly visible label which has, as a minimum, the standard radiation caution symbol and the following wording:

DANGER<sup>1</sup>  
RADIOACTIVE

NOTIFY CIVIL AUTHORITIES  
[OR NAME OF COMPANY]

<sup>1</sup>or CAUTION

**45.6(14) *Inspection and maintenance.***

*a.* Each licensee or registrant shall conduct, at intervals not to exceed six months, a program of inspection and maintenance of source holders, logging tools, source handling tools, storage containers, transport containers, and injection tools to ensure proper labeling and physical condition. Records of inspection and maintenance shall be maintained for a period of two years for inspection by the agency.

*b.* If any inspection conducted pursuant to 45.6(14) “*a*” reveals damage to labeling or components critical to radiation safety, the device shall be removed from service until repairs have been made.

*c.* If a sealed source is stuck in the source holder, the licensee shall not perform any operation, such as drilling, cutting, or chiseling, on the source holder unless the licensee is specifically approved by the U.S. Nuclear Regulatory Commission, an agreement state, or a licensing state to perform this operation.

*d.* The repair, opening, or modification of any sealed source shall be performed only by persons specifically authorized to do so by the agency, the U.S. Nuclear Regulatory Commission, an agreement state, or a licensing state.

**45.6(15) *Training requirements.***

*a.* No licensee or registrant shall permit any individual to act as a logging supervisor as defined in this rule until such individual has:

(1) Received, in a course recognized by the agency, the U.S. Nuclear Regulatory Commission, an agreement state, or a licensing state, instruction in the subjects outlined in Appendix E of this chapter and demonstrated an understanding thereof;

(2) Read and received instruction in the rules contained in this chapter and the applicable sections of 641—Chapters 38, 39, and 40 or their equivalent, conditions of appropriate license or certificate of registration, and the licensee’s or registrant’s operating and emergency procedures, and demonstrated an understanding thereof; and

(3) Demonstrated competence to use sources of radiation, related handling tools, and radiation survey instruments which will be used on the job.

*b.* No licensee or registrant shall permit any individual to assist in the handling of sources of radiation until such individual has:

(1) Read or received instruction in the licensee’s or registrant’s operating and emergency procedures and demonstrated an understanding thereof; and

(2) Demonstrated competence to use, under the direct supervision of the logging supervisor, the sources of radiation, related handling tools, and radiation survey instruments which will be used on the job.

*c.* The licensee or registrant shall maintain employee training records for inspection by the agency for two years following termination of the individual’s employment.

**45.6(16) *Operating and emergency procedures.*** Each licensee or registrant shall develop and follow written operating and emergency procedures that cover:

*a.* The handling and use of sources of radiation, including the use of sealed sources in wells without surface casing for protecting fresh water aquifers, if appropriate;

*b.* The use of remote handling tools for handling sealed sources and radioactive tracer material except low-activity calibration sources;

*c.* Methods and occasions for conducting radiation surveys, including surveys for detecting contamination, as required by 45.6(22);

*d.* Minimizing personnel exposure, including exposures from inhalation and ingestion of licensed tracer materials;

*e.* Methods and occasions for locking and securing stored licensed or registered materials;

*f.* Personnel monitoring and the use of personnel monitoring equipment;

*g.* Transportation of licensed or registered materials to field stations or temporary job sites, packaging of licensed or registered materials for transport in vehicles, placarding of vehicles when needed, and physically securing licensed materials in transport vehicles during transportation to prevent accidental loss, tampering, or unauthorized removal;

- h.* Picking up, receiving, and opening packages containing licensed or registered materials, in accordance with 641—40.65(136C);
- i.* For the use of tracers, decontamination of the environment, equipment, and personnel;
- j.* Maintenance of records generated by well logging personnel at temporary job sites;
- k.* The inspection and maintenance of sealed sources, source holders, logging tools, injection tools, source handling tools, storage containers, transport containers, and uranium sinker bars as required by 45.6(14);
- l.* Identifying and reporting defects and noncompliance;
- m.* Actions to be taken if a sealed source is lodged in a well;
- n.* Notifying proper persons in the event of an accident; and
- o.* Actions to be taken if a sealed source is ruptured that include actions to prevent the spread of contamination and minimize inhalation and ingestion of licensed materials and actions to obtain suitable radiation survey instruments as required in 45.6(8).

**45.6(17) *Personnel monitoring.***

*a.* No licensee or registrant shall permit any individual to act as a logging supervisor or to assist in the handling of sources of radiation unless each such individual wears, at all times during the handling of licensed radioactive materials, a film badge, OSL device or thermoluminescent dosimeter (TLD) that is processed and evaluated by an accredited National Voluntary Laboratory Accreditation Program (NVLAP). Each film badge, OSL device or TLD shall be assigned to and worn by only one individual. Film badges must be replaced at least monthly and OSL devices and TLDs replaced at least quarterly. After replacement, each film badge, OSL device or TLD must be promptly processed.

*b.* The licensee shall provide bioassay services to individuals using licensed materials in subsurface tracer studies if required by the license.

*c.* Personnel monitoring records and bioassay results shall be maintained for inspection until the agency authorizes disposition.

**45.6(18) *Security.*** During each logging or tracer application, the logging supervisor or other designated employee shall maintain direct surveillance of the operation to protect against unauthorized or unnecessary entry into a restricted area, as defined in 641—Chapter 38.

**45.6(19) *Handling tools.*** The licensee shall provide and require the use of tools that will ensure remote handling of sealed sources other than low activity calibration sources.

**45.6(20) *Subsurface tracer studies.***

*a.* Protective gloves and other appropriate protective clothing and equipment shall be used by all personnel handling radioactive tracer material. Precautions shall be taken to avoid ingestion or inhalation of radioactive material.

*b.* No licensee shall cause the injection of radioactive material into potable aquifers without prior written authorization from the agency and any other appropriate state agency.

**45.6(21) *Particle accelerators.*** No licensee or registrant shall permit aboveground testing of particle accelerators, designed for use in well-logging, which results in the production of radiation, except in areas or facilities so controlled or shielded that the requirements of 641—40.15(136C) and 641—40.26(136C), as applicable, are met.

**45.6(22) *Radiation surveys.***

*a.* Radiation surveys or calculations shall be made and recorded for each area where radioactive materials are used and stored.

*b.* Radiation surveys shall be made and recorded for the radiation levels in occupied positions and on the exterior of each vehicle used to transport radioactive material. Such surveys shall include each source of radiation or combination of sources to be transported in the vehicle.

*c.* If the sealed source assembly is removed from the logging tool before departing the job site, the logging tool detector shall be energized, or a survey meter used, to ensure that the logging tool is free of contamination.

*d.* Radiation surveys shall be made and recorded at the job site or wellhead for each tracer operation, except those using hydrogen-3, carbon-14, and sulfur-35. These surveys shall include measurements of radiation levels before and after the operation.

*e.* Records required pursuant to 45.6(22)“a” to “d” shall include the dates, the identification of individual(s) making the survey, the identification of survey instrument(s) used, and an exact description of the location of the survey. Records of these surveys shall be maintained for inspection by the agency for two years after completion of the survey.

**45.6(23) Documents and records required at field stations.** Each licensee or registrant shall maintain, for inspection by the agency, the following documents and records for the specific devices and sources used at the field station:

- a.* Appropriate license, certificate of registration, or equivalent document(s);
- b.* Operating and emergency procedures;
- c.* Applicable regulations;
- d.* Records of the latest survey instrument calibrations pursuant to 45.6(8);
- e.* Records of the latest leak test results pursuant to 45.6(9);
- f.* Records of quarterly inventories required pursuant to 45.6(10);
- g.* Utilization records required pursuant to 45.6(11);
- h.* Records of inspection and maintenance required pursuant to 45.6(14);
- i.* Survey records required pursuant to 45.6(22); and
- j.* Training records required pursuant to 45.6(15).

**45.6(24) Documents and records required at temporary job sites.** Each licensee or registrant conducting operations at a temporary job site shall have the following documents and records available at that site for inspection by the agency:

- a.* Operating and emergency procedures;
- b.* Survey records required pursuant to 45.6(22) for the period of operation at the site;
- c.* Evidence of current calibration for the radiation survey instruments in use at the site;
- d.* When operating in the state under reciprocity, a copy of the appropriate license, certificate of registration, or equivalent document(s); and
- e.* Shipping papers for the transportation of radioactive material.

**45.6(25) Notification of incidents, abandonment, and lost sources.**

*a.* Notification of incidents and sources lost in other than downhole logging operations shall be made in accordance with appropriate provisions of 641—Chapter 40.

*b.* Whenever a sealed source or device containing radioactive material is lodged downhole, the licensee shall:

(1) Monitor at the surface for the presence of radioactive contamination with a radiation survey instrument or logging tool during logging tool recovery operations; and

(2) Notify the agency immediately by telephone and subsequently, within 30 days, by confirmatory letter if the licensee knows or has reason to believe that a sealed source has been ruptured. This letter shall identify the well or other location, describe the magnitude and extent of the escape of radioactive material, assess the consequences of the rupture, and explain efforts planned or being taken to mitigate these consequences.

*c.* When it becomes apparent that efforts to recover the radioactive source will not be successful, the licensee shall:

(1) Advise the well operator of the regulations of the appropriate state agency regarding abandonment and an appropriate method of abandonment, which shall include:

1. The immobilization and sealing in place of the radioactive source with a cement plug;
2. The setting of a whipstock or other deflection device; and
3. The mounting of a permanent identification plaque at the surface of the well, containing the appropriate information required by 45.6(25)“d.”

(2) Notify the agency by telephone, giving the circumstances of the loss, and request approval of the proposed abandonment procedures, or specify the implemented abandonment before receiving approval because the licensee believed there was an immediate threat to public health and safety; and

(3) File a written report with the agency within 30 days of the abandonment. The licensee shall send a copy of the report to the appropriate state agency that issued permits or otherwise approved of the drilling operation. The report shall contain the following information:

1. Date of occurrence;
  2. A description of the well-logging source involved, including the radionuclide and its quantity, chemical, and physical form;
  3. Surface location and identification of the well;
  4. Results of efforts to immobilize and seal the source in place;
  5. A brief description of the attempted recovery effort;
  6. Depth of the source;
  7. Depth of the top of the cement plug;
  8. Depth of the well;
  9. The immediate threat to public health and safety justification for implementing abandonment if prior approval was not obtained in accordance with 45.6(25) “c”(2);
  10. Any other information, such as a warning statement, contained on the permanent identification plaque; and
  11. The names of state agencies receiving a copy of this report.
- d. Whenever a sealed source containing radioactive material is abandoned downhole, the licensee shall provide a permanent plaque<sup>2</sup> for posting the well or well-bore. This plaque shall:
- (1) Be constructed of long-lasting material, such as stainless steel or Monel; and
  - (2) Contain the following information engraved on its face:
    1. The word “CAUTION”;
    2. The radiation symbol without the conventional color requirement;
    3. The date of abandonment;
    4. The name of the well operator or well owner;
    5. The well name and well identification number(s) or other designation;
    6. The sealed source(s) by radionuclide and activity;
    7. The source depth and the depth to the top of the plug; and
    8. An appropriate warning, depending on the specific circumstances of each abandonment.<sup>3</sup>
- e. The licensee shall immediately notify the agency by telephone and subsequently by confirming letter if the licensee knows or has reason to believe that radioactive material has been lost in or to an underground potable aquifer. Such notice shall designate the well location and shall describe the magnitude and extent of loss of radioactive material, assess the consequences of such loss, and explain efforts planned or being taken to mitigate these consequences.

**45.6(26)** Reserved.

**45.6(27) *Radioactive markers.*** The licensee may use radioactive markers in wells only if the individual markers contain quantities of licensed material not exceeding the quantities specified in 641—Chapter 39, Appendix B, Exempt Quantities. The use of markers is subject only to the requirements of 45.6(10).

**45.6(28) *Uranium sinker bars.*** The licensee may use uranium sinker bars in well-logging applications only if they are legibly impressed with the words “CAUTION—RADIOACTIVE-DEPLETED URANIUM” and “NOTIFY CIVIL AUTHORITIES [or Company name] IF FOUND.”

**45.6(29) *Use of a sealed source in a well without a surface casing.*** The licensee may use a sealed source in a well without a surface casing for protecting fresh water aquifers only if the licensee follows a procedure for reducing the probability of the source’s becoming lodged in the well. The procedure must be approved by the NRC or licensing or agreement state.

**45.6(30) *Energy compensation source.*** The licensee may use an energy compensation source (ECS) which is contained within a logging tool, or other tool components, only if the ECS contains quantities of licensed material not exceeding 100 microcuries (3.7 MBq).

a. For well-logging applications with a surface casing for protecting fresh water aquifers, use of the ECS is only subject to the requirements of 45.6(9) to 45.6(11).

b. For well-logging applications without a surface casing for protecting fresh water aquifers, use of the ECS is only subject to the requirements of 45.6(4), 45.6(9) to 45.6(11), 45.6(25), and 45.6(29).

**45.6(31)** *Tritium neutron generator target source.*

*a.* Use of a tritium neutron generator target source that contains quantities not exceeding 30 curies (1110 MBq) and that is in a well with a surface casing to protect fresh water aquifers is subject to the requirements of this rule except subrules 45.6(4), 45.6(12), and 45.6(25).

*b.* Use of a tritium neutron generator target source that contains quantities exceeding 30 curies (1110 MBq) or that is in a well without a surface casing to protect fresh water aquifers is subject to the requirements of this rule except subrule 45.6(12).

<sup>2</sup>An example of a suggested plaque is shown in Appendix F of this chapter.

<sup>3</sup>Appropriate warnings may include: (a) "Do not drill below plug-back depth"; (b) "Do not enlarge casing"; or (c) "Do not re-enter the hole", followed by the words, "before contacting the Iowa Department of Public Health."

## CHAPTER 45—APPENDIX A

SUBJECTS FOR INSTRUCTION OF  
RADIOGRAPHER'S ASSISTANTS

Training provided to qualify individuals as radiographer's assistants in compliance with 45.1(10) shall be presented on a formal basis. The training shall include the following subjects:

- I. Fundamentals of radiation safety
  - A. Characteristics of radiation
  - B. Units of radiation dose and quantity of radioactivity
  - C. Significance of radiation dose
    - 1. Radiation protection standards
    - 2. Biological effects of radiation
    - 3. Case histories of radiography accidents
  - D. Levels of radiation from sources of radiation
  - E. Methods of controlling radiation dose
    - 1. Working time
    - 2. Working distances
    - 3. Shielding
- II. Radiation detection instrumentation to be used
  - A. Use of radiation survey instruments
    - 1. Operation
    - 2. Calibration
    - 3. Limitations
  - B. Survey techniques
  - C. Use of personnel monitoring equipment
    - 1. Film badges
    - 2. Thermoluminescent dosimeters (TLDs)
    - 3. Pocket dosimeters
    - 4. OSL devices
- III. The requirements of pertinent federal and state regulations
- IV. The licensee's or registrant's written operating and emergency procedures
- V. Radiographic equipment to be used
  - A. Remote handling equipment
  - B. Operation and control of radiographic exposure devices and sealed sources, including pictures or models of source assemblies (pigtailed)
  - C. Storage and transport containers, source changers
  - D. Operation and control of X-ray equipment
  - E. Collimators

## CHAPTER 45—APPENDIX B

GENERAL REQUIREMENTS FOR INSPECTION OF  
INDUSTRIAL RADIOGRAPHIC EQUIPMENT

- I. Panoramic devices (devices in which the sealed source is physically removed from the shielded container during exposure) shall be inspected for:
  - A. Radiographic exposure unit
    - 1. Abnormal surface radiation levels anywhere on camera, collimator, or guide tube;
    - 2. Condition of safety plugs;
    - 3. Proper operation of locking mechanism;
    - 4. Condition of pigtail connector;
    - 5. Condition of carrying device (straps, handle, etc.);
    - 6. Proper labeling.
  - B. Source tube
    - 1. Rust, dirt, or sludge buildup inside the source tube;
    - 2. Condition of source tube connector;
    - 3. Condition of source stop;
    - 4. Kinks or damage that could prevent proper operation;
    - 5. Presence of radioactive contamination.
  - C. Control cables and drive mechanism
    - 1. Proper drive mechanism with camera, as appropriate;
    - 2. Changes in general operating characteristics;
    - 3. Condition of connector on drive cable;
    - 4. Drive cable flexibility, wear, and rust;
    - 5. Excessive wear or damage to crank assembly parts;
    - 6. Damage to drive cable conduit that could prevent the cable from moving easily;
    - 7. Connection of the control cable connector with the pigtail connector for proper mating;
    - 8. Proper operation of source position indicator, if applicable;
    - 9. Presence of radioactive contamination.
- II. Directional beam devices shall be inspected for:
  - A. Abnormal surface radiation;
  - B. Changes in the general operating characteristics of the unit;
  - C. Proper operation of shutter mechanism;
  - D. Chafing or binding of shutter mechanism;
  - E. Damage to the device that might impair its operation;
  - F. Proper operation of locking mechanism;
  - G. Proper drive mechanism with camera, as appropriate;
  - H. Condition of carrying device (strap, handle, etc.);
  - I. Proper labeling.
- III. X-ray equipment shall be inspected for:
  - A. Change in the general operating characteristics of the unit;
  - B. Wear of electrical cables and connectors;
  - C. Proper labeling of console;
  - D. Proper console with machine, as appropriate;
  - E. Proper operation of locking mechanism;
  - F. Timer run-down cutoff;
  - G. Damage to tube head housing that might result in excessive radiation levels.

## CHAPTER 45—APPENDIX C

## TIME REQUIREMENTS FOR RECORD KEEPING

| Specific<br>Section       | Name of Record                                        | Time Interval Required for<br>Record Keeping                                                                      |
|---------------------------|-------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------|
| 45.1(4)                   | Receipt, transfer and disposal.                       | 3 years.                                                                                                          |
| 45.1(5)                   | Survey instrument calibrations.                       | 3 years.                                                                                                          |
| 45.1(6)                   | Quarterly inventory.                                  | 3 years.                                                                                                          |
| 45.1(7)                   | Utilization logs.                                     | 3 years.                                                                                                          |
| 45.1(8)                   | Quarterly inspection and maintenance.                 | 3 years.                                                                                                          |
| 45.1(9)                   | High radiation area control devices or alarm systems. | Until disposal is authorized by the agency.                                                                       |
| 45.1(10)                  | Training and testing records.                         | 3 years.                                                                                                          |
| 45.1(12)                  | Pocket dosimeter readings.                            | 3 years.                                                                                                          |
|                           | Pocket dosimeter calibrations.                        | 3 years.                                                                                                          |
|                           | Film badge, OSL device, or TLD reports.               | Until the agency terminates the license.                                                                          |
|                           | Alarming ratemeter calibrations.                      | 3 years.                                                                                                          |
|                           | Alarming ratemeter functions.                         | 3 years.                                                                                                          |
|                           | Estimates of overexposures.                           | Until the agency terminates the license.                                                                          |
| 45.1(19)                  | Current operating and emergency procedures.           | Until the license is terminated.                                                                                  |
|                           | Superseded material.                                  | 3 years after change.                                                                                             |
| 40.81(1)                  | Internal audit program.                               | 3 years.                                                                                                          |
| 45.1(11)                  | Radiographer audits.                                  | 3 years.                                                                                                          |
| 45.2(5)<br>and<br>45.3(7) | Radiation surveys.                                    | 2 years or until disposal is authorized by the agency if a survey was used to determine an individual's exposure. |
| 45.1(16)                  | Records at temporary job sites.                       | During temporary job site operations.                                                                             |
| 45.2(6)<br>and<br>45.3(8) | Annual evaluation of enclosed X-ray systems.          | 2 years.                                                                                                          |
| 45.3(5)                   | Leak tests.                                           | 3 years.                                                                                                          |
| 45.2(6)                   | Evaluation of certified cabinet X-ray systems.        | 2 years.                                                                                                          |

## CHAPTER 45—APPENDIX D

## OPERATING AND EMERGENCY PROCEDURES

The licensee's or registrant's operating and emergency procedures shall include instructions in at least the following:

- A. Handling and use of sources of radiation for industrial radiography such that no individual is likely to be exposed to radiation doses that exceed the limits established in 641—Chapter 40;
- B. Methods and occasions for conducting radiation surveys, including lock-out survey requirements;
- C. Methods for controlling access to industrial radiography areas;
- D. Methods and occasions for locking and securing sources or radiation;
- E. Personnel monitoring and the use of personnel monitoring equipment, including steps to be taken immediately by industrial radiographic personnel in the event a pocket dosimeter is found to be off-scale;
- F. Methods of transporting equipment to field locations, including packing of sources of radiation in the vehicles, placarding of vehicles, and controlling of sources of radiation during transportation (including applicable U.S. Department of Transportation requirements);
- G. Methods or procedures for minimizing exposure of individuals in the event of an accident, including procedures for a disconnect accident, a transportation accident, and loss of a sealed source;
- H. Procedures for notifying proper personnel in the event of an accident;
- I. Specific posting requirements;
- J. Maintenance of records (Appendix C); and
- K. Inspection and maintenance of radiographic exposure devices, source changers, storage containers, transport containers, source guide tubes, crank-out devices, and radiation machines.

## CHAPTER 45—APPENDIX E

## SUBJECTS TO BE INCLUDED IN TRAINING COURSES FOR LOGGING SUPERVISORS

- I. Fundamentals of radiation safety.
  - A. Characteristics of radiation.
  - B. Units of radiation dose and quantity of radioactivity.
  - C. Significance of radiation dose.
    - 1. Radiation protection standards.
    - 2. Biological effects of radiation dose.
  - D. Levels of radiation from sources of radiation.
  - E. Methods of minimizing radiation dose.
    - 1. Working time.
    - 2. Working distances.
    - 3. Shielding.
  - F. Radiation safety practices including prevention of contamination and methods of decontamination.
- II. Radiation detection instrumentation to be used.
  - A. Use of radiation survey instruments.
    - 1. Operation.
    - 2. Calibration.
    - 3. Limitations.
  - B. Survey techniques.
  - C. Use of personnel monitoring equipment.
- III. Equipment to be used.
  - A. Handling equipment.
  - B. Sources of radiation.
  - C. Storage and control of equipment.
  - D. Operation and control of equipment.
- IV. The requirements of pertinent federal and state regulations.
- V. The licensee's or registrant's written operating and emergency procedures.
- VI. The licensee's or registrant's record-keeping procedures.

## CHAPTER 45—APPENDIX F

EXAMPLE OF PLAQUE FOR IDENTIFYING WELLS CONTAINING SEALED SOURCES  
CONTAINING RADIOACTIVE MATERIAL ABANDONED DOWNHOLE

The size of the plaque should be convenient for use on active or inactive wells, e.g., a 7-inch square. Letter size of the word “CAUTION” should be approximately twice the letter size of the rest of the information, e.g., ½-inch and ¼-inch letter size, respectively.

These rules are intended to implement Iowa Code chapters 136B and 136C.

CHAPTER 46  
MINIMUM REQUIREMENTS FOR TANNING FACILITIES

**641—46.1(136D) Purpose and scope.** This chapter provides for the permitting and regulation of tanning facilities and devices used for the purpose of tanning human skin through the application of ultraviolet radiation. This includes, but is not limited to, public and private businesses, hotels, motels, apartments, condominiums, and health and country clubs.

All references to Code of Federal Regulations (CFR) in this chapter are those in effect as of April 30, 2007.

These rules stipulate minimum safety requirements relating to the operation of tanning devices; procedures for obtaining a permit; qualifications for tanning facility operators; and procedures for health departments to provide for the inspection of tanning facilities and enforcement of these rules. Tanning facilities which are in compliance with these rules are not relieved from the requirements of any other federal and state regulations or local ordinances.

**641—46.2(136D) Definitions.**

*“Board of health”* means a county, city, or district board of health that has a 28E agreement with the Iowa department of public health to perform inspections under this chapter.

*“Cleansing”* means to remove soil, dirt, oils or other residues from the surface of the tanning unit which may come into contact with the skin.

*“Cleansing agent”* means a substance capable of producing the effect of “cleansing.” These agents shall not adversely affect the equipment or the health of the consumer and shall be acceptable to the department or board of health.

*“Consumer”* means any member of the public who is provided access to a tanning facility in exchange for a fee or other compensation, or any individual who, in exchange for a fee or other compensation, is afforded use of a tanning facility as a condition or benefit of membership or access.

*“Department”* means the Iowa department of public health.

*“Director”* means the director of public health or the director’s designee.

*“Exposure position”* means any position, distance, orientation, or location relative to the radiation surfaces of a tanning device at which the user is intended to be exposed to ultraviolet radiation from the product, as recommended by the manufacturer.

*“Formal training”* means a course of instruction approved by the department for operators of tanning facilities.

*“Health care professional”* means an individual, licensed by the state of Iowa, who has received formal medical training in the use of phototherapy.

*“Inspection”* means an official examination or observation including but not limited to tests, surveys, and monitoring to determine compliance with rules, orders, requirements, and conditions of these rules.

*“Manufacturer’s recommendations”* means written guidelines established by a manufacturer and approved by the U.S. Food and Drug Administration for the installation and operation of the manufacturer’s equipment.

*“Operator”* means an individual designated to control operation of the tanning facility and to instruct and assist the consumer in the proper operation of the tanning devices.

*“Permit”* or *“permit to operate”* means a document issued by the department which authorizes a person to operate a tanning facility in Iowa.

*“Person”* means any individual, corporation, partnership, firm, association, trust, estate, public or private institution, group, agency, political subdivision of this state, any other state or political subdivision or agency thereof, and any legal successor, representative, agent, or agency of the foregoing, but shall not include federal government agencies.

*“Phototherapy device”* means a piece of equipment that emits ultraviolet radiation and is used by a health care professional in the treatment of disease.

*“Tanning device”* means any equipment that emits electromagnetic radiation with wavelengths in air between 200 and 400 nanometers and that is used for tanning of human skin, such as sunlamps,

tanning booths, or tanning beds. The terms also include any accompanying equipment such as protective eyewear, timers, and handrails.

*“Tanning facility”* means a place that provides access to tanning devices for compensation.

*“Ultraviolet radiation”* means electromagnetic radiation with wavelengths in air between 200 and 400 nanometers.

**641—46.3(136D) Exemptions.** The department may, upon application or upon its own initiative, grant exemptions from the requirements of these rules as long as it will not result in undue hazard to public health and safety. The following categories of devices are exempt from the provisions of this chapter:

**46.3(1) Other purposes.** Devices intended for purposes other than the deliberate exposure of human skin to ultraviolet radiation which produce or emit ultraviolet radiation incidental to their proper operation.

**46.3(2) Personal use.** Tanning devices which are limited exclusively to personal use by an individual and this individual’s immediate family. Multiple ownership of the device by persons for personal use only does not qualify it for the “personal use only” exemption.

**46.3(3) Phototherapy devices.** Phototherapy devices used by a properly trained health care professional in the treatment of disease.

**641—46.4(136D) Permits and fees.**

**46.4(1) Permit to operate.** No tanning facility shall be operated in the state without having a permit to operate issued by the department.

**46.4(2) Application requirements for permit.** Each person acquiring or establishing a tanning facility shall:

*a.* Apply for a permit prior to beginning operation. The application shall be completed on forms provided by the department or board of health and shall contain all information required by the form and accompanying instructions. A nonrefundable application fee of \$5 shall be remitted with the application.

*b.* A \$15 returned check fee will be charged for each check returned for insufficient funds.

*c.* The permit holder shall notify the department in writing within 30 days of any changes, additions, or deletions to the initial or renewal application as appropriate. This request does not apply to changes involving replacement of components in tanning equipment.

**46.4(3) Expiration of permit.** Except as provided in 46.4(4) “*b*,” each permit shall expire at the end of the specified day in the month and year stated therein.

**46.4(4) Renewal of permit.**

*a.* Permits shall be renewed annually upon acceptance of a renewal application provided by the department and upon receipt of the renewal fee of \$5.

*b.* If application has been filed prior to the expiration date of the existing permit, the existing permit shall not expire until the application status has been finally determined by the department.

*c.* A \$25 fee will be charged per month for failure to pay annual permit fees starting the month of expiration of the facility’s permit to operate. This fee is added to the annual fee not paid.

**46.4(5) Transfer or termination of permit.**

*a.* No permit shall be transferable from one person to another or from one tanning facility to another.

*b.* A permit shall be returned to the department or board of health if the facility ceases business or otherwise ceases on a permanent basis or changes ownership.

**46.4(6) Denial, revocation, or termination of permit.**

*a.* The department may deny, suspend or revoke a permit applied for or issued pursuant to this chapter for any of the following reasons:

(1) Submission of false statements in the application for a permit or in any statement of fact required by provisions of this chapter;

(2) Because of conditions revealed by the application or any report, record, inspection or other means which would warrant the department to refuse to grant a permit on an original application;

(3) Operation of the tanning facility in a manner that causes or threatens to cause hazard to the public health or safety;

(4) Failure to allow authorized representatives of the department or board of health to enter the tanning facility at reasonable times for the purpose of determining compliance with the provisions of this chapter, conditions of the permit or an order of the department or board of health;

(5) Failure to pay fees or costs required in rule 46.4(136D);

(6) Violation of any of the provisions of this chapter or of Iowa Code chapter 136D.

*b.* Except in cases where public health and safety require otherwise, prior to the institution of proceedings for suspension or revocation of a permit, the department or board of health shall:

(1) Call to the attention of the permit holder, in writing, the facts or conduct which may warrant such actions, and

(2) Provide opportunity for the permit holder to demonstrate or achieve compliance with all lawful requirements.

*c.* Any person aggrieved by a decision by the department to deny a permit or to suspend or revoke a permit after issuance may request a hearing under procedures established by the department.

*d.* Once a permit to operate has been suspended or revoked, it may be reinstated upon receipt of a fee of \$50 and completion of all other agency requirements. This fee is in addition to other applicable fees.

**46.4(7) Inspections.**

*a.* Inspections shall be conducted annually.

*b.* Inspection cost.

(1) An inspection cost of \$33 per tanning device shall be billed to the permit holder up to a maximum of \$330 per facility.

(2) Inspection costs shall be due upon receipt of payment due. When the tanning facility is located within a contracted area of a board of health, the costs billed will be paid to the contracted board of health or its designee.

(3) Inspection costs not received within 45 days of the date of billing will be assessed a \$25 penalty for each month or fraction thereof that the bill is delinquent.

(4) A penalty fee of \$25 per facility may be assessed for the following:

1. Failure to respond to a notice of violation within 30 days of the date of the inspection.

2. Failure to correct violations cited during the inspection.

*c.* Inspections shall include the following areas: proper operation and maintenance of devices, review of required records and training documentation, operator understanding and competency, and the requirements of these rules.

**641—46.5(136D) Construction and operation of tanning facilities.** Unless otherwise ordered or approved by the department, each tanning facility shall be constructed, operated, and maintained to meet the following minimum requirements:

**46.5(1)** A tanning facility shall provide and post the following warning signs and statements that describe the hazards associated with the use of tanning devices:

*a.* A warning sign in a conspicuous location readily visible to persons entering the establishment. This warning sign shall use 0.5-inch (12.7-millimeter) letters for “DANGER, ULTRAVIOLET RADIATION” and 0.25-inch (6.4-millimeter) letters for all other lettering. The sign shall use red lettering against a white background, be at least 9.0 inches by 12.0 inches (22.9 centimeters × 30.5 centimeters) and have the following wording:

---

DANGER

ULTRAVIOLET RADIATION

— Overexposure can cause

- Eye and skin injury
- Allergic reaction

- Repeated exposure may cause
    - Premature aging of the skin
    - Skin cancer
  - Failure to wear protective eyewear may result in
    - Severe burns to eyes
    - Long-term injury to eyes
  - Medication or cosmetics may increase your sensitivity
- 

*b.* A warning sign with the identical wording set forth in 46.5(1)“*a*” posted within one meter of the tanning device in a conspicuous location readily visible to a person preparing to use the device. This warning sign shall use 0.5-inch (12.7-millimeter) letters for “DANGER, ULTRAVIOLET RADIATION” and 0.25-inch (6.4-millimeter) letters for all other lettering. The sign shall use red lettering against a white background and be at least 6 inches by 9 inches (15.2 centimeters × 22.9 centimeters) in size.

*c.* A tanning facility shall require each consumer to read the information in Appendices 1, 2, and 3 prior to the consumer’s initial exposure and annually thereafter.

(1) The operator shall then require the consumer to sign a statement that the information has been read and understood.

(2) The information in Appendices 1, 2, and 3 shall be posted in each tanning room.

**46.5(2) Federal certification.**

*a.* Only tanning devices manufactured and certified under the provisions of 21 CFR Part 1040.20, “Sunlamp products and ultraviolet lamps intended for use in sunlamp products,” shall be used in tanning facilities. Compliance shall be based on the standard in effect at the time of manufacture as shown on the device identification label required by 21 CFR Parts 1010.2 and 1010.3.

*b.* Labeling shall meet the following requirements, be visible on each unit and be permanently affixed. Labeling shall include:

(1) A warning statement with the words “DANGER-Ultraviolet radiation. Follow instructions. Avoid overexposure. As with natural sunlight, overexposure can cause eye and skin injury and allergic reactions. Repeated exposure may cause premature aging of the skin and skin cancer. WEAR PROTECTIVE EYEWEAR; FAILURE TO MAY RESULT IN SEVERE BURNS OR LONG-TERM INJURY TO THE EYES. Medications or cosmetics may increase your sensitivity to the ultraviolet radiation. Consult a physician before using a sunlamp if you are using medications or have a history of skin problems or believe yourself especially sensitive to sunlight. If you do not tan in the sun, you are unlikely to tan from the use of this product.”

(2) Recommended exposure position(s). Any exposure position may be expressed either in terms of a distance specified both in meters and in feet (or in inches) or through the use of markings or other means to indicate clearly the recommended exposure position.

(3) Directions for achieving the recommended exposure position(s) and a warning that the use of other positions may result in overexposure.

(4) A recommended exposure schedule including duration and spacing of sequential exposures and maximum exposure time(s) in minutes.

(5) A statement of the time it may take before the expected results appear.

(6) Designation of the ultraviolet lamp type to be used in the product.

**46.5(3) Tanning device timers.**

*a.* Each tanning device shall have a timer which complies with the requirements of 21 CFR Part 1040.20. The maximum timer interval shall not exceed the manufacturer’s maximum recommended exposure time by a factor greater than ± 10 percent of the indicated setting.

*b.* Each tanning device must have a method of remote timing located so that consumers may not control their own exposure time.

*c.* Tokens for token timers shall not be issued to any consumer in quantities greater than the device manufacturer’s maximum recommended exposure time for the consumer.

**46.5(4)** Each tanning device shall incorporate a control on the product to enable the consumer to manually terminate the radiation emission from the product at any time without disconnecting the electrical source or removing the ultraviolet lamp.

**46.5(5)** The operator shall ensure that the facility's interior temperature does not exceed 100 degrees F or 38 degrees C.

**46.5(6)** Condition of tanning devices.

*a.* There shall be physical barriers to protect consumers from injury induced by falling against or breaking the lamps.

*b.* The tanning devices shall be maintained in good repair and comply with all state and local electrical code requirements.

**46.5(7)** Additional requirements for stand-up booths.

*a.* There shall be physical barriers (e.g., handrails) or other means (floor markings) to indicate the proper exposure distance between ultraviolet lamps and the consumer's skin.

*b.* The construction of the booth shall be such that it will withstand the stress of use and the impact of a falling person.

*c.* Access to the booth shall be of rigid construction; doors shall open outwardly. Handrails and nonslip floors shall be provided.

**46.5(8)** Protective eyewear.

*a.* Eyewear shall not be reused by another consumer.

*b.* Protective eyewear shall meet the requirements of 21 CFR Part 1040.20(c)(4).

*c.* Protective eyewear shall not be altered in any manner that would change its use as intended by the manufacturer (e.g., removal of straps).

*d.* A tanning facility operator shall not allow a consumer to use a tanning device if that consumer does not use the protective eyewear required by this subrule. To verify that a consumer has the proper eyewear, the operator must:

(1) Ask to see the eyewear before the consumer enters the tanning room; or

(2) Provide disposable eyewear in the tanning room at all times and post a sign stating that the disposable eyewear is available and that eyewear must be worn.

*e.* A tanning facility operator shall instruct the consumer in the proper utilization of the protective eyewear required by this subrule.

**46.5(9)** Operation.

*a.* A trained operator must be present when a tanning device is operated. The operator must be within hearing distance to allow the consumer to easily summon help if necessary. If the operator is not in the immediate vicinity during use, the following conditions must be met:

(1) The consumer can summon help through use of an audible device such as an intercom or buzzer; and

(2) The operator or emergency personnel can reach the consumer within a reasonable amount of time after being summoned.

*b.* The facility permit to operate shall be displayed in an open public area of the tanning facility.

*c.* A record shall be kept by the facility operator of each consumer's total number of tanning visits and tanning times, exposure lengths in minutes, times and dates of the exposure, and any injuries or illness resulting from the use of a tanning device.

*d.* Any tanning injury not requiring a physician's care and any resulting changes in tanning sessions shall be noted in the consumer's file. A written report of any tanning injury requiring a physician's care shall be forwarded by the permit holder to the department within five working days of its occurrence or knowledge thereof. The report shall include:

(1) The name of the affected individual;

(2) The name and location of the tanning facility involved;

(3) The nature of the injury;

(4) The name and address of the health care provider treating the affected individual, if any; and

(5) Any other information considered relevant to the situation.

*e.* Defective or burned-out lamps or filters shall be replaced with a type intended for use in that device as specified on the product label on the tanning device or with lamps or filters that are “equivalent” under 21 CFR Part 1040, Section 1040.20, and policies applicable at the time of lamp manufacture.

*f.* The permit holder shall replace ultraviolet lamps and bulbs, which are not otherwise defective or damaged, at such frequency or after such duration of use as may be recommended by the manufacturer of such lamps or bulbs.

*g.* Contact surfaces of tanning devices shall be:

- (1) Cleansed by the operator with a cleansing agent between each use;
- (2) Covered by a nonreusable protective material during each use; or
- (3) Cleansed by the consumer provided the following conditions are met:

1. The operator instructs the consumer annually on how to properly cleanse the unit;
2. The consumer annually signs a statement stating that the consumer agrees to cleanse the unit after each use;

3. Signs are posted in each tanning room reminding the consumer to cleanse the tanning unit after each use and stating the proper way to cleanse the unit; and

4. The operator cleanses the tanning unit at least once a day.

*h.* Any records or documentation required by this chapter must be maintained in the tanning facility for a minimum of two years. Records maintained on computer systems shall be regularly copied, at least monthly, and updated on storage media other than the hard drive of the computer. An electronic record must be retrievable as a printed copy.

*i.* The operator shall limit the exposure of the consumer to the maximum exposure frequency and session duration recommended by the manufacturer.

*j.* When a tanning device is being used, no other person shall be allowed to remain in the tanning device area.

*k.* No person or facility shall advertise or promote tanning packages labeled as “unlimited” unless tanning frequency limits set by the manufacturer are included in advertisements.

**46.5(10) Training of operators.**

*a.* No individual shall begin functioning as an operator unless the individual has satisfactorily completed a training program. Training shall include but not be limited to:

- (1) The requirements of this chapter;
- (2) Procedures for correct operation of the tanning facility and tanning devices;
- (3) The determination of skin type of consumers and appropriate determination of duration of exposure to tanning devices;
- (4) Recognition of reaction or overexposure;
- (5) Manufacturer’s procedures for operation and maintenance of tanning devices;

*b.* Owners and managers must complete formal training approved by the department. All owners and managers trained after December 31, 1997, must satisfactorily pass a certification examination approved by the department before operating a tanning facility or training employees.

*c.* For operators trained after December 31, 1997. Owners and managers are responsible to train operators in the above topics and to provide review as necessary. Training programs shall be approved by the department and include final testing. Operators shall be questioned during inspections as to the level of their understanding and competency in operating the tanning device.

*d.* Proof of training for both owner/managers and employees must be maintained in the tanning facility and available for inspection. For operators trained after December 31, 1997, the employee record shall be the original test which bears the signature of the employee, the date, and a statement signifying that all answers have been completed by the employee and without prior knowledge of the scoring key.

*e.* Operators shall be at least 16 years of age.

*f.* Operators shall complete the required training and testing every five years.

**46.5(11) Promotional materials.** A tanning facility shall not claim, or distribute promotional materials that claim, that using a tanning device is safe or free from risk or that the use of the device will result in medical or health benefits. The only claim that may be made is that the device is for cosmetic use only.

**46.5(12)** Requirements for electronically controlled facilities. Electronically controlled facilities are those facilities that rely on electronic means to monitor consumers.

*a.* Entry into the facility is allowed by card only. Two individuals may not enter under the same card. The card is specifically activated for tanning use if the facility offers other activities.

*b.* Police and all emergency services will have access to the facility through a key box located outside the entrance of the facility.

*c.* The tanning unit will not activate if the card is not programmed for tanning. The card will not activate if two individuals are in the tanning room.

*d.* The consumer must sign a tanning agreement that states the number of minutes per session, that the consumer agrees to wear protective eyewear, that the consumer will cleanse the unit after tanning, and that the consumer is aware of the emergency access in each room.

*e.* The card will be programmed for the number of minutes the consumer is allowed to tan. The card may be reprogrammed for an increase in minutes per session only after the consumer has reviewed and re-signed the Tanning Agreement. After 30 consecutive days without the consumer's accessing the tanning facility, the card will be deactivated and the consumer must reapply to access the tanning unit.

*f.* The operator will demonstrate to each consumer how to properly cleanse the unit after tanning, including the top, bottom, and handles. A sign will be placed in each room explaining the cleansing process. The operator will cleanse the units at least once a day when they are in use.

*g.* Free disposable eyewear will be placed in each room along with a sign stating that the disposable eyewear is available and that eyewear must be worn.

*h.* An emergency call button or device will be placed in each tanning room conveniently located within reach of the tanning bed. This device will call the operator or emergency personnel.

*i.* During annual inspections, the inspector may ask any consumer about any of the above processes.

**641—46.6(136D) Inspections, violations and injunctions.**

**46.6(1)** The director or an authorized agent shall have access at all reasonable times to any tanning facility to inspect the facility to determine if this chapter is being violated.

**46.6(2)** A person who operates or uses a tanning device or tanning facility in violation of this chapter or of any rule adopted pursuant to this chapter is guilty of a simple misdemeanor.

**46.6(3)** If the agency finds that a person has violated, or is violating or threatening to violate, this chapter and that the violation creates an immediate threat to the health and safety of the public, the agency may petition the district court for a temporary restraining order to restrain the violation or threat of violation.

If a person has violated, or is violating or threatening to violate, this chapter, the agency may petition the district court for an injunction to prohibit the person from continuing the violation or threat of violation.

**46.6(4)** On application for injunctive relief and a finding that a person is violating or threatening to violate this chapter, the district court shall grant any injunctive relief warranted by the facts.

**46.6(5) Enforcement.**

*a.* The department shall take the following steps or use county ordinances or any other applicable ordinances, resolutions, rules or regulations when enforcement of these rules is necessary.

(1) Cite each section of the Iowa Code or rules violated.

(2) Specify the manner in which the owner or operator failed to comply.

(3) Specify the steps required for correcting the violation.

(4) Request a corrective action plan, including a time schedule for completion of the plan.

(5) Set a reasonable time limit, not to exceed 30 days from the receipt of the notice, within which the permit holder must respond.

*b.* The department shall review the corrective action plan and approve it or require that it be modified.

*c.* In cases where the permit holder fails to comply with conditions of the written notice, the agency shall send a regulatory letter, via certified mail, advising the permit holder that unless action is

taken within five days of receipt, the case shall be turned over to the appropriate state/city/county attorney for court action.

Appendix 1  
POTENTIAL PHOTSENSITIZING AGENTS

1. Not all individuals who use or take these agents will experience a photosensitive reaction or the same degree of photosensitive reaction. An individual who experiences a reaction on one occasion will not necessarily experience it again or every time.

2. Names of agents should be considered only as examples. They do not represent all the names under which a product may be sold. A more complete list is available from the facility operator.

3. If you are using an agent in any of these classes, you should reduce UV exposure even if your particular medication is not listed.

Acne treatment (Retinoic acid, Retin-A) Psoralens (5-Methoxypsoralen, 8-Methoxypsoralen, 4,5,8-trimethyl-psoralen)

Antibacterials (deodorant bar soaps, antiseptics, cosmetics, halogenated carbanilides, halogenated phenols, halogenated salicylanilides, bithionol, chlorhexidine, hexachlorophene)

Antibiotics, anti-infectives (Tetracyclines)

Anticonvulsants (carbamazepine, trimethadione, promethazine)

Antidepressants (amitriptyline, Desipramine, Imipramine, Nortriptyline, Protriptyline), Tranquilizers, anti-emetics (Phenothiazines)

Antidiabetics (glucose-lowering agents) (sulfonylureas, oral antidiabetics, hypoglycemics)

Antihistamines (diphenhydramine, promethazine, triprolidine, chlorpheniramine)

Anti-inflammatory (Piroxicam), Non-steroidal anti-inflammatory drugs (Ibuprofen, Naproxen, Piroxicam)

Antimicrobials (griseofulvin), Sulfonamides ("Sulfa drugs," antimicrobials, anti-infectives)

Atropine-like drugs (anticholinergics, antiparkinsonism drugs, antispasmodics, synthetic muscle relaxants)

Coal tar and derivatives (Denorex, Tegrin, petroleum products used for psoriasis and chronic eczema and in shampoos)

Contraceptives, oral and estrogens (birth control pills, estrogens, progesterones)

Dyes (used in cosmetic ingredients, acridine, anthracene, eosin (lipstick), erythrosine, fluorescein, methyl violet, methylene blue, rose bengal)

Perfumes and toilet articles (musk ambrette, oil of bergamot, oil of cedar, oil of citron, oil of lavender, oil of lemon, oil of lime, oil of rosemary, oil of sandalwood)

Thiazide diuretics ("water pills")

## Appendix 2

## SUN-REACTIVE SKIN TYPES USED IN CLINICAL PRACTICE

| SKIN TYPE | SKIN REACTIONS TO SOLAR RADIATION <sup>(a)</sup><br>EXAMPLES                                                             | EXAMPLES                                                                                                       |
|-----------|--------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------|
| I         | Always burns easily and severely (painful burn). Tans little or none and peels.                                          | People most often with fair skin, blue eyes, freckles. Unexposed skin is white.                                |
| II        | Usually burns easily and severely (painful burn). Tans minimally or lightly, also peels.                                 | People most often with fair skin; red or blonde hair; blue, hazel or even brown eyes. Unexposed skin is white. |
| III       | Burns moderately and tans about average.                                                                                 | Normal average Caucasoid. Unexposed skin is white.                                                             |
| IV        | Burns minimally, tans easily, and above average with each exposure. Exhibits IPD (immediate pigment darkening) reaction. | People with white or light brown skin, dark skin, dark brown hair, dark eyes. Unexposed skin is brown.         |
| V         | Rarely burns, tans easily and substantially. Always exhibits IPD reaction.                                               | Unexposed skin is brown.                                                                                       |
| VI        | Never burns and tans profusely; exhibits IPD reaction.                                                                   | Unexposed skin is black.                                                                                       |

(a) Based in the first 45-60 minutes (= 2-3 minimum erythema dose) exposure of the summer sun (early June) at sea level

(b) Rescinded IAB 3/29/06, effective 5/3/06.

Appendix 3  
POTENTIAL NEGATIVE HEALTH EFFECTS  
RELATED TO ULTRAVIOLET EXPOSURE

1. Increased risk of skin cancer later in life.
2. Increased risk of skin thickening, age spots, irregular pigmentation, and premature aging.
3. Possibility of burning or rash, especially if using any of the potential photosensitizing drugs and agents. The consumer should consult a physician before using a tanning device if using medications, if there is a history of skin problems or if the consumer is especially sensitive to sunlight.
4. Increased risk of eye damage unless proper eyewear is worn. Iowa law requires the use of proper eyewear during tanning sessions.

TANNING SYSTEMS

1. Low-pressure tanning systems use a higher percentage of UVB rays which penetrate only the upper layer of skin and can cause burning more easily than high-pressure tanning systems. Low-pressure systems require more frequent sessions to maintain a tan.  
High-intensity tanning systems use more lamps and shorter tanning sessions than low-intensity tanning systems. These are still classified as low-pressure systems.
2. High-pressure tanning systems use a higher percentage of UVA rays which penetrate more deeply and can permanently damage the lower layers of skin and increase the incidences of skin cancers. High-pressure systems require fewer and less frequent sessions to maintain a tan.
3. The exposure schedule for each specific unit is shown on the labeling on the tanning unit. Iowa law requires the operator to limit the exposure of each consumer to the exposure schedule shown on the unit in which the consumer is tanning.

These rules are intended to implement Iowa Code chapter 136D.

## CHAPTER 50 ORAL HEALTH

**641—50.1(135) Purpose.** The purpose of establishing the state public health dental director position and the oral health bureau within the Iowa department of public health is to create a strong oral health unit with sufficient leadership and capacity to determine priorities, develop plans, make funding decisions, and establish policies that improve the oral health of all Iowans. These rules will enhance the efficiency of state government, strengthen relationships with federal and local authorities, and improve interrelationships between the public and private sectors.

**641—50.2(135) Definitions.** For purposes of this chapter, the following definitions apply:

*“Core public health functions”* means the functions of health assessment, policy development, and assurance.

1. Assessment: regular collection, analysis, interpretation, and communication of information about health conditions, risks, and assets.

2. Policy development: development, implementation, and evaluation of plans and policies, for public health in general and priority health needs in particular, in a manner that incorporates scientific information and community values and is in accordance with state public health policy.

3. Assurance: ensuring, by encouragement, regulation, or direct action, that programs and interventions which maintain and improve health are carried out.

*“Dental care for persons with disabilities program”* means the department program to provide dental services to low-income children and young adults with special health care needs.

*“Dental home”* means a network of individualized care based on risk assessment, which includes oral health education, dental screenings, preventive services, diagnostic services, treatment services, and emergency services.

*“Dental sealant program”* means the department program implemented through public or private nonprofit agencies to provide dental examinations or screenings and dental sealants to children in a school-based setting.

*“Department”* means the Iowa department of public health.

*“Direct dental services”* means those services generally delivered one-on-one between a health professional and a client.

*“Enabling services”* means services that allow or provide for access to and the derivation of benefits from the array of basic health care services and includes activities such as outreach, case management, health education, transportation, translation, home visits, support services, and other services.

*“EPSDT”* means the Early and Periodic Screening, Diagnosis, and Treatment program which provides for regular preventive health care services for children aged 0 to 21 as authorized by Title XIX of the Social Security Act.

*“Fluoride mouth rinse program”* means the department program implemented through elementary schools and middle schools, which includes oral health education and weekly rinsing with fluoride. The program targets schools with children at high risk for tooth decay.

*“Gap filling”* means direct health services supported by public health staff or resources that are needed but are not otherwise accessible in the community.

*“Infrastructure building”* means activities directed at improving and maintaining the health status of all clients by providing support for the development and maintenance of comprehensive health service systems, including development and maintenance of health service standards or guidelines, training, data, and planning systems.

*“I-Smile program”* means the department program implemented through public and private nonprofit agencies and private health care providers to increase access to dental care for children and to ensure a dental home.

*“Medicaid”* means the Medicaid program authorized by Title XIX of the Social Security Act and funded through the Iowa department of human services from the United States Department of Health and Human Services.

*“Oral health education”* means information provided by a health professional about dental disease, prevention, and anticipatory guidance, including oral habits, oral development, fluoride exposure, and dietary counseling.

*“Population-based services”* means preventive interventions and personal health services developed for and available to populations of the state rather than for individuals in a one-on-one situation. Disease prevention, health promotion, and statewide outreach are major components.

*“Senior smiles program”* means the department program implemented through public and nonprofit private agencies to provide oral screenings and interventions for older Iowans.

*“Title V”* means Title V of the Social Security Act and the federal requirements contained in the Omnibus Reconciliation Act of 1989 (Public Law 101-239) which address the Maternal and Child Health and Children with Special Health Care Needs programs.

*“Title V maternal and child health program”* means the department program implemented through local public or private nonprofit agencies for the assurance of access to preventive and primary child and maternal health services and services to children with special health care needs in accordance with 641—Chapter 76, Maternal and Child Health Program. Through this program, agencies are responsible for ensuring access to dental services, with an emphasis on early intervention and preventive oral health care beginning at or near the age of 12 months and continuing into adulthood.

*“Title XIX”* means the Medicaid program authorized by Title XIX of the Social Security Act and funded through the Iowa department of human services from the United States Department of Health and Human Services.

*“Vulnerable populations”* means individuals and groups whose needs are not addressed by traditional dental service providers and health care systems.

[ARC 7672B, IAB 4/8/09, effective 4/15/09]

**641—50.3(135) Dental director responsibilities.** The state public health dental director shall provide overall leadership of the state oral health program and shall be responsible for the following duties:

1. Plan and direct all work activities of the statewide public health dental program.
2. Develop comprehensive initiatives for oral health prevention and improved access to dental care.
3. Evaluate the effectiveness of the statewide public health dental program and of program personnel.
4. Manage the oral health bureau, including direction, supervision, and fiscal management of bureau staff.
5. Represent the department to external stakeholders, including public and private organizations, providers, and the general public.
6. Other related work as required.

**641—50.4(135) Oral health bureau functions.** The bureau shall be responsible for the core public health functions of assessment, policy development, and assurance of oral health services in Iowa.

**50.4(1) Assessment.** The bureau shall develop and implement an ongoing oral health surveillance system to evaluate and monitor the oral health status of children and other vulnerable population groups in Iowa. Assessment activities may include the following:

- a. Assess oral health status and needs so that problems can be identified and addressed.
- b. Assess determinants of identified oral health needs, including resources.
- c. Assess the fluoridation status of water systems and other sources of fluoride.
- d. Identify, investigate, and monitor oral health problems and health hazards.

**50.4(2) Policy development.** The bureau shall facilitate ongoing strategic planning and application of evidence-based research in oral health policy development to improve access to care and the overall oral health of all Iowans. Policy development activities may include the following:

- a. Develop plans and policies through a collaborative process that supports individual and community oral health efforts to address oral health needs.

*b.* Provide leadership to address oral health problems by maintaining a strong oral health unit within the department.

*c.* Mobilize partnerships with policymakers, professionals, organizations, groups, the public and others to identify and implement solutions to oral health problems.

**50.4(3) Assurance.** The bureau shall assist Iowans in maintaining optimal oral health throughout all stages of life by providing or ensuring infrastructure-building, population-based, and enabling services at the state and local level. Infrastructure-building and enabling services shall target the improvement of access to dental care and prevention. Population-based services shall include public health training and technical assistance, educational activities that increase oral health awareness, and activities that improve dental support systems for families.

The bureau shall leverage federal, state, and local resources to administer grant programs which include Title V maternal and child health, including the Medicaid and EPSDT programs; I-Smile program; dental sealant program; fluoride mouth rinse program; dental care for persons with disabilities program; senior smiles program; and other new and existing programs. Assurance activities may include the following:

*a.* Provide assistance and resources to local public health programs for community capacity-building efforts to identify vulnerable populations and to develop innovative approaches that link people to needed oral health services, including gap-filling direct dental services.

*b.* Inform, educate, and empower the public regarding oral health problems and solutions.

*c.* Promote and enforce laws and regulations that protect and improve oral health, ensure safety, and assure public accountability for the public's well-being.

*d.* Assure that the public health and personal health workforce has the capacity and expertise to effectively address oral health needs.

*e.* Evaluate the effectiveness, accessibility, and quality of population-based and personal oral health services.

*f.* Conduct research and support projects to gain new insights and promote innovative solutions to oral health problems.

**641—50.5(135) Funding.** The oral health bureau and the state public health dental director shall be funded through federal Title V funds and state matching funds, state general funds, department of human services funding, and other funds as available.

These rules are intended to implement Iowa Code Supplement sections 135.14 and 135.15.

[Editorial change: IAC Supplement 11/5/08]

[Filed Emergency ARC 7672B, IAB 4/8/09, effective 4/15/09]

\*September 3, 2008, effective date of ARC 7023B [Ch 50] delayed 70 days by the Administrative Rules Review Committee at its meeting held August 12, 2008. At its meeting held October 14, 2008, the Committee delayed the effective date of 641—50.2(135), definition of "Dental home," until adjournment of the 2009 Session of the General Assembly.

CHAPTER 51  
DENTAL SCREENING

**641—51.1(82GA,ch146,SF2111) Purpose.** The purpose of the dental screening requirement is to improve the oral health of Iowa's children. Dental screenings will facilitate early detection and referral for treatment of dental disease; reduce the incidence, impact, and cost of dental disease; inform parents and guardians of their children's dental problems; encourage the establishment of effective oral health practices early in life; promote the importance of oral health as an integral component of preparation for school and learning; and contribute to statewide surveillance of oral health. These rules will enhance the I-Smile dental home concepts of prevention, education, care coordination, and treatment to provide a critical step in closing the gap in access to dental care for underserved children.

**641—51.2(82GA,ch146,SF2111) Definitions.** For purposes of this chapter, the following definitions apply:

*"Admitting official"* means the superintendent of schools or the superintendent's designated representative if a public school; if an accredited nonpublic school, the governing official of the school.

*"Applicant"* means any person seeking first-time enrollment in an Iowa elementary school or high school.

*"Dental hygienist"* means a person licensed to practice as a dental hygienist pursuant to Iowa Code chapter 153.

*"Dentist"* means a person licensed to practice as a dentist pursuant to Iowa Code chapter 153.

*"Department"* means the Iowa department of public health.

*"Electronic signature"* means a confidential personalized digital key, code, or number that is used for secure electronic data transmission and that identifies and authenticates the signatory.

*"Elementary school"* means kindergarten, if provided, and grades one through six in an Iowa school district or accredited nonpublic school.

*"High school"* means grades 9 through 12 in an Iowa school district or accredited nonpublic school.

*"Infection or injury"* means soft tissue laceration, bleeding or swelling, or a broken or dislodged tooth.

*"I-Smile"* means the department program designed to increase access to dental care for children and to ensure a dental home.

*"I-Smile coordinator"* means a designated dental hygienist who is employed by or under contract with a local public health agency to administer the I-Smile dental home program.

*"Local board of health"* means a county, city, or district board of health as defined in Iowa Code section 137.2.

*"No obvious problems"* means a child's hard and soft tissues appear to be visually healthy and there is no apparent reason for the child to be seen before the next routine dental checkup.

*"Nurse"* means a person licensed to practice as a nurse pursuant to Iowa Code chapter 152.

*"Physician"* means a person licensed to practice medicine and surgery or osteopathic medicine and surgery pursuant to Iowa Code chapter 148, 150, or 150A.

*"Physician assistant"* means a person licensed to practice as a physician assistant pursuant to Iowa Code chapter 148C.

*"Requires dental care"* means that tooth decay or a white spot lesion is suspected in one or more teeth.

*"Requires urgent dental care"* means that obvious tooth decay is present in one or more teeth, the child is experiencing pain, or there is evidence of infection or injury.

*"Signature"* means an original signature, or authorized use of stamped signature, or electronic signature of a dentist, dental hygienist, physician, physician assistant, or nurse.

*"Tooth decay"* means a visible cavity or hole in a tooth with brown or black coloration, or a retained root.

*"Transfer student"* means an applicant from an elementary school or a high school outside Iowa who is seeking enrollment in an elementary school or a high school located in Iowa.

*“White spot lesion”* means a demineralized area of a tooth, usually appearing as a chalky, white spot or white line near the gum line. A white spot lesion is considered an early indicator of tooth decay, especially in primary teeth.

**641—51.3(82GA,ch146,SF2111) Persons included.** The dental screening requirements specified in this chapter apply to all persons newly enrolled or attempting to enroll for the first time in a public or accredited nonpublic elementary school or high school in Iowa.

**641—51.4(82GA,ch146,SF2111) Persons excluded.** Exclusions to these rules are permitted on an individual basis for religious and financial hardship reasons. Applicants approved for a religious or financial hardship exemption shall submit to the admitting official a valid Iowa department of public health certificate of dental screening exemption.

**51.4(1) Religious exemption.** A religious exemption may be granted to an applicant if the dental screening conflicts with a genuine and sincere religious belief.

*a.* The certificate of dental screening exemption for religious reasons shall attest that the dental screening conflicts with a genuine and sincere religious belief and that the belief is in fact religious and not based merely on philosophical, scientific, moral, personal, or medical opposition to dental screenings.

*b.* The certificate of dental screening exemption for religious reasons shall be signed and dated by the applicant or, if the applicant is a minor, by the parent or guardian.

*c.* The certificate of dental screening exemption for religious reasons is valid only when notarized.

*d.* To be valid, the certificate of dental screening exemption for religious reasons shall be the department certificate or a form approved in writing by the department.

**51.4(2) Financial hardship exemption.** A financial hardship exemption may be granted to an applicant who is unduly burdened by the cost of a dental screening.

*a.* The certificate of dental screening exemption for financial hardship reasons shall attest that dental screening would cause a genuine financial burden to the applicant.

*b.* The certificate of dental screening exemption for financial hardship reasons shall be signed and dated by a dentist, dental hygienist, physician, physician assistant, or nurse.

*c.* The certificate of dental screening exemption for financial hardship reasons shall include the provider type and the provider’s name, business address, and telephone number.

*d.* To be valid, the certificate of dental screening exemption for financial hardship reasons shall be the department certificate or a form approved in writing by the department.

**51.4(3)** A faxed copy, photocopy, or electronic copy of the valid certificate of dental screening exemption is acceptable.

**641—51.5(82GA,ch146,SF2111) Dental screening components.**

**51.5(1)** A dental screening is a visual assessment and is noninvasive and nondiagnostic.

**51.5(2)** Dental instrumentation is not required for a dental screening.

**51.5(3)** A dental screening can identify obvious or suspected oral health conditions that require or that might require examination by a dentist.

**51.5(4)** The dental screening shall include the following steps:

*a.* Visual inspection of the soft tissues, including the lips, cheeks, gums, tongue, floor of mouth, and roof of mouth, to assess infection or injury.

*b.* Visual inspection of all tooth surfaces to assess tooth decay, white spot lesions, or injury.

*c.* Documentation of the screening and treatment needs according to 51.9(82GA,ch146,SF2111).

**641—51.6(82GA,ch146,SF2111) Dental screening providers.**

**51.6(1) Elementary school.** A dental screening for elementary school enrollment shall be performed by a licensed dentist, a licensed dental hygienist, a licensed physician, a licensed physician assistant, or a licensed nurse.

**51.6(2) High school.** A dental screening for high school enrollment shall be provided by a licensed dentist or a licensed dental hygienist.

**641—51.7(82GA,ch146,SF2111) Time line for valid dental screening.**

**51.7(1)** Elementary school. To be valid, a minimum of one dental screening shall be performed on an applicant no earlier than three years of age but prior to reaching six years of age.

**51.7(2)** High school. To be valid, a minimum of one dental screening shall be performed on an applicant within one year prior to the enrollment date.

**51.7(3)** A dental screening may also be deemed valid by the department if the department determines that the applicant has substantially complied with the dental screening requirements.

**641—51.8(82GA,ch146,SF2111) Proof of dental screening.** The applicant or, if a minor, the parent or guardian of a child enrolled in elementary school or high school shall submit a valid Iowa department of public health certificate of dental screening to the admitting official of the school district or accredited nonpublic elementary school in which the applicant wishes to enroll.

**51.8(1)** To be valid, the certificate of dental screening shall be the department certificate or a form approved in writing by the department.

*a.* The Certificate of Dental Screening form is available on the department's Web site at [http://www.idph.state.ia.us/hpcdp/oral\\_health.asp](http://www.idph.state.ia.us/hpcdp/oral_health.asp) or is available by calling the department at (866)528-4020.

*b.* Elementary school. The certificate of dental screening shall be signed by a dentist, dental hygienist, physician, physician assistant, or nurse.

*c.* High school. The certificate of dental screening shall be signed by a dentist or dental hygienist.

*d.* The certificate of dental screening shall include all information required by 51.9(82GA,ch146,SF2111).

**51.8(2)** A faxed copy, photocopy, or electronic copy of the valid certificate of dental screening is acceptable.

**641—51.9(82GA,ch146,SF2111) Dental screening documentation.** A person performing a dental screening required by this chapter shall record the following student information on the certificate of dental screening provided or approved in writing by the department of public health in cooperation with the department of education:

1. Name (first and last);
2. Birth date;
3. Parent or guardian name;
4. Telephone numbers (home or mobile);
5. Address (street, city, and county);
6. School;
7. Grade level;
8. Gender;
9. Treatment needs (no obvious problems, requires dental care, requires urgent dental care);
10. Date of dental screening;
11. Provider type;
12. Provider name, business address, and telephone number; and
13. Provider signature.

**641—51.10(82GA,ch146,SF2111) Assuring dental screening services.** Each public and accredited nonpublic school, in collaboration with the department, shall assure that the parent or guardian of a student enrolled in the school has complied with the dental screening requirement. Parents or guardians of students who do not have a valid certificate of dental screening shall be provided with community dental screening referral resources, including contact information for the I-Smile coordinator, the department, or a dental society.

**641—51.11(82GA,ch146,SF2111) Records.** It shall be the duty of the admitting official of an elementary school or a high school to ensure that a valid certificate of dental screening or certificate of dental screening exemption is on file for each child enrolled.

**51.11(1)** The admitting official shall ensure that all certificates of dental screening are properly completed according to 51.8(82GA,ch146,SF2111).

**51.11(2)** The admitting official shall ensure that all certificates of dental screening exemption are properly completed according to 51.4(1) and 51.4(2).

**51.11(3)** The admitting official shall keep the certificates of dental screening or certificates of dental screening exemption on file at the school in which the applicant is enrolled and assist the applicant or the applicant's parent or guardian in the transfer of the certificate to another school upon the transfer of the applicant to another school.

**51.11(4)** The local board of health or its designee, the department of education, and the department or its designee shall have the right to have access to the certificates of dental screening and certificates of dental screening exemption of students enrolled in elementary schools and high schools.

**641—51.12(82GA,ch146,SF2111) Reporting.**

**51.12(1)** It shall be the duty of each local board of health or its designee to audit the certificates of dental screening and certificates of dental screening exemption in the schools within the local board's jurisdiction to determine compliance with 2007 Iowa Acts, chapter 146, and 2008 Iowa Acts, Senate File 2111.

**51.12(2)** By June 30 annually, each local board of health shall furnish the department with evidence for the preceding school year that each child enrolled in any public or accredited nonpublic school within the local board's jurisdiction met the dental screening requirement.

**51.12(3)** The evidence shall be in the form of a report that includes:

- a. Name of school, and
- b. Enrollments by grade, and
- c. The number of valid certificates of dental screening by grade, and
- d. The number of valid certificates for religious exemptions by grade, and
- e. The number of valid certificates for financial hardship exemptions by grade.

**641—51.13(82GA,ch146,SF2111) Iowa's dental screening database.** The department may develop and maintain a statewide dental screening database to ensure that students receive the required dental screening and to monitor oral health.

**51.13(1)** The database may consist of information from the valid certificates of dental screening and certificates of dental screening exemption, including identifying and demographic data.

**51.13(2)** The database may be updated, at a minimum, annually.

**51.13(3)** Database reporting shall comply with 51.13(82GA,ch146,SF2111).

**51.13(4)** Restricted uses of database. The database information shall not be used to:

- a. Market services to students or nonstudents,
- b. Assist in bill collection services, or
- c. Locate or identify students or nonstudents for any purpose other than those expressly provided in this rule.

**51.13(5)** Confidentiality of database information. Dental screening information, including identifying and demographic data maintained in the database, is confidential and may not be disclosed except under the following limited circumstances:

a. The department may release information from the database to the following:

- (1) The person who received the dental screening or the parent or guardian of the person who received the dental screening;
- (2) Users of the database who complete an agreement with the department that specifies the conditions under which the database can be accessed and who have been issued an identification code or password by the department;

(3) Persons or entities requesting dental screening data in an aggregate form that does not identify an individual either directly or indirectly;

(4) Agencies that complete an agreement with the department which specifies conditions for access to database information and how that information will be used. Agencies shall not use information obtained from the database to market services to students or nonstudents, to assist in bill collection services, or to locate or identify students or nonstudents for any purposes other than those expressly provided in this rule; or

(5) A representative of a state or federal agency, or an entity bound by that state or federal agency, to the extent that the information is necessary to perform a legally authorized function of that agency or the department. The state or federal agency is subject to confidentiality regulations that are the same as or more stringent than those in the state of Iowa. State or federal agencies shall not use information obtained from the database to market services to students or nonstudents, to assist in bill collection services, or to locate or identify students or nonstudents for any purposes other than those expressly provided in this rule.

b. Approved database users shall not release dental screening data except to the person who received the dental screening, the parent or guardian of the person who received the dental screening, health records staff of schools, medical, dental, or health care providers providing continuity of care, and other approved users of the database.

**641—51.14(82GA,ch146,SF2111) Release of dental screening information.**

**51.14(1)** *Between a dentist, dental hygienist, physician, physician assistant, or nurse, and the elementary school or high school that the child attends.* A dentist, dental hygienist, physician, physician assistant, or nurse shall disclose a student's dental screening information, including the student's name, date of birth, name of parent or guardian, demographic information, the month, day and year of the screening, and the screening results and treatment needs to an elementary school or a high school upon written or verbal request from the elementary school or high school. Written or verbal permission from a student or the student's parent or guardian is not required to release this information to an elementary school or a high school.

**51.14(2)** *Among dentists, dental hygienists, physicians, physician assistants, or nurses.* Dental screening information, including the student's name, date of birth, name of parent or guardian, demographic information, the month, day and year of the screening, and the screening results and treatment needs shall be provided by one dentist, dental hygienist, physician, physician assistant, or nurse to another health care provider without written or verbal permission from the student or the student's parent or guardian.

**641—51.15(82GA,ch146,SF2111) Referral requirements.** Parents or guardians of students who require dental care or require urgent dental care shall be referred to the parent's or guardian's dentist of choice. Students without a dentist or who have difficulty accessing dental care shall be referred to a local I-Smile coordinator or local public health agency for assistance with completion of dental care. This assistance may include locating dentists, scheduling appointments, and identifying payment sources.

**641—51.16(82GA,ch146,SF2111) Provider training.** For the purpose of quality assurance and consistency, the department shall make training and training materials available for dental screening providers.

These rules are intended to implement 2007 Iowa Acts, chapter 146, and 2008 Iowa Acts, Senate File 2111.

CHAPTER 55  
ADVISORY COUNCIL ON HEAD INJURIES  
[Prior to 9/30/92, see Persons With Disabilities Division[431] Ch 3]

**641—55.1(135) Council established.** The advisory council on head injuries, part of the Iowa department of public health, is established pursuant to Iowa Code section 135.22A consisting of a minimum of nine members in addition to the ex officio members. The council shall appoint the chairperson, vice chairperson and secretary of the council. The officers shall serve until their successors are appointed.

**641—55.2(135) Meetings.** The advisory council on head injuries shall meet at least quarterly. The first regular meeting of the fiscal year is the annual meeting. Upcoming meeting dates are set at regular council meetings. A majority of the members shall constitute a quorum.

All meetings will be held in facilities accessible and functional for people with physical disabilities. A good faith effort will be made to have all written meeting materials available in Braille or on audiotape if requested by people with visual impairments and to provide sign language interpreters for people who are deaf if requests are received within a reasonable time prior to the meeting. Notice of a meeting is published at least 24 hours prior to the meeting and will contain the specific date, time, and place of the meeting. All meetings shall be held in facilities that are accessible to people with physical disabilities. Agendas are available to any interested persons a minimum of five days prior to or at the meeting. If requested, agendas are available in Braille or on audiocassette. All meetings are open to the public unless a closed session is allowed, pursuant to Iowa Code section 21.5, and is voted by two-thirds of the entire membership or by all present. The operation of council meetings will be governed by the following rules of procedure:

**55.2(1)** Any council member who is unable to attend a meeting will notify the council office; there may not be a meeting if a majority is not present.

**55.2(2)** When a quorum is present, a position is carried by affirmative vote of a majority of the entire membership of the council.

**55.2(3)** Persons wishing to make a presentation to the council shall submit the request to the council office not less than 14 days prior to the meeting. Presentations may be made at the discretion of the chair or only upon matters appearing on the agenda.

**55.2(4)** Persons wishing to submit written materials should do so at least 14 days in advance of the scheduled meeting to ensure that council members have adequate time to receive and evaluate the material.

**55.2(5)** Special meetings may be called by the chair only upon finding good cause and shall be held in strict accordance with Iowa Code chapter 21. Special meetings may also be called by a majority of the members. A special meeting does not include the task forces; it is an emergency meeting of the council for business that cannot wait until the next regular council meeting.

**55.2(6)** Cameras and recording devices may be used at open meetings, provided they do not obstruct the meeting. The presiding officer may request a person using such a device to discontinue its use if it is obstructing the meeting. If a person fails to comply with the request, the presiding officer shall order that person excluded from the meeting.

**55.2(7)** The presiding officer may exclude any person from the meeting for repeated behavior that disrupts or obstructs the meeting.

**55.2(8)** Instances not covered by these rules shall be governed by Robert's Rules of Order (newly revised).

**55.2(9)** The council may conduct a meeting by electronic means only in circumstances where such a meeting in person is impossible or impractical, pursuant to Iowa Code section 21.8. Any vote by mail shall have the tabulated results presented at the next regular meeting of the council and the ballots retained for a period of six months for confirmation of results.

**641—55.3(135) Task forces.** The chair of the council may establish task forces as needed. Task forces may be composed of voting, ex officio, and nonmembers. The task force meetings must be announced at the regular council meetings.

**641—55.4(135) Minutes.** The council office shall keep minutes of all its meetings showing the date, time, place, members present and the action taken at each meeting. The minutes shall show the results of each vote taken, and the vote of each member present shall be made public at the open session. Approved minutes shall be available at the council office for inspection during regular office hours.

**641—55.5(135) Duties of the council.** Duties of the council are listed in Iowa Code section 216A.80.

**641—55.6(135) Conflict of interest.** A conflict of interest exists when members of the council participate in a way that directly affects the personal or financial interests of the council members. In order to avoid conflict of interest problems, council members who have a personal or financial interest in an action must abstain from participating in the entire process which would include both discussion and voting. The council members who have or think they may have a conflict of interest should declare that there is or may be a conflict of interest and request a determination from the council. Where a conflict of interest is determined to exist, council members should abstain from voting and should be recorded as abstaining when votes are taken.

These rules are intended to implement Iowa Code section 135.22A.

[Filed 5/17/91, Notice 4/3/91—published 6/12/91, effective 7/17/91]

CHAPTER 56  
BRAIN INJURY SERVICES PROGRAM

**641—56.1(135) Definitions.** For purposes of this chapter, the following definitions apply:

*“Assessment”* means the review of the consumer’s current functioning with regard to the consumer’s situation, needs, strengths, abilities, desires and goals.

*“Brain injury services waiver”* means the state’s medical assistance home- and community-based services waiver for persons with brain injury.

*“Consumer”* means an individual who has applied for and been found eligible to participate in the waiver-eligible component or the cost-share component of the brain injury services program.

*“Cost share”* means the portion an individual is responsible to pay for services received by the individual.

*“Countable income,”* when determining initial and ongoing eligibility for the brain injury services program, means all earned and unearned income, unless specifically exempted in 441—subrule 86.2(2).

*“Department”* means the Iowa department of public health.

*“Family size,”* for purposes of establishing initial and ongoing eligibility under the brain injury services program, means all persons living together who are children and who are parents of those children as defined in 441—subrule 86.2(3).

*“Program administrator”* means the division of behavioral health and professional licensure within the department of public health.

**641—56.2(135) Purpose.** The purpose of the brain injury services program is to provide services, service funding, or other support for persons with a brain injury under one of the program components established pursuant to Iowa Code section 135.22B. The overall purpose of this chapter is to establish administrative rules in accordance with Iowa Code section 135.22B relative to the financial eligibility requirements for services under the waiver-eligible and cost-share components of the brain injury services program.

**641—56.3(135) Waiver-eligible component.** Persons eligible for the brain injury services waiver and on the waiting list for the waiver are eligible for the waiver-eligible component. The brain injury services program may provide funding for the nonfederal share of the cost of services if the appropriation for the medical assistance program does not have sufficient funding designated to do so.

**56.3(1)** Provision of funding under this component is not an entitlement and is subject to funding availability.

**56.3(2)** A person who receives support under the waiver-eligible component of the brain injury services program is not eligible to receive support under the cost-share component of the program.

**641—56.4(135) Cost-share component.** Persons determined ineligible for the brain injury services waiver, due to fiscal or functional criteria, or persons who are eligible for the waiver but for whom funding was not authorized or available to provide waiver eligibility are eligible for the cost-share component of the brain injury services program.

**56.4(1)** An individual must meet all of the following requirements:

- a. The individual is aged one month through 64 years.
- b. The individual has a diagnosed brain injury as defined in Iowa Code section 135.22.
- c. The individual is a resident of Iowa and either a United States citizen or a qualified alien as defined in 8 U.S.C. Section 1641.
- d. The individual must meet the cost-share component’s financial eligibility requirements and be willing to pay a cost share for the cost-share component.

**56.4(2)** Cost-share financial eligibility. Countable income shall be used when determining initial and ongoing eligibility for the program. All of the following criteria must be met.

- a. Individuals who are at 300 percent or below the federal poverty level for a family of the same size will not be assessed a cost share.

*b.* Individuals whose countable income is between 301 percent and 350 percent of the federal poverty level for a family of the same size will be assessed a 10 percent cost share for services that will be payable to the service provider.

*c.* Individuals whose countable income is between 351 percent and 400 percent of the federal poverty level for a family of the same size will be assessed a 20 percent cost share for services that will be payable to the service provider.

*d.* Individuals whose countable income is above 400 percent of the federal poverty level for a family of the same size will be assessed a 30 percent cost share for services that will be payable to the service provider.

**56.4(3)** The cost-share component must be the source of last resort for payment; the program shall not pay for services when the provision of those services is mandated by law or administrative rule to be the responsibility of another governmental unit, private agency or program. Brain injury cost-share services are not available to an individual who receives services or funding under any type of medical assistance home- and community-based services waiver.

**641—56.5(135) Application process.**

**56.5(1)** The applicant must authorize the department of human services to provide the applicant's brain injury services waiver application materials to the brain injury services program.

**56.5(2)** The department of human services will provide the department the application materials, which shall include but are not limited to the waiver application and any denial letter, financial assessment, and functional assessment regarding the person in an agreed-upon format.

**56.5(3)** The department will determine eligibility within 45 days of receipt of complete application materials.

*a.* After determining if the applicant's service needs fit within the scope of the brain injury services program, the department shall inform the discharge planner or case manager on behalf of the applicant or the applicant's legal representative of the applicant's eligibility.

*b.* The case manager shall establish an interdisciplinary team for each consumer and, with the team, identify the consumer's plan based on the consumer's needs and desires as well as the availability and appropriateness of services. The case manager shall notify the department of the service plan.

*c.* The date of eligibility for applicants deemed eligible for the cost-share component will be the date when both the service eligibility and financial eligibility assessments have been completed.

*d.* Notification of eligibility shall be mailed or given to the applicant or the applicant's legal representative within seven days of the date eligibility determination is completed.

**56.5(4)** After determining an applicant's eligibility, if no payment slot is available, the brain injury services program shall enter the applicant on a waiting list according to the following:

*a.* The date a completed Form 470-2927 or 470-2927(S), Health Services Application, is date-stamped in the county department of human services office. If more than one application is received on the same date, applicants shall be entered on the waiting list on the basis of the applicant's month of birth, with January designated as month one.

*b.* As slots become available, applicants shall be selected from the waiting list based on their order on the waiting list to maintain the number of persons approved for participation in the program.

**56.5(5)** The consumer or the consumer's legal representative shall complete and sign Iowa department of human services Form 470-3349, Brain Injury Functional Assessment, indicating the consumer's choice of caregiver.

**56.5(6)** The case manager for the consumer will initiate development of the consumer's service plan and commencement of services. All service plans must be approved by the program administrator.

**56.5(7)** The department will not pay the cost of services provided to a consumer prior to approval of eligibility.

**56.5(8)** The program administrator shall make the final determination as to whether program funding will be authorized under the cost-share component.

**641—56.6(135) Service providers and reimbursement.**

**56.6(1)** A service provider must either be certified to provide services under the brain injury services waiver or have a contract with a county to provide services and apply to become certified to provide services under the brain injury services waiver within 90 days of the date that services commence.

**56.6(2)** The reimbursement rate payable for the cost of a service provided under the cost-share component is the rate payable under the medical assistance program. However, if the service provider does not have a medical assistance program reimbursement rate, the rate shall be the amount payable under the county contract.

**56.6(3)** All service providers must contract with the department and will be paid retroactively to the date of service eligibility.

**56.6(4)** Service providers will be responsible for billing and collection of any cost share from an individual as determined by the program administrator within the department.

**641—56.7(135) Available services/service plan.**

**56.7(1)** Services available shall be consistent with the services offered through the Medicaid home- and community-based services waiver.

**56.7(2)** Service plans must reflect use of all services, including non-cost-shared services, to ensure that no duplication of services occurs.

**56.7(3)** All service plans must be submitted, either electronically or in hard-copy format, to the program administrator for approval prior to implementation.

**56.7(4)** Any change to the service plan must be approved by the program administrator.

**641—56.8(135) Redetermination.**

**56.8(1)** A complete financial redetermination of continuing eligibility for the brain injury services program shall be completed annually by the department, after consultation with the case manager and the interdisciplinary team.

**56.8(2)** A redetermination of continuing eligibility shall also be made when a change in financial or functional circumstances occurs that affects eligibility.

**641—56.9(135) Appeal rights.** Appeal rights for any individual denied funding under either the waiver-eligible or the cost-share component of the program are as defined in 641—176.8(135,17A) with the following exception: An appeal must be submitted within 45 days of receipt of notification of an adverse decision.

These rules are intended to implement Iowa Code section 135.22B.

## CHAPTER 67 BLOOD LEAD TESTING

**641—67.1(135) Purpose.** The purpose of the blood lead testing requirement is to improve the health of Iowa's children. Blood lead testing will facilitate early detection and referral for treatment of lead poisoning; reduce the incidence, impact, and cost of lead poisoning; inform parents and guardians of their children's exposure to lead; promote the importance of reducing exposure to lead as an integral component of preparation for school and learning; and contribute to statewide surveillance of childhood lead poisoning.

**641—67.2(135) Definitions.** For purposes of this chapter, the following definitions apply:

*"Applicant"* means any person seeking first-time enrollment in kindergarten in a public or accredited nonpublic elementary school in Iowa.

*"Blood lead database"* means the database maintained by the department that includes the results of all blood lead testing reported to the department as required by 641—Chapter 1.

*"Blood lead testing"* means taking a capillary or venous sample of blood and sending it to a laboratory to determine the level of lead in the blood.

*"Capillary"* means a blood sample taken from the finger or heel for lead analysis.

*"Department"* means the Iowa department of public health.

*"Elementary school"* means an Iowa school district or accredited nonpublic school offering kindergarten.

*"Health care provider"* means a physician licensed under Iowa Code chapter 148, 150, or 150A, a physician assistant licensed under Iowa Code chapter 148C, or an advanced registered nurse practitioner licensed under Iowa Code chapter 152.

*"Laboratory"* means a laboratory certified to perform either waived or non-waived blood lead analysis according to the federal Clinical Laboratory Improvement Act of 1988 (CLIA).

*"Transfer student"* means an applicant from any elementary school outside Iowa who is seeking enrollment in kindergarten in an elementary school in Iowa.

*"Venous"* means a blood sample taken from a vein in the arm for lead analysis.

*"Very low risk"* means that a child has not (1) lived in, visited, or spent time in any building built before 1960, including but not limited to the child's home, a daycare center, a preschool, a baby-sitter's home or a relative's home; (2) eaten nonfood items; (3) lived with or frequently come in contact with an adult who works with lead on the job or as part of a hobby, including but not limited to painting, welding, foundry work, renovating old homes, working at a shooting range, manufacturing or recycling batteries, working with ceramics or stained glass, working with sheet metal or scrap metal, or plumbing; (4) lived near a battery manufacturing plant, battery recycling plant, lead smelter, or other source of lead emissions; (5) been born in or spent more than three months in Mexico, Central America, eastern Europe, or southeast Asia; (6) ingested food, candy, or remedies containing lead; (7) played with toys, jewelry, or other items that the U.S. Consumer Product Safety Commission has recalled due to lead contamination; or (8) been exposed to any other products or substances determined by the department, the U.S. Environmental Protection Agency, the U.S. Department of Housing and Urban Development, the Centers for Disease Control and Prevention, or the U.S. Food and Drug Administration to contain lead.

**641—67.3(135) Persons included.** The blood lead testing requirement specified in this chapter applies to all applicants and transfer students as defined in this chapter.

**641—67.4(135) Persons excluded.** Exclusions to these rules are permitted on an individual basis for religious reasons and for children determined by the department to be at very low risk for elevated blood lead levels. The parent or guardian of an applicant or transfer student approved for a religious exemption or an exemption for very low risk shall submit to the board of directors of each school district and the authorities in charge of each nonpublic school a valid Iowa department of public health certificate of

blood lead testing exemption. To be valid, the certificate shall be the certificate of blood lead testing exemption provided or approved by the department.

**67.4(1)** Religious exemption. A religious exemption may be granted to an applicant or transfer student if the blood lead testing conflicts with a genuine and sincere religious belief.

*a.* The certificate of blood lead testing exemption for religious reasons shall attest that the blood lead testing conflicts with a genuine and sincere religious belief and that the belief is in fact religious and not based merely on philosophical, scientific, moral, personal, or medical opposition to blood lead testing.

*b.* The certificate of blood lead testing exemption for religious reasons shall be signed and dated by the applicant's or transfer student's parent or guardian.

*c.* The certificate is valid only when notarized.

**67.4(2)** Exemption for very low risk. The department may grant to an applicant or transfer student an exemption for very low risk if the parent or guardian provides evidence satisfactory to the department that the applicant or transfer student meets the definition of very low risk.

*a.* The certificate of blood lead testing exemption for very low risk shall be signed and dated by the applicant's or transfer student's parent or guardian and by the chief of the bureau of lead poisoning prevention.

*b.* The certificate of blood lead testing exemption for very low risk is valid only when notarized.

**67.4(3)** A faxed copy, photocopy, or electronic copy of the valid certificate of blood lead testing exemption is acceptable.

**641—67.5(135) Blood lead testing requirement.**

**67.5(1)** Each applicant and transfer student shall meet the requirements of subrule 67.6(1).

**67.5(2)** The board of directors of each school district and the authorities in charge of each nonpublic school shall, in collaboration with the department, ensure that applicants and transfer students comply with the blood lead testing requirement according to subrule 67.6(1).

**641—67.6(135) Time line for valid blood lead testing.**

**67.6(1)** To be valid, a blood lead test shall be performed on an applicant or transfer student before the applicant or transfer student reaches six years of age, or in cases in which the applicant or transfer student has already reached six years of age, as soon as the department notifies the parent or guardian that a blood lead test has not yet been performed.

**67.6(2)** Desirable age for blood lead testing. A parent or guardian of a child under two years of age is strongly encouraged to have the child tested for elevated blood lead levels by the time that the child reaches two years of age.

**641—67.7(135) Proof of blood lead testing.**

**67.7(1)** The board of directors of each school district and the authorities in charge of each nonpublic school shall furnish the department, in the format specified by the department, within 60 days after the start of the school calendar, an electronic list of the children enrolled in kindergarten, including the names of children who have filed certificates of blood lead testing exemption.

**67.7(2)** The department shall match these electronic lists of children with the department's blood lead database and shall notify the school districts and nonpublic schools of the children who have and who have not met the blood lead testing requirement set forth in this chapter.

**67.7(3)** If the parent or guardian cannot provide evidence that the child received a blood lead test in accordance with subrule 67.5(1), the board of directors of the school district or the authorities in charge of the nonpublic school shall, in collaboration with the department, provide the parent or guardian with community blood lead testing program information, including contact information for the department. The department shall provide this information to and shall work with the school districts, nonpublic schools, and the local childhood lead poisoning prevention programs to ensure that children who have not met the blood lead testing requirement are tested as required by subrule 67.5(1).

**641—67.8(135) Referral requirements.** Parents or guardians of children who require a blood lead test shall be referred to a health care provider of choice. The parents or guardians of children without a health care provider or who have difficulty accessing blood lead testing shall be referred to a local childhood lead poisoning prevention program, local child health center, or local public health agency for assistance with completion of blood lead testing. This assistance may include locating health care providers, scheduling appointments, identifying payment sources, and providing blood lead testing.

**641—67.9(135) Blood lead testing documentation.** A health care provider performing a blood lead test required by this chapter shall ensure that the results of the blood lead test are reported to the department as required by 641—Chapter 1.

**641—67.10(135) Records.** The board of directors of each school district and the authorities in charge of each nonpublic school shall, in collaboration with the department, ensure that each applicant and transfer student complies with the blood lead testing requirement according to subrule 67.6(1) or has a valid certificate of blood lead testing exemption on file.

**67.10(1)** The board of directors of each school district and the authorities in charge of each nonpublic school shall ensure that the certificate of blood lead testing exemption is properly completed according to rule 641—67.4(135).

**67.10(2)** Within the constraints of the privacy rights of the parents or guardians and students, the local board of health, the department of education, and the department or its designee shall have the right to have access to the department's determination that a child has received a blood lead test and to the certificates of blood lead testing exemption of children enrolled in kindergarten.

**641—67.11(135) Provider training.** For the purpose of quality assurance and consistency, the department shall make training and training materials available for health care providers who will be performing blood lead testing and for school officials, school health personnel, local childhood lead poisoning prevention programs, local child health centers, and local public health agencies.

These rules are intended to implement Iowa Code Supplement section 135.105D and 2008 Iowa Acts, Senate File 2111.

[Filed 7/10/08, Notice 5/21/08—published 7/30/08, effective 9/3/08]

## CHAPTER 68 CONTROL OF LEAD-BASED PAINT HAZARDS

**641—68.1(135) Applicability.** The provisions of this chapter are applicable in jurisdictions in which a local board has adopted this chapter for the purpose of requiring control of lead-based paint hazards where a child has been identified with an elevated blood lead level. Nothing in this chapter shall be construed as requiring a local board to adopt this chapter as a model regulation.

**641—68.2(135) Definitions.**

*“Certified elevated blood lead (EBL) inspector/risk assessor”* means a person who has met the requirements of Iowa Administrative Code 641—70.5(135) for certification or interim certification and who has been certified by the department.

*“Chewable surface”* means an interior or exterior surface painted with lead-based paint that a young child can mouth or chew.

*“Child-occupied facility”* means a building, or portion of a building, constructed prior to 1978, visited by the same child under the age of six years on at least two different days within any week (Sunday through Saturday period, provided that each day’s visit lasts at least three hours and the combined weekly visits last at least six hours). Child-occupied facilities may include, but are not limited to, day care centers, preschools and kindergarten classrooms.

*“Clearance testing”* means an activity conducted following interim controls, lead abatement, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation to determine that the hazard reduction activities are complete. Clearance testing includes a visual assessment, the collection and analysis of environmental samples, the interpretation of sampling results, and the preparation of a report.

*“Department”* means the Iowa department of public health.

*“Deteriorated paint”* means any interior or exterior paint or other coating that is cracking, flaking, chipping, peeling, or chalking, or any paint or coating located on an interior or exterior surface that is otherwise damaged or separated from the substrate of a building component.

*“Dripline”* means the area within three feet surrounding the perimeter of a building.

*“Dust-lead hazard”* means surface dust in residential dwellings or child-occupied facilities that contains a mass-per-area concentration of lead greater than or equal to 40 micrograms per square foot on floors, 250 micrograms per square foot on interior windowsills, and 400 micrograms per square foot on window troughs based on wipe samples. A dust-lead hazard is present in a residential dwelling or child-occupied facility when the weighted arithmetic mean lead loading for all single-surface or composite samples of floors and interior windowsills is greater than or equal to 40 micrograms per square foot on floors, 250 micrograms per square foot on interior windowsills, and 400 micrograms per square foot on window troughs based on wipe samples. A dust-lead hazard is present on floors, interior windowsills, or window troughs in an unsampled residential dwelling in a multifamily dwelling if a dust-lead hazard is present on floors, interior windowsills, or window troughs, respectively, in at least one sampled residential unit on the property. A dust-lead hazard is present on floors, interior windowsills, or window troughs in an unsampled common area in a multifamily dwelling if a dust-lead hazard is present on floors, interior windowsills, or window troughs, respectively, in at least one sampled common area in the same common area group on the property. If dust samples are not taken, it may be assumed that surfaces in rooms with hazardous lead-based paint or where renovation, remodeling, or repainting has occurred recently are dust-lead hazards.

*“Elevated blood lead (EBL) child”* means any child who has had one venous blood lead level greater than or equal to 20 micrograms per deciliter or at least two venous blood lead levels of 15 to 19 micrograms per deciliter.

*“Elevated blood lead (EBL) inspection”* means an inspection to determine the sources of lead exposure for an elevated blood lead (EBL) child and the provision within ten working days of a written report explaining the results of the investigation to the property owner and occupant of the residential dwelling or child-occupied facility being inspected and to the parents of the elevated blood lead (EBL)

child. A certified elevated blood lead (EBL) inspector/risk assessor shall not determine that a residential dwelling is free of lead-based paint as a result of an elevated blood lead (EBL) inspection.

*“Friction surface”* means an interior or exterior surface that is subject to abrasion or friction including, but not limited to, certain window, floor, and stair surfaces.

*“Hazardous lead-based paint”* means lead-based paint that is present on a friction surface where there is evidence of abrasion or where the dust-lead level on the nearest horizontal surface underneath the friction surface (e.g., the windowsill or floor) is equal to or greater than the dust-lead hazard level, lead-based paint that is present on an impact surface that is damaged or otherwise deteriorated from impact, lead-based paint that is present on a chewable surface, or any other deteriorated lead-based paint in any residential building or child-occupied facility or on the exterior of a residential building or child-occupied facility.

*“Impact surface”* means an interior or exterior surface that is subject to damage by repeated sudden force such as certain parts of doorframes.

*“Lead-based paint”* means any paint or other surface coatings that contain lead equal to or in excess of 1.0 milligram of lead per square centimeter or more than 0.5 percent by weight. Lead-based paint is present on any surface that is tested and found to contain lead equal to or in excess of 1.0 milligram per square centimeter or more than 0.5 percent by weight and on any surface like a surface tested in the same room equivalent that has a similar painting history and that is found to be lead-based paint.

*“Lead-based paint hazard”* means hazardous lead-based paint, a dust-lead hazard, or a soil-lead hazard.

*“Local board”* means the local board of health as authorized by Iowa Code chapter 137.

*“Mid-yard”* means an area of a residential yard approximately midway between the dripline of a residential building and the nearest property boundary or between the driplines of a residential building and another building on the same property.

*“Occupant”* means any person living, sleeping, cooking or eating in, or having any actual possession of, a dwelling or dwelling unit.

*“Owner”* means any person who, alone or jointly with others: (1) has legal title to any dwelling, with or without accompanying actual possession thereof, or (2) has charge, care or control of any dwelling by acting as the agent of the owner or as the executor, administrator, trustee, or guardian of the estate of the owner.

*“Paint-lead hazard”* means the presence of hazardous lead-based paint in a residential dwelling or a child-occupied facility.

*“Play area”* means an area of frequent soil contact by children of less than six years of age as indicated by, but not limited to, factors including the following: the presence of play equipment (sandboxes, swing sets, and sliding boards), toys, or other children’s possessions; observations of play patterns; or information provided by parents, residents, caregivers, or property owners.

*“Residential building”* means a building containing one or more residential dwellings.

*“Residential dwelling”* means (1) a detached single-family dwelling unit, including the surrounding yard, attached structures such as porches and stoops, and detached buildings and structures including, but not limited to, garages, farm buildings, and fences; or (2) a single-family dwelling unit in a structure that contains more than one separate residential dwelling unit, which is used or occupied, or intended to be used or occupied, in whole or part, as the home or residence of one or more persons.

*“Retaliation”* means harassment, termination of the tenancy, discontinuation of utilities or other services, and any other action taken against the lessee.

*“Soil-lead hazard”* means bare soil on residential real property or on the property of a child-occupied facility that contains total lead greater than or equal to 400 parts per million for the dripline, mid-yard, and play areas. A soil-lead hazard is present in a dripline, mid-yard, or play area when the soil-lead concentration from a composite sample of bare soil is greater than or equal to 400 parts per million. If soil samples are not taken, it may be assumed that bare soil within three feet of the foundation of a garage or other structure built prior to 1978 is a soil-lead hazard.

**641—68.3(135) Elevated blood lead (EBL) inspections required.** The local board shall appoint a certified elevated blood lead (EBL) inspector/risk assessor to conduct elevated blood lead (EBL) inspections in residential dwellings and child-occupied facilities where an elevated blood lead (EBL) child lives, visits, or has recently lived. All owners and occupants shall allow access to the residential dwellings and child-occupied facilities that the certified elevated blood lead (EBL) inspector/risk assessor desires to inspect.

**641—68.4(135) Refusal of admittance.** If the certified elevated blood lead (EBL) inspector/risk assessor appointed by the local board is refused entry to a property, then the certified elevated blood lead (EBL) inspector/risk assessor may make a complaint under oath to any magistrate of the county. The magistrate may issue a warrant directing the owner or occupant to allow the certified elevated blood lead (EBL) inspector/risk assessor to conduct an elevated blood lead (EBL) inspection and directing a peace officer to accompany the certified elevated blood lead (EBL) inspector/risk assessor during the elevated blood lead (EBL) inspection/risk assessment.

**641—68.5(135) Lead hazard reduction required.**

**68.5(1)** When the certified elevated blood lead (EBL) inspector/risk assessor appointed by the local board determines that hazardous lead-based paint, a dust-lead hazard, or a soil-lead hazard is present in a residential dwelling unit or child-occupied facility where an elevated blood lead (EBL) child lives, frequently visits, or has recently resided, the certified elevated blood lead inspector/risk assessor shall issue a written notice to the owner within two weeks of the inspection and receipt of any laboratory results. The written notice shall require the owner to complete lead hazard reduction in a time period determined by the certified elevated blood lead (EBL) inspector/risk assessor. If the occupant who occupies the residential dwelling at the time that this written notice is issued vacates the residential dwelling, the residential dwelling shall not be leased or occupied by any other person until the certified elevated blood lead (EBL) inspector/risk assessor issues a written notice that the lead hazard reduction has been completed.

**68.5(2)** The owner of any residential dwelling or child-occupied facility which has been determined to contain hazardous lead-based paint, a soil-lead hazard, or a dust-lead hazard shall correct these hazards within the time period allowed by the certified elevated blood lead (EBL) inspector/risk assessor in the written notice. The following methods shall be used for lead hazard reduction. These methods shall not require the services of a lead abatement contractor certified in accordance with Iowa Administrative Code 641—70.5(135). However, other local, state, or federal regulations may require the use of a contractor who has completed an eight-hour lead-safe work practices course or a lead abatement contractor or lead abatement worker certified in accordance with Iowa Administrative Code 641—70.5(135).

*a.* On a surface that contains hazardous lead-based paint, but is not chewable and does not have evidence of impact or friction, the lead-based paint hazard shall be reduced by removing all loose and deteriorated paint from the surface, preparing the surface for repainting, and repainting the surface with a lead-free coating.

*b.* On a surface that contains hazardous lead-based paint and is chewable or has evidence of impact or friction, the lead-based paint hazard shall be reduced by treating the surface one inch back from the edge or corner through one of the following methods:

(1) All lead-based paint on the treatment area shall be removed to the bare substrate. The surface shall be prepared for repainting and repainted with a lead-free coating.

(2) The treatment area shall be covered with a permanently affixed lead-free material such as plastic, wood, or vinyl. Carpet may be used on floors and stair treads.

*c.* Dust-lead hazards shall be reduced by thoroughly cleaning the affected surface.

*d.* Soil-lead hazards shall be reduced by planting grass or groundcover, applying sod, or covering the affected area with six inches of bark, gravel, or other material.

*e.* Lead hazard reduction shall be conducted using lead-safe work practices to protect the safety of the occupants and workers. Occupants shall not enter the work area while work is underway. The following are prohibited methods of lead hazard reduction:

- (1) Open-flame burning or torching of lead-based paint.
- (2) Machine sanding or grinding or abrasive blasting or sandblasting of lead-based paint unless used with high-efficiency particulate air (HEPA) exhaust control that removes particles of 0.3 microns or larger from the air at 99.97 percent or greater efficiency.
- (3) Uncontained water blasting of lead-based paint.
- (4) Dry scraping or dry sanding of lead-based paint except in conjunction with the use of a heat gun or around electrical outlets.
- (5) Operating a heat gun at a temperature above 1100 degrees Fahrenheit.

**68.5(3)** The certified elevated blood lead (EBL) inspector/risk assessor shall inspect all areas identified as hazards after lead hazard reduction is complete. The certified elevated blood lead (EBL) inspector/risk assessor may conduct clearance testing pursuant to Iowa Administrative Code 641—Chapter 70 to ensure that no dust-lead hazards exist after the work is complete. Within two weeks of verifying that all lead hazard reduction has been completed as required, the certified elevated blood lead (EBL) inspector/risk assessor shall issue a written notice to the owner and occupant stating that the lead hazard reduction has been completed and that the repaired surfaces must be maintained in good condition.

**641—68.6(135) Retaliation prohibited.**

**68.6(1)** The lessor of a dwelling, the employees of the lessor, and agents or persons acting on behalf of the lessor shall not retaliate against lessees of residential dwellings and child-occupied facilities whose occupants or visitors have been tested for lead poisoning and shall not discourage the occupants or visitors from being tested for lead poisoning.

**68.6(2)** An action taken against the lessee shall not be considered retaliation if it is supported by reasonable cause unrelated to the testing of an occupant for lead poisoning or if it is shown to have occurred as a result of an accident or mistake and not to be the intentional act of the lessor of a dwelling, the employees of the lessor, or agents or persons acting on behalf of the lessor.

**641—68.7(135) Enforcement.** The certified elevated blood lead (EBL) inspector/risk assessor appointed by the local board shall have the duty and responsibility of enforcing this chapter.

**68.7(1)** Penalties shall be as provided in Iowa Code section 137.21.

**68.7(2)** Upon failure of any person to correct a hazard identified through this chapter in the time specified by the certified elevated blood lead (EBL) inspector/risk assessor appointed by the local board, the local board may direct or cause the correction of said hazards. All expenses incurred thereby may be recovered by suit in the name of the local board, or the local board may certify the amount of said expenses, together with a description of the property, to the county treasurer, who shall enter the same upon the tax books as costs for removing a lead hazard, and said amounts shall be collected as other taxes.

**641—68.8(135) Hearings.** In the event any person is aggrieved by any order of the certified elevated blood lead (EBL) inspector/risk assessor, the person may appeal to the local board in writing within ten days of the date of such order. The appeal shall state the reasons for requesting such order to be rescinded or modified. The local board shall review the action of the certified elevated blood lead (EBL) inspector/risk assessor. The local board shall order compliance with said order or may, with cause, modify or withdraw said order. Any order of the local board may be appealed within ten days to the district court for the county in which the local board is located.

**641—68.9(135) Variances.** The elevated blood lead (EBL) inspector/risk assessor may determine that a chewable surface that would otherwise be identified as a hazard by this chapter is not causing or does not have reasonable potential to cause lead exposure and is not required to be corrected through lead hazard reduction. The elevated blood lead (EBL) inspector/risk assessor shall document the reason for this determination in the inspection report. However, the elevated blood lead (EBL) inspector/risk assessor

shall not, under any circumstances, determine that any other surface meeting the definition of hazardous lead-based paint does not need to be corrected through lead hazard reduction.

**641—68.10(135) Injunction.** Nothing in this chapter shall prohibit a local board from pursuing injunctive relief or other relief as allowed by law.

**641—68.11(135) Effective date.** This chapter shall be in effect in a jurisdiction after a local board adopts it.

These rules are intended to implement Iowa Code section 135.102.

[Filed 7/16/04, Notice 5/26/04—published 8/4/04, effective 9/8/04]

CHAPTER 69  
RENOVATION, REMODELING, AND REPAINTING—  
LEAD HAZARD NOTIFICATION PROCESS

**641—69.1(135) Applicability.** This chapter applies to all persons who perform renovation, remodeling, or repainting for compensation in target housing or a child-occupied facility.

[ARC 8501B, IAB 2/10/10, effective 1/13/10]

**641—69.2(135) Definitions.**

*“Arithmetic mean”* means the algebraic sum of data values divided by the number of data values. For example, the sum of the concentration of lead in several soil samples divided by the number of samples is the arithmetic mean.

*“Certificate of mailing”* means certified mail with return receipt or its equivalent.

*“Chewable surface”* means an interior or exterior surface painted with lead-based paint that a young child can mouth or chew.

*“Child-occupied facility”* means a building, or portion of a building, constructed prior to 1978, that is described by all of the following: (1) The building is visited on a regular basis by the same child, who is less than six years of age, on at least two different days within any week. For purposes of this chapter, a week is a Sunday through Saturday period. (2) Each day’s visit by the child lasts at least 3 hours, and the combined annual visits total at least 60 hours. A child-occupied facility may include, but is not limited to, a child care center, preschool, or kindergarten classroom. A child-occupied facility also includes common areas that are routinely used by children who are less than six years of age, such as restrooms and cafeterias, and the exterior walls and adjoining space of the building that are immediately adjacent to the child-occupied facility or the common areas routinely used by children under the age of six years. “Child-occupied facility” also includes any building where lead-based paint activities are conducted immediately prior to or during the conversion of the building to a child-occupied facility.

*“Common area”* means a portion of the building that is generally accessible to all occupants. This includes, but is not limited to, hallways, stairways, laundry and recreational rooms, playgrounds, community centers, garages, and boundary fences.

*“Compensation”* means payment or reimbursement for services performed. Compensation is not limited to monetary considerations and includes payment of rent for rental units, receipt of a salary from the owner or manager of target housing, and receipt of a salary from the owner or operator of a child-occupied facility.

*“Components”* means specific design or structural elements or fixtures of a building, residential dwelling, or child-occupied facility that are distinguished from each other by form, function, and location. These include, but are not limited to, interior components such as ceilings, crown moldings, walls, chair rails, doors, door trim, floors, fireplaces, radiators and other heating units, shelves, shelf supports, stair treads, stair risers, stair stringers, newel posts, railing caps, balustrades, windows and trim (including sashes, window heads, jambs, sills or stools and troughs), built-in cabinets, columns, beams, bathroom vanities, countertops, and air conditioners; and exterior components such as painted roofing, chimneys, flashing, gutters and downspouts, ceilings, soffits, fascias, rake boards, cornerboards, bulkheads, doors and door trim, fences, floors, joists, latticework, railings and railing caps, siding, handrails, stair risers and treads, stair stringers, columns, balustrades, windowsills or stools and troughs, casing, sashes and wells, and air conditioners.

*“Department”* means the department of public health.

*“Dripline”* means the area within three feet surrounding the perimeter of a building.

*“Dust-lead hazard”* means surface dust in residential dwellings or child-occupied facilities that contains a mass-per-area concentration of lead equal to or exceeding 40 micrograms per square foot on floors, 250 micrograms per square foot on interior windowsills, and 400 micrograms per square foot on window troughs based on wipe samples. A dust-lead hazard is present in a residential dwelling or child-occupied facility when the weighted arithmetic mean lead loading for all single-surface or composite samples of floors and interior windowsills is equal to or greater than 40 micrograms per

square foot on floors, 250 micrograms per square foot on interior windowsills, and 400 micrograms per square foot on window troughs based on wipe samples. A dust-lead hazard is present on floors, interior windowsills, or window troughs in an unsampled residential dwelling in a multifamily dwelling if a dust-lead hazard is present on floors, interior windowsills, or window troughs, respectively, in at least one sampled residential unit on the property. A dust-lead hazard is present on floors, interior windowsills, or window troughs in an unsampled common area in a multifamily dwelling if a dust-lead hazard is present on floors, interior windowsills, or window troughs, respectively, in at least one sampled common area in the same common area group on the property.

*“Dwelling unit”* means a single, unified combination of rooms designed for use as a dwelling by one family.

*“Emergency renovation, remodeling, or repainting”* means renovation, remodeling, or repainting activities necessitated by nonroutine failures of equipment or a structure that were not planned but resulted from a sudden, unexpected event that, if not immediately attended to, presents a safety or public health hazard or threatens equipment or property with significant damage.

*“Friction surface”* means an interior or exterior surface that is subject to abrasion or friction including, but not limited to, certain window, floor, and stair surfaces.

*“Hazardous lead-based paint”* means lead-based paint that is present on a friction surface where there is evidence of abrasion or where the dust-lead level on the nearest horizontal surface underneath the friction surface (e.g., the windowsill or floor) is equal to or greater than the dust-lead hazard level, lead-based paint that is present on an impact surface that is damaged or otherwise deteriorated from impact, lead-based paint that is present on a chewable surface, or any other deteriorated lead-based paint in any residential building or child-occupied facility or on the exterior of any residential building or child-occupied facility.

*“Housing for the elderly”* means retirement communities or similar types of housing reserved for households composed of one or more persons 62 years of age or older or an age recognized as elderly by a specific federal housing assistance program.

*“Impact surface”* means an interior or exterior surface that is subject to damage by repeated sudden force such as certain parts of door frames.

*“Lead-based paint”* means paint or other surface coatings that contain lead equal to or in excess of 1.0 milligram per square centimeter or more than 0.5 percent by weight.

*“Lead-based paint hazard”* means hazardous lead-based paint, a dust-lead hazard, or a soil-lead hazard.

*“Living area”* means any area of a residential dwelling used by at least one child six years of age or less including, but not limited to, living rooms, kitchen areas, dens, playrooms, and children’s bedrooms.

*“Mid-yard”* means an area of a residential yard approximately midway between the dripline of a residential building and the nearest property boundary or between the driplines of a residential building and another building on the same property.

*“Multifamily dwelling”* means a structure that contains more than one separate residential dwelling unit, which is used or occupied, or is intended to be used or occupied, in whole or in part, as the home or residence of one or more persons.

*“Person”* means individual, corporation, limited liability company, government or governmental subdivision or agency, business trust, estate, trust, partnership, or association, or any other legal entity.

*“Play area”* means an area of frequent soil contact by children of less than six years of age as indicated by, but not limited to, factors including the following: the presence of play equipment (sandboxes, swing sets, and sliding boards), toys, or other children’s possessions, observations of play patterns, or information provided by parents, residents, caregivers, or property owners.

*“Regulated entity”* means any individual or company that is regulated by the department by virtue of these rules, the Iowa Code, or other official regulatory promulgation.

*“Renovation, remodeling, repainting”* means modifying any existing structure or portion of a structure where painted surfaces are disturbed, unless the activity fits the criteria of lead abatement as defined in 641—70.2(135) and is performed by a certified lead abatement contractor as defined in 641—70.2(135). This includes, but is not limited to, removing walls, ceilings, and other painted

building components; window replacement; floor refinishing; and sanding, scraping, stripping, water blasting, or otherwise removing paint.

*“Residential dwelling”* means (1) a detached single-family dwelling unit, including the surrounding yard, attached structures such as porches and stoops, and detached buildings and structures including, but not limited to, garages, farm buildings, and fences, or (2) a single-family dwelling unit in a structure that contains more than one separate residential dwelling unit, which is used or occupied, or intended to be used or occupied, in whole or part, as the home or residence of one or more persons.

*“Soil-lead hazard”* means bare soil on residential real property or on the property of a child-occupied facility that contains total lead in excess of 400 parts per million for the dripline, mid-yard, and play areas. A soil-lead hazard is present in a dripline, mid-yard, or play area when the soil-lead concentration from a composite sample of bare soil is equal to or greater than 400 parts per million.

*“Target housing”* means housing constructed prior to 1978 with the exception of housing for the elderly or for persons with disabilities, unless at least one child under the age of six years resides or is expected to reside in the housing, and housing which does not contain a bedroom.

[ARC 8501B, IAB 2/10/10, effective 1/13/10]

**641—69.3(135) Notification required in target housing.** A person who performs renovation, remodeling, or repainting of target housing for compensation, except for emergency renovation, remodeling, or repainting of target housing, and except for minor repair and maintenance activities that disrupt less than 1.0 square feet of painted surface, must do the following prior to commencing the work:

**69.3(1)** Provide the pamphlet, Lead Poisoning: How to Protect Iowa Families, or the federal pamphlet, Renovate Right, to the owner and adult occupant of each dwelling unit where renovation, remodeling, or repainting will be performed. The pamphlet shall be provided no more than 60 days prior to commencing the work.

**69.3(2)** Obtain a signed, dated acknowledgment from the owner and known adult occupant of each dwelling unit where renovation, remodeling, or repainting will be performed affirming that they have received the pamphlet prior to the start of renovation, remodeling, or repainting and are aware of the potential health hazards from remodeling, renovating, or repainting housing containing lead-based paint. The acknowledgment shall be obtained no more than 60 days prior to commencing the work.

*a.* The acknowledgment shall include the owner’s and occupant’s names and the address of the residential dwelling undergoing renovation, remodeling, or repainting.

*b.* The acknowledgment shall include the following language:

I have received the pamphlet entitled Lead Poisoning: How to Protect Iowa Families or the federal pamphlet, Renovate Right, prior to the start of renovation, remodeling, or repainting and am aware of the potential health risk associated with remodeling, renovating, or repainting housing containing lead-based paint or lead-based paint hazards.

*c.* Below the statement, the acknowledgment shall require the signature of the owner and occupant, along with their dates of signature.

*d.* If a signature cannot be obtained from an adult occupant, the person must certify in writing that the pamphlet has been delivered to the dwelling and that a written acknowledgment could not be obtained from an adult occupant. Such certification must include the address of the unit to be remodeled, renovated, or repainted, the date and method of delivery of the pamphlet, the name of the person delivering the pamphlet, the reason for lack of acknowledgment (e.g., occupant refuses to sign, no adult occupant available), the signature of the person conducting the renovation, remodeling, or repainting, and the date of signature.

*e.* The type shall be clear and legible.

*f.* The acknowledgment may be included as a separate sheet or as a part of any written contract or service agreement. The acknowledgment must be completed prior to commencing the work.

*g.* If the parties use a written contract or agreement which is written in a language other than English, the acknowledgment text shall be written in the same language as the text of the contract or agreement.

**69.3(3)** In lieu of delivering the pamphlet and written acknowledgment, the person conducting the renovation, remodeling, or repainting may obtain a certificate of mailing the pamphlet and written acknowledgment at least seven days prior to beginning the work.

**69.3(4)** If the general nature, location, and expected starting and ending dates of the planned renovation, remodeling, or repainting change after the initial notification has been conducted, the person conducting the renovation, remodeling, or repainting shall provide further notification to the owners and occupants providing revised information on the ongoing or planned activities. This subsequent notification must be provided before the person conducting the renovation, remodeling, or repainting initiates work beyond that which was described in the original notice.

[ARC 8501B, IAB 2/10/10, effective 1/13/10]

**641—69.4(135) Notification required in multifamily housing.** A person who performs renovation, remodeling, or repainting of common areas for compensation, except for emergency renovation, remodeling, or repainting of target housing, and except for minor repair and maintenance activities that disrupt less than 1.0 square feet of painted surface, must do the following prior to commencing the work:

**69.4(1)** Provide the pamphlet, Lead Poisoning: How to Protect Iowa Families, or the federal pamphlet, Renovate Right, to the owner of the multifamily target housing where renovation, remodeling, or repainting will be performed. The pamphlet shall be provided no more than 60 days prior to commencing the work.

**69.4(2)** Obtain a signed, dated acknowledgment from the owner of the multifamily target housing where renovation, remodeling, or repainting will be performed affirming that the owner has received the pamphlet prior to the start of renovation, remodeling, or repainting and is aware of the potential health hazards from remodeling, renovating, or repainting housing containing lead-based paint. The acknowledgment shall be obtained no more than 60 days prior to commencing the work.

*a.* The acknowledgment shall include the owner's name and the address of the multifamily dwelling undergoing renovation, remodeling, or repainting.

*b.* The acknowledgment shall include the following language:

I have received the pamphlet entitled Lead Poisoning: How to Protect Iowa Families or the federal pamphlet, Renovate Right, prior to the start of renovation, remodeling, or repainting and am aware of the potential health risk associated with remodeling, renovating, or repainting housing containing lead-based paint or lead-based paint hazards.

*c.* Below the statement, the acknowledgment shall require the signature of the owner, along with the date of signature.

*d.* The type shall be clear and legible.

*e.* The acknowledgment may be included as a separate sheet or as a part of any written contract or service agreement. The acknowledgment must be completed prior to commencing the work.

*f.* If the parties use a written contract or agreement which is written in a language other than English, the acknowledgment text shall be written in the same language as the text of the contract or agreement.

*g.* Notify each occupant of the multifamily housing, in writing, of the intended remodeling, repainting, or renovation, and make the pamphlet, Lead Poisoning: How to Protect Iowa Families, or the federal pamphlet, Renovate Right, available upon request. At a minimum, this notification shall be accomplished by distributing written notice to each occupant of the target housing. The notice shall describe:

(1) The general nature and location of the planned renovation, remodeling, or repainting activity.

(2) The expected starting and ending dates of the planned renovation, remodeling, or repainting activity.

(3) A statement of how the owners and occupants can obtain the pamphlet, Lead Poisoning: How to Protect Iowa Families, or the federal pamphlet, Renovate Right, at no charge from the person conducting the renovation, remodeling, or repainting activity.

*h.* These activities shall be conducted by the person planning to perform the renovation, remodeling, or repainting, or by the owner on behalf of this person.

*i.* The person planning to perform the renovation, remodeling, or repainting must prepare, sign, and date a statement describing the steps performed to notify all occupants of the intended renovation, remodeling, or repainting, and to provide the pamphlet, Lead Poisoning: How to Protect Iowa Families, or the federal pamphlet, Renovate Right, at no charge upon request. Regardless of who performs the notification activities required in this subrule, the person planning to conduct the renovation, remodeling, or repainting shall be responsible for ensuring compliance with this subrule and shall be liable for any failures to comply with the notification requirements in this subrule.

**69.4(3)** In lieu of delivering the pamphlet and written acknowledgment to the owner, the person conducting the renovation, remodeling, or repainting may obtain a certificate of mailing the pamphlet and written acknowledgment at least seven days prior to beginning the work.

**69.4(4)** If the general nature, location, and expected starting and ending dates of the planned renovation, remodeling, or repainting change after the initial notification has been conducted, the person conducting the renovation, remodeling, or repainting shall provide further notification to the owners and occupants providing revised information on the ongoing or planned activities. This subsequent notification must be provided before the person conducting the renovation, remodeling, or repainting initiates work beyond that which was described in the original notice.

[ARC 8501B, IAB 2/10/10, effective 1/13/10]

**641—69.5(135) Emergency renovation, remodeling, or repainting in target housing.** A person who performs emergency renovation, remodeling, or repainting of target housing for compensation, except for minor repair and maintenance activities that disrupt less than 1.0 square feet of painted surface, must do the following as soon as reasonably possible:

**69.5(1)** Provide the pamphlet, Lead Poisoning: How to Protect Iowa Families, or the federal pamphlet, Renovate Right, to the owner of the target housing where renovation, remodeling, or repainting is performed.

**69.5(2)** Notify each owner and occupant of the target housing, in writing, of the remodeling, repainting, or renovation, and make the pamphlet, Lead Poisoning: How to Protect Iowa Families, or the federal pamphlet, Renovate Right, available upon request. At a minimum, this notification shall be accomplished by distributing written notice to each owner and occupant of the target housing. The notice shall describe:

- a.* The general nature and location of the renovation, remodeling, or repainting activity.
- b.* The starting and ending dates of the renovation, remodeling, or repainting activity.
- c.* A statement of how the owners and occupants can obtain the pamphlet, Lead Poisoning: How to Protect Iowa Families, or the federal pamphlet, Renovate Right, at no charge from the person conducting the renovation, remodeling, or repainting activity.

**69.5(3)** These activities shall be conducted by the person performing the renovation, remodeling, or repainting, or by the owner on behalf of this person. The person planning to perform the renovation, remodeling, or repainting must prepare, sign, and date a statement describing the steps performed to notify all occupants of the intended renovation, remodeling, or repainting, and to provide the pamphlet, Lead Poisoning: How to Protect Iowa Families, or the federal pamphlet, Renovate Right, at no charge upon request. Regardless of who performs the notification activities required in this rule, the person conducting the renovation, remodeling, or repainting shall be responsible for ensuring compliance with this rule and shall be liable for any failures to comply with the notification requirements in this rule.

[ARC 8501B, IAB 2/10/10, effective 1/13/10]

**641—69.6(135) Certification of attempted delivery in target housing.** When an adult occupant is unavailable for signature or refuses to sign the acknowledgment of receipt of the pamphlet, the person conducting the renovation, remodeling, or repainting is permitted by subrule 69.3(2) to certify delivery for each instance. The certification shall include the address of the unit undergoing renovation, remodeling, or repainting, the date and method of delivery of the pamphlet, name of the person delivering the pamphlet, reason for lack of acknowledgment (e.g., occupant refuses to sign, no adult occupant available), the signature of the person conducting the renovation, remodeling, or repainting, and the date of signature.

**69.6(1) *Unavailable for signature.***

*a.* If an adult occupant is unavailable for signature, the certification shall contain the following language:

I certify that I have made a good-faith effort to deliver the pamphlet, Lead Poisoning: How to Protect Iowa Families, or the federal pamphlet, Renovate Right, to the unit listed below at the dates and times indicated, and that an adult occupant was unavailable to sign the acknowledgment. I further certify that I have left a copy of the pamphlet at the unit with the occupant.

*b.* Below the statement, the certification shall require the printed name and signature of the person conducting the renovation, remodeling, or repainting, the address of the unit, the attempted delivery dates and times, and the date of signature.

**69.6(2) *Refused to sign.***

*a.* If the occupant refuses to sign the acknowledgment, the certification shall contain the following language:

I certify that I have made a good-faith effort to deliver the pamphlet, Lead Poisoning: How to Protect Iowa Families, or the federal pamphlet, Renovate Right, to the unit listed below at the dates and times indicated, and that the occupant refused to sign the acknowledgment. I further certify that I have left a copy of the pamphlet at the unit.

*b.* Below the statement, the certification shall require the printed name and signature of the person conducting the renovation, remodeling, or repainting, the address of the unit, the attempted delivery dates and times, the location where the pamphlet was left at the unit (e.g., taped to the door, slipped under the door), and the date of signature.

[ARC 8501B, IAB 2/10/10, effective 1/13/10]

**641—69.7(135) Notification required in child-occupied facilities.** A person who performs renovation, remodeling, or repainting of child-occupied facilities for compensation, except for emergency renovation, remodeling, or repainting of child-occupied facilities, and except for minor repair and maintenance activities that disrupt less than 1.0 square feet of painted surface, must do the following prior to commencing the work:

**69.7(1)** Provide the pamphlet, Lead Poisoning: How to Protect Iowa Families, or the federal pamphlet, Renovate Right, to the owner of the building where renovation, remodeling, or repainting will be performed. The pamphlet shall be provided no more than 60 days prior to commencing the work.

**69.7(2)** Obtain a signed, dated acknowledgment from the owner of the building where renovation, remodeling, or repainting will be performed affirming that the owner has received the pamphlet prior to the start of renovation, remodeling, or repainting and is aware of the potential health hazards from remodeling, renovating, or repainting buildings containing lead-based paint. The acknowledgment shall be obtained no more than 60 days prior to commencing the work.

*a.* The acknowledgment shall include the owner's name and the address of the child-occupied facility undergoing renovation, remodeling, or repainting.

*b.* The acknowledgment shall include the following language:

I have received the pamphlet entitled Lead Poisoning: How to Protect Iowa Families or the federal pamphlet, Renovate Right, prior to the start of renovation, remodeling, or repainting and am aware of the potential health risk associated with remodeling, renovating, or repainting buildings containing lead-based paint or lead-based paint hazards.

*c.* Below the statement, the acknowledgment shall require the signature of the owner along with the date of signature.

*d.* If a signature cannot be obtained from the owner, the person must certify in writing that the pamphlet has been delivered to the building and that a written acknowledgment could not be obtained from an owner. Such certification must include the address of the building to be remodeled, renovated, or repainted, the date and method of delivery of the pamphlet, the name of the person delivering the

pamphlet, the reason for lack of acknowledgment (e.g., owner refuses to sign, owner not available), the signature of the person conducting the renovation, remodeling, or repainting, and the date of signature.

*e.* The type shall be clear and legible.

*f.* The acknowledgment may be included as a separate sheet or as a part of any written contract or service agreement. The acknowledgment must be completed prior to commencing the work.

*g.* If the parties use a written contract or agreement which is written in a language other than English, the acknowledgment text shall be written in the same language as the text of the contract or agreement.

**69.7(3)** In lieu of delivering the pamphlet and written acknowledgment, the person conducting the renovation, remodeling, or repainting may obtain a certificate of mailing the pamphlet and written acknowledgment to the owner at least 7 days prior to beginning the work.

**69.7(4)** If the general nature, location, and expected starting and ending dates of the planned renovation, remodeling, or repainting change after the initial notification has been conducted, the person conducting the renovation, remodeling, or repainting shall provide further notification to the owners providing revised information on the ongoing or planned activities. This subsequent notification must be provided before the person conducting the renovation, remodeling, or repainting initiates work beyond that which was described in the original notice.

**69.7(5)** If the operator of the child-occupied facility is not the owner of the building, provide the pamphlet, Lead Poisoning: How to Protect Iowa Families, or the federal pamphlet, Renovate Right, to the operator of the child-occupied facility where renovation, remodeling, or repainting will be performed. The pamphlet shall be provided no more than 60 days prior to commencing the work.

**69.7(6)** If the operator of the child-occupied facility is not the owner of the building, obtain a signed, dated acknowledgment from the operator of the child-occupied facility where renovation, remodeling, or repainting will be performed affirming that the operator has received the pamphlet prior to the start of renovation, remodeling, or repainting and is aware of the potential health hazards from remodeling, renovating, or repainting buildings containing lead-based paint. The acknowledgment shall be obtained no more than 60 days prior to commencing the work.

*a.* The acknowledgment shall include the name of the operator of the child-occupied facility and the address of the child-occupied facility undergoing renovation, remodeling, or repainting.

*b.* The acknowledgment shall include the following language:

I have received the pamphlet entitled Lead Poisoning: How to Protect Iowa Families or the federal pamphlet, Renovate Right, prior to the start of renovation, remodeling, or repainting and am aware of the potential health risk associated with remodeling, renovating, or repainting buildings containing lead-based paint or lead-based paint hazards.

*c.* Below the statement, the acknowledgment shall require the signature of the operator of the child-occupied facility along with the date of signature.

*d.* If a signature cannot be obtained from the operator of the child-occupied facility, the person must certify in writing that the pamphlet has been delivered to the building and that a written acknowledgment could not be obtained from the operator of the child-occupied facility. Such certification must include the address of the building to be remodeled, renovated, or repainted, the date and method of delivery of the pamphlet, the name of the person delivering the pamphlet, the reason for lack of acknowledgment (e.g., operator of the child-occupied facility refuses to sign, operator of the child-occupied facility not available), the signature of the person conducting the renovation, remodeling, or repainting, and the date of signature.

*e.* The type shall be clear and legible.

*f.* The acknowledgment may be included as a separate sheet or as a part of any written contract or service agreement. The acknowledgment must be completed prior to commencing the work.

*g.* If the parties use a written contract or agreement which is written in a language other than English, the acknowledgment text shall be written in the same language as the text of the contract or agreement.

**69.7(7)** In lieu of delivering the pamphlet and written acknowledgment, the person conducting the renovation, remodeling, or repainting may obtain a certificate of mailing the pamphlet and written acknowledgment to the operator of the child-occupied facility at least 7 days prior to beginning the work.

**69.7(8)** If the general nature, location, and expected starting and ending dates of the planned renovation, remodeling, or repainting change after the initial notification has been conducted, the person conducting the renovation, remodeling, or repainting shall provide further notification to the operator of the child-occupied facility providing revised information on the ongoing or planned activities. This subsequent notification must be provided before the person conducting the renovation, remodeling, or repainting initiates work beyond that which was described in the original notice.

**69.7(9)** Provide the pamphlet, Lead Poisoning: How to Protect Iowa Families, or the federal pamphlet, Renovate Right, and information regarding the general nature and locations of the renovation, remodeling, or repainting and the anticipated completion date to the parents and guardians of children using the child-occupied facility where renovation, remodeling, or repainting will be performed. The pamphlet and information shall be provided no more than 60 days prior to commencing the work. The person conducting the renovation, remodeling, or repainting shall provide this information using one of the following methods:

*a.* Mail or hand-deliver the pamphlet and information to each parent or guardian of each child using the child-occupied facility (the pamphlet and information may not be sent home with the child); or

*b.* While the renovation, remodeling, or repainting is ongoing, post informational signs describing the general nature and locations of the renovation, remodeling, or repainting and the anticipated completion date. These signs must be posted in areas where they can be seen by the parents of the children frequenting the child-occupied facility. The signs must be accompanied by a posted copy of the pamphlet or information on how interested parents or guardians can review a copy of the pamphlet or obtain a copy from the person conducting the renovation, remodeling, or repainting at no cost to the parents or guardians.

**69.7(10)** The activities in subrule 69.7(9) shall be conducted by the person planning to perform the renovation, remodeling, or repainting or by the owner or operator of the child-occupied facility on behalf of this person. Regardless of who performs the notification activities required in subrule 69.7(9), the person conducting the renovation, remodeling, or repainting shall be responsible for ensuring compliance with this rule and shall be liable for any failures to comply with the notification requirements in this rule.

**69.7(11)** The person conducting the renovation, remodeling, or repainting shall prepare, sign, and date a statement describing the steps performed to notify all parents and guardians of the intended renovation, remodeling, or repainting and to provide the pamphlet to them.

**69.7(12)** If the general nature, location, and expected starting and ending dates of the planned renovation, remodeling, or repainting change after the initial notification has been conducted, the person conducting the renovation, remodeling, or repainting shall provide revised information on the ongoing or planned activities to the parents and guardians of children frequenting the child-occupied facility providing revised information on the ongoing or planned activities. This subsequent notification must be provided before the person conducting the renovation, remodeling, or repainting initiates work beyond that which was described in the original notice.

[ARC 8501B, IAB 2/10/10, effective 1/13/10]

**641—69.8(135) Emergency renovation, remodeling, or repainting in child-occupied facilities.** A person who performs emergency renovation, remodeling, or repainting of child-occupied facilities for compensation, except for minor repair and maintenance activities that disrupt less than 1.0 square feet of painted surface, must do the following as soon as reasonably possible:

**69.8(1)** Provide the pamphlet, Lead Poisoning: How to Protect Iowa Families, or the federal pamphlet, Renovate Right, to the owner of the building where renovation, remodeling, or repainting is performed.

**69.8(2)** Notify each owner and, if different, the operator of the child-occupied facility, in writing, of the remodeling, repainting, or renovation, and make the pamphlet, Lead Poisoning: How to Protect

Iowa Families, or the federal pamphlet, Renovate Right, available upon request. At a minimum, this notification shall be accomplished by distributing written notice to each owner and, if different, operator of the child-occupied facility. The notice shall describe:

- a. The general nature and location of the renovation, remodeling, or repainting activity.
- b. The starting and ending dates of the renovation, remodeling, or repainting activity.
- c. A statement of how each owner and, if different, the operator of the child-occupied facility can obtain the pamphlet, Lead Poisoning: How to Protect Iowa Families, or the federal pamphlet, Renovate Right, at no charge from the person conducting the renovation, remodeling, or repainting activity.

**69.8(3)** Provide the pamphlet, Lead Poisoning: How to Protect Iowa Families, or the federal pamphlet, Renovate Right, and information regarding the general nature and locations of the renovation, remodeling, or repainting and the anticipated completion date to the parents and guardians of children using the child-occupied facility where renovation, remodeling, or repainting will be performed. The person conducting the renovation, remodeling, or repainting shall provide this information using one of the following methods:

- a. Mail or hand-deliver the pamphlet and information to each parent or guardian of each child using the child-occupied facility (the pamphlet and information may not be sent home with the child); or
- b. While the renovation, remodeling, or repainting is ongoing, post informational signs describing the general nature and locations of the renovation, remodeling, or repainting and the anticipated completion date. These signs must be posted in areas where they can be seen by the parents or guardians of the children frequenting the child-occupied facility. The signs must be accompanied by a posted copy of the pamphlet or information on how interested parents or guardians can review a copy of the pamphlet or obtain a copy from the person conducting the renovation, remodeling, or repainting at no cost to the parents or guardians.

**69.8(4)** The activities in subrule 69.8(3) shall be conducted by the person planning to perform the renovation, remodeling, or repainting or by the owner or operator of the child-occupied facility on behalf of this person. Regardless of who performs the notification activities required in subrule 69.8(3), the person conducting the renovation, remodeling, or repainting shall be responsible for ensuring compliance with this rule and shall be liable for any failures to comply with the notification requirements in this rule. [ARC 8501B, IAB 2/10/10, effective 1/13/10]

**641—69.9(135) Certification of attempted delivery for child-occupied facilities.** When the owner and, if different, operator of a child-occupied facility are unavailable for signature or refuse to sign the acknowledgment of receipt of the pamphlet, the person conducting the renovation, remodeling, or repainting is permitted by subrule 69.3(2) to certify delivery for each instance. The certification shall include the address of the child-occupied facility undergoing renovation, remodeling, or repainting, the date and method of delivery of the pamphlet, name of the person delivering the pamphlet, reason for lack of acknowledgment (e.g., owner and, if different, operator refuse to sign), the signature of the individual conducting the renovation, remodeling, or repainting, and the date of signature.

**69.9(1) Unavailable for signature.**

- a. If the owner and, if different, operator of the child-occupied facility are unavailable for signature, the certification shall contain the following language:

I certify that I have made a good-faith effort to deliver the pamphlet, Lead Poisoning: How to Protect Iowa Families, or the federal pamphlet, Renovate Right, to the child-occupied facility listed below at the dates and times indicated, and that the owner and, if different, operator of the child-occupied facility were unavailable to sign the acknowledgment. I further certify that I have left a copy of the pamphlet at the child-occupied facility with the owner and, if different, operator.

- b. Below the statement, the certification shall require the printed name and signature of the person conducting the renovation, remodeling, or repainting, the address of the child-occupied facility, the attempted delivery dates and times, and the date of signature.

**69.9(2) *Refused to sign.***

a. If the owner and, if different, operator refuse to sign the acknowledgment, the certification shall contain the following language:

I certify that I have made a good-faith effort to deliver the pamphlet, Lead Poisoning: How to Protect Iowa Families, or the federal pamphlet, Renovate Right, to the child-occupied facility listed below at the dates and times indicated, and that the owner and, if different, operator refused to sign the acknowledgment. I further certify that I have left a copy of the pamphlet at the child-occupied facility.

b. Below the statement, the certification shall require the printed name and signature of the person conducting the renovation, remodeling, or repainting, the address of the child-occupied facility, the attempted delivery dates and times, the location where the pamphlet was left at the child-occupied facility (e.g., taped to the door, slipped under the door), and the date of signature.

[ARC 8501B, IAB 2/10/10, effective 1/13/10]

**641—69.10(135) Subcontracts.** In cases where renovation, remodeling, or repainting activities involve subcontracts, it is the responsibility of the person receiving the compensation from the property owner, or other party on behalf of the property owner, to provide the notification(s) described in 641—69.3(135), 641—69.4(135), 641—69.5(135), and 641—69.6(135) of this chapter.

[ARC 8501B, IAB 2/10/10, effective 1/13/10]

**641—69.11(135) Exemption.** Renovation, remodeling, or repainting in target housing or a child-occupied facility in which a lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor certified pursuant to 641—Chapter 70 has made a written determination that the components affected by the renovation are free of lead-based paint and where the person conducting the renovation, remodeling, or repainting has obtained a copy of the written determination is exempt from the provisions of 641—Chapter 69.

[ARC 8501B, IAB 2/10/10, effective 1/13/10]

**641—69.12(135) Record-keeping requirements.** A person who conducts renovation, remodeling, or repainting for compensation in target housing or a child-occupied facility shall retain all records necessary to demonstrate compliance with this chapter for a minimum of three years following completion of the renovation, remodeling, or repainting. The records shall include:

**69.12(1)** The address or location of the target housing or child-occupied facility where remodeling, renovation, or repainting was conducted.

**69.12(2)** A list of all known occupants of the dwelling units where renovation, remodeling, or repainting was conducted at the commencement of the work.

**69.12(3)** Copies of signed, dated acknowledgments as required by subrule 69.3(2) from each owner and occupant of a dwelling unit where renovation, remodeling, or repainting was conducted.

**69.12(4)** Copies of signed, dated acknowledgments as required by subrule 69.4(2) from each owner of multifamily target housing where renovation, remodeling, or repainting was conducted in common areas.

**69.12(5)** Copies of all signed, dated statements of notification, as well as copies of all notification materials given to all owners and occupants and acknowledgments as required by subrule 69.4(2) from each owner and occupant of multifamily target housing where renovation, remodeling, or repainting was conducted in common areas.

**69.12(6)** Copies of signed, dated acknowledgments as required by 641—69.7(135) from the owner and, if different, operator of a child-occupied facility where renovation, remodeling, or repainting was conducted.

**69.12(7)** Copies of all notification materials given to the parents or guardians of children using a child-occupied facility or the signs posted in areas where the signs can be seen by the parents or guardians of children using the child-occupied facility as required by subrule 69.7(9).

**69.12(8)** Reports showing that a lead inspector/risk assessor or elevated blood level (EBL) inspector/risk assessor certified pursuant to 641—Chapter 70 has made a written determination that the components affected by the renovation are free of lead-based paint.

**69.12(9)** Certifications of attempted delivery as described in 641—69.6(135).

**69.12(10)** Certificates of mailing as described in subrules 69.3(3) and 69.4(3).  
[ARC 8501B, IAB 2/10/10, effective 1/13/10]

**641—69.13(135) Compliance inspections.** The department may enter the place of business of a person who conducts renovation, remodeling, or repainting for the purpose of enforcing the notification required by this chapter.

[ARC 8501B, IAB 2/10/10, effective 1/13/10]

**641—69.14(135) Enforcement.**

**69.14(1)** The department may impose a civil penalty pursuant to Iowa Code section 135.105C and this rule and may refer the case to the office of the county attorney for possible criminal penalties pursuant to Iowa Code section 135.38 when it finds that a person has committed any of the following acts:

- a.* Failed or refused to comply with any requirements of this chapter.
- b.* Failed or refused to establish, maintain, provide, copy, or permit access to records or reports as required by this chapter.
- c.* Failed or refused to permit entry or inspection as described in subrule 69.14(1).
- d.* Falsified reports and records required by this chapter.
- e.* Failed to comply with the terms of a department order or the terms of a settlement agreement or consent order.
- f.* Failed to respond within 20 days of receipt of communication sent by the department by registered or certified mail.
- g.* Engaged in any conduct that subverts or attempts to subvert a department investigation.
- h.* Failed to comply with a subpoena issued by the department or failed to cooperate with a department investigation.
- i.* Failed to pay costs assessed in any disciplinary action.

**69.14(2)** Complaints and other requests for action under this rule. Complaints regarding a person who performs renovation, remodeling, or repainting for compensation in target housing or a child-occupied facility shall be submitted in writing to the Iowa Department of Public Health, Lead Poisoning Prevention Program, 321 East 12th Street, Des Moines, Iowa 50319-0075. The complainant shall provide the name of the person who performs renovation, remodeling, or repainting for compensation in target housing or a child-occupied facility and the specific details of the person's action(s) that did not comply with the rules.

**69.14(3) Civil penalties.**

*a.* Before instituting any proceeding to impose a civil penalty under Iowa Code section 135.105C, the department shall serve a written notice of violation upon the person charged. The notice of violation shall specify the date or dates, facts, and the nature of the alleged act or omission with which the person is charged and shall identify specifically the particular provision or provisions of the law, rule, regulation, or cease and desist order involved in the alleged violation and must state the amount of each proposed penalty. The notice of violation shall also advise the person charged that the civil penalty may be paid in the amount specified therein, or the proposed imposition of the civil penalty may be protested in its entirety or in part, by a written answer, either denying the violation or showing extenuating circumstances. The notice of violation shall advise the person charged that upon failure to pay a civil penalty subsequently determined by the department, if any, unless compromised, remitted, or mitigated, the fee shall be collected by civil action pursuant to Iowa Code section 135.105C.

*b.* Within 20 days of the date of a notice of violation or other time specified in the notice, the person charged may either pay the penalty in the amount proposed or answer the notice of violation. The answer to the notice of violation shall state any facts, explanations, and arguments denying the charges of violation or demonstrating any extenuating circumstances, error in the notice of violation, or other reason why the penalty should not be imposed and may request remission or mitigation of the penalty.

*c.* If the person charged with a violation fails to answer within the time specified in paragraph 69.14(3) “*b*,” an order may be issued imposing the civil penalty in the amount set forth in the notice of violation described in paragraph 69.14(3) “*a*.”

*d.* If the person charged with a violation files an answer to the notice of violation, the department, upon consideration of the answer, will issue an order dismissing the proceeding or imposing, mitigating, or remitting the civil penalty. The person charged may, within 20 days of the date of the order or other time specified in the order, request a hearing.

*e.* If the person charged with a violation requests a hearing, the department will issue an order designating the time and place of hearing. The hearing shall be conducted according to the procedural rules of the department of inspections and appeals found in 481—Chapter 10, Iowa Administrative Code.

*f.* If a hearing is held, an order will be issued after the hearing by the presiding officer or the department dismissing the proceeding or imposing, mitigating, or remitting the civil penalty.

*g.* The department may compromise any civil penalty. If the civil penalty is not compromised or is not remitted by the presiding officer or the department or if the time for requesting a hearing described in paragraph 69.14(3) “*d*” has expired, the department may refer the matter to the attorney general for collection.

*h.* Except when payment is made after compromise or mitigation by the department of justice or as ordered by a court of the state, following reference of the matter to the attorney general for collection, payment of civil penalties imposed under Iowa Code section 135.105C shall be made by check, draft, or money order payable to the Iowa Department of Public Health.

**69.14(4) Appeals.**

*a.* Notice of the civil penalty shall be sent to the affected person by certified mail, return receipt requested, or by personal service. The affected person shall have a right to appeal the civil penalty.

*b.* An appeal of a civil penalty shall be submitted by certified mail, return receipt requested, to the Iowa Department of Public Health, Lead Poisoning Prevention Program, 321 East 12th Street, Des Moines, Iowa 50319-0075, within 20 days of receipt of the department’s notice. If such a request is made within the 20-day time period, the notice of civil penalty shall be deemed to be suspended. Prior to or at the hearing, the department may rescind the notice upon satisfaction that the reason for the civil penalty has been or will be removed. After the hearing, or upon default of the applicant or alleged violator, the administrative law judge shall affirm, modify or set aside the civil penalty. If no appeal is submitted within 20 days, the civil penalty shall become the department’s final agency action.

*c.* Upon receipt of an appeal that meets contested case status, the appeal shall be transmitted to the department of inspections and appeals within 5 working days of receipt pursuant to the rules adopted by that agency regarding the transmission of contested cases. The information upon which the civil penalty is based shall be provided to the department of inspections and appeals.

*d.* The hearing shall be conducted according to the procedural rules of the department of inspections and appeals found in 481—Chapter 10, Iowa Administrative Code.

*e.* When the administrative law judge makes a proposed decision and order, it shall be served by restricted certified mail, return receipt requested, or delivered by personal service. The proposed decision and order then becomes the department’s final agency action without further proceedings 10 days after it is received by the aggrieved party unless an appeal to the director is taken as provided in paragraph 69.14(4) “*f*.”

*f.* Any appeal to the director for review of the proposed decision and order of the administrative law judge shall be filed in writing and mailed to the director by certified mail, return receipt requested, or delivered by personal service within 10 days after the receipt of the administrative law judge’s proposed decision and order by the aggrieved party. A copy of the appeal shall also be mailed to the administrative law judge. Any request for appeal shall state the reason for appeal.

*g.* Upon receipt of an appeal request, the administrative law judge shall prepare the record of the hearing or submission to the director. The record shall include the following:

- (1) All pleadings, motions, and rulings.
- (2) All evidence received or considered and all other submissions by recording or transcript.
- (3) A statement of all matters officially noticed.

(4) All questions and offers of proof, objection, and rulings thereon.

(5) All proposed findings and exceptions.

(6) The proposed findings and order of the administrative law judge.

*h.* The decision and order of the director becomes the department's final agency action upon receipt by the aggrieved party and shall be delivered by restricted certified mail, return receipt requested, or by personal service.

*i.* It is not necessary to file an application for a rehearing to exhaust administrative remedies when appealing to the director or the district court as provided in Iowa Code section 17A.19. The aggrieved party to the final agency action of the department who has exhausted all administrative remedies may petition for judicial review of that action pursuant to Iowa Code chapter 17A.

*j.* Any petition for judicial review of a decision and order shall be filed in the district court within 20 days after the decision and order becomes final. A copy of the notice of appeal shall be sent by certified mail, return receipt requested, or by personal service to the Iowa Department of Public Health, Lead Poisoning Prevention Program, 321 East 12th Street, Des Moines, Iowa 50319-0075.

*k.* The party who appeals a final agency action to the district court shall pay the cost of the preparation of a transcript of the contested case hearing for the district court.

[Filed Emergency After Notice ARC 8501B (Notice ARC 8355B, IAB 12/2/09), IAB 2/10/10, effective 1/13/10]

## CHAPTER 70 LEAD-BASED PAINT ACTIVITIES

**641—70.1(135) Applicability.** This chapter applies to all persons who are lead professionals in Iowa, all firms that perform lead professional activities in Iowa, and training providers that offer training for lead professionals. This chapter requires lead professionals and firms to be certified and establishes specific requirements for how lead-based paint activities must be performed if a property owner, manager, or occupant chooses to undertake them. However, nothing in this chapter requires a property owner, manager, or occupant to undertake any particular lead-based paint activity. This chapter also provides for the approval of courses that provide training for lead professionals.

[ARC 8502B, IAB 2/10/10, effective 1/13/10]

### **641—70.2(135) Definitions.**

*“Adequate quality control”* means a plan or design which ensures the authenticity, integrity, and accuracy of samples, including dust, soil, and paint chip or paint film samples. Adequate quality control also includes provisions for representative sampling.

*“Approved course”* means a course that has been approved by the department for the training of lead professionals.

*“Approved lead-safe work practices training program”* means a lead-safe work practices training program that has been approved by the department.

*“Arithmetic mean”* means the algebraic sum of data values divided by the number of data values. For example, the sum of the concentration of lead in several soil samples divided by the number of samples is the arithmetic mean.

*“Certified elevated blood lead (EBL) inspection agency”* means an agency that has met the requirements of 641—70.5(135) and that has been certified by the department.

*“Certified elevated blood lead (EBL) inspector/risk assessor”* means a person who has met the requirements of 641—70.5(135) for certification or interim certification and who has been certified by the department.

*“Certified firm”* means a firm that employs certified lead professionals and has met the requirements of 641—70.7(135) for certification and has been certified by the department.

*“Certified lead abatement contractor”* means a person who has met the requirements of 641—70.5(135) for certification or interim certification and who has been certified by the department.

*“Certified lead abatement worker”* means a person who has met the requirements of 641—70.5(135) and who has been certified by the department.

*“Certified lead inspector/risk assessor”* means a person who has met the requirements of 641—70.5(135) for certification or interim certification and who has been certified by the department.

*“Certified lead professional”* means a person who has been certified by the department as a lead inspector/risk assessor, elevated blood lead (EBL) inspector/risk assessor, lead abatement contractor, lead abatement worker, project designer, sampling technician, or lead-safe renovator.

*“Certified lead-safe renovator”* means a person who has met the requirements of 641—70.5(135) for certification and who has been certified by the department.

*“Certified project designer”* means a person who has met the requirements of 641—70.5(135) for certification or interim certification and who has been certified by the department.

*“Certified sampling technician”* means a person who has met the requirements of 641—70.5(135) and who has been certified by the department.

*“Chewable surface”* means an interior or exterior surface painted with lead-based paint that a young child can mouth or chew.

*“Child-occupied facility”* means a building, or portion of a building, constructed prior to 1978, that is described by all of the following: (1) The building is visited on a regular basis by the same child, who is less than six years of age, on at least two different days within any week. For purposes of this chapter, a week is a Sunday through Saturday period. (2) Each day’s visit by the child lasts at least 3 hours, and the combined annual visits total at least 60 hours. A child-occupied facility may include, but

is not limited to a child care center, preschool, or kindergarten classroom. A child-occupied facility also includes common areas that are routinely used by children who are less than six years of age, such as restrooms and cafeterias, and the exterior walls and adjoining space of the building that are immediately adjacent to the child-occupied facility or the common areas routinely used by children under the age of six years. "Child-occupied facility" also includes any building where lead-based paint activities are conducted immediately prior to or during the conversion of the building to a child-occupied facility.

"*Cleaning verification card*" means a card developed and distributed, or otherwise approved, by the U.S. Environmental Protection Agency (EPA) for the purpose of determining, through comparison of wet and dry disposable cleaning cloths with the card, whether postrenovation cleaning has been properly completed.

"*Clearance level*" means the value at which the amount of lead in dust on a surface following completion of interim controls, lead abatement, paint stabilization, standard treatments, ongoing lead-based paint maintenance, rehabilitation, or renovation is a dust-lead hazard and fails clearance testing. The clearance level for a single-surface dust sample from a floor is greater than or equal to 40 micrograms per square foot. The clearance level for a single-surface dust sample from an interior windowsill is greater than or equal to 250 micrograms per square foot. The clearance level for a single-surface dust sample from a window trough is greater than or equal to 400 micrograms per square foot.

"*Clearance testing*" means an activity conducted following interim controls, lead abatement, paint stabilization, standard treatments, ongoing lead-based paint maintenance, rehabilitation, or renovation to determine that the hazard reduction activities are complete. Clearance testing includes a visual assessment, the collection and analysis of environmental samples, the interpretation of sampling results, and the preparation of a report.

"*Common area*" means a portion of the building that is generally accessible to all occupants. This includes, but is not limited to, hallways, stairways, laundry and recreational rooms, porches, exteriors, playgrounds, community centers, garages, and boundary fences.

"*Common area group*" means a group of common areas that are similar in design, construction, and function. Common area groups include, but are not limited to, hallways, stairwells, and laundry rooms.

"*Component*" or "*building component*" means specific design or structural elements or fixtures of a building, residential dwelling, or child-occupied facility that are distinguished from each other by form, function, and location. These include, but are not limited to, interior components such as ceilings, crown moldings, walls, chair rails, doors, door trim, floors, fireplaces, radiators and other heating units, shelves, shelf supports, stair treads, stair risers, stair stringers, newel posts, railing caps, balustrades, windows and trim (including sashes, window heads, jambs, sills or stools and troughs), built-in cabinets, columns, beams, bathroom vanities, countertops, and air conditioners; and exterior components such as painted roofing, chimneys, flashing, gutters and downspouts, ceilings, soffits, fascias, rake boards, cornerboards, bulkheads, doors and door trim, fences, floors, joists, latticework, railings and railing caps, siding, handrails, stair risers and treads, stair stringers, columns, balustrades, windowsills or stools and troughs, casings, sashes and wells, and air conditioners. Each side of a door is considered a component within its respective room.

"*Component type*" means a group of like components constructed of the same substrate in the same multifamily housing. For example, "wood door" is a component type.

"*Composite sample*" means the collection of more than one sample of the same medium (e.g., dust, soil, or paint) from the same type of surface (e.g., floor, interior windowsill, or window trough) such that multiple samples can be analyzed as a single sample.

"*Concentration*" means the relative content of a specific substance contained within a larger mass, such as the amount of lead (in micrograms per grams or parts per million of weight) in a sample of soil or dust.

"*Containment*" means a system of temporary barriers to protect workers, residents, and the environment by controlling exposures to the dust-lead hazards and debris created during renovation or lead abatement.

*“Course agenda”* means an outline of the key topics to be covered during a training course, including the time allotted to teach each topic.

*“Course test”* means an evaluation of the overall effectiveness of the training which shall test the trainees’ knowledge and retention of the topics covered during the course.

*“Course test blueprint”* means written documentation identifying the proportion of course test questions devoted to each major topic in the course curriculum.

*“Department”* means the Iowa department of public health.

*“Deteriorated paint”* means any interior or exterior paint or other coating that is cracking, flaking, chipping, peeling, or chalking, or any paint or coating located on an interior or exterior surface that is otherwise damaged or separated from the substrate of a building component.

*“Discipline”* means one of the specific types or categories of lead-based paint activities identified in this chapter for which individuals may receive training from approved courses and become certified by the department. For example, “lead inspector/risk assessor” is a discipline, and “lead-safe renovator” is a discipline.

*“Distinct painting history”* means the application history, as indicated by its visual appearance or a record of application, over time, of paint or other surface coatings to a component or room.

*“Documented methodologies”* means methods or protocols used to sample for the presence of lead in paint, dust, and soil.

*“Dripline”* means the area within three feet surrounding the perimeter of a building.

*“Dry disposable cleaning cloth”* means a commercially available dry, electrostatically charged, white disposable cloth designed to be used for cleaning hard surfaces such as uncarpeted floors or countertops.

*“Dry sanding”* means sanding a surface that is partially coated with paint or other surface coating without moisture and includes hand and mechanical methods of sanding.

*“Dry scraping”* means scraping a surface that is partially coated with paint or other surface coating without moisture and includes hand and mechanical methods of scraping.

*“Dust-lead hazard”* means surface dust in residential dwellings or child-occupied facilities that contains a mass-per-area concentration of lead greater than or equal to 40 micrograms per square foot on floors, 250 micrograms per square foot on interior windowsills, and 400 micrograms per square foot on window troughs based on wipe samples. A dust-lead hazard is present in a residential dwelling or child-occupied facility when the weighted arithmetic mean lead loading for all single-surface or composite samples of floors and interior windowsills is greater than or equal to 40 micrograms per square foot on floors, 250 micrograms per square foot on interior windowsills, and 400 micrograms per square foot on window troughs based on wipe samples. A dust-lead hazard is present on floors, interior windowsills, or window troughs in an unsampled residential dwelling in a multifamily dwelling if a dust-lead hazard is present on floors, interior windowsills, or window troughs, respectively, in at least one sampled residential unit on the property. A dust-lead hazard is present on floors, interior windowsills, or window troughs in an unsampled common area in a multifamily dwelling if a dust-lead hazard is present on floors, interior windowsills, or window troughs, respectively, in at least one sampled common area in the same common area group on the property.

*“Elevated blood lead (EBL) child”* means any child who has had one venous blood lead level greater than or equal to 20 micrograms per deciliter or at least two venous blood lead levels of 15 to 19 micrograms per deciliter.

*“Elevated blood lead (EBL) inspection”* means an inspection to determine the sources of lead exposure for an elevated blood lead (EBL) child and the provision within ten working days of a written report explaining the results of the investigation to the property owner and occupant of the residential dwelling or child-occupied facility being inspected and to the parents of the elevated blood lead (EBL) child. A certified elevated blood lead (EBL) inspector/risk assessor shall not determine that a residential dwelling is free of lead-based paint as a result of an elevated blood lead (EBL) inspection.

*“Elevated blood lead (EBL) inspection agency”* means an agency that employs or contracts with individuals who perform elevated blood lead (EBL) inspections. Elevated blood lead (EBL) inspection agencies may also employ or contract with individuals who perform other lead-based paint activities.

*“Emergency renovation”* means renovation, remodeling, or repainting activities necessitated by nonroutine failures of equipment or of a structure that were not planned but resulted from a sudden, unexpected event that, if not immediately attended to, presents a safety or public health hazard or threatens equipment or property with significant damage. “Emergency renovation” includes interim controls, renovation, remodeling, or repainting activities that are conducted in response to an elevated blood lead (EBL) inspection.

*“Encapsulant”* means a substance that forms a barrier between lead-based paint and the environment using a liquid-applied coating (with or without reinforcement materials) or an adhesively bonded coating material.

*“Encapsulation”* means the application of an encapsulant.

*“Enclosure”* means the use of rigid, durable construction materials that are mechanically fastened to the substrate in order to act as a barrier between lead-based paint and the environment.

*“Firm”* means a company, partnership, corporation, sole proprietorship, individual doing business, association, or other business entity; a federal, state, tribal, or local government agency; or a nonprofit organization that performs or offers to perform lead-based paint activities.

*“Friction surface”* means an interior or exterior surface that is subject to abrasion or friction including, but not limited to, certain window, floor, and stair surfaces.

*“Guest instructor”* means an individual designated by the training program manager or principal instructor to provide instruction specific to the lecture, hands-on work activities, or work practice components of a course.

*“Hands-on skills assessment”* means an evaluation which tests the trainees’ ability to satisfactorily perform the work practices and procedures identified in 641—70.6(135), as well as any other skill taught in a training course.

*“Hazardous lead-based paint”* means lead-based paint that is present on a friction surface where there is evidence of abrasion or where the dust-lead level on the nearest horizontal surface underneath the friction surface (e.g., the windowsill or floor) is greater than or equal to the dust-lead hazard level, lead-based paint that is present on an impact surface that is damaged or otherwise deteriorated from impact, lead-based paint that is present on a chewable surface, or any other deteriorated lead-based paint in any residential building or child-occupied facility or on the exterior of any residential building or child-occupied facility.

*“Hazardous waste”* means any waste as defined in 40 CFR 261.3.

*“HEPA exhaust control”* means a HEPA vacuum attached to the machine in such a manner that it captures the air, dust, and debris disturbed by the machine.

*“HEPA vacuum”* means a vacuum cleaner which has been designed, operated, and maintained with a high-efficiency particulate air (HEPA) filter as the last filtration stage. A HEPA filter is a filter that is capable of capturing particles of 0.3 microns with 99.97 percent efficiency. The vacuum cleaner must be designed, operated, and maintained so that all of the air drawn into the machine is expelled through the HEPA filter with none of the air leaking past it. A vacuum must have sufficient suction to capture the dust that must be collected. A vacuum that complies with ANSI/IESO Standard 4310-2009 for Portable High Efficiency Air Filtration Device Field Testing and Validation Standard as a Class 3, 4, or 5 device is considered a HEPA vacuum.

*“Housing for the elderly”* means retirement communities or similar types of housing reserved for households composed of one or more persons 62 years of age or older or an age recognized as elderly by a specific federal housing assistance program.

*“Immediate family”* means spouse, parents and grandparents, children and grandchildren, brothers and sisters, mother-in-law and father-in-law, brothers-in-law and sisters-in-law, daughters-in-law and sons-in-law, and adopted and step family members.

*“Impact surface”* means an interior or exterior surface that is subject to damage by repeated sudden force such as certain parts of door frames.

*“Inconclusive classification”* means any XRF reading falling within the inconclusive range on the performance characteristic sheet, including the boundary values defining the range.

*“Interim controls”* means a set of measures designed to temporarily reduce human exposure or likely exposure to lead-based paint hazards, including repairing deteriorated lead-based paint, specialized cleaning, maintenance, painting, temporary containment, ongoing monitoring of lead-based paint hazards or potential hazards, and the establishment and operation of management and resident education programs.

*“Interior windowsill”* means the portion of the horizontal window ledge that protrudes into the interior of the room.

*“Lead abatement”* means any measure or set of measures designed to permanently eliminate lead-based paint hazards in a residential dwelling or child-occupied facility. Lead abatement includes, but is not limited to, (1) the removal of lead-based paint and dust-lead hazards, the permanent enclosure or encapsulation of lead-based paint, the replacement of lead-painted surfaces or fixtures, and the removal or covering of soil-lead hazards and (2) all preparation, cleanup, disposal, repainting or refinishing, and postabatement clearance testing activities associated with such measures. “Lead abatement” specifically includes projects for which there is a written contract or other documentation, which provides that an individual will be conducting lead abatement in or around a residential dwelling or child-occupied facility.

In addition, “lead abatement” includes, but is not limited to, (1) projects for which there is a written contract or other document, which provides that an individual will be conducting activities in or to a residential dwelling or child-occupied facility that shall result in or are designed to permanently eliminate lead-based paint hazards, (2) projects resulting in the permanent elimination of lead-based paint hazards that are conducted by firms or individuals certified under 641—70.5(135), (3) projects resulting in the permanent elimination of lead-based paint hazards that are conducted by firms or individuals who, through their company name or promotional literature, represent, advertise, or hold themselves out to be in the business of performing lead abatement, and (4) projects resulting in the permanent elimination of lead-based paint that are conducted in response to a lead abatement order. However, in the case of items (1) through (4) of this definition, “lead abatement” does not include renovation, remodeling, landscaping, or other activities, when such activities are not designed to permanently eliminate lead-based paint hazards, but, instead, are designed to repair, restore, or remodel a given structure or dwelling, even though these activities may incidentally result in a reduction or elimination of lead-based paint hazards. Furthermore, “lead abatement” does not include interim controls, operations and maintenance activities, renovation, or other measures and activities designed to temporarily, but not permanently, reduce lead-based paint hazards.

*“Lead-based paint”* means paint or other surface coatings that contain lead greater than or equal to 1.0 milligram per square centimeter or greater than 0.5 percent by weight. Lead-based paint is present on any surface that is tested and found to contain lead greater than or equal to 1.0 milligram per square centimeter or greater than 0.5 percent by weight and on any surface like a surface tested in the same room equivalent that has a similar painting history and that is found to be lead-based paint.

*“Lead-based paint activities”* means, in the case of target housing and child-occupied facilities, lead-free inspection, lead inspection, elevated blood lead (EBL) inspection, lead hazard screen, risk assessment, lead abatement, visual risk assessment, clearance testing conducted after lead abatement, clearance testing conducted after renovation, clearance testing conducted after interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation pursuant to 24 CFR Part 35, and renovation.

*“Lead-based paint hazard”* means hazardous lead-based paint, a dust-lead hazard, or a soil-lead hazard.

*“Lead-based paint hazard reduction activity”* means an activity that permanently or temporarily reduces or eliminates lead-based paint hazards. “Lead-based paint hazard reduction activity” includes lead abatement, renovation, or interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation pursuant to 24 CFR Part 35.

*“Lead-free inspection”* means an inspection to determine whether a single dwelling unit or multifamily housing is free of lead-based paint and qualifies for the exemption in 24 CFR Part 35 and 40 CFR Part 745 for target housing being leased that is free of lead-based paint and the provision of

a written report explaining the results of the lead-free inspection and options for reducing lead-based paint hazards to the property owner and to the person requesting the lead inspection.

*“Lead hazard screen”* means a limited risk assessment activity that involves limited paint and dust sampling and the provision of a written report explaining the results of the lead hazard screen to the property owner and to the person requesting the lead hazard screen.

*“Lead inspection”* means a surface-by-surface investigation to determine the presence of lead-based paint and a determination of the existence, nature, severity, and location of lead-based paint hazards in a residential dwelling or child-occupied facility and the provision of a written report explaining the results of the investigation and options for reducing lead-based paint hazards to the property owner and to the person requesting the lead inspection. A certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall not determine that a residential dwelling is free of lead-based paint as a result of a lead inspection.

*“Lead professional”* means a person who conducts lead abatement, renovation, lead inspections, elevated blood lead (EBL) inspections, lead hazard screens, risk assessments, visual risk assessments, clearance testing after lead abatement, clearance testing after renovation, or clearance testing after interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation pursuant to 24 CFR Part 35.

*“Lead-safe work practices”* means methods that are used to minimize hazards when conducting renovation or interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation pursuant to 24 CFR Part 35.

*“Lead-safe work practices training program”* means an 8-hour training program that provides training on how to work safely with lead-based paint.

*“Living area”* means any area of a residential dwelling used by at least one child under the age of six years, including, but not limited to, living rooms, kitchen areas, dens, playrooms, and children’s bedrooms.

*“Loading”* means the quantity of a specific substance present per unit of surface area, such as the amount of lead in micrograms contained in the dust collected from a certain surface area divided by the surface area in square feet or square meters.

*“Mid-yard”* means an area of a residential yard approximately midway between the dripline of a residential building and the nearest property boundary or between the driplines of a residential building and another building on the same property.

*“Minor repair and maintenance activities”* means activities, including minor heating, ventilation or air-conditioning work, electrical work, and plumbing, that disrupt less than 1.0 square feet of a painted surface where none of the work practices prohibited or restricted by this chapter are used and where the work does not involve window replacement or demolition of painted surface areas. When painted components or portions of painted components are removed, the entire surface area removed is the amount of painted surface disturbed. Projects, other than emergency renovation, performed in the same room within the same 30 days must be considered the same project for the purpose of determining whether the project is a minor repair and maintenance activity.

*“Multifamily dwelling”* means a structure that contains more than one separate residential dwelling unit, which is used or occupied, or intended to be used or occupied, in whole or in part, as the home or residence of one or more persons.

*“Multifamily housing”* means one or more multifamily dwellings that are under the same ownership or management.

*“Negative classification”* means any value defined by the performance characteristics sheet as indicating that lead-based paint is not present.

*“NIST 1.02 standard film”* means the National Institute of Standards and Technology 1.02 milligrams of lead per square centimeter standard reference material. If the specific 1.02 milligrams of lead per square centimeter standard is not available from NIST, then the lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use the closest available standard from NIST (1.0X).

*“Occupant protection plan”* means a plan developed by a certified lead abatement contractor prior to the commencement of lead abatement in a residential dwelling or child-occupied facility that describes

the measures and management procedures that will be taken during lead abatement to protect the building occupants from exposure to any lead-based paint hazards.

*“Ongoing lead-based paint maintenance”* means the maintenance of housing pursuant to 24 CFR Part 35.

*“Painted component”* means a component or building component that is at least partially covered with paint or other surface coating.

*“Paint-lead hazard”* means the presence of hazardous lead-based paint in a residential dwelling or a child-occupied facility.

*“Paint sample”* means a sample collected in a representative location using ASTM E1729, “Standard Practice for Field Collection of Dried Paint Samples for Lead Determination by Atomic Spectrometry Techniques,” or equivalent method.

*“Paint stabilization”* means repairing any physical defect in the substrate of a painted surface that is causing paint deterioration, removing loose paint and other material from the surface to be treated, and applying a new protective coating or paint pursuant to 24 CFR Part 35.

*“Paint testing”* means the process of determining the presence or the absence of lead-based paint on a specific component or surface. Paint testing shall only be conducted by certified lead inspector/risk assessors or certified elevated blood lead (EBL) inspector/risk assessors using approved methods for testing. Approved methods for paint testing are XRF analysis and laboratory analysis.

*“Performance characteristics sheet (PCS)”* means an information sheet developed by the U.S. Environmental Protection Agency and U.S. Department of Housing and Urban Development that defines acceptable operating specifications and procedures for a specific model of X-ray fluorescence analyzer (XRF). The PCS contains information about XRF readings taken on specific substrates, calibration check tolerances, interpretation of XRF readings, and other aspects of the model’s performance.

*“Permanently covered soil”* means soil which has been separated from human contact by the placement of a barrier consisting of solid, relatively impermeable materials, such as pavement or concrete. Grass, mulch, and other landscaping materials are not considered permanent covering.

*“Play area”* means an area of frequent soil contact by children of less than six years of age as indicated by, but not limited to, factors including the following: the presence of play equipment (sandboxes, swing sets, and sliding boards), toys, or other children’s possessions, observations of play patterns, or information provided by parents, residents, caregivers, or property owners.

*“Positive classification”* means any value defined by the performance characteristics sheet as indicating the presence of lead-based paint.

*“Postrenovation cleaning verification”* means the use of a wet or dry disposable cleaning cloth to wipe the interior windowsill, window trough, uncarpeted floor, and countertops of the renovation work area and the comparison of the cloth to a cleaning verification card to determine if the work area has been adequately cleaned.

*“Principal instructor”* means the individual who has the primary responsibility for organizing and teaching a particular course.

*“Random selection”* means a method of choosing residential dwellings from multifamily housing consisting of similarly constructed and maintained residential dwellings such that each residential dwelling has an equal chance of being selected.

*“Recognized laboratory”* means an environmental laboratory recognized by the U.S. Environmental Protection Agency pursuant to Section 405(b) of the federal Toxic Substance Control Act as capable of performing an analysis for lead compounds in paint, soil, and dust.

*“Recognized test kit”* means a commercially available kit recognized by the EPA under 40 CFR 745.88 as being capable of allowing a user to determine the presence of lead at levels equal to or in excess of 1.0 milligrams per square centimeter, or more than 0.5 percent by weight, in a paint chip, paint, powder, or painted surface.

*“Reduction”* means measures designed to reduce or eliminate human exposure to lead-based paint hazards through methods including interim controls and lead abatement.

*“Reevaluation”* means a visual assessment of painted surfaces and limited dust and soil sampling conducted periodically following a lead-based paint hazard reduction activity where lead-based paint is still present and the provision of a written report explaining the results of the reevaluation.

*“Refresher training course”* means a course taken by a certified lead professional to maintain certification in a particular discipline.

*“Regulated entity”* means any lead professional or firm that is regulated by the department by virtue of these rules, the Iowa Code, certification documents, approval documents, lead abatement notices, or other official regulatory promulgation.

*“Rehabilitation”* means the improvement of an existing structure through alterations, incidental additions, or enhancements. Rehabilitation includes repairs necessary to correct the results of deferred maintenance, the replacement of principal fixtures and components, improvements to increase the efficient use of energy, and installation of security devices.

*“Renovation”* means the modification of any existing structure, or portion thereof, that results in the disturbance of painted surfaces, unless that activity is performed as part of lead abatement as defined by this chapter. The term “renovation” includes, but is not limited to, the removal, modification, or repair of painted surfaces or painted components such as modification of painted doors, surface restoration, and window repair; surface preparation activity such as sanding, scraping, or other such activities that may generate paint dust; the partial or complete removal of building components such as walls, ceilings, and windows; weatherization projects such as cutting holes in painted surfaces to install blown-in insulation or to gain access to attics and planing thresholds to install weatherstripping; and interim controls that disturb painted surfaces. “Renovation” does not include minor repair and maintenance activities.

*“Residential building”* means a building containing one or more residential dwellings.

*“Residential dwelling”* means (1) a detached single-family dwelling unit, including the surrounding yard, attached structures such as porches and stoops, and detached buildings and structures including, but not limited to, garages, farm buildings, and fences, or (2) a single-family dwelling unit in a structure that contains more than one separate residential dwelling unit, which is used or occupied, or intended to be used or occupied, in whole or part, as the home or residence of one or more persons.

*“Risk assessment”* means an investigation to determine the existence, nature, severity, and location of lead-based paint hazards in a residential dwelling or child-occupied facility and the provision of a written report explaining the results of the investigation and options for reducing lead-based paint hazards to the property owner and to the person requesting the risk assessment.

*“Room”* means a separate part of the inside of a building, such as a bedroom, living room, dining room, kitchen, bathroom, laundry room, or utility room. To be considered a separate room, the room must be separated from adjoining rooms by built-in walls or archways that extend at least six inches from an intersecting wall. Half walls or bookcases count as room separators if built-in. Movable or collapsible partitions or partitions consisting solely of shelves or cabinets are not considered built-in walls. A screened-in porch that is used as a living area is a room. Each exterior side of the house is considered a separate room.

*“Soil-lead hazard”* means bare soil on residential real property or on the property of a child-occupied facility that contains total lead greater than or equal to 400 parts per million for the dripline, mid-yard, and play areas. A soil-lead hazard is present in a dripline, mid-yard, or play area when the soil-lead concentration from a composite sample of bare soil is greater than or equal to 400 parts per million.

*“Soil sample”* means a sample collected in a representative location using ASTM E1727, “Standard Practice for Field Collection of Soil Samples by Atomic Spectrometry Techniques,” or equivalent method.

*“Standard treatments”* means a series of hazard reduction measures designed to reduce all lead-based paint hazards in a residential dwelling without the benefit of a risk assessment or other evaluation pursuant to 24 CFR Part 35. Standard treatments consist of the stabilization of all deteriorated interior and exterior paint, the provision of smooth and cleanable horizontal hard surfaces, the correction of dust-generating conditions (i.e., conditions causing rubbing, binding, or crushing of surfaces known to or presumed to be coated with lead-based paint), and the treatment of bare soil to control known or presumed soil-lead hazards.

*“State certification examination”* means a discipline-specific examination approved by the department to test the knowledge of a person who has completed an approved training course and is applying for certification in a particular discipline. The state certification examination may not be administered by the provider of an approved course.

*“Substrate”* means the material underneath the paint or finish on a surface. Substrates are classified as brick, concrete, drywall, metal, plaster, or wood.

*“Substrate correction”* means adjustments that must be made to readings obtained from some X-ray fluorescence analyzers to correct for systematic biases due to interference from the substrate beneath the paint.

*“Substrate correction value”* means the value that is used to adjust readings obtained from some X-ray fluorescence analyzers to correct for systematic biases due to interference from the substrate beneath the paint.

*“Targeted selection”* means selecting residential dwellings from multifamily housing for risk assessments or lead hazard screens using information supplied by the property owner.

*“Target housing”* means housing constructed prior to 1978 with the exception of housing for the elderly or for persons with disabilities and housing which does not contain a bedroom, unless at least one child under the age of six years resides or is expected to reside in the housing for the elderly or persons with disabilities or housing which does not contain a bedroom. Target housing also includes any nonresidential building where lead-based paint activities are conducted prior to or during the conversion of the nonresidential building to target housing.

*“Testing combination”* means the unique combination of the room, component, substrate, and distinct painting history.

*“Training hour”* means at least 50 minutes of actual learning, including, but not limited to, time devoted to lecture, learning activities, small group activities, demonstrations, evaluations, or hands-on experience.

*“Training manager”* means the individual responsible for administering an approved course and monitoring the performance of principal instructors and guest instructors.

*“Training program”* means a person or organization sponsoring a lead professional training course(s).

*“Visual inspection for clearance testing”* means the visual examination of a residential dwelling or a child-occupied facility following lead abatement or following interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation pursuant to 24 CFR 35.1340 to determine whether or not the lead abatement, interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation has been successfully completed.

*“Visual risk assessment”* means a visual assessment to determine the presence of deteriorated paint or other potential sources of lead-based paint hazards in a residential dwelling or child-occupied facility and the provision of a written report explaining the results of the assessment to the property owner and to the person requesting the visual risk assessment. For the purpose of compliance with this chapter, housing quality standards inspections conducted in housing owned by a public housing authority and housing that is receiving tenant-based rental assistance from a public housing authority are not considered visual risk assessments.

*“Weighted arithmetic mean”* means the arithmetic mean of sample results weighted by the number of subsamples in each sample. Its purpose is to give influence to a sample relative to the surface area it represents. A single surface dust sample is comprised of a single dust subsample. A composite dust sample may contain from two to four dust subsamples of the same area as each other and of each single surface dust sample in the composite. The weighted arithmetic mean is obtained by summing, for all dust samples, the product of the dust sample’s result multiplied by the number of dust subsamples in the dust sample, and dividing the sum by the total number of dust subsamples contained in all dust samples. For example, the weighted arithmetic mean of a single surface dust sample containing 60 micrograms per square foot ( $\mu\text{g}/\text{ft}^2$ ), a composite dust sample (three dust subsamples) containing 100  $\mu\text{g}/\text{ft}^2$ , and a composite dust sample (four dust subsamples) containing 110  $\mu\text{g}/\text{ft}^2$  is 100  $\mu\text{g}/\text{ft}^2$ . This result is based on the equation  $[60+(3\times 100)+(4\times 110)] / (1+3+4)$ .

*“Wet disposable cleaning cloth”* means a commercially available, premoistened white disposable cloth designed to be used for cleaning hard surfaces such as uncarpeted floors or countertops.

*“Wet mopping system”* means a device with the following characteristics: a long handle, a mop head designed to be used with disposable absorbent cleaning pads, a reservoir for cleaning solution, and a built-in mechanism for distributing or spraying the cleaning solution onto a floor, or a method of equivalent efficiency.

*“Wet sanding”* means a process of removing loose paint in which a surface that is partially coated with paint or other surface coating is kept wet or moist during sanding to minimize the dispersal of paint chips and airborne dust.

*“Wet scraping”* means a process of removing loose paint in which a surface that is partially coated with paint or other surface coating is kept wet or moist during scraping to minimize the dispersal of paint chips and airborne dust.

*“Windowsill”* means the portion of the horizontal window ledge that protrudes into the interior of the room when the window is closed.

*“Window trough”* means, for a typical double-hung window, the portion of the exterior windowsill between the interior windowsill (or stool) and the frame of the storm window. If there is no storm window, the window trough is the area that receives both the upper and lower window sashes when they are both lowered. The window trough is sometimes referred to as the window well.

*“Wipe sample”* means a sample collected by wiping a representative surface of known area, as determined by ASTM E1728, “Standard Practice for Field Collection of Settled Dust Samples Using Wipe Sampling Methods for Lead Determination by Atomic Spectrometry Techniques,” or equivalent method, with an acceptable wipe material as defined in ASTM E1792, “Standard Specification for Wipe Sampling Materials for Lead in Surface Dust.” The minimum area for a floor wipe sample shall be 0.50 square feet or 72 square inches. The minimum area for a windowsill wipe sample and for a window trough wipe sample shall be 0.25 square feet or 36 square inches.

*“Worksite”* or *“work area”* means an interior or exterior area where lead-based paint hazard reduction activity or renovation takes place. There may be more than one worksite in a dwelling unit or at a residential property.

*“Worst case selection”* means conducting a walk-through survey of all residential dwellings in the multifamily housing to select the highest-risk residential dwellings for risk assessments or lead hazard screens.

*“X-ray fluorescence analyzer (XRF)”* means an instrument that determines lead concentrations in milligrams per square centimeter (mg/cm<sup>2</sup>) using the principle of X-ray fluorescence.

*“XRF reading”* means the number obtained when a surface is tested with an X-ray fluorescence analyzer.

[ARC 8502B, IAB 2/10/10, effective 1/13/10]

**641—70.3(135) Lead professional certification.** A person or a firm shall not conduct lead abatement, clearance testing after lead abatement, lead-free inspections, lead inspections, elevated blood lead (EBL) inspections, lead hazard screens, risk assessments, visual risk assessments, clearance testing after renovation, or interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation pursuant to 24 CFR Part 35 unless the person or firm has been certified by the department in the appropriate discipline. Beginning April 22, 2010, a person or firm shall not conduct renovation unless the person or firm has been certified by the department in the appropriate discipline. However, persons who perform these activities within residential dwellings that they own are not required to be certified, unless the residential dwelling is occupied by a person other than the owner or a member of the owner’s immediate family while these activities are being performed. In addition, elevated blood lead (EBL) inspections shall be conducted only by certified elevated blood lead (EBL) inspector/risk assessors employed by or under contract with a certified elevated blood lead (EBL) inspection agency. In addition, persons who perform renovation under the supervision of a certified lead-safe renovator, certified lead abatement contractor, or certified lead abatement worker and who have completed on-the-job training are not required to be certified. However, on-the-job training does

not meet the training requirement for work conducted pursuant to 24 CFR Part 35. Lead professionals and firms shall not state that they have been certified by the state of Iowa unless they have met the requirements of 641—70.5(135) and been issued a current certificate by the department. Elevated blood lead (EBL) inspection agencies must be certified by the department. Elevated blood lead (EBL) inspection agencies shall not state that they have been certified by the state of Iowa unless they have met the requirements of 641—70.5(135) and been issued a current certificate by the department.

[ARC 8502B, IAB 2/10/10, effective 1/13/10]

**641—70.4(135) Course approval and standards.** All lead professional training courses for initial certification and refresher training must be approved by the department. Training programs shall not state that they have been approved by the state of Iowa unless they have met the requirements of 641—70.4(135) and been issued a letter of approval by the department. Lead-safe work practices training programs that were approved by the department prior to January 13, 2010, must reapply for approval.

**70.4(1)** Training courses shall meet the following requirements:

*a.* The training program offering the course shall employ a training manager who has the following qualifications:

(1) A bachelor's or graduate degree in building construction technology, engineering, industrial hygiene, safety, public health, or a related field; or two years of experience in managing a training program specializing in environmental hazards.

(2) Demonstrated experience, education, or training in lead professional activities, including lead inspection, lead abatement, lead-safe work practices, painting, carpentry, renovation, remodeling, occupational safety and health, or industrial hygiene.

*b.* The training manager shall designate a qualified principal instructor for each course who has the following qualifications:

(1) Demonstrated experience, education, or training in teaching workers or adults.

(2) Certification as a lead inspector/risk assessor, elevated blood lead (EBL) inspector/risk assessor, or lead abatement contractor. In the case of a course for training lead-safe renovators, the principal instructor may be certified as a sampling technician.

(3) Demonstrated experience, education, or training in lead professional activities, including lead inspection, lead abatement, lead-safe work practices, painting, carpentry, renovation, remodeling, occupational safety and health, or industrial hygiene.

*c.* The principal instructor shall be responsible for the organization of the course and oversight of the teaching of all course material. The training manager may designate guest instructors as needed to provide instruction specific to the lecture, hands-on activities, or work practice components of a course.

*d.* The training program shall ensure the availability of, and provide adequate facilities for, the delivery of the lecture, course test, hands-on training, and assessment activities. This includes providing training equipment that reflects current work practices and maintaining or updating the equipment as needed.

*e.* The training manager shall maintain the validity and integrity of the hands-on skills assessment to ensure that it accurately evaluates the trainees' performance of the work practices and procedures associated with the course topics contained in subrules 70.4(3) to 70.4(17).

*f.* The training manager shall maintain the validity and integrity of the course test to ensure that it accurately evaluates the trainees' knowledge and retention of the course topics.

*g.* The course test shall be developed in accordance with the test blueprint submitted with the course approval application. Training programs may use course tests developed by the department.

*h.* The training program shall issue unique course completion certificates to each individual who passes the course. The course completion certificate shall be issued in color. The course completion certificate shall include:

(1) The name and address of the individual, a photograph of the individual, and a unique identification number.

(2) The name of the particular course that the individual completed and the course length in hours.

- (3) Dates of course completion and test passage.
- (4) The name, address, and telephone number of the training program.
- (5) The signature of the training manager.
  - i.* The training manager shall develop and implement a quality control plan. The plan shall be used to maintain and improve the quality of the training program over time. This plan shall contain at least the following elements:
    - (1) Procedures for periodic revision of training materials and the course test to reflect changes in regulations and recommended practices.
    - (2) Procedures for the training manager to conduct an annual review of the competency of the principal instructor and all other instructors.
  - j.* The training program shall offer courses that teach the work practice standards for conducting lead-based paint activities contained in 641—70.6(135) and other standards developed by the department. These standards shall be taught in the appropriate courses to provide trainees with the knowledge needed to perform the lead-based paint activities they are responsible for conducting.
  - k.* The training manager shall ensure that each course meets the requirements in this rule for the number of training hours and hours of hands-on training. The training manager shall ensure that any student who misses more than 20 minutes of class time makes up the time before taking the course test.
  - l.* The training manager shall ensure that the training program complies at all times with all requirements in this rule.
  - m.* The training manager shall allow the department to audit the training program to verify the contents of the application for approval and for reapproval.
  - n.* The training program shall maintain, and make available to the department, upon request, the following records:
    - (1) All documents specified in paragraph 70.4(2) “f.”
    - (2) Current curriculum/course materials and documents reflecting any changes made to these materials.
    - (3) The course test blueprint and the course test.
    - (4) Information regarding how the hands-on assessment is conducted including, but not limited to, who conducts the assessment, how the skills are graded, what facilities are used, and the pass/fail rate.
    - (5) The quality control plan as described in paragraph 70.4(1) “i.”
    - (6) A file for each student who has completed a course. Each student file shall contain the following:
      1. The student’s name, address, and telephone number.
      2. The student’s test and answer sheet.
      3. A copy of the student’s course completion certificate.
      4. A copy of the student’s hands-on skill assessment, if applicable.
      5. A photograph of the student as taken by the training program.
    - (7) A file for each individual course that has been offered. Each file shall include the following:
      1. The dates of the course.
      2. The location of the course.
      3. The instructors who taught the course.
      4. A paper or electronic copy of the curriculum used for the course.
      5. A copy of the test used for the course.
      6. Documentation of the times that each student was present at the course, including documentation of how a student made up missed time.
      7. The course evaluations.
    - (8) Any other materials that have been submitted to the department as part of the program’s application for approval.
  - o.* The training program shall retain all required records at the address specified on the training program approval application for a minimum of six years.
  - p.* The training program shall notify the department in writing within 30 days of changing the address specified on its training program approval application or transferring the records from that address.

*q.* A training program shall notify the department in writing at least 7 days in advance of offering an approved course. The notification shall include the date(s), time(s), and location(s) where the approved course will be held. A training program shall notify the department at least 24 hours in advance of canceling an approved course.

*r.* The training program shall take a digital photograph of each student. The digital photograph shall be the same photograph that appears on the training certificate and is submitted to the department. The photograph shall meet the following specifications:

- (1) The individual shall be facing the camera.
- (2) The individual's head shall not be tilted.
- (3) The individual's head shall cover approximately half of the photo area.
- (4) The individual shall be in front of a neutral or light-colored background.
- (5) The individual shall not wear any items that detract from the face, such as hats or sunglasses.

Only head coverings worn for religious reasons may be worn. Religious head coverings may not cover the face of the individual.

- (6) Photographs shall be 24-bit color depth.

*s.* A training program shall provide the following information to the department electronically in a format specified by the department within 30 days of the conclusion of an approved course for each student who has taken the approved course:

- (1) Name, address, and social security number.
- (2) Course completion certificate number.
- (3) Test score.

(4) The photograph of each student as taken by the training program shall be submitted as a joint photographic experts group (JPEG) file with a size of at least two inches by two inches and a minimum resolution of 300 pixels per inch.

**70.4(2)** If a training program desires approval of a course by the department, the training program shall apply to the department for approval of the course at least 90 days before the initial offering of the course if the training program will use materials developed by the training program. If the training program will use materials developed by the department, the training program shall apply to the department for approval of the course at least 30 days before the initial offering of the course. The department may allow courses to be offered sooner if the department completes the approval in less than 30 days. The application shall include:

- a.* Training program name, contact person, address, and telephone number.
- b.* Course dates and times.
- c.* Course location, including a description of the facilities and equipment to be used for lecture and hands-on training.
- d.* Course agenda, including approximate times allotted to each training segment.
- e.* A copy of each reference material, text, student and instructor manuals, and audio-visual material used in the course. These materials may also be provided by the department.
- f.* The name(s) and qualifications of the training manager, principal instructor(s), and guest instructor(s). The following documents shall be submitted as evidence that training managers and principal instructors have the education, work experience, training requirements, or demonstrated experience required by subrule 70.4(1):

- (1) Official transcripts or diplomas as evidence of meeting the education requirements.
- (2) Résumés, letters of reference, or documentation of work experience, as evidence of meeting the work experience requirements.
- (3) Certificates from lead-specific training courses, as evidence of meeting the training requirements.
- g.* A copy of the course test blueprint. The course test may also be provided by the department.
- h.* A description of the activities and procedures that will be used for conducting the assessment of hands-on skills for each course.

- i.* Maximum class size.

- j.* A copy of the quality control plan for the course.

*k.* A nonrefundable fee of \$200.

**70.4(3)** To be approved for the training of lead inspector/risk assessors and elevated blood lead (EBL) inspector/risk assessors, a course must be at least 40 training hours with a minimum of 12 hours devoted to hands-on training activities. Lead inspector/risk assessor and elevated blood lead (EBL) inspector/risk assessor training courses shall cover at least the following subjects (requirements ending in an asterisk (\*) indicate areas that require hands-on activities as an integral component of the course):

- a.* Role and responsibilities of an inspector/risk assessor.
- b.* Background information on lead and its adverse health effects, how children and adults are exposed to lead, and how to prevent lead exposure in children and adults.
- c.* Background information on federal, state, and local regulations and guidance that pertain to lead-based paint and lead-based paint activities.
- d.* Lead-based paint inspection methods, including selection of rooms and components for sampling or testing to determine if a property is free of lead-based paint as specified in the Guidelines for the Evaluation and Control of Lead-Based Paint Hazards in Housing (1995, U.S. Department of Housing and Urban Development), and methods to determine if lead-based paint hazards are present in a property.\*
- e.* Paint, dust, and soil sampling methodologies.\*
- f.* Clearance standards and testing, including random sampling.\*
- g.* Collection of background information to perform a risk assessment.
- h.* Sources of environmental lead contamination such as paint, surface dust and soil, and water.
- i.* Visual inspection to identify lead-based paint hazards.\*
- j.* Lead hazard screen protocol.
- k.* Visual risk assessment protocol.
- l.* Reevaluation protocol.
- m.* In the case of renovation, procedures for using recognized test kits to determine whether paint is lead-based paint.\*
- n.* In the case of renovation, methods to ensure that the renovation has been properly completed, including postrenovation cleaning verification and clearance testing.\*
- o.* Sampling for other sources of lead exposure.\*
- p.* Interpretation of lead-based paint and other lead sampling results, including all applicable federal, state, and local guidance or regulations pertaining to lead-based paint hazards.\*
- q.* Development of lead hazard control options.
- r.* The role of interim controls, operation and maintenance activities, and renovation in reducing lead-based paint hazards.
- s.* Approved methods for conducting lead-based paint abatement, interim controls, operation and maintenance activities, and renovation.
- t.* Prohibited methods for conducting lead-based paint abatement, interim controls, operation and maintenance activities, and renovation.
- u.* Interior dust abatement and cleanup.
- v.* Soil and exterior dust abatement and cleanup.
- w.* Preparation of the final reports for lead inspections, lead-free inspections, risk assessments, visual assessments, lead hazard screens, clearance testing after lead abatement, clearance testing after renovation, reevaluation, and clearance testing after interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, and rehabilitation pursuant to 24 CFR Part 35.
- x.* Record keeping.
- y.* The course shall conclude with a course test and, if applicable, a hands-on skills assessment. The student must achieve a score of at least 80 percent on the examination and successfully complete the hands-on skills assessment to successfully complete the course. The student may take the course test no more than three times within six months of completing the course. If an individual does not pass the course test within six months of completing the course, the individual must retake the appropriate approved course.

z. The instructor shall provide each student with instructions and forms needed to apply to the department for certification and information provided by the department regarding the state certification examination. The instructor shall also provide each student with a current copy of this chapter and 641—Chapter 69.

aa. All of the course materials including instructions, applications, and forms must be provided on paper unless an individual student requests that the materials be provided electronically.

**70.4(4)** To be approved for the training of lead inspector/risk assessors and elevated blood lead (EBL) inspector/risk assessors who have already completed an approved sampling technician course, a course must be at least 20 training hours with a minimum of 8 hours devoted to hands-on training activities. The training course shall cover at least the following subjects (requirements ending in an asterisk (\*) indicate areas that require hands-on activities as an integral component of the course):

a. Role and responsibilities of a lead inspector/risk assessor and elevated blood lead (EBL) inspector/risk assessor.

b. Lead-based paint inspection methods, including selection of rooms and components for sampling or testing to determine if a property is free of lead-based paint as specified in the work practice standards in 641—70.6(135), and methods to determine if lead-based paint hazards are present in a property.\*

c. Collection of background information to perform a risk assessment.

d. Lead hazard screen protocol.

e. Reevaluation protocol.

f. Sampling for other sources of lead exposure.\*

g. Interpretation of lead-based paint and other lead sampling results, including all applicable federal, state, and local guidance or regulations pertaining to lead-based paint hazards.\*

h. Development of lead hazard control options, including lead abatement.\*

i. The role of interim controls, operation and maintenance activities, and renovation in reducing lead-based paint hazards.

j. Approved methods for conducting lead abatement, interim controls, operation and maintenance activities, and renovation.

k. Prohibited methods for conducting lead abatement, interim controls, operation and maintenance activities, and renovation.

l. Preparation of the final reports for lead inspections, lead-free inspections, risk assessments, lead hazard screens, reevaluation, and clearance testing after lead abatement.

m. Record keeping.

n. The course shall conclude with a course test and, if applicable, a hands-on skills assessment. The student must achieve a score of at least 80 percent on the examination and successfully complete the hands-on skills assessment to successfully complete the course. The student may take the course test no more than three times within six months of completing the course. If an individual does not pass the course test within six months of completing the course, the individual must retake the appropriate approved course.

o. The instructor shall provide each student with instructions and forms needed to apply to the department for certification and information provided by the department regarding the state certification examination. The instructor shall also provide each student with a current copy of this chapter and 641—Chapter 69.

p. All of the course materials including instructions, applications, and forms must be provided on paper unless an individual student requests that the materials be provided electronically.

**70.4(5)** Rescinded IAB 3/31/04, effective 5/5/04.

**70.4(6)** Rescinded IAB 3/31/04, effective 5/5/04.

**70.4(7)** Rescinded IAB 3/31/04, effective 5/5/04.

**70.4(8)** To be approved for the training of lead abatement contractors, a course must be at least 40 training hours with a minimum of 12 hours devoted to hands-on activities and shall cover at least the following subjects (requirements ending in an asterisk (\*) indicate areas that require hands-on activities as an integral component of the course):

- a. Role and responsibilities of a lead abatement contractor.
- b. Background information on lead and its adverse health effects, how children and adults are exposed to lead, and how to prevent lead exposure in children and adults.
- c. Background information on federal, state, and local regulations and guidance that pertain to lead-based paint and lead-based paint activities.
- d. Liability and insurance issues relating to lead abatement, interim controls, and renovation.
- e. Identification of lead-based paint and lead-based paint hazards.\*
- f. Interpretation of lead inspection reports.\*
- g. Development and implementation of an occupant protection plan, lead abatement report, and renovation report.
- h. Respiratory protection and protective clothing.\*
- i. Employee information and training.
- j. Approved methods for conducting lead abatement, interim controls, and renovation.\*
- k. Prohibited methods for conducting lead abatement, interim controls, and renovation.
- l. Interior dust abatement and cleanup.\*
- m. Soil and exterior dust abatement and cleanup.\*
- n. Clearance standards and testing, including random sampling.
- o. Cleanup, waste handling, and waste disposal.
- p. In the case of renovation, interior and exterior containment and cleanup methods.\*
- q. In the case of renovation, providing on-the-job training to other workers.\*
- r. In the case of renovation, procedures for using recognized test kits to determine whether paint is lead-based paint, including preparation of the required report.\*
- s. In the case of renovation, methods to ensure that the renovation has been properly completed, including postrenovation cleaning verification and clearance testing.\*
- t. In the case of renovation, record preparation and record keeping.
- u. Record keeping for lead abatement.
- v. The course shall conclude with a course test and, if applicable, a hands-on skills assessment.

The student must achieve a score of at least 80 percent on the examination and successfully complete the hands-on skills assessment to successfully complete the course. The student may take the course test no more than three times within six months of completing the course. If an individual does not pass the course test within six months of completing the course, the individual must retake the appropriate approved course.

w. The instructor shall provide each student with instructions and forms needed to apply to the department for certification and information provided by the department regarding the state certification examination. The instructor shall also provide each student with a current copy of this chapter and 641—Chapter 69.

x. All of the course materials including instructions, applications, and forms must be provided on paper unless an individual student requests that the materials be provided electronically.

**70.4(9)** To be approved for the training of lead abatement contractors who have already completed an approved lead abatement worker course, a course must be at least 16 training hours with a minimum of 4 hours devoted to hands-on activities and shall cover at least the following subjects (requirements ending in an asterisk (\*) indicate areas that require hands-on activities as an integral component of the course):

- a. Role and responsibilities of a lead abatement contractor.
- b. Liability and insurance issues relating to lead abatement.
- c. Interpretation of lead inspection reports.\*
- d. Development and implementation of an occupant protection plan and abatement report.
- e. Employee information and training.
- f. Clearance standards and testing, including random sampling.
- g. Record keeping for lead abatement.
- h. The course shall conclude with a course test and, if applicable, a hands-on skills assessment.

The student must achieve a score of at least 80 percent on the examination and successfully complete

the hands-on skills assessment to successfully complete the course. The student may take the course test no more than three times within six months of completing the course. If an individual does not pass the course test within six months of completing the course, the individual must retake the appropriate approved course.

*i.* The instructor shall provide each student with instructions and forms needed to apply to the department for certification and with information provided by the department regarding the state certification examination. The instructor shall also provide each student with a current copy of this chapter and 641—Chapter 69.

*j.* All of the course materials including instructions, applications, and forms must be provided on paper unless an individual student requests that the materials be provided electronically.

**70.4(10)** To be approved for the training of lead abatement workers, a course must be at least 24 training hours with a minimum of 8 hours devoted to hands-on activities and shall cover at least the following subjects (requirements ending in an asterisk (\*) indicate areas that require hands-on activities as an integral component of the course):

- a.* Role and responsibilities of a lead abatement worker.
- b.* Background information on lead and its adverse health effects, how children and adults are exposed to lead, and how to prevent lead exposure in children and adults.
- c.* Background information on federal, state, and local regulations and guidance that pertain to lead-based paint and lead-based paint activities.
- d.* Identification of lead-based paint and lead-based paint hazards.\*
- e.* Approved methods for conducting lead abatement, interim controls, and renovation.\*
- f.* Prohibited methods for conducting lead abatement, interim controls, and renovation.
- g.* Interior dust abatement and cleanup.\*
- h.* Soil and exterior dust abatement and cleanup.\*
- i.* Cleanup, waste handling, and waste disposal.
- j.* Respiratory protection and protective clothing.\*
- k.* Personal hygiene.
- l.* In the case of renovation, interior and exterior containment and cleanup methods.\*
- m.* In the case of renovation, providing on-the-job training to other workers.\*
- n.* In the case of renovation, procedures for using recognized test kits to determine whether paint is lead-based paint, including preparation of the required report.\*
- o.* In the case of renovation, methods to ensure that the renovation has been properly completed, including postrenovation cleaning verification and clearance testing.\*
- p.* In the case of renovation, record preparation and record keeping.
- q.* The course shall conclude with a course test and, if applicable, a hands-on skills assessment.

The student must achieve a score of at least 80 percent on the examination and successfully complete the hands-on skills assessment to successfully complete the course. The student may take the course test no more than three times within six months of completing the course. If an individual does not pass the course test within six months of completing the course, the individual must retake the appropriate approved course.

*r.* The instructor shall provide each student with instructions and forms needed to apply to the department for certification. The instructor shall also provide each student with a current copy of this chapter and 641—Chapter 69.

*s.* All of the course materials including instructions, applications, and forms must be provided on paper unless an individual student requests that the materials be provided electronically.

**70.4(11)** To be approved for the training of sampling technicians, a course must be at least 20 training hours with a minimum of 4 hours devoted to hands-on training activities. The training course shall cover at least the following subjects (requirements ending in an asterisk (\*) indicate areas that require hands-on activities as an integral component of the course):

- a.* Role and responsibilities of a sampling technician.
- b.* Background information on lead and its adverse health effects, how children and adults are exposed to lead, and how to prevent lead exposure in children and adults.

- c.* Background information on federal, state, and local regulations and guidance that pertain to lead-based paint and lead-based paint activities.
- d.* Methods of conducting visual risk assessments.\*
- e.* Paint, dust, and soil sampling methodologies.\*
- f.* In the case of renovation, procedures for using recognized test kits to determine whether paint is lead-based paint.\*
- g.* Clearance standards and testing.\*
- h.* Identification of lead-based paint hazards.\*
- i.* Sources of environmental lead contamination such as paint, surface dust and soil, and water.
- j.* Visual inspection to identify lead-based paint hazards.\*
- k.* Approved methods for conducting lead abatement, interim controls, operation and maintenance activities, and renovation.
- l.* Prohibited methods for conducting lead abatement, interim controls, operation and maintenance activities, and renovation.
- m.* Methods of interim controls and lead abatement for interior dust and cleanup.
- n.* Methods of interim controls and lead abatement for exterior dust and soil and cleanup.
- o.* Preparation of the final visual assessment report.
- p.* Preparation of clearance testing reports for clearance testing after renovation and clearance testing after interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, and rehabilitation pursuant to 24 CFR Part 35.
- q.* Record keeping.
- r.* The course shall conclude with a course test and, if applicable, a hands-on skills assessment. The student must achieve a score of at least 80 percent on the examination and successfully complete the hands-on skills assessment to successfully complete the course. The student may take the course test no more than three times within six months of completing the course. If an individual does not pass the course test within six months of completing the course, the individual must retake the appropriate approved course.
- s.* The instructor shall provide each student with instructions and forms needed to apply to the department for certification. The instructor shall also provide each student with a current copy of this chapter and 641—Chapter 69.

*t.* All of the course materials including instructions, applications, and forms must be provided on paper unless an individual student requests that the materials be provided electronically.

**70.4(12)** To be approved for the training of project designers, a course must be at least 48 instructional training hours with a minimum of 12 hours devoted to hands-on activities and shall cover at least the following subjects (requirements ending in an asterisk (\*) indicate areas that require hands-on activities as an integral component of the course):

- a.* Role and responsibilities of a lead abatement contractor.
- b.* Background information on lead and its adverse health effects, how children and adults are exposed to lead, and how to prevent lead exposure in children and adults.
- c.* Background information on federal, state, and local regulations and guidance that pertain to lead-based paint and lead-based paint activities.
- d.* Liability and insurance issues relating to project design.
- e.* Identification of lead-based paint and lead hazards.\*
- f.* Interpretation of lead inspection reports.\*
- g.* Development and implementation of an occupant protection plan, lead abatement report, and renovation report.
- h.* Respiratory protection and protective clothing.\*
- i.* Employee information and training.
- j.* Approved methods for conducting lead abatement, interim controls, and renovation.\*
- k.* Prohibited methods for conducting lead abatement, interim controls, and renovation.
- l.* Interior dust abatement and cleanup.\*
- m.* Soil and exterior dust abatement and cleanup.\*

- n.* Clearance standards and testing, including random sampling.
  - o.* Cleanup, waste handling, and waste disposal.
  - p.* In the case of renovation, providing on-the-job training to other workers.\*
  - q.* In the case of renovation, procedures for using recognized test kits to determine whether paint is lead-based paint, including preparation of the required report.\*
  - r.* In the case of renovation, methods to ensure that the renovation has been properly completed, including postrenovation cleaning verification and clearance testing.\*
  - s.* In the case of renovation, record preparation and record keeping.
  - t.* Record keeping for lead abatement.
  - u.* Role and responsibilities of a project designer.
  - v.* Development and implementation of an occupant protection plan for large-scale lead abatement projects.
  - w.* Lead abatement and lead hazard reduction methods, including restricted practices for large-scale lead abatement projects.
  - x.* Interior dust abatement/cleanup or lead hazard control and reduction methods for large-scale lead abatement projects.
  - y.* Clearance standards and testing for large-scale lead abatement projects.
  - z.* Integration of lead abatement methods with modernization and rehabilitation projects for large-scale lead abatement projects.
  - aa.* The course shall conclude with a course test and, if applicable, a hands-on skills assessment. The student must achieve a score of at least 80 percent on the examination and successfully complete the hands-on skills assessment to successfully complete the course. The student may take the course test no more than three times within six months of completing the course. If an individual does not pass the course test within six months of completing the course, the individual must retake the appropriate approved course.
  - ab.* The instructor shall provide each student with instructions and forms needed to apply to the department for certification and with information provided by the department regarding the state certification examination. The instructor shall also provide each student with a current copy of this chapter and 641—Chapter 69.
  - ac.* All of the course materials including instructions, applications, and forms must be provided on paper unless an individual student requests that the materials be provided electronically.
- 70.4(13)** To be approved for the training of project designers who have already completed an approved lead abatement contractor course, a course must be at least 8 instructional training hours and shall cover at least the following subjects:
- a.* Role and responsibilities of a project designer.
  - b.* Development and implementation of an occupant protection plan for large-scale abatement projects.
  - c.* Lead abatement and lead hazard reduction methods, including restricted practices for large-scale lead abatement projects.
  - d.* Interior dust abatement/cleanup or lead hazard control and reduction methods for large-scale lead abatement projects.
  - e.* Clearance standards and testing for large-scale lead abatement projects.
  - f.* Integration of lead abatement methods with modernization and rehabilitation projects for large-scale lead abatement projects.
  - g.* The course shall conclude with a course test and, if applicable, a hands-on skills assessment. The student must achieve a score of at least 80 percent on the examination and successfully complete the hands-on skills assessment to successfully complete the course. The student may take the course test no more than three times within six months of completing the course. If an individual does not pass the course test within six months of completing the course, the individual must retake the appropriate approved course.
  - h.* The instructor shall provide each student with instructions and forms needed to apply to the department for certification and information provided by the department regarding the state certification

examination. The instructor shall also provide each student with a current copy of this chapter and 641—Chapter 69.

*i.* All of the course materials including instructions, applications, and forms must be provided on paper unless an individual student requests that the materials be provided electronically.

**70.4(14)** To be approved for the training of project designers who have already completed an approved lead abatement worker course, a course must be at least 24 instructional training hours with a minimum of 4 hours devoted to hands-on activities and shall cover at least the following subjects (requirements ending in an asterisk (\*) indicate areas that require hands-on activities as an integral component of the course):

- a.* Role and responsibilities of a lead abatement contractor.
- b.* Liability and insurance issues relating to lead abatement.
- c.* Interpretation of lead inspection reports.\*
- d.* Development and implementation of an occupant protection plan and lead abatement report.
- e.* Employee information and training.
- f.* Clearance standards and testing, including random sampling.
- g.* Record keeping.
- h.* Role and responsibilities of a project designer.
- i.* Development and implementation of an occupant protection plan for large-scale lead abatement projects.
- j.* Lead abatement and lead hazard reduction methods, including restricted practices for large-scale lead abatement projects.
- k.* Interior dust abatement/cleanup or lead hazard control and reduction methods for large-scale lead abatement projects.
- l.* Clearance standards and testing for large-scale lead abatement projects.
- m.* Integration of lead abatement methods with modernization and rehabilitation projects for large-scale lead abatement projects.
- n.* The course shall conclude with a course test and, if applicable, a hands-on skills assessment. The student must achieve a score of at least 80 percent on the examination and successfully complete the hands-on skills assessment to successfully complete the course. The student may take the course test no more than three times within six months of completing the course. If an individual does not pass the course test within six months of completing the course, the individual must retake the appropriate approved course.
- o.* The instructor shall provide each student with instructions and forms needed to apply to the department for certification and information provided by the department regarding the state certification examination. The instructor shall also provide each student with a current copy of this chapter and 641—Chapter 69.
- p.* All of the course materials including instructions, applications, and forms must be provided on paper unless an individual student requests that the materials be provided electronically.

**70.4(15)** To be approved for the training of lead-safe renovators, a course must be at least 8 instructional training hours with a minimum of 2 hours devoted to hands-on activities and shall cover at least the following subjects (requirements ending in an asterisk (\*) indicate areas that require hands-on activities as an integral component of the course):

- a.* Background information on lead and its adverse health effects, how children and adults are exposed to lead, and how to prevent lead exposure in children and adults.
- b.* Background information on federal, state, and local regulations and guidance that pertain to lead-based paint, lead-based paint activities, and renovation activities.
- c.* Procedures for using recognized test kits to determine whether paint is lead-based paint, including preparation of the required report.\*
- d.* Renovation methods to minimize the creation of dust and lead-based paint hazards.\*
- e.* Prohibited methods of renovation.
- f.* Interior and exterior containment and cleanup methods.\*

g. Methods to ensure that the renovation has been properly completed, including postrenovation cleaning verification and clearance testing.\*

h. Waste handling and disposal.

i. Providing on-the-job training to other workers.\*

j. Record preparation and record keeping.

k. The course shall conclude with a course test and, if applicable, a hands-on skills assessment.

The student must achieve a score of at least 80 percent on the examination and successfully complete the hands-on skills assessment to successfully complete the course. The student may take the course test no more than three times within six months of completing the course. If an individual does not pass the course test within six months of completing the course, the individual must retake the appropriate approved course.

l. The instructor shall provide each student with instructions and forms needed to apply to the department for certification. The instructor shall also provide each student with a current copy of this chapter and 641—Chapter 69.

m. All of the course materials including instructions, applications, and forms must be provided on paper unless an individual student requests that the materials be provided electronically.

**70.4(16)** To be approved for refresher training of sampling technicians, lead abatement contractors, lead abatement workers, and project designers, a course must be at least 8 training hours. To be approved for refresher training of lead inspector/risk assessors and elevated blood lead (EBL) inspector/risk assessors who completed an approved 24-hour training course, a course must be at least 8 training hours to meet the recertification requirements of subrule 70.5(3). To be approved for refresher training of lead inspector/risk assessors and elevated blood lead (EBL) inspector/risk assessors to meet the recertification requirements of subrule 70.5(6), a course must be at least 16 training hours. To be approved for refresher training of lead-safe renovators, a course must be at least 4 hours. All refresher training courses shall cover at least the following topics:

a. A review of the curriculum topics of the initial certification course for the appropriate discipline as listed in subrules 70.4(3) to 70.4(15).

b. An overview of current safety practices relating to lead-based paint activities in general, as well as specific information pertaining to the appropriate discipline.

c. Current laws and regulations relating to lead-based paint activities in general, as well as specific information pertaining to the appropriate discipline.

d. Current technologies relating to lead-based paint activities in general, as well as specific information pertaining to the appropriate discipline.

e. The course shall conclude with a course test and, if applicable, a hands-on skills assessment. The student must achieve a score of at least 80 percent on the examination and successfully complete the hands-on skills assessment to successfully complete the course. The student may take the course test no more than three times within six months of completing the course. If an individual does not pass the course test within six months of completing the course, the individual must retake the appropriate approved course.

f. All of the course materials including instructions, applications, and forms must be provided on paper unless an individual student requests that the materials be provided electronically.

**70.4(17)** Approvals of training courses shall expire three years after the date of issuance. The training manager shall submit the following at least 90 days prior to the expiration date for a course to be reapproved:

a. Sponsoring organization name, contact person, address, and telephone number.

b. A list of the courses for which reapproval is sought.

c. A description of any changes to the training staff, facility, equipment, or course materials since the approval of the training program.

d. A statement signed by the training manager stating that the training program complies at all times with 641—70.4(135).

e. A nonrefundable fee of \$200.

**70.4(18)** The department shall consider a request for approval of a training course that has been approved by a state or tribe authorized by the U.S. Environmental Protection Agency.

*a.* The course shall be approved if it meets the requirements of 641—70.4(135).

*b.* If the course does not meet all of the requirements of 641—70.4(135), the department shall inform the training provider of additional topics and training hours that are needed to meet the requirements of 641—70.4(135).

[ARC 8502B, IAB 2/10/10, effective 1/13/10]

**641—70.5(135) Certification, interim certification, and recertification.**

**70.5(1)** A person wishing to become a certified lead professional shall apply on forms supplied by the department. The applicant must submit:

*a.* A completed application form.

*b.* A certificate of completion of an approved course for the discipline in which the applicant wishes to become certified.

*c.* If wishing to become a certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor, documentation of successful completion of the manufacturer's training course or equivalent for the X-ray fluorescence (XRF) analyzer that the inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor will use to conduct lead inspections.

*d.* If wishing to become a certified elevated blood lead (EBL) inspector/risk assessor, documentation of successful completion of 8 hours of training from the department's childhood lead poisoning prevention program. This training shall cover the roles and responsibilities of an elevated blood lead (EBL) inspector/risk assessor and the environmental and medical case management of elevated blood lead (EBL) children.

*e.* Documentation that the applicant meets the additional experience and education requirements in subrule 70.5(2) for the discipline in which the applicant wishes to become certified. The following documents shall be submitted as evidence that the applicant has the education and work experience required by subrule 70.5(2):

(1) Official transcripts or diplomas as evidence of meeting the education requirements.

(2) Résumés, letters of reference, or documentation of work experience, as evidence of meeting the work experience requirements.

*f.* To become certified as a lead inspector/risk assessor, elevated blood lead (EBL) inspector/risk assessor, lead abatement contractor, or project designer, a certificate showing that the applicant has passed the state certification examination in the discipline in which the applicant wishes to become certified.

*g.* A \$60 nonrefundable fee.

*h.* A person may receive interim certification from the department as a lead inspector/risk assessor, elevated blood lead (EBL) inspector/risk assessor, lead abatement contractor, or project designer by submitting the items required by paragraphs 70.5(1) "a" to "e" and "g" to the department. Interim certification shall expire six months from the date of completion of an approved course. An applicant shall upgrade an interim certification to a certification by submitting a certificate to the department showing that the applicant has passed the state certification examination as required by paragraph 70.5(1) "f." Interim certification is equivalent to certification.

*i.* Beginning April 22, 2010, lead-safe renovators must be certified by the department. A person who completed an approved course conducted by an approved lead-safe work practices training provider prior to January 13, 2010, must complete a lead-safe renovator refresher course to obtain certification.

**70.5(2)** To become certified by the department as a lead professional, an applicant must meet the education and experience requirements for the appropriate discipline:

*a.* Lead inspector/risk assessors and elevated blood lead (EBL) inspector/risk assessors must meet one of the following requirements:

(1) Bachelor's degree and one year of related experience (e.g., lead, environmental health, public health, housing inspection, building trades).

(2) Associate's degree and two years of related experience (e.g., lead, environmental health, public health, housing inspection, building trades).

(3) High school diploma and three years of related experience (e.g., lead, environmental health, public health, housing inspection, building trades).

(4) Certification as an industrial hygienist, professional engineer, registered architect, registered sanitarian, registered environmental health specialist, or registered nurse.

*b.* Lead abatement contractors must meet one of the following requirements:

(1) One year of experience as a certified lead abatement worker.

(2) Two years of related experience or education (e.g., lead, housing inspection, building trades, property management and maintenance).

*c.* No additional education or experience is required for lead abatement workers.

*d.* Sampling technicians must meet one of the following requirements:

(1) Associate's degree.

(2) High school diploma and one year of related experience (e.g., lead, environmental health, public health, housing inspection, building trades).

(3) Certification as an industrial hygienist, professional engineer, registered architect, registered sanitarian, registered environmental health specialist, or registered nurse.

*e.* Project designers must meet one of the following requirements:

(1) Bachelor's degree in engineering, architecture, or a related profession, and one year of experience in building construction and design or a related field.

(2) Four years of experience in building construction and design or a related field.

*f.* No additional education or experience is required for lead-safe renovators.

**70.5(3) and 70.5(4) Reserved.**

**70.5(5)** All agencies that perform or offer to perform elevated blood lead (EBL) inspections must be certified by the department. An agency wishing to become a certified elevated blood lead (EBL) inspection agency shall apply on forms supplied by the department. The agency must submit:

*a.* A completed application form.

*b.* Documentation that the agency has the authority to require the repair of lead hazards identified through an elevated blood lead (EBL) inspection.

*c.* Documentation that the agency employs or has contracted with a certified elevated blood lead (EBL) inspector/risk assessor to provide environmental case management of all elevated blood lead (EBL) children in the agency's service area, including follow-up to ensure that lead-based paint hazards identified as a result of elevated blood lead (EBL) inspections are corrected, and that lead-based paint activities will be conducted only by appropriately certified lead professionals. In addition, the agency must document that the agency and its employees or contractors will follow the work practice standards in 641—70.6(135) for conducting lead-based paint activities.

*d.* A statement that the certified elevated blood lead (EBL) inspection agency will maintain all records required by subrule 70.6(10).

**70.5(6)** Individuals certified as lead professionals must be recertified each year. To be recertified, lead professionals must submit the following:

*a.* A completed application form.

*b.* A \$60 nonrefundable fee.

*c.* Every three years, a certificate showing that the applicant has successfully completed an approved refresher training course for the appropriate discipline. The initial refresher training course must be completed no more than three years after the date on which the applicant completed an approved training program.

*d.* If a certified individual taking a refresher training course is also an approved instructor for that particular refresher training course and has access to the testing materials, the certified individual must take a refresher training course test supplied by the department in lieu of the normal refresher training course test.

**70.5(7)** The department shall approve the state certification examinations for the disciplines of lead inspector/risk assessor, elevated blood lead (EBL) inspector/risk assessor, lead abatement contractor, and project designer. The state certification examination shall be administered by selected community

college testing centers in Iowa. A community college testing center shall set the fee for administering the state certification examination to each applicant and shall collect the fee from each applicant.

*a.* An individual must achieve a score of at least 80 percent on the examination. An individual may take the state certification examination no more than three times within six months of receiving a certificate of completion from an approved course.

*b.* If an individual does not pass the state certification examination within six months of receiving a certificate of completion from an approved course, the individual must retake the appropriate approved course before reapplying for certification.

**70.5(8) Reciprocity.** Each applicant for certification who is certified in any of the disciplines specified in this rule in another state may request reciprocal certification. The department shall evaluate the requirements for certification to determine that the requirements for certification in such other state are as protective of health and the environment as the requirements for certification in Iowa. For all disciplines except lead-safe renovator, if the department determines that the requirements for certification in such other state are as protective of health and the environment as the requirements for certification in Iowa, the applicant may be certified after passing a proctored test covering Iowa-specific lead information with a score of at least 80 percent. For a lead-safe renovator, if the department determines that the requirements for certification in such other state are as protective of health and the environment as the requirements for certification in Iowa, the applicant may be certified after signing a statement indicating that the applicant has read and understands Iowa-specific lead information provided by the department. Each applicant for certification pursuant to this subrule shall submit the appropriate application accompanied by the fee for each discipline as specified in 641—70.5(135).

[ARC 8502B, IAB 2/10/10, effective 1/13/10]

**641—70.6(135) Work practice standards for lead professionals conducting lead-based paint activities in target housing and child-occupied facilities.** All lead-based paint activities shall be performed according to the work practice standards in 641—70.6(135), and a certified individual must perform that activity in compliance with the appropriate requirements below.

**70.6(1)** A certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor must conduct a lead-free inspection according to the following standards. A lead-free inspection shall be conducted only by a certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor.

*a.* When conducting a lead-free inspection in a residential dwelling, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use the following procedures:

(1) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall test paint in each room, including each exterior side.

(2) Except for components known to have been replaced after December 31, 1977, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall test each testing combination in each room. On windows, the window frame, interior windowsill, window sash, and window trough shall each be considered a separate testing combination. Except for walls, one sample shall be taken for each testing combination in a room. Each wall in a room shall be tested. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall require one of the following two types of evidence to determine that components were replaced after 1977:

1. Detailed specifications showing which components were to be replaced, restored, enclosed, or encapsulated and evidence that the work was actually completed such as receipts for building materials, city building records showing a date of remodeling, or a final inspection by the city or another inspector showing that the work was actually completed.

2. A certification under penalty of perjury per Iowa Code section 622.1 from the contractor who did the work or from the person(s) who owned the property at the time outlining all of the components that were removed and replaced.

If one of these two types of evidence is not available, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall test the component.

(3) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall note any components where lead-based paint has been enclosed or encapsulated. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall not make a determination that the residential dwelling is lead-free where components that are painted with lead-based paint have been enclosed or encapsulated.

(4) Paint shall be tested using adequate quality control by X-ray fluorescence (XRF) or by laboratory analysis using a recognized laboratory to determine the presence of lead-based paint on a surface. If testing by laboratory analysis, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall collect paint samples using the documented methodologies specified in guidance documents issued by the department. If testing by X-ray fluorescence, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use the following methodologies:

1. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use an X-ray fluorescence analyzer that has a performance characteristics sheet and shall use the X-ray fluorescence analyzer according to the performance characteristics sheet.

2. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use standards provided by the manufacturer and the NIST 1.02 standard film for calibration of the X-ray fluorescence analyzer.

3. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall take calibration readings consisting of an average of three readings at the beginning of the inspection, every four hours, and at the end of the inspection.

4. Prior to taking the final set of calibration readings and if recommended by the performance characteristics sheet, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall conduct substrate correction for all XRF readings less than 4.0 milligrams of lead per square centimeter. For each substrate that requires substrate correction, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall completely remove all paint from an area of two different testing combinations for that substrate. If possible, the areas chosen for substrate correction should have initial XRF readings of less than 2.5 milligrams of lead per square centimeter. For each testing combination, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall remove paint from an area that is at least as large as the XRF probe faceplate. On each of the two areas, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall place the NIST 1.02 standard film over the surface and take three XRF readings with the XRF used to conduct the inspection. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall calculate the arithmetic mean for these six readings and shall subtract 1.02 from this arithmetic mean to obtain the substrate correction value. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall then subtract the substrate correction value from each XRF reading for the substrate requiring substrate correction to obtain the corrected XRF reading. For example, if the six readings taken on the NIST 1.02 standard film were 1.1, 1.3, 1.4, 1.0, 1.2, and 1.1, the arithmetic mean is calculated by the equation  $(1.1 + 1.3 + 1.4 + 1.0 + 1.2 + 1.1)/6$  and is equal to 1.18. The substrate correction value is equal to 1.18 minus 1.02, or 0.16.

5. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall classify each XRF reading that did not require substrate correction and each corrected XRF reading for XRF readings that required substrate correction as positive, negative, or inconclusive, according to the performance characteristics sheet for the XRF. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall not discard XRF readings unless instructed to do so by the performance characteristics sheet or the operating instructions from the manufacturer. If the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor believes that a reading classified as positive is in error, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall collect a paint sample for laboratory analysis. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall change the positive

classification to negative only if the results of the laboratory analysis indicate that the surface is not painted with lead-based paint.

6. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall resolve inconclusive readings as defined by the performance characteristics sheet for the XRF by collecting paint samples for laboratory analysis. If instructed by the property owner or the person requesting the report, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor may assume that inconclusive readings are positive, but shall not assume that inconclusive readings are negative.

7. As described by the performance characteristics sheet, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall conduct retesting of 10 surfaces, calculate the retest tolerance limit, and determine whether the inspection meets the retest tolerance limit. If the retest tolerance limit is not met, then this procedure shall be repeated with 10 additional surfaces. If the retest tolerance limit is not met with the 20 retested surfaces, then all results of the inspection shall be considered invalid.

(5) If each testing combination in the residential dwelling is found to be free of lead-based paint, then the residential dwelling is free of lead-based paint. If any surface in the residential dwelling is found to be painted with lead-based paint, then the residential dwelling is not free of lead-based paint.

(6) If lead-based paint is identified through a lead-free inspection, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor must conduct a visual inspection to determine the presence of lead-based paint hazards and any other potential lead hazards including bare soil in the dripline of a home where lead-based paint is identified on exterior components or lead-based paint previously existed on exterior components, but has been removed, enclosed, or encapsulated.

(7) A certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor shall prepare a written report for each residential dwelling or child-occupied facility where a lead-free inspection is completed. No later than three weeks after the receipt of laboratory results, the certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall send a copy of the report to the property owner and to the person requesting the lead-free inspection, if different. A certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor shall maintain a copy of each written report for no less than three years. The report shall include, at least:

1. A statement that the inspection was conducted to determine whether the residential dwelling is free of lead-based paint;
2. Date of inspection;
3. Address of building;
4. Date of construction;
5. Apartment numbers (if applicable);
6. The name, address, and telephone number of the owner or owners of each residential dwelling or child-occupied facility;
7. Name, signature, and certification number of each certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor conducting the inspection;
8. Name and certification number of the certified firm(s) conducting the inspection;
9. Name, address, and telephone number of each laboratory conducting an analysis of collected samples;
10. Each testing method and sampling procedure employed for paint analysis, including quality control data and, if used, the manufacturer, serial number, software, and operating mode of any X-ray fluorescence (XRF) device;
11. XRF readings taken for calibration and calculations to demonstrate that the XRF is properly calibrated at each required calibration;
12. Specific locations by room of each painted component tested for the presence of lead-based paint and the results for each component expressed in terms appropriate to the sampling method used;
13. The results of retesting of 10 surfaces, calculations to determine the retest tolerance limit, and the determination of whether the inspection meets the retest tolerance limit;

14. If the certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor determines that the residential dwelling is free of lead-based paint, the report shall contain the following statement:

“The results of this inspection indicate that no lead in amounts greater than or equal to 1.0 mg/cm<sup>2</sup> in paint was found on any building components, using the inspection protocol in Chapter 7 of the HUD Guidelines for the Evaluation and Control of Lead-Based Paint Hazards in Housing (1997). Therefore, this residential dwelling qualifies for the exemption in 24 CFR Part 35 and 40 CFR Part 745 for target housing being leased that is free of lead-based paint, as defined in the rule. However, some painted surfaces may contain levels of lead below 1.0 mg/cm<sup>2</sup>, which could create lead dust or lead-contaminated soil hazards if the paint is turned into dust by abrasion, scraping, or sanding. This report should be kept by the owner and all future owners for the life of the residential dwelling. Per the disclosure requirements of 24 CFR Part 35 and 40 CFR Part 745, prospective buyers are entitled to all available inspection reports should the property be resold.”;

15. If any lead-based paint is identified, a description of the location, type, and severity of identified lead-based paint hazards, including the classification of each tested surface as to whether it is a lead-based paint hazard, and any other potential lead hazards, including bare soil in the dripline of a home where lead-based paint is identified on exterior components or lead-based paint previously existed on exterior components, but has been removed, enclosed, or encapsulated;

16. A description of interim controls and lead abatement options for each identified lead-based paint hazard and a suggested prioritization for addressing each hazard. If the use of an encapsulant or enclosure is recommended, the report shall recommend a maintenance and monitoring schedule for the encapsulant or enclosure;

17. Information regarding the owner’s obligations to disclose known lead-based paint and lead-based paint hazards upon sale or lease of residential property as required by Subpart H of 24 CFR Part 35 and Subpart I of 40 CFR Part 745;

18. Information regarding Iowa’s prerenovation notification requirements found in 641—Chapter 69; and information regarding Iowa’s regulations for renovation, remodeling and repainting found in 641—Chapter 70; and

19. The report shall contain the following statement:

“The location and nature of this inspection are required to be reported to the Iowa Department of Public Health for tracking purposes. The Iowa Department of Public Health may review this report for compliance purposes. It is a violation of law for anyone other than the certified lead professional signing it to alter this report. This report may be supplemented with additional information, so long as any addendum is signed by a lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor certified according to Iowa Administrative Code 641—70.3(135) and 70.5(135).”

*b.* When conducting a lead-free inspection in multifamily housing, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use the following procedures:

(1) A certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor may randomly select residential dwellings for testing when conducting a lead-free inspection in multifamily housing. If built before 1960 or if the date of construction is unknown, the multifamily housing shall contain at least 20 similarly constructed and maintained residential dwellings in order to use random selection. If built from 1960 to 1977, the multifamily housing shall contain at least 10 similarly constructed and maintained residential dwellings in order to use random selection. If the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor does not randomly select the residential dwellings for testing or if there are not enough residential dwellings to randomly select them for sampling, all residential dwellings shall be tested. If random selection is used, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor conducting the lead-free inspection shall randomly select the residential dwellings to be tested. The property owner, manager, or another interested party shall not specify which residential dwellings are to be tested. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use Table 1 to determine the number of residential dwellings to randomly select for testing.

Table 1

Minimum Number of Residential Dwellings to be Randomly Selected in Multifamily Housing for  
Lead-Free Inspection, Risk Assessment, Lead Hazard Screen, or Clearance Testing

| Number of Similar Residential Dwellings, Similar Common Areas, or Similar Exteriors in Multifamily Housing | Lead-Free Inspection, Risk Assessment, or Lead Hazard Screen                                                                     |                                                                          | Clearance Testing                                                        |
|------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------|--------------------------------------------------------------------------|
|                                                                                                            | Number of Pre-1960 Residential Dwellings or Residential Dwellings of Unknown Date of Construction to Randomly Select for Testing | Number of 1960-1977 Residential Dwellings to Randomly Select for Testing | Number of Residential Dwellings to Randomly Select for Clearance Testing |
| 1-9                                                                                                        | All                                                                                                                              | All                                                                      | All                                                                      |
| 10-13                                                                                                      | All                                                                                                                              | 10                                                                       | All                                                                      |
| 14                                                                                                         | All                                                                                                                              | 11                                                                       | All                                                                      |
| 15                                                                                                         | All                                                                                                                              | 12                                                                       | All                                                                      |
| 16-17                                                                                                      | All                                                                                                                              | 13                                                                       | All                                                                      |
| 18                                                                                                         | All                                                                                                                              | 14                                                                       | All                                                                      |
| 19                                                                                                         | All                                                                                                                              | 15                                                                       | All                                                                      |
| 20                                                                                                         | All                                                                                                                              | 16                                                                       | All                                                                      |
| 21-26                                                                                                      | 20                                                                                                                               | 16                                                                       | 20                                                                       |
| 27                                                                                                         | 21                                                                                                                               | 17                                                                       | 21                                                                       |
| 28                                                                                                         | 22                                                                                                                               | 18                                                                       | 22                                                                       |

| 259-279                                                                                                    | 53                                                                                                                               | 27                                                                       | 53                                                                       |
| 280-299                                                                                                    | 53                                                                                                                               | 28                                                                       | 53                                                                       |
| 300-379                                                                                                    | 54                                                                                                                               | 28                                                                       | 54                                                                       |
| 380-499                                                                                                    | 55                                                                                                                               | 28                                                                       | 55                                                                       |
| 500-776                                                                                                    | 56                                                                                                                               | 28                                                                       | 56                                                                       |
| 777-939                                                                                                    | 57                                                                                                                               | 28                                                                       | 57                                                                       |
| 940-1004                                                                                                   | 57                                                                                                                               | 29                                                                       | 57                                                                       |
| 1005-1022                                                                                                  | 58                                                                                                                               | 29                                                                       | 58                                                                       |
| 1023-1032                                                                                                  | 59                                                                                                                               | 29                                                                       | 59                                                                       |
| 1033-1039                                                                                                  | 59                                                                                                                               | 30                                                                       | 59                                                                       |
| 1040+                                                                                                      | 5.8%, rounded to the next highest whole number                                                                                   | 2.9%, rounded to the next highest whole number                           | 5.8%, rounded to the next highest whole number                           |

(2) A certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor may randomly select each type of common area in the multifamily housing, including but not limited to hallways, exterior sides of a building, and laundry rooms, for testing. Each type of common area shall be counted separately. If built before 1960, the multifamily housing shall contain at least 20 of a type of common area in order to use random selection. If built from 1960 to 1977, the multifamily housing shall contain at least 10 of a type of common area in order to use random selection. If the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor does not randomly select the common areas for testing or if there are not enough common areas to randomly select them for testing, all common areas shall be tested. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use Table 1 to determine the number of each type of common area to randomly select for testing.

(3) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall test paint in each room of each residential dwelling selected for testing and in each common area selected for testing.

(4) Except for components known to have been replaced after December 31, 1977, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall test each testing combination in each room of a residential dwelling chosen for testing and in each common area chosen

for testing. On windows, the window frame, interior windowsill, window sash, and window trough shall each be considered a separate testing combination. Each wall in a room or a common area shall be tested. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall require one of the following two types of evidence to determine that components were replaced after 1977:

1. Detailed specifications showing which components were to be replaced, restored, enclosed, or encapsulated and evidence that the work was actually completed such as receipts for building materials, city building records showing a date of remodeling, or evidence of a final inspection by the city or another inspector showing that the work was actually completed.

2. A certification under penalty of perjury per Iowa Code section 622.1 from the contractor who did the work or from the person(s) who owned the property at the time outlining all of the components that were removed and replaced.

If one of these two types of evidence is not available, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall test the component.

- (5) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall note any components where lead-based paint has been enclosed or encapsulated. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall not make a determination that a component or the multifamily housing is lead-free where components that are painted with lead-based paint have been enclosed or encapsulated.

- (6) Paint shall be tested using adequate quality control by X-ray fluorescence or by laboratory analysis using a recognized laboratory to determine the presence of lead-based paint on a surface. If testing by laboratory analysis, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall collect paint samples using the documented methodologies specified in guidance documents issued by the department. If testing by X-ray fluorescence, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use the following methodologies:

1. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor must use an X-ray fluorescence analyzer which has a performance characteristics sheet and shall use the X-ray fluorescence analyzer according to the performance characteristics sheet.

2. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall not use an X-ray fluorescence analyzer using a software version or a mode of operation that could result in inconclusive readings or that recommends substrate correction.

3. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use standards provided by the manufacturer and the NIST 1.02 standard film for calibration of the X-ray fluorescence analyzer.

4. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall take calibration readings consisting of an average of three readings at the beginning of the inspection, every four hours, and at the end of the inspection.

5. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall classify each XRF reading as positive or negative according to the performance characteristics sheet for the XRF. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall not discard XRF readings unless instructed to do so by the performance characteristics sheet or the operating instructions from the manufacturer. If the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor believes that a reading classified as positive is in error, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall collect a paint sample for laboratory analysis. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall change the positive classification to negative only if the results of the laboratory analysis indicate that the surface is not painted with lead-based paint.

6. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall count the number of XRF readings taken for each component type. If fewer than 40 of any component type were tested, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall randomly choose additional testing combinations for the component type

to reach a total of 40 XRF readings. If fewer than 40 testing combinations are available for testing, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall test each testing combination.

(7) For each component type where at least 40 testing combinations have been tested, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall determine the number and percentage of each component type that is classified as positive or negative. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall classify each component type as follows:

1. Lead-based paint is not present on a component type if all readings are classified as negative.
2. Lead-based paint is present on a component type if at least 15 percent of the readings are classified as positive.

3. Lead-based paint is present on a component type if greater than or equal to 5 percent but less than 15 percent of the XRF readings are classified as positive, unless the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor collects paint samples and obtains laboratory analyses for all positive XRF readings. If the laboratory analyses show that lead-based paint is not present on any components, then the component type is negative. If the laboratory analyses show that lead-based paint is present on any component, then the component type is positive.

4. Lead-based paint is present on a component type if greater than 0 but less than 5 percent of the XRF readings are classified as positive, unless the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor collects paint samples and obtains laboratory analyses for all positive XRF readings or randomly selects a second set of residential dwellings for testing. If the laboratory analyses show that lead-based paint is not present on any components, then the component type is negative. If the laboratory analyses show that lead-based paint is present on any component, then the component type is positive. If a second set of randomly selected residential dwellings is sampled and greater than 0 but less than 2.5 percent of the combined set of results is positive, the component type may be considered as not having lead-based paint developmentwide but rather, having lead-based paint in isolated locations, with a reasonable degree of confidence. Individual components that are classified as positive should be considered lead-based painted and managed or abated appropriately.

5. If a particular component type in the sampled residential dwellings is classified as positive, that same component type in the unsampled residential dwellings is also classified as positive.

- (8) If fewer than 40 of a component type are available for testing, each testing combination must be classified individually as positive or negative.

- (9) If any component type or individual component is classified as positive, then the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall not state that the multifamily housing is free of lead-based paint.

- (10) As specified by the performance characteristics sheet, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall conduct retesting of 10 surfaces selected from two residential dwellings, calculate the retest tolerance limit, and determine whether the inspection meets the retest tolerance limit. If the retest tolerance limit is not met, then this procedure shall be repeated with 10 additional surfaces selected from the two residential dwellings. If the retest tolerance limit is not met with the 20 retested surfaces, then all results of the inspection shall be considered invalid.

- (11) If lead-based paint is identified on any component or component type, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor must conduct a visual inspection to determine the presence of lead-based paint hazards and any other potential lead hazards, including bare soil in the dripline of a home where lead-based paint is identified on exterior components or lead-based paint previously existed on exterior components, but has been removed, enclosed, or encapsulated.

- (12) A certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor shall prepare a written report for each residential dwelling or child-occupied facility inspected. No later than three weeks after the receipt of laboratory results, the certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall send a copy of the report to the property owner and to the person requesting the inspection, if different. A certified lead inspector/risk assessor or

a certified elevated blood lead (EBL) inspector/risk assessor shall maintain a copy of each written report for no less than three years. The inspection report shall include, at least:

1. Date of each inspection;
2. Address of each building in the multifamily housing;
3. Date of construction for each building in the multifamily housing;
4. A list of the apartments and common areas in each building in the multifamily housing;
5. The name, address, and telephone number of the owner or owners of each residential dwelling or child-occupied facility;
6. A statement that the inspection was conducted to determine that lead-based paint is not present;
7. The name of the Iowa-certified inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor who randomly selected the residential dwellings and common areas for testing;
8. The number of residential dwellings and common areas that were selected for testing, how these numbers were determined, and a list of the residential dwellings and common areas that were selected for testing;
9. Name, signature, and certification number of each certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor conducting the inspection;
10. Name and certification number of the certified firm(s) conducting the inspection;
11. Name, address, and telephone number of each laboratory conducting an analysis of collected samples;
12. Each testing method and sampling procedure employed for paint analysis, including quality control data and, if used, the manufacturer, serial number, software, and operating mode of any X-ray fluorescence (XRF) analyzer;
13. XRF readings taken for calibration and calculations to demonstrate that the XRF is properly calibrated at each required calibration;
14. Specific locations by room of each painted component tested for the presence of lead-based paint and by residential dwelling or common area and the results for each component expressed in terms appropriate to the sampling method used;
15. Component aggregations and the determination of whether lead-based paint is present by component type;
16. The results of retesting of 10 surfaces, calculations to determine the retest tolerance limit, and the determination of whether the inspection meets the retest tolerance limit;
17. If the certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor determines that the multifamily housing is free of lead-based paint, the report shall contain the following statement:

“The results of this inspection indicate that no lead in amounts greater than or equal to 1.0 mg/cm<sup>2</sup> in paint was found on any building components, using the inspection protocol in Chapter 7 of the HUD Guidelines for the Evaluation and Control of Lead-Based Paint Hazards in Housing (1997). Therefore, this multifamily housing qualifies for the exemption in 24 CFR Part 35 and 40 CFR Part 745 for target housing being leased that is free of lead-based paint, as defined in the rule. However, some painted surfaces may contain levels of lead below 1.0 mg/cm<sup>2</sup>, which could create lead dust or lead-contaminated soil hazards if the paint is turned into dust by abrasion, scraping, or sanding. This report should be kept by the owner and all future owners for the life of the multifamily housing. Per the disclosure requirements of 24 CFR Part 35 and 40 CFR Part 745, prospective buyers are entitled to all available inspection reports should the property be resold.”;
18. If any lead-based paint is identified, a description of the location, type, and severity of identified lead-based paint hazards, including the classification of each tested surface as to whether it is a lead-based paint hazard, and any other potential lead hazards, including bare soil in the dripline of a home where lead-based paint is identified on exterior components or lead-based paint previously existed on exterior components, but has been removed, enclosed, or encapsulated;
19. A description of interim controls and lead abatement options for each identified lead-based paint hazard and a suggested prioritization for addressing each hazard. If the use of an encapsulant or

enclosure is recommended, the report shall recommend a maintenance and monitoring schedule for the encapsulant or enclosure;

20. Information regarding the owner's obligations to disclose known lead-based paint and lead-based paint hazards upon sale or lease of residential property as required by Subpart H of 24 CFR Part 35 and Subpart I of 40 CFR Part 745;

21. Information regarding Iowa's prerenovation notification requirements found in 641—Chapter 69; and information regarding Iowa's regulations for renovation found in 641—Chapter 70; and

22. The report shall contain the following statement:

"The location and nature of this inspection are required to be reported to the Iowa Department of Public Health for tracking purposes. The Iowa Department of Public Health may review this report for compliance purposes. It is a violation of law for anyone other than the certified lead professional signing it to alter this report. This report may be supplemented with additional information, so long as any addendum is signed by a lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor certified according to Iowa Administrative Code 641—70.3(135) and 70.5(135)."

**70.6(2)** A certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor must conduct lead inspections according to the following standards. Lead inspections shall be conducted only by a certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor.

*a.* When conducting a lead inspection in a residential dwelling or child-occupied facility, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use the following procedures:

(1) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall test paint in each room, including each exterior side.

(2) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall test each testing combination in each room. On windows, the window frame, interior windowsill, window sash, and window trough shall each be considered a separate testing combination. One sample shall be taken for each testing combination in a room, including the walls. If a testing combination is painted and not tested, it shall be assumed to be painted with lead-based paint.

*b.* Paint shall be tested using adequate quality control by X-ray fluorescence or by laboratory analysis using a recognized laboratory to determine the presence of lead-based paint on a surface. If testing by laboratory analysis, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall collect paint samples using the documented methodologies specified in guidance documents issued by the department. If testing by X-ray fluorescence, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use the following methodologies:

(1) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use an X-ray fluorescence analyzer that has a performance characteristics sheet and shall use the X-ray fluorescence analyzer according to the performance characteristics sheet.

(2) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use the NIST 1.02 standard film or standards provided by the manufacturer for calibration of the X-ray fluorescence analyzer. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall not state that any surface is free of lead-based paint unless the NIST 1.02 standard film is used for calibration.

(3) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall take calibration readings consisting of an average of three readings at the beginning of the inspection.

(4) If recommended by the performance characteristics sheet, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall conduct substrate correction for all XRF readings less than 4.0 milligrams of lead per square centimeter. For each substrate that requires substrate correction, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall completely remove all paint from an area of two different testing combinations for that substrate. If possible, the areas chosen for substrate correction should have initial XRF readings of

less than 2.5 milligrams of lead per square centimeter. For each testing combination, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall remove paint from an area that is at least as large as the XRF probe faceplate. On each of the two areas, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall place the NIST 1.02 standard film over the surface, and take three XRF readings with the XRF used to conduct the inspection. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall calculate the arithmetic mean for these six readings and shall subtract 1.02 from this arithmetic mean to obtain the substrate correction value. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall then subtract the substrate correction value from each XRF reading for the substrate requiring substrate correction to obtain the corrected XRF reading. For example, if the six readings taken on the NIST 1.02 standard film were 1.1, 1.3, 1.4, 1.0, 1.2, and 1.1, the arithmetic mean is calculated by the equation  $(1.1 + 1.3 + 1.4 + 1.0 + 1.2 + 1.1)/6$  and is equal to 1.18. The substrate correction value is equal to 1.18 minus 1.02, or 0.16. If the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor does not conduct substrate correction where recommended by the performance characteristics sheet, then the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall assume that all of the readings are positive and shall not state that a surface is free of lead-based paint.

(5) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall classify each XRF reading that did not require substrate correction and each corrected XRF reading for XRF readings that required substrate correction as positive, negative, or inconclusive, according to the performance characteristics sheet for the XRF. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall not discard XRF readings unless instructed to do so by the performance characteristics sheet or the operating instructions from the manufacturer. If the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor believes that a reading classified as positive is in error, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall collect a paint sample for laboratory analysis. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall change the positive classification to negative only if the results of the laboratory analysis indicate that the surface is not painted with lead-based paint. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor may assume that all inconclusive readings are positive and classify them as such.

(6) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall resolve inconclusive readings as defined by the performance characteristics sheet for the XRF by collecting paint samples for laboratory analysis. If the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor does not resolve inconclusive readings by laboratory analysis, then the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall assume that the inconclusive readings are positive.

c. If lead-based paint is identified through an inspection, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor must conduct a visual inspection to determine the presence of lead-based paint hazards and any other potential lead hazards, including bare soil in the dripline of a home where lead-based paint is identified on exterior components or lead-based paint previously existed on exterior components, but has been removed, enclosed, or encapsulated.

d. A certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor shall prepare a written report for each residential dwelling or child-occupied facility inspected. No later than three weeks after the receipt of laboratory results, the certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall send a copy of the report to the property owner and to the person requesting the inspection, if different. A certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor shall maintain a copy of each written report for no less than three years. The inspection report shall include, at least:

- (1) A statement that the inspection was conducted to identify lead-based paint and lead-based paint hazards in the residential dwelling;
- (2) Date of each inspection;
- (3) Address of building;

- (4) Date of construction;
- (5) Apartment numbers (if applicable);
- (6) The name, address, and telephone number of the owner or owners of each residential dwelling or child-occupied facility;
- (7) Name, signature, and certification number of each certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor conducting the inspection;
- (8) The name and certification number of the certified firm(s) conducting the inspection;
- (9) Name, address, and telephone number of each laboratory conducting an analysis of collected samples;
- (10) Each testing method and sampling procedure employed for paint analysis, including quality control data and, if used, the manufacturer, serial number, software, and operating mode of any X-ray fluorescence (XRF) analyzer;
- (11) XRF readings taken for calibration and calculations to demonstrate that the XRF is properly calibrated;
- (12) Specific locations by room of each painted component tested for the presence of lead-based paint and the results for each component expressed in terms appropriate to the sampling method used;
- (13) A statement that all painted or finished components that were not tested must be assumed to contain lead-based paint;
- (14) A description of the location, type, and severity of identified lead-based paint hazards, including the classification of each tested surface as to whether it is a lead-based paint hazard, and any other potential lead hazards, including bare soil in the dripline of a home where lead-based paint is identified on exterior components or lead-based paint previously existed on exterior components, but has been removed, enclosed, or encapsulated;
- (15) A description of interim controls and lead abatement options for each identified lead-based paint hazard and a suggested prioritization for addressing each hazard. If the use of an encapsulant or enclosure is recommended, the report shall recommend a maintenance and monitoring schedule for the encapsulant or enclosure;
- (16) Information regarding the owner's obligations to disclose known lead-based paint and lead-based paint hazards upon sale or lease of residential property as required by Subpart H of 24 CFR Part 35 and Subpart I of 40 CFR Part 745;
- (17) Information regarding Iowa's prerenovation notification requirements found in 641—Chapter 69; and information regarding Iowa's regulations for renovation found in 641—Chapter 70; and
- (18) The report shall contain the following statement:

"The location and nature of this inspection are required to be reported to the Iowa Department of Public Health for tracking purposes. The Iowa Department of Public Health may review this report for compliance purposes. It is a violation of law for anyone other than the certified lead professional signing it to alter this report. This report may be supplemented with additional information, so long as any addendum is signed by a lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor certified according to Iowa Administrative Code 641—70.3(135) and 70.5(135)."

**70.6(3)** A certified elevated blood lead (EBL) inspector/risk assessor must conduct elevated blood lead (EBL) inspections according to the following standards. Elevated blood lead (EBL) inspections shall be conducted only by a certified elevated blood lead (EBL) inspector/risk assessor.

*a.* When conducting an elevated blood lead (EBL) inspection, the certified elevated blood lead (EBL) inspector/risk assessor shall use the following procedures:

- (1) The certified elevated blood lead (EBL) inspector/risk assessor shall test paint in each room, including each exterior side.
- (2) The certified elevated blood lead (EBL) inspector/risk assessor shall test each testing combination in each room. One sample shall be taken for each testing combination in a room, including walls. On windows, the window frame, interior windowsill, window sash, and window trough shall each be considered a separate testing combination. If a testing combination is painted and not tested, it shall be assumed to be painted with lead-based paint.

b. Paint shall be tested using adequate quality control by X-ray fluorescence or by laboratory analysis using a recognized laboratory to determine the presence of lead-based paint on a surface. If testing by laboratory analysis, the certified elevated blood lead (EBL) inspector/risk assessor shall collect paint samples using the documented methodologies specified in guidance documents issued by the department. If testing by X-ray fluorescence, the certified elevated blood lead (EBL) inspector/risk assessor shall use the following methodologies:

(1) The certified elevated blood lead (EBL) inspector/risk assessor shall use an X-ray fluorescence analyzer that has a performance characteristics sheet and shall use the X-ray fluorescence analyzer according to the performance characteristics sheet.

(2) The certified elevated blood lead (EBL) inspector/risk assessor shall use the NIST 1.02 standard film or standards provided by the manufacturer for calibration of the X-ray fluorescence analyzer. The certified elevated blood lead (EBL) inspector/risk assessor shall not state that any surface is free of lead-based paint unless the NIST 1.02 standard film is used for calibration.

(3) The certified elevated blood lead (EBL) inspector/risk assessor shall take calibration readings consisting of an average of three readings at the beginning of the inspection.

(4) If recommended by the performance characteristics sheet, the certified elevated blood lead (EBL) inspector/risk assessor shall conduct substrate correction for all XRF readings less than 4.0 milligrams of lead per square centimeter. For each substrate that requires substrate correction, the certified elevated blood lead (EBL) inspector/risk assessor shall completely remove all paint from an area of two different testing combinations for that substrate. If possible, the areas chosen for substrate correction should have initial XRF readings of less than 2.5 milligrams of lead per square centimeter. For each testing combination, the certified elevated blood lead (EBL) inspector/risk assessor shall remove paint from an area that is at least as large as the XRF probe faceplate. On each of the two areas, the certified elevated blood lead (EBL) inspector/risk assessor shall place the NIST 1.02 standard film over the surface, and take three XRF readings with the XRF used to conduct the inspection. The certified elevated blood lead (EBL) inspector/risk assessor shall calculate the arithmetic mean for these six readings and shall subtract 1.02 from this arithmetic mean to obtain the substrate correction value. The certified elevated blood lead (EBL) inspector/risk assessor shall then subtract the substrate correction value from each XRF reading for the substrate requiring substrate correction to obtain the corrected XRF reading. For example, if the six readings taken on the NIST 1.02 standard film were 1.1, 1.3, 1.4, 1.0, 1.2, and 1.1, the arithmetic mean is calculated by the equation  $(1.1 + 1.3 + 1.4 + 1.0 + 1.2 + 1.1)/6$  and is equal to 1.18. The substrate correction value is equal to 1.18 minus 1.02, or 0.16. If the certified elevated blood lead (EBL) inspector/risk assessor does not conduct substrate correction where recommended by the performance characteristics sheet, then the certified elevated blood lead (EBL) inspector/risk assessor shall assume that all of the readings are positive and shall not state that a surface is free of lead-based paint.

(5) The certified elevated blood lead (EBL) inspector/risk assessor shall classify each XRF reading that did not require substrate correction and each corrected XRF reading for XRF readings that required substrate correction as positive, negative, or inconclusive, according to the performance characteristics sheet for the XRF. The certified elevated blood lead (EBL) inspector/risk assessor may assume that all inconclusive readings are positive and classify them as such.

(6) The certified elevated blood lead (EBL) inspector/risk assessor shall resolve inconclusive readings as defined by the performance characteristics sheet for the XRF by collecting paint samples for laboratory analysis. If the certified elevated blood lead (EBL) inspector/risk assessor does not resolve inconclusive readings, then the certified elevated blood lead (EBL) inspector/risk assessor shall assume that the inconclusive readings are positive.

c. If lead-based paint is identified through an elevated blood lead (EBL) inspection, the certified elevated blood lead (EBL) inspector/risk assessor must conduct a visual inspection to determine the presence of lead-based paint hazards and any other potential lead hazards, including bare soil in the play area or in the dripline of a home where lead-based paint is identified on exterior components or lead-based paint previously existed on exterior components, but has been removed, enclosed, or encapsulated.

*d.* No later than two weeks after the receipt of laboratory results, a certified elevated blood lead (EBL) inspector/risk assessor shall prepare a written report for each residential dwelling or child-occupied facility where an elevated blood lead (EBL) inspection has been conducted and shall provide a copy of this report to the property owner and the occupant of the dwelling. The report shall include, at least:

- (1) A statement that the elevated blood lead (EBL) inspection was conducted to identify lead-based paint and lead-based paint hazards in the residential dwelling;
- (2) Date of each elevated blood lead (EBL) inspection;
- (3) Address of building;
- (4) Date of construction;
- (5) Apartment numbers (if applicable);
- (6) The name, address, and telephone number of the owner or owners of each residential dwelling or child-occupied facility;
- (7) Name, signature, and certification number of each certified elevated blood lead (EBL) inspector/risk assessor conducting the inspection;
- (8) Name and certification number of the certified firm(s) conducting the inspection;
- (9) Name, address, and telephone number of each laboratory conducting an analysis of collected samples;
- (10) Each testing method and sampling procedure employed for paint analysis, including quality control data and, if used, the manufacturer, serial number, software, and operating mode of any X-ray fluorescence (XRF) analyzer;
- (11) XRF readings taken for calibration and calculations to demonstrate that the XRF is properly calibrated;
- (12) Specific locations by room of each painted component tested for the presence of lead-based paint and the results for each component expressed in terms appropriate to the sampling method used;
- (13) A statement that all painted or finished components that were not tested must be assumed to contain lead-based paint;
- (14) A description of the location, type, and severity of identified lead-based paint hazards, including the classification of each tested surface as to whether it is a lead-based paint hazard, and any other potential lead hazards, including bare soil in the play area or in the dripline of a home where lead-based paint is identified on exterior components or lead-based paint previously existed on exterior components, but has been removed, enclosed, or encapsulated;
- (15) A description of interim controls and lead abatement options for each identified lead-based paint hazard and a suggested prioritization for addressing each hazard. If the use of an encapsulant or enclosure is recommended, the report shall recommend a maintenance and monitoring schedule for the encapsulant or enclosure;
- (16) Information regarding the owner's obligations to disclose known lead-based paint and lead-based paint hazards upon sale or lease of residential property as required by Subpart H of 24 CFR Part 35 and Subpart I of 40 CFR Part 745;
- (17) Information regarding Iowa's prerenovation notification requirements found in 641—Chapter 69; and information regarding Iowa's regulations for renovation found in 641—Chapter 70; and
- (18) The report shall contain the following statement:

"The location and nature of this inspection are required to be reported to the Iowa Department of Public Health for tracking purposes. The Iowa Department of Public Health may review this report for compliance purposes. It is a violation of law for anyone other than the certified lead professional signing it to alter this report. This report may be supplemented with additional information, so long as any addendum is signed by an elevated blood lead (EBL) inspector/risk assessor certified according to Iowa Administrative Code 641—70.3(135) and 70.5(135)."

*e.* A certified elevated blood lead (EBL) inspector/risk assessor shall maintain for no fewer than ten years a written record for each residential dwelling or child-occupied facility where an elevated blood lead (EBL) inspection has been conducted. The record shall include, at least:

- (1) A copy of the written report required by paragraph 70.6(3) "*d.*"

- (2) Blood lead test results for the elevated blood lead (EBL) child.
- (3) A record of conversations held with the owners and occupants of each residential dwelling or child-occupied facility prior to, during, and after the EBL inspection.
- (4) Records of follow-up visits made to each residential dwelling or child-occupied facility where lead-based paint hazards are identified and, when issued, a copy of the clearance report.

**70.6(4)** A certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor must conduct lead hazard screens according to the following standards. Lead hazard screens shall be conducted only by a certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor.

*a.* Background information regarding the physical characteristics of the residential dwelling or child-occupied facility and occupant use patterns that may cause lead-based paint exposure to at least one child under the age of six years shall be collected.

*b.* A visual inspection of the residential dwelling or child-occupied facility shall be conducted to determine if any deteriorated paint is present and to locate at least two dust sampling locations.

*c.* If deteriorated paint is present, each surface with deteriorated paint which is determined to have a distinct painting history must be tested for the presence of lead. In addition, friction surfaces where there is evidence of abrasion and impact surfaces that are damaged or otherwise deteriorated from impact and that have a distinct painting history shall be tested for the presence of lead.

*d.* In residential dwellings, a minimum of two composite or single-surface dust samples shall be collected. One sample shall be collected from the floors and the other from the interior windowsills in rooms, hallways, or stairwells where at least one child under the age of six years is most likely to come in contact with dust.

*e.* In multifamily dwellings and child-occupied facilities, single-surface or composite dust samples shall also be collected from common areas where at least one child under the age of six years is likely to come in contact with dust.

*f.* Dust samples shall be collected by wipe samples using the documented methodologies specified in guidance documents issued by the department. The minimum area for a floor wipe sample shall be 0.50 square feet or 72 square inches. The minimum area for a windowsill wipe sample and for a window trough wipe sample shall be 0.25 square feet or 36 square inches. Dust samples shall be analyzed by a recognized laboratory to determine the level of lead.

*g.* Soil samples shall be collected and analyzed for lead content in exterior play areas and dripline areas where bare soil is present. In addition, soil samples shall be collected and analyzed for lead content from any other areas of the yard where bare soil is present. Soil and paint samples shall be collected using the documented methodologies specified in guidance documents issued by the department and shall be analyzed by a recognized laboratory to determine the level of lead.

*h.* Paint shall be tested using adequate quality control by X-ray fluorescence or by laboratory analysis using a recognized laboratory to determine the presence of lead-based paint on a surface. If testing by laboratory analysis, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall collect paint samples using the documented methodologies specified in guidance documents issued by the department. If testing by X-ray fluorescence, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use the following methodologies:

(1) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use an X-ray fluorescence analyzer that has a performance characteristics sheet and shall use the X-ray fluorescence analyzer according to the performance characteristics sheet.

(2) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use the National Institute of Standards and Technology 1.02 milligrams of lead per square centimeter standard reference material or standards provided by the manufacturer for calibration of the X-ray fluorescence analyzer.

(3) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall take calibration readings consisting of an average of three readings at the beginning of the inspection.

(4) If recommended by the performance characteristics sheet, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall conduct substrate correction for all XRF readings less than 4.0 milligrams of lead per square centimeter. For each substrate that requires substrate correction, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall completely remove all paint from an area of two different testing combinations for that substrate. If possible, the areas chosen for substrate correction should have initial XRF readings of less than 2.5 milligrams of lead per square centimeter. For each testing combination, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall remove paint from an area that is at least as large as the XRF probe faceplate. On each of the two areas, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall place the NIST 1.02 standard film over the surface, and take three XRF readings with the XRF used to conduct the inspection. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall calculate the arithmetic mean for these six readings and shall subtract 1.02 from this arithmetic mean to obtain the substrate correction value. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall then subtract the substrate correction value from each XRF reading for the substrate requiring substrate correction to obtain the corrected XRF reading. For example, if the six readings taken on the NIST 1.02 standard film were 1.1, 1.3, 1.4, 1.0, 1.2, and 1.1, the arithmetic mean is calculated by the equation  $(1.1 + 1.3 + 1.4 + 1.0 + 1.2 + 1.1)/6$  and is equal to 1.18. The substrate correction value is equal to 1.18 minus 1.02, or 0.16. If the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor does not conduct substrate correction where recommended by the performance characteristics sheet, then the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall assume that all the readings are positive and shall not state that a surface is free of lead-based paint.

(5) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall classify each XRF reading that did not require substrate correction and each corrected XRF reading for XRF readings that required substrate correction as positive, negative, or inconclusive, according to the performance characteristics sheet for the XRF. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall not discard XRF readings unless instructed to do so by the performance characteristics sheet or the operating instructions from the manufacturer. If the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor believes that a reading classified as positive is in error, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall collect a paint sample for laboratory analysis. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall change the positive classification to negative only if the results of the laboratory analysis indicate that the surface is not painted with lead-based paint. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor may assume that all inconclusive readings are positive and classify them as such.

(6) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall resolve inconclusive readings as defined by the performance characteristics sheet for the XRF by collecting paint samples for laboratory analysis. If the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor does not resolve inconclusive readings by laboratory analysis, then the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall assume that the inconclusive readings are positive.

*i.* The following standards shall be used to determine whether a residential dwelling or child-occupied facility fails a lead hazard screen:

(1) A residential dwelling or child-occupied facility shall fail a lead hazard screen if any deteriorated paint or paint on friction or impact surfaces is found to be lead-based paint.

(2) A residential dwelling shall fail a lead hazard screen if any floor dust lead level in a single-surface or composite-surface dust sample is greater than or equal to 25 micrograms per square foot.

(3) A residential dwelling shall fail a lead hazard screen if any interior windowsill dust level in a single-surface or composite-surface dust sample is greater than or equal to 125 micrograms per square foot.

(4) A residential dwelling or child-occupied facility shall fail a lead hazard screen if any bare soil is found to be a soil-lead hazard.

*j.* When conducting a lead hazard screen in multifamily housing, a certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor may sample each residential dwelling or choose residential dwellings for sampling by random selection, targeted selection, or worst case selection.

(1) If built before 1960 or if the date of construction is unknown, the multifamily housing shall contain at least 20 similarly constructed and maintained residential dwellings in order to use random selection. If built from 1960 to 1977, the multifamily housing shall contain at least 10 similarly constructed and maintained residential dwellings in order to use random selection. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use Table 1 to determine the number of residential dwellings to randomly select for testing.

(2) If the multifamily housing contains five or more similar residential dwellings, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor may use targeted selection. If using targeted selection, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use Table 2 to determine the number of residential dwellings to test. If the multifamily housing has fewer than five similar dwellings, all residential dwellings shall be tested. Residential dwellings chosen by targeted selection shall meet as many of the following criteria as possible:

1. The residential dwelling has been cited with a housing or building code violation within the past year.
2. The property owner believes that the residential dwelling is in poor condition.
3. The residential dwelling contains two or more children between the ages of six months and six years. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall give preference to residential dwellings that house the largest number of children.
4. The residential dwelling serves as a day care facility.
5. The residential dwelling has been prepared for reoccupancy within the past three months.

If additional residential dwellings are needed to meet the minimum number specified in Table 2, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall select them randomly. If too many residential dwellings meet the criteria, residential dwellings shall be eliminated randomly.

Table 2

Minimum Number of Residential Dwellings in Multifamily Housing for Risk Assessment  
or Lead Hazard Screen Through Targeted Selection

| Number of Similar Residential Dwellings | Number of Residential Dwellings to Sample*                                                     |
|-----------------------------------------|------------------------------------------------------------------------------------------------|
| 1-4                                     | All                                                                                            |
| 5-20                                    | 4 residential dwellings or 50% (whichever is greater)**                                        |
| 21-75                                   | 10 residential dwellings or 20% (whichever is greater)**                                       |
| 76-125                                  | 17                                                                                             |
| 126-175                                 | 19                                                                                             |
| 176-225                                 | 20                                                                                             |
| 226-300                                 | 21                                                                                             |
| 301-400                                 | 22                                                                                             |
| 401-500                                 | 23                                                                                             |
| 501+                                    | 24 + 1 residential dwelling for each additional increment of 100 residential dwellings or less |

\*Does not include residential dwellings housing children with elevated blood lead levels.

\*\*For percentages, round up to determine number of residential dwellings to be sampled.

*k.* If the multifamily housing contains five or more similar residential dwellings, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor may use worst case selection. If using worst case selection, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use Table 2 to determine the number of residential dwellings to test. If the multifamily housing has fewer than five similar dwellings, all residential dwellings shall be tested.

*l.* The following standards shall be used to determine whether multifamily housing fails a lead hazard screen:

(1) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall calculate the arithmetic mean of the dust lead levels for carpeted floors, uncarpeted floors, and interior windowsills. If the arithmetic mean for carpeted floors or uncarpeted floors is greater than or equal to 25 micrograms per square foot, the multifamily housing shall fail the lead hazard screen. If the arithmetic mean for interior windowsills is greater than or equal to 125 micrograms per square foot, the multifamily housing shall fail the lead hazard screen. If the arithmetic mean for carpeted floors or uncarpeted floors is less than 25 micrograms per square foot, but some of the samples have dust lead levels that are greater than or equal to 25 micrograms per square foot, then the residential dwellings where these samples were taken and all other similar residential dwellings in the multifamily housing shall fail the lead hazard screen. If the arithmetic mean for interior windowsills is less than 125 micrograms per square foot, but some of the samples have dust lead levels that are greater than or equal to 125 micrograms per square foot, then the residential dwellings where these samples were taken and all other similar residential dwellings in the multifamily housing shall fail the lead hazard screen.

(2) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall evaluate the results of paint sampling by component and location. If all components at a given location are determined to be painted with lead-based paint or are determined to not be painted with lead-based paint, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor may assume this condition is true for all similar residential dwellings. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall not assume that the multifamily housing is free of lead-based paint. If a component at a given location is found to be painted with lead-based paint in some residential dwellings and not painted with lead-based paint in other residential dwellings, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall assume that the component is a lead-based paint hazard in all similar residential dwellings. If a component in a residential dwelling is determined or assumed to be lead-based paint, then the entire group of similar residential dwellings in the multifamily housing shall fail the lead hazard screen.

(3) Multifamily housing shall fail a lead hazard screen if any bare soil is found to be a soil-lead hazard.

*m.* A certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor shall prepare a written report for each residential dwelling or child-occupied facility where a lead hazard screen is conducted. No later than three weeks after the receipt of laboratory results, the certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall send a copy of the report to the property owner and to the person requesting the lead hazard screen, if different. A certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor shall maintain a copy of each written report for no less than three years. The report shall include, at least:

- (1) Date of each lead hazard screen.
- (2) Address of building.
- (3) Date of construction.
- (4) Apartment numbers (if applicable).
- (5) The name, address, and telephone number of the owner or owners of each residential dwelling or child-occupied facility.
- (6) Name, signature, and certification number of each certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor conducting the lead hazard screen.
- (7) Name and certification number of the certified firm(s) conducting the lead hazard screen.

(8) Name, address, and telephone number of each recognized laboratory conducting an analysis of collected samples, including the identification number for each such laboratory recognized by EPA under Section 405(b) of the Toxic Substances Control Act (15 U.S.C. 2685(b)).

(9) Results of the visual inspection.

(10) Each testing method and sampling procedure employed for paint analysis, including quality control data and, if used, the manufacturer, serial number, software, and operating mode of any X-ray fluorescence (XRF) analyzer.

(11) If used, XRF readings taken for calibration and calculations to demonstrate that the XRF is properly calibrated.

(12) Specific locations by room of each painted component tested for the presence of lead-based paint and the results for each component tested expressed in terms appropriate to the sampling method used.

(13) All results of laboratory analysis of collected paint, dust, and soil samples. The results of dust sampling shall be reported in micrograms of lead per square foot, and the results of soil sampling shall be reported in parts per million of lead. Results shall not be reported as “not detectable.”

(14) Any other sampling results.

(15) A statement that all painted or finished components that were not tested must be assumed to contain lead-based paint.

(16) Background information collected regarding the physical characteristics of the residential dwelling or child-occupied facility and occupant use patterns that may cause lead-based paint exposure to at least one child under the age of six years.

(17) Whether the residential dwelling or child-occupied facility passed or failed the lead hazard screen and recommendations, if warranted, for a follow-up lead inspection or risk assessment, and, as appropriate, any further actions.

(18) Information regarding the owner’s obligations to disclose known lead-based paint and lead-based paint hazards upon sale or lease of residential property as required by Subpart H of 24 CFR Part 35 and Subpart I of 40 CFR Part 745.

(19) Information regarding Iowa’s prerenovation notification requirements found in 641—Chapter 69; and information regarding Iowa’s regulations for renovation found in 641—Chapter 70.

(20) The report shall contain the following statement:

“The location and nature of this inspection are required to be reported to the Iowa Department of Public Health for tracking purposes. The Iowa Department of Public Health may review this report for compliance purposes. It is a violation of law for anyone other than the certified lead professional signing it to alter this report. This report may be supplemented with additional information, so long as any addendum is signed by a lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor certified according to Iowa Administrative Code 641—70.3(135) and 70.5(135).”

**70.6(5)** A certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor must conduct risk assessments according to the following standards. Risk assessments shall be conducted only by a certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor.

*a.* Background information regarding the physical characteristics of the residential dwelling or child-occupied facility and occupant use patterns that may cause lead-based paint exposure to at least one child under the age of six years shall be collected.

*b.* A visual inspection for risk assessment shall be undertaken to locate the existence of deteriorated paint and other potential lead hazards and to assess the extent and causes of the paint deterioration.

*c.* If deteriorated paint is present, each surface with deteriorated paint which is determined to have a distinct painting history must be tested for the presence of lead.

*d.* Friction surfaces where there is evidence of abrasion and impact surfaces that are damaged or otherwise deteriorated from impact and that have a distinct painting history shall be tested for the presence of lead.

*e.* In residential dwellings, dust samples shall be collected from the interior windowsill, window trough, and floor in all living areas where at least one child is most likely to come in contact with dust. Dust samples shall be analyzed for lead concentration and may be either composite or single-surface samples.

*f.* In multifamily dwellings, dust samples shall also be collected from interior windowsills, window troughs, and floors in common areas adjacent to the sampled residential dwellings or child-occupied facility and in other common areas where the certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor determines that at least one child under the age of six years is likely to come in contact with dust. Dust samples shall be analyzed for lead concentration and may be either composite or single-surface samples.

*g.* In child-occupied facilities, dust samples shall be collected from the interior windowsill, window trough, and floor in each room, hallway, or stairwell utilized by one or more children under the age of six years and in other common areas where the certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor determines that at least one child under the age of six years is likely to come in contact with dust. Dust samples shall be analyzed for lead concentration and may be either composite or single-surface samples.

*h.* Soil samples shall be collected and analyzed for lead content in exterior play areas and dripline areas where bare soil is present. In addition, soil samples shall be collected and analyzed for lead content from any other areas of the yard where bare soil is present.

*i.* Dust samples shall be collected by wipe samples using the documented methodologies specified in guidance documents issued by the department. The minimum area for a floor wipe sample shall be 0.50 square feet. The minimum area for a windowsill wipe sample and for a window trough wipe sample shall be 0.25 square feet. Soil and paint samples shall be collected using the documented methodologies specified in guidance documents issued by the department. Dust and soil samples shall be analyzed by a recognized laboratory to determine the level of lead. The results of dust sampling shall be reported in micrograms of lead per square foot, and the results of soil sampling shall be reported in parts per million of lead. The results shall not be reported as “not detectable.”

*j.* Paint shall be tested using adequate quality control by X-ray fluorescence or by laboratory analysis using a recognized laboratory to determine the presence of lead-based paint on a surface. If testing by laboratory analysis, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall collect paint samples using the documented methodologies specified in guidance documents issued by the department. If testing by X-ray fluorescence, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use the following methodologies:

(1) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use an X-ray fluorescence analyzer that has a performance characteristics sheet and shall use the X-ray fluorescence analyzer according to the performance characteristics sheet.

(2) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use the NIST 1.02 standard film material or standards provided by the manufacturer for calibration of the X-ray fluorescence analyzer. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall not state that any surface is free of lead-based paint unless the NIST 1.02 standard film is used for calibration.

(3) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall take calibration readings consisting of an average of three readings at the beginning of the inspection.

(4) If recommended by the performance characteristics sheet, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall conduct substrate correction for all XRF readings less than 4.0 milligrams of lead per square centimeter. For each substrate that requires substrate correction, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall completely remove all paint from an area of two different testing combinations for that substrate. If possible, the areas chosen for substrate correction should have initial XRF readings of less than 2.5 milligrams of lead per square centimeter. For each testing combination, the certified lead

inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall remove paint from an area that is at least as large as the XRF probe faceplate. On each of the two areas, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall place the NIST 1.02 standard film over the surface, and take three XRF readings with the XRF used to conduct the inspection. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall calculate the arithmetic mean for these six readings and shall subtract 1.02 from this arithmetic mean to obtain the substrate correction value. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall then subtract the substrate correction value from each XRF reading for the substrate requiring substrate correction to obtain the corrected XRF reading. For example, if the six readings taken on the NIST 1.02 standard film were 1.1, 1.3, 1.4, 1.0, 1.2, and 1.1, the arithmetic mean is calculated by the equation  $(1.1 + 1.3 + 1.4 + 1.0 + 1.2 + 1.1)/6$  and is equal to 1.18. The substrate correction value is equal to 1.18 minus 1.02, or 0.16. If the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor does not conduct substrate correction where recommended by the performance characteristics sheet, then the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall assume that all of the readings are positive and shall not state that a surface is free of lead-based paint.

(5) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall classify each XRF reading that did not require substrate correction and each corrected XRF reading for XRF readings that required substrate correction as positive, negative, or inconclusive, according to the performance characteristics sheet for the XRF. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall not discard XRF readings unless instructed to do so by the performance characteristics sheet or the operating instructions from the manufacturer. If the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor believes that a reading classified as positive is in error, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall collect a paint sample for laboratory analysis. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall change the positive classification to negative only if the results of the laboratory analysis indicate that the surface is not painted with lead-based paint. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor may assume that all inconclusive readings are positive and classify them as such.

(6) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall resolve inconclusive readings as defined by the performance characteristics sheet for the XRF by collecting paint samples for laboratory analysis. If the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor does not resolve inconclusive readings by laboratory analysis, then the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall assume that the inconclusive readings are positive.

*k.* When conducting a risk assessment in multifamily housing, a certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor may sample each residential dwelling or choose residential dwellings for sampling by random selection, targeted selection, or worst case selection.

(1) If built before 1960 or if the date of construction is unknown, the multifamily housing shall contain at least 20 similarly constructed and maintained residential dwellings in order to use random selection. If built from 1960 to 1977, the multifamily housing shall contain at least 10 similarly constructed and maintained residential dwellings in order to use random selection. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use Table 1 to determine the number of residential dwellings to randomly select for testing.

(2) If the multifamily housing contains five or more similar residential dwellings, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor may use targeted selection. If using targeted selection, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use Table 2 to determine the number of residential dwellings to test. If the multifamily housing has fewer than five similar dwellings, all residential dwellings shall be tested. Residential dwellings chosen by targeted selection shall meet as many of the following criteria as possible. If additional residential dwellings are needed to meet the minimum number specified in

Table 2, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall select them randomly. If too many residential dwellings meet the criteria, residential dwellings shall be eliminated randomly. Targeted selection criteria are as follows:

1. The residential dwelling has been cited with a housing or building code violation within the past year.

2. The property owner believes that the residential dwelling is in poor condition.

3. The residential dwelling contains two or more children between the ages of six months and six years. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall give preference to residential dwellings that house the largest number of children.

4. The residential dwelling serves as a day care facility.

5. The residential dwelling has been prepared for reoccupancy within the past three months.

- (3) If the multifamily housing contains five or more similar residential dwellings, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor may use worst case selection. If using worst case selection, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use Table 2 to determine the number of residential dwellings to test. If the multifamily housing has fewer than five similar dwellings, all residential dwellings shall be tested.

- (4) The following standards shall be used to determine the extent of lead-based paint hazards throughout multifamily housing that is sampled by random selection, targeted selection, or worst case selection:

1. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall calculate the arithmetic mean of the dust lead levels for carpeted floors, uncarpeted floors, interior windowsills, and window troughs. If the arithmetic mean is greater than or equal to the level defined as a dust lead hazard for the component, then the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall determine that a dust lead hazard has been identified on the component throughout the multifamily housing. If the arithmetic mean is less than the level defined as a dust lead hazard for the component, but some of the individual components have dust lead levels that are greater than or equal to the level defined as a dust lead hazard, then the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall determine that a dust lead hazard has been identified on the individual components and on all other similar components throughout the multifamily housing.

2. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall evaluate the results of paint sampling by component and location. If all components at a given location are determined to be painted with lead-based paint or are determined to not be painted with lead-based paint, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor may assume this condition is true for all similar residential dwellings. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall not assume that the multifamily housing is free of lead-based paint. If a component at a given location is found to be painted with lead-based paint in some residential dwellings and not painted with lead-based paint in other residential dwellings, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall assume that the component is a lead-based paint hazard in all similar residential dwellings.

- l. A certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor shall prepare a written report for each residential dwelling or child-occupied facility where a risk assessment is conducted. No later than three weeks after the receipt of laboratory results, the certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall send a copy of the report to the property owner and to the person requesting the risk assessment, if different. A certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor shall maintain a copy of the report for no less than three years. The report shall include, at least:

- (1) Date of each risk assessment;
- (2) Address of building;
- (3) Date of construction;
- (4) Apartment numbers (if applicable);

(5) The name, address, and telephone number of the owner or owners of each residential dwelling or child-occupied facility;

(6) Name, signature, and certification number of each certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor conducting the risk assessment;

(7) Name and certification number of the certified firm(s) conducting the risk assessment;

(8) Name, address, and telephone number of each recognized laboratory conducting an analysis of collected samples, including the identification number for each such laboratory recognized by EPA under Section 405(b) of the Toxic Substances Control Act (15 U.S.C. 2685(b));

(9) Results of the visual inspection;

(10) Each testing method and sampling procedure employed for paint analysis, including quality control data and, if used, the manufacturer, serial number, software, and operating mode of any X-ray fluorescence (XRF) analyzer;

(11) If used, XRF readings taken for calibration and calculations to demonstrate that the XRF is properly calibrated;

(12) Specific locations by room of each painted component tested for the presence of lead-based paint and the results for each component tested expressed in terms appropriate to the sampling method used;

(13) All results of laboratory analysis of collected paint, dust, and soil samples;

(14) Any other sampling results;

(15) A statement that all painted or finished components that were not tested must be assumed to contain lead-based paint;

(16) Background information collected regarding the physical characteristics of the residential dwelling or child-occupied facility and occupant use patterns that may cause lead-based paint exposure to at least one child under the age of six years;

(17) To the extent that they are used as part of the lead-based paint hazard determination, the results of any previous inspections or analyses for the presence of lead-based paint, or other assessments of lead-based paint hazards;

(18) A description of the location, type, and severity of identified lead-based paint hazards, and any other potential lead hazards, including bare soil in the play area or in the dripline of a home where lead-based paint is identified on exterior components or lead-based paint previously existed on exterior components, but has been removed, enclosed, or encapsulated;

(19) A description of interim controls and lead abatement options for each identified lead-based paint hazard and a suggested prioritization for addressing each hazard. If the use of an encapsulant or enclosure is recommended, the report shall recommend a maintenance and monitoring schedule for the encapsulant or enclosure;

(20) Information regarding the owner's obligations to disclose known lead-based paint and lead-based paint hazards upon sale or lease of residential property as required by Subpart H of 24 CFR Part 35 and Subpart I of 40 CFR Part 745;

(21) Information regarding Iowa's prerenovation notification requirements found in 641—Chapter 69; and information regarding Iowa's regulations for renovation found in 641—Chapter 70; and

(22) The report shall contain the following statement:

"The location and nature of this inspection are required to be reported to the Iowa Department of Public Health for tracking purposes. The Iowa Department of Public Health may review this report for compliance purposes. It is a violation of law for anyone other than the certified lead professional signing it to alter this report. This report may be supplemented with additional information, so long as any addendum is signed by a lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor certified according to Iowa Administrative Code 641—70.3(135) and 70.5(135)."

**70.6(6)** A certified lead abatement contractor or certified lead abatement worker must conduct lead abatement according to the following standards. Lead abatement shall be conducted only by a certified lead abatement contractor or a certified lead abatement worker.

*a.* A certified lead abatement contractor must be on site during all work site preparation and during the postabatement cleanup of work areas. At all other times when lead abatement is being conducted,

the certified lead abatement contractor shall be on site or available by telephone, pager, or answering service, and be able to be present at the work site in no more than two hours.

*b.* A certified lead abatement contractor shall ensure that lead abatement is conducted according to all federal, state, and local requirements.

*c.* A certified lead abatement contractor shall notify the department in writing at least seven days prior to the commencement of lead abatement in a residential dwelling or child-occupied facility. The notification shall include the following information:

- (1) The address, including apartment numbers, where lead abatement will be conducted.
- (2) The dates when lead abatement will be conducted.
- (3) The name, address, telephone number, Iowa certification number, and signature of the contact for the certified firm that will conduct the work.
- (4) The name, address, telephone number, Iowa certification number, and signature of the certified lead abatement contractor who will serve as the contact person for the project.
- (5) The name, address, and telephone number of the property owner.
- (6) Whether the dwelling is owner-occupied or a rental dwelling.
- (7) If the dwelling is an occupied rental, the names of the occupants.
- (8) The approximate year that the dwelling was built.
- (9) A brief description of the lead abatement work to be done.

*d.* A certified lead abatement contractor shall submit a revised notification to the department if any information in the original notification changes.

*e.* A certified lead abatement contractor shall ensure that the worksite(s) is accessed only by certified lead professionals according to Iowa Administrative Code 641—70.3(135) and 70.5(135). Noncertified individuals shall not be allowed access to a worksite. A worksite shall remain inaccessible to noncertified individuals until it passes clearance testing.

*f.* A certified lead abatement contractor or a certified project designer shall develop a written occupant protection plan for all lead abatement projects prior to starting lead abatement and shall implement the occupant protection plan during the lead abatement project. The occupant protection plan shall be unique to each residential dwelling or child-occupied facility. If the occupants will be living at the property where lead abatement is taking place, then the written occupant plan shall be given to the occupants prior to the start date of the lead abatement project and must contain at least the following information:

- (1) A description of the type and location of the physical barriers that will keep occupants out of the designated worksite(s).
- (2) An explanation of how the contractor will ensure that the worksite(s) is not entered by the occupants.
- (3) An explanation of how the contractor will ensure that the occupants have access to a kitchen, bathroom, and living area that are not in the worksite(s).

*g.* Approved methods must be used to conduct lead abatement, and prohibited work practices must not be used to conduct lead abatement.

(1) Signs must be posted and readable. All signs must be posted before lead abatement begins and must remain in place until dust-lead clearance has been passed.

1. To the extent practicable, all signage must be posted in the occupants' primary language.
2. The signs must clearly define the work area.
3. The signs must warn occupants and other persons not involved with the lead abatement to remain outside the work area.
4. The signs must be posted at the entrance(s) to all work areas.

(2) The work area must be effectively contained before the lead abatement begins. To be effective, containment must:

1. Isolate the work area so that no dust or debris leaves the work area while the lead abatement is being performed.
2. Be monitored and maintained so that any plastic or other impermeable materials are not torn or displaced.

3. Be installed in such a manner that it does not interfere with occupant and worker egress in an emergency.

(3) For interior lead abatement, containment shall include:

1. The removal or covering of all objects from the work area, including but not limited to furniture, rugs, and window coverings. Objects that are not removed from the work area must be covered with plastic sheeting or other impermeable material with all seams and edges taped or otherwise sealed.

2. Closing and covering all duct openings in the work area. Ducts must be covered with plastic sheeting or other impermeable material that is taped down.

3. Closing windows and doors in the work area. Doors must be covered with plastic sheeting or other impermeable material. Doors used as an entrance to the work area must be covered with plastic sheeting or other impermeable material in a manner that allows workers to pass through while confining dust and debris to the work area.

4. Covering the floor surface, including installed carpet, with taped-down plastic sheeting or other impermeable material in the work area six feet beyond the perimeter of the surfaces undergoing lead abatement or a sufficient distance to contain the dust, whichever is greater.

5. Ensuring that all personnel, tools, and other items, including the exteriors of containers of waste, are free of dust and debris before leaving or being removed from the work area.

(4) For exterior lead abatement, containment shall include:

1. Closing all doors and windows within 20 feet of the lead abatement. On multistory buildings, all doors and windows within 20 feet of the lead abatement on the same story as the lead abatement shall be closed, and all doors and windows on all stories below the lead abatement that are the same horizontal distance from the lead abatement shall be closed.

2. Ensuring that doors within the work areas that will be used while the lead abatement is being performed are covered with plastic sheeting or other impermeable material in a manner that allows workers to pass through while confining dust and debris to the work area.

3. Covering the ground with plastic sheeting or other disposable impermeable material extending 10 feet beyond the perimeter of surfaces undergoing lead abatement or a sufficient distance to collect falling paint debris, whichever is greater, unless the property line prevents 10 feet of such ground cover. Exterior ground cover shall include anchors or weights to ensure that the covering remains effective even during weather conditions such as high wind.

4. Vertical containment. In certain situations, such as where other buildings are in close proximity to the work area, when conditions are windy, or where the work area abuts a property line, the certified lead abatement contractor or certified lead abatement worker shall erect a system of vertical containment designed to prevent dust and debris from migrating to adjacent property or contaminating the ground, other buildings, or any object beyond the work area.

(5) The following are prohibited work practices:

1. Open-flame burning or torching of lead-based paint.

2. Machine sanding or grinding or abrasive blasting or sandblasting of lead-based paint unless used with high-efficiency particulate air (HEPA) exhaust control that removes particles of 0.3 microns or larger from the air at 99.97 percent or greater efficiency.

3. Uncontained water blasting of lead-based paint.

4. Dry scraping or dry sanding of lead-based paint except in conjunction with the use of a heat gun or around electrical outlets.

5. Operating a heat gun at a temperature at or above 1100 degrees Fahrenheit.

(6) All waste generated during lead abatement shall be contained to prevent the release of dust and debris before the waste is removed from the work area for storage or disposal. Any chutes used to remove waste from the work area shall be covered.

1. At the conclusion of each workday and at the conclusion of the lead abatement, waste that has been collected from lead abatement activities must be stored under containment, in an enclosure, or behind a barrier that prevents release of dust and debris out of the work area and prevents access to dust and debris.

2. All waste from lead abatement must be contained during transportation so that no dust or debris is released.

(7) The work area shall be cleaned so that no dust, debris, or residue remains after lead abatement. Cleaning shall include:

1. The collection of all paint chips and debris and, without dispersing the paint chips and debris, the sealing of the materials in heavy-duty bags.

2. The removal of the protective sheeting used as required in this subrule. The sheeting shall be misted, then the sheeting shall be folded dirty side inward. All sheeting shall be taped shut or otherwise sealed inside heavy-duty bags. Sheeting used to separate work areas from non-work areas must remain in place until after the cleaning and removal of other sheeting. All sheeting shall be disposed of as waste.

3. For interior lead abatement, all objects and surfaces in the work area and within two feet of the work area must be cleaned from high to low in the following manner:

- Walls must either be vacuumed with a HEPA vacuum or wiped with a wet cloth, beginning at the ceiling and working toward the floor.

- All remaining surfaces including objects and fixtures must be thoroughly vacuumed with a HEPA vacuum. For carpeted floors and rugs, the HEPA vacuum must be equipped with a beater bar.

- All remaining surfaces, except for carpeted or upholstered surfaces, must also be wiped with a damp cloth. Uncarpeted floors must be thoroughly mopped using a method that keeps the wash water separate from the rinse water, such as the two-bucket mopping method, or using a wet mopping system.

*h.* Soil abatement shall be conducted using one of the following methods:

(1) If soil is removed, soil that is a soil-lead hazard shall be replaced by soil with a lead concentration as close to the local background as practicable, but less than 400 parts per million. The soil that is removed shall not be used as topsoil at another residential property or child-occupied facility.

(2) If soil is not removed, the soil that is a soil-lead hazard shall be remediated to meet the definition of “permanently covered soil.”

*i.* If lead-based paint is removed from a surface, the surface shall be repainted or refinished prior to postabatement clearance dust sampling. A certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor shall visually verify that lead-based paint was removed from a surface prior to repainting or refinishing.

*j.* If components painted with lead-based paint are removed, the replacement components shall be installed prior to postabatement clearance testing.

*k.* Postabatement clearance procedures shall be conducted by a certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor. If the abatement is conducted in response to an elevated blood lead (EBL) inspection, clearance must be conducted by a certified elevated blood lead (EBL) inspector/risk assessor. Postabatement clearance testing shall be performed by persons or entities independent of those performing lead abatement, unless the designated party uses qualified in-house employees to conduct postabatement clearance testing. An in-house employee shall not conduct both lead abatement and the postabatement clearance testing for this work. Postabatement clearance testing shall be conducted using the following procedures:

(1) Following a lead abatement, the certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall review the report of the lead inspection, risk assessment, or visual assessment done prior to the lead abatement project and the lead abatement specifications to determine the lead-based paint hazards that were to be abated by the lead abatement project. The certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall perform a visual inspection to determine if all lead-based paint hazards that were to be abated have been abated and to determine if deteriorated paint surfaces or visible amounts of dust, debris, or residue are still present in the rooms where lead abatement was conducted. If lead-based paint hazards that were to be abated by the project or deteriorated paint surfaces or visible amounts of dust, debris, or residue are present in the rooms where lead abatement was conducted, these conditions must be eliminated prior to the continuation of the clearance procedures. However, elimination of deteriorated paint is not required if it has been determined through paint testing or a lead-based paint inspection that the deteriorated paint is not lead-based paint. Following an exterior lead abatement, a visual inspection shall be conducted to

determine if all lead-based paint hazards that were to be abated have been abated and to determine if any visible dust or debris remains on any horizontal surfaces in the outdoor living areas close to the abated surface. In addition, a visual inspection shall be conducted to determine the presence of paint chips on the dripline or next to the foundation below any exterior surface that was abated. If lead-based paint hazards that were to be abated by the project are still present, these conditions must be eliminated prior to the continuation of the clearance procedures. If visible dust, debris, or paint chips are present, they must be removed from the site and properly disposed of according to all applicable federal, state, and local standards.

(2) Following the visual inspection and any required postabatement cleanup, the certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall conduct clearance sampling for lead in dust. Clearance sampling may be conducted by employing single-surface sampling or composite dust sampling. Interior dust-lead testing shall be performed for all projects that include window replacement.

(3) Dust samples shall be collected a minimum of one hour after the completion of final postabatement cleanup activities.

(4) Dust samples shall be collected by wipe samples using the documented methodologies specified in guidance documents issued by the department. The minimum area for a floor wipe sample shall be 0.50 square feet or 72 square inches. The minimum area for a windowsill wipe sample and for a window trough wipe sample shall be 0.25 square feet or 36 square inches. Dust samples shall be analyzed by a recognized laboratory to determine the level of lead.

(5) The following postabatement clearance activities shall be conducted as appropriate based upon the extent or manner of lead abatement activities conducted in the residential dwelling or child-occupied facility:

1. After conducting a lead abatement with containment between abated and unabated areas, three dust samples shall be taken from each of no fewer than four rooms, hallways, or stairwells within the containment area. Dust samples shall be taken from one interior windowsill and from one window trough (if available), and one dust sample shall be taken from the floor of each of no fewer than four rooms, hallways, or stairwells within the containment area. In addition, one dust sample shall be taken from the floor outside of each individual containment area. If there are fewer than four rooms, hallways, or stairwells within the containment area, then all rooms, hallways, and stairwells shall be sampled.

2. After conducting a lead abatement with no containment between abated and unabated areas, three dust samples shall be taken from each of no fewer than four rooms, hallways, or stairwells in the residential dwelling or child-occupied facility. Dust samples shall be taken from one interior windowsill and from one window trough (if available), and one dust sample shall be taken from the floor of each room, hallway, or stairwell selected. If there are fewer than four rooms, hallways, or stairwells in the residential dwelling or child-occupied facility, then all rooms, hallways, and stairwells shall be sampled.

3. The certified lead abatement contractors and certified lead abatement workers who abate or clean the dwellings shall not have any knowledge of which rooms or surfaces will be selected for the dust samples.

(6) Reserved.

- (7) The certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall compare the residual lead level as determined by the laboratory analysis from each single-surface dust sample with applicable single-surface clearance levels for lead in dust on floors, interior windowsills, and window troughs. If the residual lead level in a single-surface dust sample is greater than or equal to the applicable clearance level for a floor, interior windowsill, or window trough, then the failed component in each room with a failed single-surface dust sample and that type of component in each room that was not tested shall be recleaned. Additional clearance samples shall be taken from the failed component in each room where it failed and from enough additional rooms that were not previously tested so that four rooms are sampled. If four rooms are not available, then each available room shall be retested. The certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall evaluate the results of this testing to determine if the

recleaned components meet the clearance level. The components must be recleaned and retested until the clearance level is met.

(8) The certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall compare the residual lead level as determined by the laboratory analysis from each composite dust sample with applicable single-surface clearance levels for lead in dust on floors, interior windowsills, and window troughs divided by half the number of subsamples in the composite sample. If the residual lead level in a composite dust sample is greater than or equal to the applicable clearance level divided by half the number of subsamples in the composite sample, then all the components represented by the failed composite dust sample shall be recleaned and retested until clearance levels are met.

*l.* In multifamily housing consisting of at least 20 similarly constructed and maintained residential dwellings, random selection for the purpose of clearance testing may be conducted if the following conditions are met:

(1) The certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall randomly select the residential dwellings that will be sampled. The certified lead abatement contractors and certified lead abatement workers who abate or clean the dwellings do not know which residential dwellings will be selected for the random selection or which rooms or surfaces will be selected for the dust samples.

(2) The certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall use Table 1 to determine the minimum number of residential dwellings selected for dust sampling. This shall provide a 95 percent level of confidence that no more than 5 percent or 50 of the residential dwellings (whichever is smaller) in the randomly sampled population are greater than or equal to the appropriate clearance levels.

(3) The certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall sample the randomly selected residential dwellings and evaluate them for clearance according to the procedures found in paragraphs 70.6(6) “i” through “k.”

*m.* No later than three weeks after the property passes clearance, the certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall send a report to the lead abatement contractor that contains the items required by subparagraphs 70.6(6) “n”(7) through (9).

*n.* The certified lead abatement contractor or a certified project designer shall prepare a lead abatement report containing the following information:

(1) A copy of the original and any revised lead abatement notifications.  
(2) Starting and completion dates of the lead abatement project.  
(3) The name, address, and telephone number of the property owner(s).  
(4) The name, address, and signature of the certified lead abatement contractor and of the certified firm contact for the firm conducting the lead abatement.

(5) Whether or not containment was used and, if containment was used, the locations of the containment.

(6) The occupant protection plan required by paragraph 70.6(6) “f.”

(7) The name, address, and signature of each certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor conducting clearance sampling, the date on which the clearance testing was conducted, the results of the visual inspection for the presence of lead hazards that were not abated as specified, deteriorated paint and visible dust, debris, residue, or paint chips in the interior rooms and exterior areas where lead abatement was conducted, and the results of all postabatement clearance testing and all soil analyses, if applicable. The results of dust sampling shall be reported in micrograms of lead per square foot by location of sample, and the results of soil sampling shall be reported in parts per million of lead. The results shall not be reported as “not detectable.” If random selection was used to select the residential dwellings that were sampled, the report shall state that random selection was used, the number of residential dwellings that were sampled, and how this number was determined.

(8) A statement that the lead abatement was or was not done as specified and that the rooms and exterior areas where lead abatement was conducted did or did not pass the visual clearance and the

clearance dust testing. If the certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor conducting the clearance testing cannot verify that all lead-based paint hazards have been abated, the report shall contain the following statement:

“The purpose of this clearance report is to verify that the lead abatement project was done according to the project specifications. This residential dwelling may still contain hazardous lead-based paint, soil-lead hazards, or dust-lead hazards in the rooms or exterior areas that were not included in the lead abatement project.”

(9) The name, address, and telephone number of each recognized laboratory conducting an analysis of clearance samples and soil samples, including the identification number for each such laboratory recognized by EPA under Section 405(b) of the Toxic Substances Control Act (15 U.S.C. 2685(b)).

(10) A detailed written description of the lead abatement project, including lead abatement methods used, locations of rooms and components where lead abatement occurred, reasons for selecting particular lead abatement methods, and any suggested monitoring of encapsulants or enclosures.

(11) Information regarding the owner's obligations to disclose known lead-based paint and lead-based paint hazards upon sale or lease of residential property as required by Subpart H of 24 CFR Part 35 and Subpart I of 40 CFR Part 745.

(12) Information regarding Iowa's prerenovation notification requirements found in 641—Chapter 69; and information regarding Iowa's regulations for renovation found in 641—Chapter 70.

(13) If applicable, a copy of the written consent or waiver required by subrule 70.6(13).

*o.* The lead abatement report shall be completed no later than 30 days after the lead abatement project passes clearance testing.

*p.* The certified lead abatement contractor shall maintain all reports and plans required in this subrule for a minimum of three years.

*q.* The certified lead abatement contractor shall provide a copy of all reports required by this subrule to the building owner and to the person who contracted for the lead abatement, if different.

**70.6(7)** A certified lead inspector/risk assessor, a certified elevated blood lead (EBL) inspector/risk assessor, or a certified sampling technician must conduct visual risk assessments according to the following standards. Visual risk assessments shall be conducted only by a certified lead inspector/risk assessor, a certified elevated blood lead (EBL) inspector/risk assessor, or a certified sampling technician.

*a.* Background information regarding the physical characteristics of the residential dwelling or child-occupied facility and occupant use patterns that may cause lead-based paint exposure to at least one child under the age of six years shall be collected.

*b.* A visual inspection for risk assessment shall be undertaken to locate the existence of deteriorated paint and other potential lead-based paint hazards and to assess the extent and causes of the paint deterioration. A certified lead inspector/risk assessor, a certified elevated blood lead (EBL) inspector/risk assessor, or a certified sampling technician shall assess each component in each room, including each exterior side. A certified lead inspector/risk assessor, a certified elevated blood lead (EBL) inspector/risk assessor, or a certified sampling technician shall identify the following conditions as potential lead-based paint hazards:

(1) All interior and exterior surfaces with deteriorated paint.

(2) Horizontal hard surfaces, including but not limited to floors and windowsills, that are not smooth or cleanable.

(3) Dust-generating conditions, including but not limited to conditions causing rubbing, binding, or crushing of surfaces known or presumed to be coated with lead-based paint.

(4) Bare soil in the play area and dripline of the home.

*c.* A certified lead inspector/risk assessor, a certified elevated blood lead (EBL) inspector/risk assessor, or a certified sampling technician shall prepare a written report for each residential dwelling or child-occupied facility where a visual risk assessment is conducted. No later than three weeks after completing the visual risk assessment, the certified lead inspector/risk assessor, certified elevated blood lead (EBL) inspector/risk assessor, or certified sampling technician shall send a copy of the report to the property owner and to the person requesting the visual risk assessment, if different. A certified lead inspector/risk assessor, a certified elevated blood lead (EBL) inspector/risk assessor, or a certified

sampling technician shall maintain a copy of the report for no less than three years. The report shall include, at least:

- (1) Date of each visual risk assessment;
- (2) Address of building;
- (3) Date of construction;
- (4) Apartment numbers (if applicable);
- (5) The name, address, and telephone number of the owner or owners of each residential dwelling or child-occupied facility;
- (6) Name, signature, and certification number of each certified sampling technician, certified lead inspector/risk assessor, or certified elevated blood lead (EBL) inspector/risk assessor conducting the visual risk assessment;
- (7) Name and certification number of the certified firm(s) conducting the visual risk assessment;
- (8) A statement that all painted or finished components must be assumed to contain lead-based paint;
- (9) Specific locations of painted or finished components identified as likely to contain lead-based paint and likely to be lead-based paint hazards;
- (10) Specific locations of bare soil in the play area and the dripline of a home;
- (11) Information for the owner and occupants on how to reduce lead hazards in the residential dwelling or child-occupied facility;
- (12) Information regarding the owner's obligations to disclose known lead-based paint and lead-based paint hazards upon sale or lease of residential property as required by Subpart H of 24 CFR Part 35 and Subpart I of 40 CFR Part 745;
- (13) Information regarding Iowa's prerenovation notification requirements found in 641—Chapter 69; and information regarding Iowa's regulations for renovation found in 641—Chapter 70; and
- (14) The report shall contain the following statement:

"The location and nature of this inspection are required to be reported to the Iowa Department of Public Health for tracking purposes. The Iowa Department of Public Health may review this report for compliance purposes. It is a violation of law for anyone other than the certified lead professional signing it to alter this report. This report may be supplemented with additional information, so long as any addendum is signed by a sampling technician, lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor certified according to Iowa Administrative Code 641—70.3(135) and 70.5(135)."

**70.6(8)** A certified lead inspector/risk assessor, a certified elevated blood lead (EBL) inspector/risk assessor, or a certified sampling technician must conduct clearance testing according to the following standards. Clearance testing following lead abatement shall be conducted only by a certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor. Clearance testing after renovation and clearance testing after interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, and rehabilitation pursuant to 24 CFR Part 35 shall be conducted only by certified sampling technicians, certified lead inspector/risk assessors, or certified elevated blood lead (EBL) inspector/risk assessors. If the abatement, renovation, or interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation pursuant to 24 CFR Part 35 is conducted in response to an elevated blood lead (EBL) inspection, clearance must be conducted by a certified elevated blood lead (EBL) inspector/risk assessor.

*a.* Clearance testing following lead abatement shall be conducted according to paragraphs 70.6(6) "i" through "m."

*b.* Clearance testing after renovation and clearance testing after interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation pursuant to 24 CFR Part 35 shall be conducted according to the following standards:

- (1) A certified sampling technician shall perform clearance testing only for a single-family property or for individual residential dwellings and associated common areas in multifamily housing. A certified sampling technician shall not perform clearance testing using random selection of residential dwellings or common areas in multifamily housing.

(2) A certified lead inspector/risk assessor, a certified elevated blood lead (EBL) inspector/risk assessor, or a certified sampling technician shall review the report of the lead inspection, risk assessment, or visual assessment done prior to interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation conducted pursuant to 24 CFR Part 35 and the project specifications to determine the lead-based paint hazards that were to be controlled by the project. A certified lead inspector/risk assessor, a certified elevated blood lead (EBL) inspector/risk assessor, or a certified sampling technician shall perform a visual inspection to determine if all lead-based paint hazards that were to be controlled by the project have been controlled and to determine if deteriorated paint surfaces or visible amounts of dust, debris, or residue are still present in the rooms where interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation were conducted pursuant to 24 CFR Part 35. If lead-based paint hazards that were to be controlled by the project, deteriorated paint surfaces or visible amounts of dust, debris, or residue are present in these rooms, these conditions must be eliminated prior to the continuation of the clearance testing. However, elimination of deteriorated paint is not required if it has been determined through a lead-based paint inspection that the deteriorated paint is not lead-based paint. If exterior painted surfaces have been disturbed by the interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation conducted pursuant to 24 CFR Part 35, the visual inspection shall include an assessment to determine if all exterior lead-based paint hazards that were to be controlled by the project have been controlled and to determine if any visible dust or debris remains on any horizontal surfaces in the outdoor living areas close to the affected exterior painted surfaces. In addition, a visual inspection shall be conducted to determine if paint chips are present on the dripline or next to the foundation below any exterior painted surface that was treated. If lead-based paint hazards that were to be controlled by the project are still present, these conditions must be eliminated prior to the continuation of the clearance procedures. If visible dust, debris, or paint chips are present, they must be removed from the site and properly disposed of according to all applicable federal, state, and local standards.

(3) Following the visual inspection and any required cleanup, clearance sampling for lead in dust shall be conducted. Clearance sampling may be conducted by employing single-surface sampling or composite dust sampling.

(4) Dust samples shall be collected a minimum of one hour after the completion of final cleanup activities.

(5) Dust samples shall be collected by wipe samples using the documented methodologies specified in guidance documents issued by the department. The minimum area for a floor wipe sample shall be 0.50 square feet or 72 square inches. The minimum area for a windowsill wipe sample and for a window trough wipe sample shall be 0.25 square feet or 36 square inches. Dust samples shall be analyzed by a recognized laboratory to determine the level of lead.

(6) The following clearance activities shall be conducted as appropriate based upon the extent or manner of renovation or of interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation conducted pursuant to 24 CFR Part 35 in the residential dwelling or child-occupied facility:

1. After conducting renovation or interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation pursuant to 24 CFR Part 35, with containment between treated and untreated areas, three dust samples shall be taken from each of no fewer than four rooms, hallways, or stairwells within the containment area. Dust samples shall be taken from one interior windowsill and from one window trough (if available), and one dust sample shall be taken from the floor of each of no fewer than four rooms, hallways, or stairwells within the containment area. In addition, one dust sample shall be taken from the floor outside of each individual containment area. If there are fewer than four rooms, hallways, or stairwells within the containment area, then all rooms, hallways, and stairwells shall be sampled. Interior dust-lead testing shall be performed for all projects that include window replacement.

2. After conducting renovation or interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation pursuant to 24 CFR Part 35, with no containment between treated and untreated areas, three dust samples shall be taken from each of no

fewer than four rooms, hallways, or stairwells in the residential dwelling or child-occupied facility. Dust samples shall be taken from one interior windowsill and window trough (if available), and one dust sample shall be taken from the floor of each room, hallway, or stairwell selected. If there are fewer than four rooms, hallways, or stairwells in the residential dwelling or child-occupied facility, then all rooms, hallways, and stairwells shall be sampled. Interior dust-lead testing shall be performed for all projects that include window replacement.

(7) The contractors conducting the work or cleaning the dwellings shall not know which rooms or surfaces will be selected for the dust samples.

(8) The certified lead inspector/risk assessor, certified elevated blood lead (EBL) inspector/risk assessor, or certified sampling technician shall compare the residual lead level as determined by the laboratory analysis from each single-surface dust sample with applicable single-surface clearance levels for lead in dust on floors, interior windowsills, and window troughs. If the residual lead level in a single-surface dust sample is greater than or equal to the applicable clearance level for a floor, interior windowsill, or window trough, then the failed component in each room with a failed single-surface dust sample and that type of component in each room that was not tested shall be recleaned. Additional clearance samples shall be taken from the failed component in each room where it failed and from enough additional rooms that were not previously tested so that four rooms are sampled. If four rooms are not available, then each available room shall be retested. The certified lead inspector/risk assessor, certified elevated blood lead (EBL) inspector/risk assessor, or certified sampling technician shall evaluate the results of this testing to determine if the recleaned components meet the clearance level. The components must be recleaned and retested until the clearance level is met.

(9) The certified lead inspector/risk assessor, certified elevated blood lead (EBL) inspector/risk assessor, or certified sampling technician shall compare the residual lead level as determined by the laboratory analysis from each composite dust sample with applicable single-surface clearance levels for lead in dust on floors, interior windowsills, and window troughs divided by half the number of subsamples in the composite sample. If the residual lead level in a composite dust sample is greater than or equal to the applicable clearance level divided by half the number of subsamples in the composite sample, then all the components represented by the failed composite dust sample shall be recleaned and retested until clearance levels are met.

c. In multifamily housing consisting of at least 20 similarly constructed and maintained residential dwellings, random selection for the purpose of clearance testing may be conducted if the following conditions are met:

(1) The certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall randomly select the dwellings that will be sampled. The contractors and the workers who conducted the lead abatement, interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation do not know which residential dwellings will be selected for the random selection.

(2) The certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall use Table 1 to determine the minimum number of dwellings selected for dust sampling. This shall provide a 95 percent level of confidence that no more than 5 percent or 50 of the residential dwellings (whichever is smaller) in the randomly sampled population are greater than or equal to the appropriate clearance levels.

(3) The certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall sample the randomly selected residential dwellings and evaluate them for clearance according to the procedures found in paragraphs 70.6(6) "h" through "j."

(4) The clearance testing is conducted by a certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor.

d. A clearance report must be prepared that provides documentation of the lead abatement, renovation, or interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation conducted pursuant to 24 CFR Part 35 as well as the clearance testing. When lead abatement is performed, the report shall be a lead abatement report in accordance with paragraph 70.6(6) "n." When renovation or interim controls, paint stabilization, standard treatments,

ongoing lead-based paint maintenance, or rehabilitation pursuant to 24 CFR Part 35 is performed, the certified lead inspector/risk assessor, certified elevated blood lead (EBL) inspector/risk assessor, or certified sampling technician shall prepare a written report for each residential dwelling or child-occupied facility where clearance testing is conducted. No later than 30 days after the property passes clearance, the certified lead inspector/risk assessor, certified elevated blood lead (EBL) inspector/risk assessor, or certified sampling technician shall send a copy of the report to the property owner and to the person requesting the clearance testing, if different. The clearance report shall include the following information:

(1) The address of the residential property and, if only part of a multifamily property is affected, the specific dwelling units and common areas affected.

(2) The following information regarding the clearance testing:

1. The date(s) of the clearance testing.

2. The name, address, and signature of each certified lead professional performing the clearance examination, including the certification number.

3. The name and certification number of the certified firm(s) conducting the clearance testing.

4. Whether or not containment was used and, if containment was used, the locations of the containment.

5. If random selection was used to select the residential dwellings that were sampled, the report shall state that random selection was used, the number of residential dwellings that were sampled, and how this number was determined.

6. The results of the visual inspection for the presence of deteriorated paint and visible dust, debris, residue, or paint chips in the rooms where renovation or interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation was conducted pursuant to 24 CFR Part 35.

7. All of the results of the analysis of dust samples, in micrograms per square foot, by location of sample. The results shall not be reported as "not detectable."

8. A statement that the renovation or interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation conducted pursuant to 24 CFR Part 35 was or was not done as specified and that the rooms and exterior areas where these activities were conducted did or did not pass the visual clearance and the clearance dust testing. If the certified lead inspector/risk assessor, certified elevated blood lead (EBL) inspector/risk assessor, or certified sampling technician conducting the clearance testing cannot verify that all lead-based paint hazards have been controlled, the report shall contain the following statement:

"The purpose of this clearance report is to verify that this lead hazard control project was done according to the project specifications. This residential dwelling may still contain hazardous lead-based paint, soil-lead hazards, or dust-lead hazards in the rooms or exterior areas that were not included in the lead hazard control project."

9. The name, address, and telephone number of each recognized laboratory conducting an analysis of the dust samples, including the identification number for each such laboratory recognized by EPA under Section 405(b) of the Toxic Substances Control Act (15 U.S.C. 2685(b)).

(3) The following information on the renovation or interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation pursuant to 24 CFR Part 35 for which clearance testing was performed:

1. The start and completion dates of the renovation, interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation.

2. The name and address of each firm or organization conducting the renovation, interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation and the name of each supervisor assigned.

3. A detailed written description of the renovation, interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation, including the methods used, locations of exterior surfaces, interior rooms, common areas, and components where the hazard reduction activity occurred.

4. If interim control of soil hazards was conducted, a detailed description of the location(s) of the interim controls and the method(s) used.

5. Information regarding the owner's obligations to disclose known lead-based paint and lead-based paint hazards upon sale or lease of residential property as required by Subpart H of 24 CFR Part 35 and Subpart I of 40 CFR Part 745.

6. Information regarding Iowa's prerenovation notification requirements found in 641—Chapter 69; and information regarding Iowa's regulations for renovation found in 641—Chapter 70.

7. The report shall contain the following statement:

"The location and nature of this inspection are required to be reported to the Iowa Department of Public Health for tracking purposes. The Iowa Department of Public Health may review this report for compliance purposes. It is a violation of law for anyone other than the certified lead professional signing it to alter this report. This report may be supplemented with additional information, so long as any addendum is signed by a sampling technician, lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor certified according to Iowa Administrative Code 641—70.3(135) and 70.5(135)."

*e.* A certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor or a certified sampling technician shall maintain a copy of the clearance testing information included in the lead abatement report specified in paragraph 70.6(6) "*m*" for no fewer than three years. A certified lead inspector/risk assessor, a certified elevated blood lead (EBL) inspector/risk assessor, or a certified sampling technician shall maintain a copy of the clearance testing report specified in paragraph 70.6(8) "*d*" for no fewer than three years.

*f.* Clearance testing shall be performed by persons or entities independent of those performing lead abatement, renovation, interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation, unless the designated party uses qualified in-house employees to conduct clearance testing. An in-house employee shall not conduct both lead abatement, renovation, interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation and the clearance examination for this work.

**70.6(9)** A certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor shall conduct paint testing pursuant to 24 CFR Part 35 according to the following standards. Paint testing pursuant to 24 CFR Part 35 shall be conducted only by a certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor.

*a.* When conducting paint testing in a residential dwelling or child-occupied facility, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use the following procedures:

(1) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall test paint on each deteriorated paint surface and on each painted surface that will be disturbed or replaced. On windows, the window frame, interior windowsill, window sash, and window trough shall each be tested.

(2) Paint shall be tested using adequate quality control by X-ray fluorescence or by laboratory analysis using a recognized laboratory to determine the presence of lead-based paint on a surface. If testing by laboratory analysis, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall collect paint samples using the documented methodologies specified in guidance documents issued by the department. If testing by X-ray fluorescence, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use the following methodologies:

1. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use an X-ray fluorescence analyzer that has a performance characteristics sheet and shall use the X-ray fluorescence analyzer according to the performance characteristics sheet.

2. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use the NIST 1.02 standard film or standards provided by the manufacturer for calibration of the X-ray fluorescence analyzer. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall not state that any surface is free of lead-based paint unless the NIST 1.02 standard film is used for calibration.

3. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall take calibration readings consisting of an average of three readings at the beginning of the inspection.

4. If recommended by the performance characteristics sheet, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall conduct substrate correction for all XRF readings less than 4.0 milligrams of lead per square centimeter. For each substrate that requires substrate correction, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall completely remove all paint from an area of two different testing combinations for that substrate. If possible, the areas chosen for substrate correction should have initial XRF readings of less than 2.5 milligrams of lead per square centimeter. For each testing combination, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall remove paint from an area that is at least as large as the XRF probe faceplate. On each of the two areas, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall place the NIST 1.02 standard film over the surface, and take three XRF readings with the XRF used to conduct the inspection. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall calculate the arithmetic mean for these six readings and shall subtract 1.02 from this arithmetic mean to obtain the substrate correction value. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall then subtract the substrate correction value from each XRF reading for the substrate requiring substrate correction to obtain the corrected XRF reading. For example, if the six readings taken on the NIST 1.02 standard film were 1.1, 1.3, 1.4, 1.0, 1.2, and 1.1, the arithmetic mean is calculated by the equation  $(1.1 + 1.3 + 1.4 + 1.0 + 1.2 + 1.1)/6$  and is equal to 1.18. The substrate correction value is equal to 1.18 minus 1.02, or 0.16. If the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor does not conduct substrate correction where recommended by the performance characteristics sheet, then the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall assume that all of the readings are positive and shall not state that a surface is free of lead-based paint.

5. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall classify each XRF reading that did not require substrate correction and each corrected XRF reading for XRF readings that required substrate correction as positive, negative, or inconclusive, according to the performance characteristics sheet for the XRF. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall not discard XRF readings unless instructed to do so by the performance characteristics sheet or the operating instructions from the manufacturer. If the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor believes that a reading classified as positive is in error, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall collect a paint sample for laboratory analysis. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall change the positive classification to negative only if the results of the laboratory analysis indicate that the surface is not painted with lead-based paint. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor may assume that all inconclusive readings are positive and classify them as such.

6. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall resolve inconclusive readings as defined by the performance characteristics sheet for the XRF by collecting paint samples for laboratory analysis. If the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor does not resolve inconclusive readings by laboratory analysis, then the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall assume that the inconclusive readings are positive.

*b.* If lead-based paint is identified through paint testing, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor must conduct a visual inspection to determine the presence of lead-based paint hazards and any other potential lead hazards, including bare soil in the dripline of a home where lead-based paint is identified on exterior components or lead-based paint previously existed on exterior components, but has been removed, enclosed, or encapsulated.

*c.* A certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor shall prepare a written report for each residential dwelling or child-occupied facility where paint

testing is conducted. No later than three weeks after the receipt of laboratory results, the certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall send a copy of the report to the property owner and to the person requesting the inspection, if different. A certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor shall maintain a copy of each written report for no less than three years. The report shall include, at least:

- (1) A statement that the inspection was conducted to determine whether lead-based paint is present on deteriorated paint surfaces and on painted surfaces that will be disturbed or replaced;
- (2) Date of the testing;
- (3) Address of building;
- (4) Date of construction;
- (5) Apartment numbers (if applicable);
- (6) The name, address, and telephone number of the owner or owners of each residential dwelling or child-occupied facility;
- (7) Name, signature, and certification number of each certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor conducting the paint testing;
- (8) Name and certification number of the certified firm(s) conducting the paint testing;
- (9) Name, address, and telephone number of each laboratory conducting an analysis of collected samples;
- (10) Each testing method and sampling procedure employed for paint analysis, including quality control data and, if used, the manufacturer, serial number, software, and operating mode of any X-ray fluorescence (XRF) analyzer;
- (11) XRF readings taken for calibration and calculations to demonstrate that the XRF is properly calibrated;
- (12) Specific locations by room of each painted component tested for the presence of lead-based paint and the results for each component expressed in terms appropriate to the sampling method used;
- (13) A statement that all painted or finished components that were not tested must be assumed to contain lead-based paint;
- (14) A description of the location, type, and severity of identified lead-based paint hazards, including the classification of each tested surface as to whether it is a lead-based paint hazard, and any other potential lead hazards, including bare soil in the dripline of a home where lead-based paint is identified on exterior components or lead-based paint previously existed on exterior components, but has been removed, enclosed, or encapsulated;
- (15) A description of interim controls and lead abatement options for each identified lead-based paint hazard and a suggested prioritization for addressing each hazard. If the use of an encapsulant or enclosure is recommended, the report shall recommend a maintenance and monitoring schedule for the encapsulant or enclosure;
- (16) Information regarding the owner's obligations to disclose known lead-based paint and lead-based paint hazards upon sale or lease of residential property as required by Subpart H of 24 CFR Part 35 and Subpart I of 40 CFR Part 745;
- (17) Information regarding Iowa's prerenovation notification requirements found in 641—Chapter 69; and information regarding Iowa's regulations for renovation found in 641—Chapter 70; and
- (18) The report shall contain the following statement:

"The location and nature of this inspection are required to be reported to the Iowa Department of Public Health for tracking purposes. The Iowa Department of Public Health may review this report for compliance purposes. It is a violation of law for anyone other than the certified lead professional signing it to alter this report. This report may be supplemented with additional information, so long as any addendum is signed by a lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor certified according to Iowa Administrative Code 641—70.3(135) and 70.5(135)."

**70.6(10)** A certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor must conduct reevaluations according to the following standards. Reevaluations shall be conducted only by a certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor.

*a.* All available information regarding lead-based paint for the property being reevaluated shall be reviewed, including but not limited to reports of any lead-based paint activities conducted in a residential dwelling, multifamily dwelling, or child-occupied facility.

*b.* A visual inspection of the property shall be undertaken to locate the existence of deteriorated paint; bare soil; recommended lead abatement, interim controls, or standard treatments that were not implemented; and failed interim controls, standard treatments, encapsulation, or enclosure.

*c.* Deteriorated paint for which the lead content is unknown shall be tested for the presence of lead.

*d.* Soil samples shall be collected and analyzed from bare soil for which the lead content is unknown. Soil samples shall be collected using the documented methodologies specified in guidance documents issued by the department and shall be analyzed by a recognized laboratory to determine the level of lead.

*e.* If any lead-based paint hazards, recommended lead abatement, interim controls, or standard treatments that were not implemented, or failed interim controls, standard treatments, encapsulation, or enclosure is identified, then the reevaluation is failed. These conditions shall be controlled through lead abatement or interim controls before the reevaluation can continue. Clearance testing shall be conducted following control of the conditions through lead abatement or interim controls.

*f.* If there are no lead-based paint hazards present and all of the recommended lead abatement or interim controls were implemented and have not failed, then single-surface or composite dust samples shall be collected. The reevaluation is passed if all of the dust samples taken are below the clearance level.

*g.* In residential dwellings, single-surface or composite dust samples shall be collected from floors and interior windowsills in at least four rooms, hallways, or stairwells where at least one child under the age of six years is most likely to come in contact with dust.

*h.* In multifamily dwellings, single-surface or composite dust samples shall also be collected from common areas where at least one child under the age of six years is likely to come in contact with dust.

*i.* In child-occupied facilities, single-surface or composite dust samples shall be collected from the floor and interior windowsill in at least four rooms, hallways, or stairwells utilized by one or more children under the age of six years and in other common areas where the certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor determines that at least one child under the age of six years is likely to come in contact with dust.

*j.* Dust samples shall be collected by wipe samples using the documented methodologies specified in guidance documents issued by the department. The minimum area for a floor wipe sample shall be 0.50 square feet or 72 square inches. The minimum area for a windowsill wipe sample and for a window trough wipe sample shall be 0.25 square feet or 36 square inches. Dust samples shall be analyzed by a recognized laboratory to determine the level of lead.

*k.* Paint shall be tested using adequate quality control by X-ray fluorescence or by laboratory analysis using a recognized laboratory to determine the presence of lead-based paint on a surface. If tested by laboratory analysis, the paint shall be sampled using the documented methodologies specified in guidance documents issued by the department. If testing by X-ray fluorescence, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use the following methodologies:

(1) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use an X-ray fluorescence analyzer that has a performance characteristics sheet and shall use the X-ray fluorescence analyzer according to the performance characteristics sheet.

(2) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use the NIST 1.02 standard film or standards provided by the manufacturer for calibration of the X-ray fluorescence analyzer. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall not state that any surface is free of lead-based paint unless the NIST 1.02 standard film is used for calibration.

(3) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall take calibration readings consisting of an average of three readings.

(4) If recommended by the performance characteristics sheet, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall conduct substrate correction for all XRF readings less than 4.0 milligrams of lead per square centimeter. For each substrate that requires substrate correction, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall completely remove all paint from an area of two different testing combinations for that substrate. If possible, the areas chosen for substrate correction should have initial XRF readings of less than 2.5 milligrams of lead per square centimeter. For each testing combination, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall remove paint from an area that is at least as large as the XRF probe faceplate. On each of the two areas, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall place the NIST 1.02 standard film over the surface, and take three XRF readings with the XRF used to conduct the inspection. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall calculate the arithmetic mean for these six readings and shall subtract 1.02 from this arithmetic mean to obtain the substrate correction value. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall then subtract the substrate correction value from each XRF reading for the substrate requiring substrate correction to obtain the corrected XRF reading. For example, if the six readings taken on the NIST 1.02 standard film were 1.1, 1.3, 1.4, 1.0, 1.2, and 1.1, the arithmetic mean is calculated by the equation  $(1.1 + 1.3 + 1.4 + 1.0 + 1.2 + 1.1)/6$  and is equal to 1.18. The substrate correction value is equal to 1.18 minus 1.02, or 0.16. If the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor does not conduct substrate correction where recommended by the performance characteristics sheet, then the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall assume that all of the readings are positive and shall not state that a surface is free of lead-based paint.

(5) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall classify each XRF reading that did not require substrate correction and each corrected XRF reading for XRF readings that required substrate correction as positive, negative, or inconclusive, according to the performance characteristics sheet for the XRF. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall not discard XRF readings unless instructed to do so by the performance characteristics sheet or the operating instructions from the manufacturer. If the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor believes that a reading classified as positive is in error, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall collect a paint sample for laboratory analysis. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall change the positive classification to negative only if the results of the laboratory analysis indicate that the surface is not painted with lead-based paint. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor may assume that all inconclusive readings are positive and classify them as such.

(6) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall resolve inconclusive readings as defined by the performance characteristics sheet for the XRF by collecting paint samples for laboratory analysis. If the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor does not resolve inconclusive readings by laboratory analysis, then the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall assume that the inconclusive readings are positive.

*l.* When conducting reevaluation in multifamily housing, a certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor may sample each residential dwelling or choose residential dwellings for sampling by random selection, targeted selection, or worst case selection.

(1) If built before 1960 or if the date of construction is unknown, the multifamily housing shall contain at least 20 similarly constructed and maintained residential dwellings in order to use random selection. If built from 1960 to 1977, the multifamily housing shall contain at least 10 similarly constructed and maintained residential dwellings in order to use random selection. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use Table 1 to determine the number of residential dwellings to randomly select for testing.

(2) If the multifamily housing contains 5 or more similar residential dwellings, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor may use targeted selection. If using targeted selection, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use Table 2 to determine the number of residential dwellings to test. If the multifamily housing has fewer than 5 similar dwellings, all residential dwellings shall be tested. Residential dwellings chosen by targeted selection shall meet as many of the following criteria as possible. If additional residential dwellings are needed to meet the minimum number specified in Table 2, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall select them randomly. If too many residential dwellings meet the criteria, residential dwellings shall be eliminated randomly. Targeted selection criteria are as follows:

1. The residential dwelling has been cited with a housing or building code violation within the past year.
2. The property owner believes that the residential dwelling is in poor condition.
3. The residential dwelling contains two or more children between the ages of six months and six years. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall give preference to residential dwellings that house the largest number of children.
4. The residential dwelling serves as a child-occupied facility.
5. The residential dwelling has been prepared for reoccupancy within the past three months.

(3) If the multifamily housing contains 5 or more similar residential dwellings, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor may use worst case selection. If using worst case selection, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use Table 2 to determine the number of residential dwellings to test. If the multifamily housing has fewer than 5 similar dwellings, all residential dwellings shall be tested.

(4) The following standards shall be used to determine the extent of lead-based paint hazards throughout multifamily housing that is sampled by random selection, targeted selection, or worst case selection:

1. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall calculate the arithmetic mean of the dust-lead levels for carpeted floors, uncarpeted floors, interior windowsills, and window troughs. If the arithmetic mean is greater than or equal to the level defined as a dust-lead hazard for the component, then the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall determine that a dust-lead hazard has been identified on the component throughout the multifamily housing. If the arithmetic mean is less than the level defined as a dust-lead hazard for the component, but some of the individual components have dust-lead levels that are greater than or equal to the level defined as a dust-lead hazard, then the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall determine that a dust-lead hazard has been identified on the individual components and on all other similar components throughout the multifamily housing.

2. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall evaluate the results of paint sampling by component and location. If all components at a given location are determined to be painted with lead-based paint or are determined not to be painted with lead-based paint, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor may assume this condition is true for all similar residential dwellings. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall not assume that the multifamily housing is free of lead-based paint. If a component at a given location is found to be painted with lead-based paint in some residential dwellings and not painted with lead-based paint in other residential dwellings, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall assume that the component is a lead-based paint hazard in all similar residential dwellings.

*m.* If reevaluation is conducted, the first reevaluation shall be conducted no later than two years from completion of lead abatement, interim controls, or standard treatments. Subsequent reevaluation shall be conducted at intervals of two years, plus or minus 60 days. To be exempt from additional reevaluation, a residential dwelling or child-occupied facility shall have at least two consecutive passing

reevaluations conducted at such two-year intervals. If, however, a reevaluation fails, at least two more consecutive reevaluations conducted at such two-year intervals must be conducted.

*n.* A certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall prepare a written report for each residential dwelling or child-occupied facility where a reevaluation is conducted. No later than three weeks after the receipt of laboratory results, the certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall send a copy of the report to the property owner and to the person requesting the reevaluation, if different. A certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall maintain a copy of the report for no less than three years. The report shall include, at least:

- (1) Date of each reevaluation;
- (2) Address of building;
- (3) Date of construction;
- (4) Apartment numbers (if applicable);
- (5) The name, address, and telephone number of the owner or owners of each residential dwelling or child-occupied facility;
- (6) Name, signature, and certification number of each certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor conducting the reevaluation;
- (7) Name and certification number of the certified firm(s) conducting the reevaluation;
- (8) All of the information gathered for the review as outlined in 70.6(10)“a”;
- (9) Results of the visual inspection including details of any newly identified lead-based paint hazards, the status of past lead hazard control measures, and repair options for any lead-based paint hazards identified during the reevaluation;
- (10) An indication of whether or not the property passed or failed the reevaluation;
- (11) An indication of when the next reevaluation, if any, should occur;
- (12) The results of any environmental samples taken, including all XRF readings, all laboratory analyses and clearance testing results, if necessary;
- (13) Name, address, and telephone number of each recognized laboratory conducting an analysis of collected samples, including the identification number for each such laboratory recognized by EPA under Section 405(b) of the Toxic Substances Control Act (15 U.S.C. 2685(b));
- (14) Information regarding the owner’s obligations to disclose known lead-based paint and lead-based paint hazards upon sale or lease of residential property as required by Subpart H of 24 CFR Part 35 and Subpart I of 40 CFR Part 745;
- (15) Information regarding Iowa’s prerenovation notification requirements found in 641—Chapter 69; and information regarding Iowa’s regulations for renovation found in 641—Chapter 70; and
- (16) The report shall contain the following statement:

“The location and nature of this inspection are required to be reported to the Iowa Department of Public Health for tracking purposes. The Iowa Department of Public Health may review this report for compliance purposes. It is a violation of law for anyone other than the certified lead professional signing it to alter this report. This report may be supplemented with additional information, so long as any addendum is signed by a sampling technician, lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor certified according to Iowa Administrative Code 641—70.3(135) and 70.5(135).”

**70.6(11)** All renovations performed in target housing and child-occupied facilities, except for emergency renovations and minor repair and maintenance activities, shall be performed according to the work practice standards in 70.6(11). Renovation activities conducted in housing or on surfaces determined to be free of lead-based paint by a certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall be exempt from all work practice standards except record keeping. All renovations shall be performed by a certified firm under the supervision of a certified lead abatement contractor or a certified lead abatement worker who completes initial certification on or after January 13, 2010, or if certified prior to January 13, 2010, completes a lead abatement worker, lead abatement contractor, or lead-safe renovator refresher course on or after January 13, 2010, or shall be performed by a certified lead-safe renovator in accordance with the requirements below.

a. A firm shall assign at least one certified lead abatement contractor, a certified lead abatement worker, or a certified lead-safe renovator to each individual renovation project. The certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator assigned to each individual renovation project shall ensure the following:

(1) A certified lead abatement contractor, a certified lead abatement worker, or a certified lead-safe renovator must be on site during all worksite preparation and during the cleanup of work areas. At all other times when renovation is being conducted, a certified lead abatement contractor, a certified lead abatement worker, or a certified lead-safe renovator shall be on site or available by telephone, pager, or answering service and be able to be present at the worksite in no more than two hours.

(2) Signs are posted and readable. All signs must be posted before the renovation begins and must remain in place until the postrenovation cleaning verification has been completed.

1. To the extent practicable, all signage must be posted in the occupants' primary language.

2. The signs must clearly define the work area.

3. The signs must warn occupants and other persons not involved with the renovation activity to remain outside the work area.

4. The signs must be posted at the entrance(s) to all work areas.

(3) The work area must be effectively contained before the renovation is begun. To be effective, containment must:

1. Isolate the work area so that no dust or debris leaves the work area while the renovation is being performed.

2. Be monitored and maintained so that any plastic or other impermeable materials are not torn or displaced.

3. Be installed in such a manner that it does not interfere with occupant and worker egress in an emergency.

(4) For interior renovations, containment shall include:

1. The removal or covering of all objects from the work area, including but not limited to furniture, rugs, and window coverings. Objects that are not removed from the work area must be covered with plastic sheeting or other impermeable material with all seams and edges taped or otherwise sealed.

2. Closing and covering all duct openings in the work area. Ducts must be covered with plastic sheeting or other impermeable material that is taped down.

3. Closing windows and doors in the work area. Doors must be covered with plastic sheeting or other impermeable material. Doors used as an entrance to the work area must be covered with plastic sheeting or other impermeable material in a manner that allows workers to pass through while confining dust and debris to the work area.

4. Covering the floor surface, including installed carpet, with taped-down plastic sheeting or other impermeable material in the work area six feet beyond the perimeter of the surfaces undergoing renovation or a sufficient distance to contain the dust, whichever is greater.

5. Ensuring that all personnel, tools, and other items, including the exteriors of containers of waste, are free of dust and debris before leaving or being removed from the work area.

(5) For exterior renovations, containment shall include:

1. Closing all doors and windows within 20 feet of the renovation. On multistory buildings, all doors and windows within 20 feet of the renovation on the same story as the renovation shall be closed, and all doors and windows on all stories below the renovation that are the same horizontal distance from the renovation shall be closed.

2. Ensuring that doors within the work areas that will be used while the renovation is being performed are covered with plastic sheeting or other impermeable material in a manner that allows workers to pass through while confining dust and debris to the work area.

3. Covering the ground with plastic sheeting or other disposable impermeable material extending 10 feet beyond the perimeter of surfaces undergoing renovation or a sufficient distance to collect falling paint debris, whichever is greater, unless the property line prevents 10 feet of such ground cover. Exterior ground cover shall include anchors or weights to ensure the covering remains effective even during weather conditions such as high wind.

4. Vertical containment. In certain situations, such as where other buildings are in close proximity to the work area, when conditions are windy, or where the work area abuts a property line, the certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator shall erect a system of vertical containment designed to prevent dust and debris from migrating to adjacent property or contaminating the ground, other buildings, or any object beyond the work area.

(6) Prohibited practices are not used during the renovation. Prohibited practices include:

1. Open-flame burning or torching of paint.
2. Machine sanding or grinding or abrasive blasting or sandblasting of paint unless used with high-efficiency particulate air (HEPA) exhaust control that removes particles of 0.3 microns or larger from the air at 99.97 percent or greater efficiency.
3. Uncontained water blasting of paint.
4. Dry scraping or dry sanding of paint except in conjunction with the use of a heat gun or around electrical outlets.

5. Operating a heat gun at a temperature at or above 1100 degrees Fahrenheit.

(7) All workers that are not certified lead abatement contractors, certified lead abatement workers, or certified lead-safe renovators must have on-the-job training as required by 70.6(11)“d.” However, on-the-job training does not meet the training requirement for work conducted pursuant to 24 CFR 35.1340.

(8) If desired, perform all testing with recognized test kits in accordance with 70.6(11)“e.”

(9) Perform the postrenovation cleaning verification as outlined in 70.6(11)“b.”

(10) All waste generated during renovation activities is contained to prevent the release of dust and debris before the waste is removed from the work area for storage or disposal. Any chutes used to remove waste from the work area shall be covered.

1. At the conclusion of each workday and at the conclusion of the renovation, waste that has been collected from renovation activities must be stored under containment, in an enclosure, or behind a barrier that prevents release of dust and debris out of the work area and prevents access to dust and debris.

2. All waste from renovation activities must be contained during transportation so that no dust or debris is released.

(11) The work area shall be cleaned so that no dust, debris, or residue remains after the renovation. Cleaning shall include:

1. The collection of all paint chips and debris and, without dispersing the paint chips and debris, the sealing of the materials in heavy-duty bags.

2. The removal of the protective sheeting used as required in this subrule. The sheeting shall be misted, then the sheeting shall be folded dirty side inward. All sheeting shall be taped shut or otherwise sealed inside heavy-duty bags. Sheeting used to separate work areas from non-work areas must remain in place until after the cleaning and removal of other sheeting. All sheeting shall be disposed of as waste.

3. For interior renovations, all objects and surfaces in the work area and within two feet of the work area must be cleaned from high to low in the following manner:

- Walls must either be vacuumed with a HEPA vacuum or wiped with a wet cloth, beginning at the ceiling and working toward the floor.

- All remaining surfaces including objects and fixtures must be thoroughly vacuumed with a HEPA vacuum. For carpeted floors and rugs, the HEPA vacuum must be equipped with a beater bar.

- All remaining surfaces, except for carpeted or upholstered surfaces, must also be wiped with a damp cloth. Uncarpeted floors must be thoroughly mopped using a method that keeps the wash water separate from the rinse water, such as the two-bucket mopping method, or using a wet mopping system.

b. Postrenovation cleaning verification. A certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator shall use the following procedure for conducting postrenovation cleaning verification. In lieu of postrenovation cleaning verification, clearance testing as outlined in 70.6(8) can be performed. If the work is done in response to an elevated blood lead (EBL) inspection, clearance testing shall be performed by a certified elevated blood lead (EBL) inspector/risk

assessor in lieu of postrenovation cleaning verification. Warning signs may be removed after all of the work areas in a renovation project have been adequately cleaned and verified or passed clearance testing.

(1) For interior renovations, the certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator shall perform a visual inspection to determine whether dust, debris, or residue is still present. If dust, debris, or residue is still present, these conditions must be removed by recleaning, and another visual inspection must be performed. Following a successful visual inspection, a certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator must:

1. Verify that each windowsill and window trough in the work area has been adequately cleaned, using the following procedure:

- Wipe the windowsill and window trough with a wet disposable cleaning cloth that is damp to the touch. If the cloth matches or is lighter than the cleaning verification card, the windowsill has been adequately cleaned.

- If the cloth does not match and is darker than the cleaning verification card, reclean the windowsill or window trough as directed in 70.6(11)“a”(11). Then wipe the windowsill or window trough again, using a new cloth or the same cloth folded in such a way that an unused surface is exposed. If the cloth matches or is lighter than the cleaning verification card, that windowsill has been adequately cleaned.

- If the cloth does not match and is darker than the cleaning verification card, wait for one hour or until the surface has dried completely, whichever is longer.

- After waiting for the windowsill or window trough to dry, wipe the windowsill or window trough with a dry disposable cleaning cloth. After this wipe, that windowsill or window trough has been adequately cleaned.

2. Verify that uncarpeted floors and countertops in the work area have been adequately cleaned, using the following procedure. If the surface within the work area is greater than 40 square feet, the surface within the work area must be divided into roughly equal sections that are each less than 40 square feet.

- Wipe uncarpeted floors and countertops within the work area with a wet disposable cleaning cloth. Floors must be wiped using an application device with a long handle and a head to which the cloth is attached. The cloth must remain damp at all times while it is being used to wipe the surface for postrenovation cleaning verification. Wipe each such section separately with a new wet disposable cleaning cloth. If the cloth used to wipe each section of the surface within the work area matches or is lighter than the cleaning verification card, the surface has been adequately cleaned.

- If the cloth does not match and is darker than the cleaning verification card, reclean the surface as in 70.6(11)“a”(11). Then wipe the floor or countertop again, using a new cloth. If the cloth matches or is lighter than the cleaning verification card, that surface has been adequately cleaned.

- If the cloth does not match and is darker than the cleaning verification card, wait for one hour or until the surface has dried completely, whichever is longer.

- After waiting for the surface to dry, wipe each section of the surface that has not yet achieved the postrenovation cleaning verification with a dry disposable cleaning cloth. After this wipe, that surface has been adequately cleaned.

(2) For exterior renovations, the certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator shall perform a visual inspection to determine whether dust, debris, or residue is still present on surfaces in and below the work area, including windowsills and the ground. If dust, debris, or residue is present, these conditions must be eliminated and another visual inspection must be performed. When the area passes the visual inspection, the exterior has been adequately cleaned.

(3) A certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator shall only use cleaning verification cards that are approved by the U.S. Environmental Protection Agency (EPA).

(4) A certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator shall not use cleaning verification cards that have expired.

*c.* Clearance testing. Postrenovation cleaning verification is not required if the contract between the renovation firm and the person contracting for the renovation or another federal, state, territorial, tribal, or local law or regulation requires the renovation firm to perform clearance testing at the conclusion of a renovation covered by this chapter.

(1) The dust samples must be collected by a certified lead inspector/risk assessor, certified elevated blood lead (EBL) inspector/risk assessor, or certified sampling technician. If the work is done in response to an elevated blood lead (EBL) inspection, the dust samples must be collected by a certified elevated blood lead (EBL) inspector/risk assessor.

(2) The firm conducting the renovation is required to reclean the work area until the dust clearance sample results are below the clearance standards in subrule 70.6(8).

*d.* On-the-job training. The certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator assigned to the renovation project shall ensure that each noncertified individual conducting renovation activities has been or is currently being trained on how to safely conduct renovation activities. However, on-the-job training does not meet the training requirement for work conducted pursuant to 24 CFR Part 35.

(1) All on-the-job training shall be conducted by a certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator.

(2) Each noncertified individual shall be trained by a certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator who is employed by the same certified firm. A certified firm shall not accept on-the-job training that was performed by another firm. On-the-job training does not meet the requirement for work conducted pursuant to 24 CFR Part 35.

(3) On-the-job training shall be specific for the type of work the noncertified individual is performing and must include at least the following topics:

1. An overview of the requirements described in this chapter.
2. An overview of the health effects of lead poisoning.
3. Methods to prevent taking lead dust home from the worksite.
4. How and why to properly set up a work area for lead-safe renovations.
5. How and where to properly post signage.
6. Personal protection.
7. How and why to properly set up containment.
8. How and why to minimize dust and debris.
9. Proper cleaning techniques and time lines for cleaning in renovation activities.
10. How to properly handle and control waste generated from renovation activities.
11. An overview of the postrenovation cleaning verification and clearance testing.
12. An overview of the prerenovation notification requirements found in 641—Chapter 69.
13. Prohibited work practices.

*e.* Recognized test kits. A certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator may use recognized test kits to determine whether surfaces to be affected by renovation activities are painted with lead-based paint. The result from each individual test performed applies only to the individual surface tested. Surfaces which are determined by proper use of a recognized test kit to be free of lead-based paint are exempt from the requirements of 70.6(11)“a” through “d.” Results obtained from recognized test kits are only valid if the testing was performed according to the manufacturer’s directions. Any results from test kits which are not recognized shall be invalid. A certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator shall not discard a valid result from a recognized test kit.

*f.* A certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator must complete a written report when conducting a renovation. The report shall include the results of any testing performed with a recognized test kit, information regarding the work practices used in the renovation and, if applicable, a copy of the clearance testing report. When the final invoice for the renovation is delivered or within 30 days after the renovation activity is complete, whichever is earlier, the certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator shall send a copy of the report to the owner of the building. If the renovation took place

within a residential dwelling, the certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator shall send a copy of the report to an adult occupant of the residential dwelling and to the person requesting the renovation, if different from the owner. If the renovation took place within a child-occupied facility, the certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator shall send a copy of the report to an adult representative of the child-occupied facility and to the person requesting the renovation, if different from the owner. If the renovation took place within common areas of multifamily target housing, the certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator shall post in areas where it is likely to be seen by the occupants of all of the affected units the report required by this paragraph or instructions on how interested occupants can obtain a copy of this report at no charge. If the renovation took place within a child-occupied facility, the certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator shall post in areas where it is likely to be seen by the parents or guardians of children frequenting the child-occupied facility the report required by this paragraph or instructions on how interested parents or guardians of children frequenting the child-occupied facility can obtain a copy of this report at no charge. A certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator shall maintain a copy of the report for no less than three years. The report shall include, at least:

- (1) The date(s) of the renovation.
- (2) Address of the building, including apartment numbers, if applicable.
- (3) The name, address, and telephone number of the owner(s) of the address(es) where the renovation took place.
- (4) The name, address, signature, certification number, and telephone number of the certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator who performed the renovation.
- (5) The name and certification number of the certified firm performing the renovation.
- (6) If testing was performed with a recognized test kit, the location of each test. The location shall be specific to the room and component.
- (7) The results of testing. The results shall be classified as either positive for lead-based paint or negative for lead-based paint.
- (8) The name and manufacturer of the recognized test kit(s) used, the expiration date, and the EPA approval number.
- (9) The work practices used in the renovation, including the location(s) where each work practice was used. The location shall be specific to the room and component.
- (10) If applicable, a copy of the clearance report.
- (11) Information regarding the owner's obligations to disclose known lead-based paint and lead-based paint hazards upon sale or lease of residential property as required by Subpart H of 24 CFR Part 35 and Subpart I of 40 CFR Part 745.
- (12) Information regarding Iowa's prerenovation notification requirements found in 641—Chapter 69; and information regarding Iowa's regulations for renovation, remodeling and repainting found in 641—Chapter 70.

g. Record keeping. Records shall be kept for each renovation project that involves target housing or child-occupied facilities. The records for each renovation shall include:

- (1) The name and certification number of the certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator responsible for the renovation.
- (2) The name and certification number of the certified firm that performed the renovation.
- (3) The address(es) of the property where the renovation activity was performed.
- (4) The name, address, and telephone number of the property owner where the renovation activity was performed.
- (5) Renovations considered emergency pursuant to 641—70.2(135) shall contain a description of the circumstances explaining why the renovations were immediately required and which work practice standards were not followed as a result.

(6) Any reports or documentation completed by a certified lead professional concerning the renovation project, including documentation from certified lead inspector/risk assessors or certified elevated blood lead (EBL) lead inspector/risk assessors regarding housing, components, or surfaces that have been determined to be free of lead-based paint and clearance reports from clearance testing performed in lieu of postrenovation cleaning verification.

(7) Documentation that each noncertified individual working on the renovation project had, or was receiving, the appropriate on-the-job training outlined in 70.6(11)“d.” The documentation must include the names of all of the noncertified individuals who worked on the renovation. However, on-the-job training does not meet the training requirement for work conducted pursuant to 24 CFR 35.1340.

(8) Documentation that the certified lead-safe renovator followed the work practices for renovation activities outlined in 70.6(11). This shall include documentation that the following work practices were followed:

1. Signs were posted at the entrance to the work area.
2. The work area was contained.
3. All objects in the work area were covered or removed.
4. All HVAC ducts in the work area were closed and covered.
5. All windows in the work area were closed, and all windows within 20 feet of exterior work areas were closed.
6. All doors not used to enter the work area were closed and sealed, and all doors within 20 feet of exterior work areas were closed and sealed.
7. All doors used as an entrance to the work area had containment in place to prevent the spread of dust and debris.
8. All floors in the work area were covered for a sufficient distance to contain the dust and debris from the renovation.
9. Adequate ground cover was in place to contain the dust and debris for exterior renovations.
10. Adequate vertical containment was in place to contain the dust and debris for exterior renovations.
11. All waste generated during the renovations was contained throughout the renovation and the transportation to disposal.

(9) Documentation that the renovation work area was cleaned and passed the postrenovation cleaning verification procedures outlined in 70.6(11)“b,” including the expiration date of the cleaning verification cards used.

(10) Documentation regarding the use of any recognized test kits outlined in 70.6(11)“e.” The documentation shall include a copy of the written report required by 70.6(11)“f.”

*h.* Emergency renovations.

(1) Renovation activities that are deemed to be an emergency are exempt from the certification requirements and all of the work practice standards, except for the cleaning requirements, postrenovation cleaning verification, and the written report required by 70.6(11)“f.” All postrenovation cleaning must take place under the direction of a certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator. The postrenovation cleaning verification after an emergency renovation must be performed by a certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator.

(2) Emergency renovations that are required as a result of an elevated blood lead (EBL) inspection are initially exempt from the certification requirements. The work practice standards found in 70.6(11)“a” shall apply. All individuals who perform emergency renovations in response to an elevated blood lead (EBL) inspection are required to obtain certification as a lead-safe renovator, lead abatement contractor, or lead abatement worker within six months from the date the elevated blood lead (EBL) inspection report was issued. Renovations and interim controls performed in response to an elevated blood lead (EBL) inspection are required to pass clearance testing that is performed by a certified elevated blood lead (EBL) inspector/risk assessor.

**70.6(12)** A certified elevated blood lead (EBL) inspection agency shall maintain for a period of at least 10 years the written records for all elevated blood lead (EBL) inspections conducted by persons that

the agency employs or contracts with to provide elevated blood lead (EBL) inspections in the agency's service area.

**70.6(13)** A person may be certified as a lead inspector/risk assessor, sampling technician, or elevated blood lead (EBL) inspector/risk assessor and as a lead abatement contractor or lead abatement worker. Except as specified by paragraph 70.6(6) "k" and paragraph 70.6(8) "f," a person who is certified both as a lead inspector/risk assessor, sampling technician, or elevated blood lead (EBL) inspector/risk assessor and as a lead abatement contractor or lead abatement worker shall not provide both lead inspection or visual risk assessment and lead abatement services at the same site unless a written consent or waiver, following full disclosure by the person, is obtained from the owner or manager of the site.

**70.6(14)** Any paint chip, dust, or soil samples collected pursuant to the work practice standards contained in subrules 70.6(1) to 70.6(6) and 70.6(9) shall be collected by persons certified as a lead inspector/risk assessor or an elevated blood lead (EBL) inspector/risk assessor. Any paint chip, dust, or soil samples collected pursuant to the work practice standards contained in subrule 70.6(8) for clearance testing following lead abatement shall be collected by persons certified as a lead inspector/risk assessor or an elevated blood lead (EBL) inspector/risk assessor. Any dust or soil samples collected pursuant to the work practice standards contained in subrule 70.6(8) for clearance testing after renovation or interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, and rehabilitation pursuant to 24 CFR Part 35 shall be collected only by certified sampling technicians, certified lead inspector/risk assessors, or certified elevated blood lead (EBL) inspector/risk assessors. Any paint chip, dust, or soil samples collected pursuant to the work practice standards contained in 641—70.6(135) shall be analyzed by a recognized laboratory.

**70.6(15)** Composite dust sampling shall be conducted only in the situations specified in subrules 70.6(4) to 70.6(6) and 70.6(8). If composite sampling is conducted, it shall meet the following requirements:

- a. Composite dust samples shall consist of at least two subsamples.
- b. Every component that is being tested shall be included in the sampling.
- c. Composite dust samples shall not consist of subsamples from more than one type of component.
- d. The results of composite dust samples shall be evaluated by comparing the residual lead level as determined by the laboratory analysis from each composite dust sample with applicable single-surface dust-lead hazard or clearance levels for lead in dust on floors, interior windowsills, and window troughs divided by half the number of subsamples in the composite sample. For example, the applicable clearance level for a composite window trough sample consisting of three subsamples would be 267 micrograms per square foot ( $400/1.5$ ).

**70.6(16)** Reporting lead-based paint activities. A certified sampling technician, lead inspector risk/assessor, and elevated blood lead (EBL) inspector risk/assessor shall report to the department quarterly all lead-based paint activities that they perform. Lead-based paint activities include: lead-free inspections, lead inspections, risk assessments, lead hazard screens, visual risk assessments, and clearance testing.

a. Each certified sampling technician, lead inspector risk/assessor, and elevated blood lead (EBL) inspector/risk assessor shall provide the following information to the department electronically in a format specified by the department:

(1) Name and certification number of the certified sampling technician, lead inspector/risk assessor, or elevated blood lead (EBL) inspector/risk assessor who performed the lead-based paint activity.

(2) Name, address, telephone number, and certification number of the certified firm that performed the lead-based paint activity.

(3) Address where the activity took place. For each address, the report shall specify:

1. The type of activity.
2. Whether or not lead-based paint was identified, including paint assumed to be lead-based paint.
3. Whether or not lead-based paint hazards were identified, including assumed hazards.
4. Whether or not the address was free of lead-based paint pursuant to the requirements outlined in subrule 70.6(1).

*b.* Reports shall be due on January 15, April 15, July 15, and October 15 of each year.  
[ARC 8502B, IAB 2/10/10, effective 1/13/10]

**641—70.7(135) Firms.** All firms that perform or offer to perform lead-based paint activities must be certified by the department. Firms shall employ only appropriately certified employees to conduct lead-based paint activities, and the firm and its employees shall follow the work practice standards in 641—70.6(135) for conducting lead-based paint activities. A firm must employ at least one certified individual in order to receive or maintain firm certification. Beginning April 22, 2010, firms that perform or offer to perform renovation must be certified by the department.

**70.7(1)** A firm wishing to be certified shall apply on forms supplied by the department. The firm must submit:

- a.* A completed application form.
- b.* Documentation that the firm will employ only appropriately certified lead professionals to perform lead-based paint activities. In addition, the firm must document that the agency and its employees or contractors will follow the work practice standards in 641—70.6(135) for conducting lead-based paint activities.
- c.* The certified firm must maintain all records required by 641—70.6(135), with the exception of elevated blood lead (EBL) inspection reports, for three years. Certified firms that are also certified as elevated blood lead (EBL) inspection agencies must maintain elevated blood lead (EBL) inspection reports for at least 10 years.

**70.7(2)** Firms must be recertified each year. To be recertified, the firm must submit the following:

- a.* A completed application form.
- b.* Documentation that the firm will employ only appropriately certified lead professionals to perform lead-based paint activities. In addition, the firm must document that the firm and its employees or contractors will follow the work practice standards in 641—70.6(135) for conducting lead-based paint activities.

[ARC 8502B, IAB 2/10/10, effective 1/13/10]

**641—70.8(135) Lead-safe work practices training program approval and lead-safe work practices contractor registration.** Rescinded IAB 2/10/10, effective 1/13/10.

**641—70.9(135) Compliance inspections.**

**70.9(1)** The department may enter premises or facilities where violations of the provisions regarding lead-based paint activities may occur for the purpose of conducting compliance inspections.

**70.9(2)** The department may enter premises or facilities where training programs conduct business.

**70.9(3)** The department may take samples and review records as part of the lead-based paint activities compliance inspection process.

**70.9(4)** The department may review all reports involving lead-based paint activities.

**70.9(5)** The department may issue subpoenas pursuant to 641—Chapter 173, Iowa Administrative Code, for the purposes of determining compliance.

[ARC 8502B, IAB 2/10/10, effective 1/13/10]

**641—70.10(135) Denial, suspension, or revocation of certification; denial, suspension, revocation, or modification of course approval; and imposition of penalties.**

**70.10(1)** When the department finds that the applicant, certified lead professional, certified elevated blood lead (EBL) inspection agency, or certified firm has committed any of the following acts, the department may deny an application for certification, may suspend or revoke a certification, may prohibit specific work practices, may require a project conducted by persons or firms that are not certified or a project where prohibited work practices are being used to be halted, may require the cleanup of lead hazards created by the use of prohibited work practices, may impose a civil penalty, may place on probation, may require additional education, may require reexamination of the state certification examination, may issue a warning, may refer the case to the office of the county attorney

for possible criminal penalties pursuant to Iowa Code section 135.38, or may impose other sanctions allowed by law as may be appropriate.

- a.* Failure or refusal to comply with any requirements of this chapter.
- b.* Failure or refusal to establish, maintain, provide, copy, or permit access to records or reports as required by rules 70.3(135) to 70.7(135).
- c.* Failure or refusal to permit entry or inspection as described in subrules 70.9(1) to 70.9(3).
- d.* Obtaining certification through fraudulent representation.
- e.* Failure to obtain certification from the department and performing work requiring certification.
- f.* Fraudulently obtaining certification and engaging in any lead-based paint activities requiring certification.
- g.* Conducting any part of a lead-based paint activity that requires certification without being certified or with a certification that has lapsed.
- h.* Obtained documentation of training through fraudulent means.
- i.* Gained admission to an accredited training program through misrepresentation of admission requirements.
- j.* Obtained certification through misrepresentation of certification requirements or related documents pertaining to education, training, professional registration, or experience.
- k.* Performed work requiring certification at a job site without having proof of current certification.
- l.* Permitted the duplication or use of the individual's or firm's own certificate by another.
- m.* Failed to follow the standards of conduct required by 641—70.6(135).
- n.* Failed to comply with federal, state, or local lead-based paint statutes and regulations, including the requirements of this chapter.
- o.* Performed work for which certification is required with employees or persons under the control of the certified elevated blood lead (EBL) inspection agency or certified firm who were not appropriately certified.
- p.* Knowingly made misleading, deceptive, untrue, or fraudulent representations in the practice of lead professional activities or engaged in unethical conduct or practice harmful or detrimental to the public. Proof of actual injury need not be established.
- q.* Used untruthful or improbable statements in advertisements. This includes, but is not limited to, an action by a lead professional making information or intention known to the public that is false, deceptive, misleading, or promoted through fraud or misrepresentation.
- r.* Falsified reports and records required by this chapter.
- s.* Accepted any fee by fraud or misrepresentation.
- t.* Negligence by the firm or individual in the practice of lead professional activities. This includes a failure to exercise due care, including negligent delegation of duties or supervision of employees or other individuals, whether or not injury results; or any conduct, practice, or conditions that impair the ability of the firm or individual to safely and skillfully practice the profession.
- u.* Revocation, suspension, or other disciplinary action taken by a certification or licensing authority of this state, another state, territory, or country; or failure by the firm or individual to report such action in writing within 30 days of the final action by such certification or licensing authority. A stay by an appellate court shall not negate this requirement; however, if such disciplinary action is overturned or reversed by a court of last resort, the report shall be expunged from the records of the board.
- v.* Failed to comply with the terms of a department order or the terms of a settlement agreement or consent order.
- w.* Representation by a firm or individual that the firm or individual is certified when the certification has been suspended or revoked or has not been renewed.
- x.* Failed to respond within 20 days of receipt of communication from the department that was sent by registered or certified mail.
- y.* Engaged in any conduct that subverts or attempts to subvert a department investigation.
- z.* Failed to comply with a subpoena issued by the department or failure to cooperate with a department investigation.

*aa.* Failed to pay costs assessed in any disciplinary action.

*ab.* Been convicted of a felony or misdemeanor related to lead professional activities or the conviction of any felony or misdemeanor that would affect the ability of the firm or individual to perform lead professional activities. A copy of the record of conviction or plea of guilty shall be conclusive evidence.

*ac.* Unethical conduct. This includes, but is not limited to, the following:

(1) Verbally or physically abusing a client or coworker.

(2) Improper sexual conduct with or making suggestive, lewd, lascivious, or improper remarks or advances to a client or coworker.

(3) Engaging in a professional conflict of interest.

(4) Mental or physical inability reasonably related to and adversely affecting the ability of the firm or individual to practice in a safe and competent manner.

(5) Being adjudged mentally incompetent by a court of competent jurisdiction.

(6) Habitual intoxication or addiction to drugs.

1. The inability of a lead professional to practice with reasonable skill and safety by reason of the excessive use of alcohol on a continuing basis.

2. The excessive use of drugs which may impair a lead professional's ability to practice with reasonable skill or safety.

3. Obtaining, possessing, attempting to obtain or possess, or administering controlled substances without lawful authority.

**70.10(2)** Reserved.

**70.10(3)** The department may deny, suspend, revoke, or modify the approval for a course, or may place on probation, or impose other sanctions allowed by law as may be appropriate, or may impose a civil penalty or may refer the case to the office of the county attorney for possible criminal penalties pursuant to Iowa Code section 135.38 when it finds that the training program, training manager, or other person with supervisory authority over the course has committed any of the following acts:

*a.* Misrepresented the contents of a training course to the department or to the student population.

*b.* Failed to submit required information or notifications in a timely manner.

*c.* Failed to maintain required records.

*d.* Falsified approval records, instructor qualifications, or other information or documentation related to course approval.

*e.* Failed to comply with the training standards and requirements in 641—70.4(135).

*f.* Made false or misleading statements to the department in its application for approval or reapproval which the department relied upon in approving the application.

*g.* Failed to comply with federal, state, or local lead-based paint statutes and regulations, including the requirements of this chapter.

*h.* Knowingly made misleading, deceptive, untrue, or fraudulent representations in the practice of conducting a training program or engaged in unethical conduct or practice harmful or detrimental to the public. Proof of actual injury need not be established.

*i.* Used untruthful or improbable statements in advertisements. This includes, but is not limited to, an action by a training program making information or intention known to the public that is false, deceptive, misleading, or promoted through fraud or misrepresentation.

*j.* Falsified reports and records required by this chapter.

*k.* Accepted any fee by fraud or misrepresentation.

*l.* Revocation, suspension, or other disciplinary action taken by a certification or licensing authority of this state, another state, territory, or country; or failure by the firm or individual to report such action in writing within 30 days of the final action by such certification or licensing authority. A stay by an appellate court shall not negate this requirement; however, if such disciplinary action is overturned or reversed by a court of last resort, the report shall be expunged from the records of the board.

*m.* Failed to comply with the terms of a department order or the terms of a settlement agreement or consent order.

- n.* Failed to respond within 20 days of receipt of communication from the department that was sent by registered or certified mail.
- o.* Engaged in any conduct that subverts or attempts to subvert a department investigation.
- p.* Failed to comply with a subpoena issued by the department or failure to cooperate with a department investigation.
- q.* Failed to pay costs assessed in any disciplinary action.

**70.10(4)** Complaints and other requests for action under this rule. Complaints regarding a certified lead professional, a certified elevated blood lead (EBL) inspection agency, a certified firm, or an approved course shall be submitted in writing to the Iowa Department of Public Health, Lead Poisoning Prevention Program, 321 East 12th Street, Des Moines, Iowa 50319-0075. The complainant shall provide:

- a.* The name of the certified lead professional, certified elevated blood lead (EBL) inspection agency, or certified firm and the specific details of the action(s) by the certified lead professional, certified elevated blood lead (EBL) inspection agency, or certified firm that did not comply with the rules; or
- b.* The name of the lead professional or firm that conducted lead professional activities without the appropriate certification or approval as required by the rules; or
- c.* The name of the sponsoring person or organization of an approved course and the specific way(s) that an approved course did not comply with the rules; or
- d.* The name of the sponsoring person or organization that provided a course without the approval required by these rules.

**70.10(5)** Civil penalties.

*a.* Before instituting any proceeding to impose a civil penalty under Iowa Code section 135.105A, the department shall serve a written notice of violation upon the person charged. The notice of violation shall specify the date or dates, facts, and the nature of the alleged act or omission with which the person is charged and shall identify specifically the particular provision or provisions of the law, rule, regulation, certification, approval, or cease and desist order involved in the alleged violation and must state the amount of each proposed penalty. The notice of violation shall also advise the person charged that the civil penalty may be paid in the amount specified therein, or the proposed imposition of the civil penalty may be protested in its entirety or in part, by a written answer, either denying the violation or showing extenuating circumstances. The notice of violation shall advise the person charged that upon failure to pay a civil penalty subsequently determined by the department, if any, unless compromised, remitted, or mitigated, the fee shall be collected by civil action, pursuant to Iowa Code section 135.105A.

*b.* Within 20 days of the date of a notice of violation or other time specified in the notice, the person charged may either pay the penalty in the amount proposed or answer the notice of violation. The answer to the notice of violation shall state any facts, explanations, and arguments denying the charges of violation, or demonstrating any extenuating circumstances, error in the notice of violation, or other reason why the penalty should not be imposed and may request remission or mitigation of the penalty.

*c.* If the person charged with violation fails to answer within the time specified in paragraph 70.10(5) “*b*,” an order may be issued imposing the civil penalty in the amount set forth in the notice of violation described in paragraph 70.10(5) “*a*.”

*d.* If the person charged with violation files an answer to the notice of violation, the department, upon consideration of the answer, will issue an order dismissing the proceeding or imposing, mitigating, or remitting the civil penalty. The person charged may, within 20 days of the date of the order or other time specified in the order, request a hearing.

*e.* If the person charged with violation requests a hearing, the department will issue an order designating the time and place of hearing. The hearing shall be conducted according to the procedural rules of the department of inspections and appeals found in 481—Chapter 10, Iowa Administrative Code.

*f.* If a hearing is held, an order will be issued after the hearing by the presiding officer or the department dismissing the proceeding or imposing, mitigating, or remitting the civil penalty.

*g.* The department may compromise any civil penalty. If the civil penalty is not compromised, or is not remitted by the presiding officer or the department, and if payment is not made within ten days following either the service of the order described in paragraph 70.10(5) “*c*” or “*f*,” or the expiration

of the time for requesting a hearing described in paragraph 70.10(5) “d,” the department may refer the matter to the attorney general for collection.

*h.* Except when payment is made after compromise or mitigation by the department of justice or as ordered by a court of the state, following reference of the matter to the attorney general for collection, payment of civil penalties imposed under Iowa Code section 135.105A shall be made by check, draft, or money order payable to the Iowa Department of Public Health.

**70.10(6) Appeals.**

*a.* Notice of denial, suspension or revocation of certification, or denial, suspension, revocation, or modification of course approval shall be sent to the affected individual or organization by restricted certified mail, return receipt requested, or by personal service. The affected individual or organization shall have a right to appeal the denial, suspension or revocation.

*b.* An appeal of a denial, suspension or revocation or other disciplinary action shall be submitted by certified mail, return receipt requested, within 20 days of the receipt of the department’s notice to the Iowa Department of Public Health, Lead Poisoning Prevention Program, 321 East 12th Street, Des Moines, Iowa 50319-0075. If such a request is made within the 20-day time period, the notice of denial, suspension or revocation or other disciplinary action shall be deemed to be suspended. Prior to or at the hearing, the department may rescind the notice upon satisfaction that the reason for the denial, suspension or revocation or other disciplinary action has been or will be removed. After the hearing, or upon default of the applicant or alleged violator, the administrative law judge shall affirm, modify or set aside the denial, suspension or revocation or other disciplinary action. If no appeal is submitted within 20 days, the denial, suspension or revocation or other disciplinary action shall become the department’s final agency action.

*c.* Upon receipt of an appeal that meets contested case status, the appeal shall be transmitted to the department of inspections and appeals within five working days of receipt pursuant to the rules adopted by that agency regarding the transmission of contested cases. The information upon which the denial, suspension or revocation is based shall be provided to the department of inspections and appeals.

*d.* The hearing shall be conducted according to the procedural rules of the department of inspections and appeals found in 481—Chapter 10, Iowa Administrative Code.

*e.* When the administrative law judge makes a proposed decision and order, it shall be served by restricted certified mail, return receipt requested, or delivered by personal service. The proposed decision and order then becomes the department’s final agency action without further proceedings ten days after it is received by the aggrieved party unless an appeal to the director is taken as provided in paragraph 70.10(6) “f.”

*f.* Any appeal to the director for review of the proposed decision and order of the administrative law judge shall be filed in writing and mailed to the director by certified mail, return receipt requested, or delivered by personal service within ten days after the receipt of the administrative law judge’s proposed decision and order by the aggrieved party. A copy of the appeal shall also be mailed to the administrative law judge. Any request for appeal shall state the reason for appeal.

*g.* Upon receipt of an appeal request, the administrative law judge shall prepare the record of the hearing or submission to the director. The record shall include the following:

- (1) All pleadings, motions, and rulings.
- (2) All evidence received or considered and all other submissions by recording or transcript.
- (3) A statement of all matters officially noticed.
- (4) All questions and offers of proof, objection, and rulings thereon.
- (5) All proposed findings and exceptions.
- (6) The proposed findings and order of the administrative law judge.

*h.* The decision and order of the director becomes the department’s final agency action upon receipt by the aggrieved party and shall be delivered by restricted certified mail, return receipt requested, or by personal service.

*i.* It is not necessary to file an application for a rehearing to exhaust administrative remedies when appealing to the director or the district court as provided in Iowa Code section 17A.19. The aggrieved

party to the final agency action of the department who has exhausted all administrative remedies may petition for judicial review of that action pursuant to Iowa Code chapter 17A.

*j.* Any petition for judicial review of a decision and order shall be filed in the district court within 20 days after the decision and order becomes final. A copy of the notice of appeal shall be sent to the department by certified mail, return receipt requested, or by personal service to the Iowa Department of Public Health, Lead Poisoning Prevention Program, 321 East 12th Street, Des Moines, Iowa 50319-0075.

*k.* The party who appeals a final agency action to the district court shall pay the cost of the preparation of a transcript of the contested case hearing for the district court.

**70.10(7) Public notification.**

*a.* The public shall be notified of the suspension, revocation, modification, or reinstatement of course approval through appropriate mechanisms.

*b.* The department shall maintain a list of courses for which the approval has been suspended, revoked, modified, or reinstated.

*c.* The public shall be notified of the suspension or revocation of the certification of a lead professional or firm.

*d.* The department shall maintain a list of lead professionals and firms for which certification has been suspended or revoked.

CHAPTER 71  
EMERGENCY INFORMATION SYSTEM ON PESTICIDES FOR USE BY HEALTH CARE  
PROVIDERS DURING MEDICAL EMERGENCIES

**641—71.1(139A) Scope.** Except as otherwise specifically provided, these rules apply to requirements for the operation of an emergency information system operated by providers of pesticides in Iowa who register with the Iowa department of agriculture and land stewardship (IDALS). These rules do not pertain to registrants who do not operate their own emergency information system.

**641—71.2(139A) Definitions.** As used in this chapter, these terms have the definition set forth below.

*“Department”* means the Iowa department of public health.

*“Emergency information system (EIS)”* means a system developed by a registrant that is accessible by Iowa health care providers and poison control centers 24 hours per day, every day of the year. The system must provide ready access to pesticide product profiles of the registrants to include but not be limited to characterization of inert ingredient(s) and their general proportion whether openly defined or confidentially maintained as a trade secret.

*“Registrant”* means the person registering any pesticide or device or who has obtained a certificate of license from IDALS pursuant to the provisions of Iowa Code chapter 206.

**641—71.3(139A) Operation of EIS.**

**71.3(1) Registrants operating their own EIS shall:**

a. Provide emergency treatment information to health care providers engaged in the emergency care of a real-time human exposure to a registrant’s product(s) upon request 24 hours per day, every day of the year. These services shall identify required inert ingredients, pursuant to Iowa Code section 206.12(2) “c”(2), even if they are considered trade secret, for the sole purpose of assisting in the medical management of persons exposed to pesticides;

b. Ensure that information response time to provide appropriate pesticide ingredient information, which may be responsible for the medical emergency, to a health care provider or poison control center, as defined in Iowa Code section 206.2, does not exceed 15 minutes;

c. Have in operation a toll-free number (800 number, reverse charges number, etc.) which can be accessed anywhere in Iowa;

d. Have qualified responders on duty at all times. A qualified responder who provides the information to the inquiring health care provider shall:

(1) Have a college degree in one of the life sciences or its equivalent and have a minimum of two years’ experience in the hazardous chemical (pesticide) field. This experience shall be in the routine handling and working with hazardous substances of the type that would, in the normal course of events, require emergency response; or

(2) Be an individual who is under the direct supervision of an individual who meets the requirements of 71.3(1) “d”(1); and

(3) Have comprehensive emergency response and accident mitigation training.

e. Have an adequate contingency plan to continue operation in the event of equipment or power failure;

f. Have facsimile (fax) capabilities;

g. Provide at a minimum:

(1) The immediate health hazards posed by internal or external exposure to a given pesticide,

(2) Risks of fire or explosion of a material,

(3) Immediate precautions to take in the event of an accident or incident,

(4) Preliminary first-aid measures, and

(5) A comprehensive list of compounds in a given product including identification of the inert ingredients only upon request from the health care provider who is treating a real-time human exposure to a registrant’s product.

*h.* Provide to poison control centers, defined in Iowa Code subsection 206.2(24), the telephone number(s) to be used to obtain treatment information for a person exposed to a registrant's product.

**71.3(2)** Reserved.

These rules are intended to implement Iowa Code subsection 139A.21(7).

[Filed emergency 1/8/92—published 2/5/92, effective 1/8/92]

[Filed emergency 3/11/92—published 4/1/92, effective 3/13/92]

[Filed 6/1/92, Notice 4/15/92—published 6/24/92, effective 7/29/92]

[Filed Without Notice 9/21/06—published 10/11/06, effective 11/15/06]

CHAPTER 72  
CHILDHOOD LEAD POISONING  
PREVENTION PROGRAM

**641—72.1(135) Definitions.**

*“Approved program”* means a program that meets the requirements of subrule 72.2(3) and has been approved by the department.

*“Capillary”* means a blood sample taken from the finger or heel for lead analysis.

*“Certified elevated blood lead (EBL) inspection agency”* means an agency that has met the requirements of 641—70.5(135) and has been certified by the department.

*“Certified elevated blood lead (EBL) inspector/risk assessor”* means a person who has met the requirements of 641—70.5(135) for certification or interim certification and who has been certified by the department.

*“Chelation”* means the administration of medication that binds lead so that it can be removed from the body.

*“Department”* means the Iowa department of public health.

*“Elevated blood lead (EBL) child”* means any child who has had one venous blood lead level greater than or equal to 20 micrograms per deciliter or at least two venous blood lead levels of 15 to 19 micrograms per deciliter.

*“Elevated blood lead (EBL) inspection”* means an inspection to determine the sources of lead exposure for an elevated blood lead (EBL) child and the provision within ten working days of a written report explaining the results of the investigation to the owner and occupant of the residential dwelling or child-occupied facility being inspected and to the parents of the elevated blood lead (EBL) child.

*“Elevated blood lead (EBL) inspection agency”* means an agency that employs or contracts with individuals who perform elevated blood lead (EBL) inspections. Elevated blood lead (EBL) inspection agencies may also employ or contract with individuals who perform other lead-based paint activities.

*“Laboratory”* means a laboratory satisfactorily participating in the blood lead analysis proficiency testing program of the Centers for Disease Control and Prevention/University of Wisconsin.

*“Lead-based paint hazard”* means hazardous lead-based paint, a dust-lead hazard, or a soil-lead hazard as defined in 641—Chapter 70.

*“Local board”* means a county, district, or city board of health.

*“Local childhood lead poisoning prevention program”* means a program in which the services listed in subrule 72.2(3) are provided by agencies located in a community.

*“Venous”* means a blood sample taken from a vein in the arm for lead analysis.

**641—72.2(135) Approved programs.**

**72.2(1)** An individual local board of health representing a geographic area with a population of at least 15,000 is eligible to apply for status as an approved program. A group of local boards of health representing a geographic area with a total population of at least 15,000 may apply for status as an approved program by designating an individual local board of health to apply on behalf of the group.

**72.2(2)** A local board wishing to apply for status as an approved program shall make application to the Iowa department of public health by December 1 of each year, beginning on December 1, 2003, for the program year of July 1, 2004, through June 30, 2005. An individual local board of health may submit or be included in only one application for status as an approved program. An application for status as an approved program must follow the format which will be made available from the Lead Poisoning Prevention Program, Iowa Department of Public Health, Lucas State Office Building, Des Moines, Iowa 50319-0075. All materials submitted as part of the application for status as an approved program are public records.

**72.2(3)** A local board applying for status as an approved program must demonstrate that it is prepared to provide the following activities and authority immediately upon the receipt of funding. The application submitted by a local board of health shall specify the name of the agency and of the individual staff member who will be responsible for carrying out each of the following activities:

- a.* A public education program about lead poisoning and the dangers of lead poisoning to children.
- b.* An effective outreach effort to ensure the availability of services in the geographic area to be served.
- c.* A blood lead testing program for children, with an emphasis on children less than six years of age. Blood lead testing should be done in conformance with the department's statewide blood lead testing plan, available on request from the department.
- d.* Provision of laboratory services, in conformance with the above-cited reference.
- e.* A program to ensure that children identified with blood lead levels greater than or equal to 10 micrograms per deciliter receive services appropriate for the blood lead level including, but not limited to, confirmatory venous blood lead testing, follow-up capillary or venous blood lead testing, nutrition counseling, a home nursing visit, a developmental evaluation, a medical evaluation, and chelation.
- f.* Elevated blood lead (EBL) inspections in dwelling units associated with an elevated blood lead (EBL) child. Elevated blood lead (EBL) inspections shall be conducted by certified elevated blood lead (EBL) inspector/risk assessors employed by or under contract with a certified elevated blood lead (EBL) inspection agency.
- g.* Follow-up inspections to ensure that lead-based paint hazards identified in dwelling units associated with an elevated blood lead (EBL) child are corrected.
- h.* Adoption and enforcement of a local code which provides adequate authority to require control of lead-based paint hazards found in dwelling units associated with an elevated blood lead (EBL) child.
- i.* Development of a community coalition to address childhood lead poisoning prevention.
- j.* Management of blood lead and case management data using the Strategic Tracking of Elevated Lead Levels and Remediation (STELLAR) program.
- k.* A plan of intent to continue the program on a maintenance basis after the grant is discontinued.

**72.2(4)** By January 1 of each year, the department shall notify each local board of health that has applied for status as an approved program whether the local board of health has been granted status as an approved program, beginning January 1, 2004, for the program year of July 1, 2004, through June 30, 2005.

**72.2(5)** A county that receives childhood lead poisoning prevention funding from the department for the program year of July 1, 2002, through June 30, 2003, shall have status as an approved program for the program year of July 1, 2003, through June 30, 2004. Unless the local board of health requests otherwise by March 1, 2003, the contractors that provide childhood lead poisoning prevention services in the county for the program year of July 1, 2002, through June 30, 2003, shall continue to serve as contractors for the program year of July 1, 2003, through June 30, 2004.

#### **641—72.3(135) Level of funding.**

**72.3(1)** The department shall develop a formula to allocate funding to approved programs. In the development of the formula, the department shall consider factors that affect the burden of childhood lead poisoning in a geographic area including, but not limited to, the number of children under the age of six years, the percentage of housing built before 1950, the percentage of children in poverty, and the demonstrated prevalence of childhood lead poisoning in the geographic area to be served.

**72.3(2)** The department shall allocate state funds appropriated to the department for this program according to this formula. Federal funds available to the department for local childhood lead poisoning prevention programs shall be allocated to approved programs according to this formula unless a different method is mandated by the federal agency providing the funding.

**72.3(3)** The approved program shall provide one dollar for every three dollars of state funding awarded for each of the first two years of funding and then one dollar for each dollar of state funding awarded for the third and subsequent years of funding. Local contributions may be in the form of in-kind matching.

**72.3(4)** Matching requirements for federal funding allocated to approved programs shall be as mandated by the federal agency providing the funding.

**72.3(5)** On January 1, April 1, and June 1 of each year, the department shall ask each approved program to estimate the amount of funds that the approved program will not use. The department may

allocate these funds to approved programs with demonstrated special needs for childhood lead poisoning prevention services.

**641—72.4(135) Appeals.**

**72.4(1)** Any applicant that has timely filed an application and is aggrieved by the decision made pursuant to these rules regarding the applicant's status as an approved program may request a reconsideration of the applicant's proposal by filing a written request for reconsideration with the director of the Iowa department of public health. The request shall be filed within three working days of the date of notification of the decision regarding the applicant's status as an approved program.

**72.4(2)** A request for reconsideration must be in writing and clearly state the reasons for reconsideration. The director's scope of review for requests shall be limited to a finding that the department erred in following the rules or procedures of the approval process as outlined in these administrative rules.

**72.4(3)** The department shall refrain from allocating any funds until it has received the decision of the director as to any reconsideration. The review shall be conducted as expeditiously as possible so that all funds can be allocated in a timely fashion.

**72.4(4)** This procedure shall end the review process at the administrative level.

These rules are intended to implement Iowa Code sections 135.100 to 135.105.

[Filed 11/13/87, Notice 9/9/87—published 12/2/87, effective 1/6/88]

[Filed 9/14/01, Notice 8/8/01—published 10/3/01, effective 11/7/01]

[Filed 11/15/02, Notice 10/2/02—published 12/11/02, effective 1/15/03]

CHAPTER 73  
SPECIAL SUPPLEMENTAL NUTRITION PROGRAM  
FOR WOMEN, INFANTS, AND CHILDREN (WIC)  
[Prior to 7/29/87, Health Department[470] Ch 73]

**641—73.1(135) Program explanation.** The Special Supplemental Nutrition Program for Women, Infants, and Children (WIC) is a federal program operated pursuant to agreement with the states. The purpose of the program is to provide supplemental foods and nutrition education to eligible pregnant, postpartum, and breastfeeding women, infants, and young children from families with inadequate incomes. The WIC program is administered on the federal level by the U.S. Department of Agriculture, Food and Nutrition Service (FNS). The Iowa department of public health serves as the administering agency for the state of Iowa. The Iowa department of public health enters into contracts with selected local agencies on an annual basis for the provision of WIC services to eligible participants.

**641—73.2(135) Adoption by reference.** Federal regulations found at 7 CFR Part 246 (effective as of February 13, 1985, as amended through September 27, 2006, and any additional amendments) shall be the authority for rules governing the Iowa WIC program and are incorporated by reference herein. The WIC state plan provides policy and procedural guidance in the implementation of these regulations to contract agencies administering WIC programs. The WIC state plan as approved by the United States Department of Agriculture is incorporated herein by reference.

**641—73.3(135) Availability of rules.** Copies of the federal rules and the WIC state plan adopted by reference in 73.2(135) are available from: Chief, Bureau of Nutrition and Health Promotion, Iowa Department of Public Health, Lucas State Office Building, 321 East 12th Street, Des Moines, Iowa 50319-0075, (515)281-4919.

**641—73.4(135) Certain rules exempted from public participation.** The Iowa department of public health finds that certain rules should be exempted from notice and public participation as being in a very narrowly tailored category of rules for which notice and public participation are unnecessary as provided in Iowa Code section 17A.4(2). Such rules shall be those that are mandated by federal law and regulation governing the Iowa WIC program where the department has no option but to adopt such rules as specified and where federal funding for the WIC program is contingent upon the adoption of the rules.

**641—73.5(135) Definitions.**

*“Applicant”* means a person applying for the WIC program, but not yet a participant of the WIC program.

*“Breastfeeding women”* means women up to one year postpartum who are breastfeeding their infants.

*“Certification”* means the implementation of criteria and procedures to assess and document each applicant’s eligibility for the program.

*“Children”* means persons who have had their first birthday but have not yet attained their fifth birthday.

*“Competent professional authority”* or *“CPA”* means an individual on the staff of the contract agency who, using standardized WIC screening tools and eligibility criteria provided by the department, determines whether an applicant for WIC services is eligible to receive those services. A CPA shall be a member of one of the following categories:

1. A dietitian licensed by the Iowa board of dietetic examiners;
2. A nutrition educator as defined in the Iowa WIC Policy and Procedure Manual;
3. A physician, registered nurse or licensed physician assistant.

*“Contract agency”* means a private, nonprofit or public agency that has a contract with the department to provide WIC services and receives funds from the department for that purpose.

*“Department”* means the Iowa department of public health.

*“Director”* means the director of the Iowa department of public health.

*“Division director”* means the director of the division of health promotion and chronic disease prevention, Iowa department of public health.

*“Family”* means a group of related or nonrelated individuals who are living together as one economic unit, except that residents of a homeless facility or an institution shall not all be considered as members of a single family.

*“Food instrument”* means a voucher, check, coupon, electronic benefits transfer (EBT) card or any other document used to obtain supplemental foods.

*“HAWK-I”* means healthy and well kids in Iowa and is the health insurance program in Iowa, as authorized in Title XXI of the Social Security Act.

*“Health professional”* means an individual who is licensed to provide health care or social services within the individual’s scope of practice.

*“Health services”* means ongoing, routine pediatric and obstetric care (such as infant and child care and prenatal and postpartum examinations) or referral for treatment.

*“Hearing officer”* means the contract agency director, health professional, community leader or impartial citizen who is designated to hear the appeal of a participant, and is not to be confused with the statutory definition of a hearing officer, which is an administrative law judge.

*“Infants”* means persons under one year of age.

*“Nutritional risk”* means: (a) detrimental or abnormal nutritional conditions detectable by biochemical or anthropometric measurements; (b) other documented nutritionally related medical conditions; (c) dietary deficiencies that impair or endanger health; or (d) conditions that predispose persons to inadequate nutritional patterns or nutritionally related medical conditions.

*“Nutrition education”* means individual or group education sessions and the provision of information and educational materials designed to improve health status, achieve positive change in dietary habits, and emphasize relationships between nutrition and health, all in keeping with the individual’s personal, cultural, and socioeconomic preferences.

*“Participants”* means pregnant women, breastfeeding women, postpartum women, infants and children who are receiving supplemental foods under the program, and the breastfed infants of participant breastfeeding women.

*“Peer group”* means a system of grouping WIC vendors according to structure; type; number of cash registers; square footage; and sales. Peer groups are used to establish statistical norms that an individual store may be compared against and provide the numeric baselines for the process of determining what may be fraudulent behavior.

*“Postpartum women”* means women up to six months postpregnancy who are not breastfeeding.

*“Pregnant women”* means women determined to have one or more embryos or fetuses in utero.

*“Program”* means the Special Supplemental Nutrition Program for Women, Infants, and Children (WIC) authorized by Section 17 of the Child Nutrition Act of 1966.

*“Vendor”* means a retail outlet that provides supplemental food to WIC program participants.

#### **641—73.6(135) Staffing of contract agencies.**

**73.6(1)** Rescinded IAB 10/9/96, effective 11/13/96.

**73.6(2)** The competent professional authority shall conduct either the diet history or the health history part of the certification process and shall sign the certification form attesting to the applicant’s eligibility for services after the certification process is completed.

**73.6(3)** Contract agencies shall maintain on file documentation of qualifications for any individual employed or under contract as a CPA.

**73.6(4)** All contract agencies shall employ at least one licensed dietitian to provide services for participants determined to be at high risk. Nutrition educators employed by a contract agency shall be supervised by a licensed dietitian.

**73.6(5)** Rescinded IAB 10/9/96, effective 11/13/96.

**73.6(6)** Contract agencies shall submit the license number of each dietitian hired within 30 days of employment.

**73.6(7)** Proposed staffing patterns within contract agencies shall be subject to approval from the department following review in accord with established statewide WIC staff patterns.

**641—73.7(135) Certification of participants.** The certification process to determine eligibility for WIC services, as defined in 7 CFR 246.7, shall include the following procedures and definitions:

**73.7(1) Application.** Information on identity, address, family incomes, and nutrition risk must be collected in accordance with the Iowa WIC Policy and Procedure Manual.

**73.7(2) Income.**

*a.* The income guidelines used shall be the same as the National School Lunch Program guidelines for reduced price school lunches, which are equal to 185 percent of the current federal poverty guidelines. Definitions of income are mandated by federal regulation and are described in the WIC state plan. Revised dollar figures for the 185 percent poverty level are published annually in the Federal Register and become effective for WIC no later than July 1 following their publication. Copies of the income definitions and monetary guidelines are available from the department.

*b.* Applicants must provide the contract agency written proof of their income as part of each certification process, pursuant to the Iowa WIC Policy and Procedure Manual.

**73.7(3) Time frame for services.**

*a.* The date of initial visit shall be the day on which an applicant first requests services from a contract agency. A visit to another program office to complete a common application form does not constitute an initial visit.

*b.* Pregnant women shall be certified for the duration of their pregnancy and for up to six weeks postpartum. Pregnant women precertified with referral data require a full certification within 30 days.

*c.* Rescinded IAB 5/30/01, effective 7/4/01.

*d.* Priority II infants pre-certified with referral data require a full certification within six weeks of the infant's birth.

**73.7(4) Medical equipment.**

*a.* Medical equipment used in conducting WIC clinics shall be subject to approval by the department.

*b.* Standards for conducting the medical and nutritional assessments on program applicants shall be as described in the Iowa WIC Policy and Procedure Manual.

*c.* Medical equipment shall be recalibrated in accord with procedures outlined in the Iowa WIC Policy and Procedure Manual.

**73.7(5) Documentation of health and nutrition information.** Documentation of health and nutrition information in individual participant records shall be as described in the Iowa WIC Policy and Procedure Manual.

**73.7(6) Documentation of nonmedical information.** Documentation of nonmedical information in individual participant and collective program records shall be as described in the Iowa WIC Policy and Procedure Manual.

**73.7(7) Transfer of participant information.** Requirements for use and disclosure of confidential applicant and participant information for non-WIC purposes were revised in the Federal Register September 27, 2006, Department of Agriculture, Food and Nutrition Service, 7 CFR Part 246, Miscellaneous Provisions; Final Rule 246.25(a)(4).

*a.* *Designation by chief state health officer.* The chief state health officer must designate in writing the permitted non-WIC uses of the information and the names of the organizations to which such information may be disclosed.

*b.* *Notice to applicants and participants.* The applicant or participant will be notified at the time of application (in accordance with 7 CFR 246.7(i)(11)) or through a subsequent notice that the chief state health officer may authorize the use and disclosure of information about an applicant's or participant's participation in the WIC program for non-WIC purposes. This statement will also indicate that such information will be used by state and local WIC agencies and public organizations only in the administration of programs that serve persons eligible for the WIC program.

*c. Written agreement and WIC state plan.* The state or local agency disclosing the information will enter into a written agreement with the other public organization or, in the case of a non-WIC use by a state or local WIC agency, the unit of the state or local agency that will be using the information. The state agency will also include in its state plan, as specified in 7 CFR 246.4(a)(24), a list of all organizations (including units of the state agency or local agencies) with which the state agency or its local agencies have executed or intend to execute a written agreement. The written agreement must:

(1) Specify that the receiving organization may use the confidential applicant and participant information only for:

1. Establishing the eligibility of WIC applicants or participants for the programs that the organization administers;

2. Conducting outreach to WIC applicants and participants for such programs;

3. Enhancing the health, education, or well-being of WIC applicants or participants who are currently enrolled in such programs, including the reporting of known or suspected child abuse or neglect that is not otherwise required by state law;

4. Streamlining administrative procedures in order to minimize burdens on staff, applicants, or participants in either the receiving program or the WIC program; or

5. Assessing and evaluating the responsiveness of a state's health system to participants' health care needs and health care outcomes; and

(2) Contain the receiving organization's assurance that it will not use the information for any other purpose or disclose the information to a third party.

**641—73.8(135) Food delivery.** Food delivery refers to all aspects of the method by which WIC participants receive food benefits, i.e., printing, distribution, and processing of computerized personal food instruments redeemable through retail food markets and the statewide banking system. Food delivery shall be uniform throughout the state as provided for by these rules.

**73.8(1) Responsibilities of WIC participants.**

*a. Prompt redemption of food instruments.* A WIC participant must redeem WIC benefits within the validated date of use.

*b. Claiming food instruments.* Enrolled participants are required to appear in person to claim food instruments when they have appointments to certify or have nutrition education contacts. Missed attendance may entitle contract agencies to deny that month's benefit. If a written statement is provided to the contract agency, a proxy may pick up food instruments.

*c. Adherence to standards for use of the food instrument.* The WIC participant in using the WIC food instrument to obtain the specified foods shall:

(1) Sign the WIC identification card at the time of receipt in the clinic.

(2) Present the WIC identification card to the vendor at point of purchase.

(3) Sign each food instrument in the appropriate box in the presence of the vendor.

(4) Write in the total amount of the purchase in the designated space.

(5) Not accept money in exchange for unused food instruments or portions of the food allotment.

(6) Attempt to redeem food instruments only with a WIC-contracted vendor.

**73.8(2) Responsibilities of contract agencies.**

*a. Loss or theft of food instruments.* The contract agency is responsible for any financial loss due to theft or other loss of food instruments from clinics. Steps for minimizing the chances of theft or loss are followed in accord with the Iowa WIC Policy and Procedure Manual.

*b. Mailing of WIC food instruments.* Mailing of food instruments to participants is allowed when inclement weather prevents participants from coming to a distribution site. Any mailing of WIC food instruments on a clinicwide basis must have prior approval from the state.

*c. Use of manual food instruments.* Rescinded IAB 1/30/08, effective 3/5/08.

*d. Training/monitoring of WIC vendors.* The contract agency shall communicate information regarding the Iowa WIC program to vendors, as instructed by the department. Monitoring and training of vendors and securement of contracts shall be carried out in accordance with department directives outlined in the Iowa WIC Policy and Procedure Manual.

*e. Food instrument distribution on nonclinic days.* It is the policy of the Iowa WIC program to ensure maximum accessibility to program benefits by establishing alternate procedures for distributing WIC food instruments to participants on days other than regularly scheduled clinic days when the participant notified the contract agency on or before the clinic day of the participant's inability to appear at the clinic. Each contract agency shall establish written guidelines for assessing the adequacy of reasons presented for inability to appear and shall establish written procedures for alternative means of food instrument distribution when a participant timely presents adequate reasons for inability to appear on a regularly scheduled clinic day. These written guidelines and procedures shall be subject to review and approval by the department.

**73.8(3) Responsibilities of department.** Provision of foods through retail grocers and special purpose vendors is an integral part of the WIC program's function. It is the responsibility of the department to ensure that there are a sufficient number of stores authorized to provide reasonable access for program participants. The department also has an obligation to ensure that both food and administrative funds are expended in the most efficient manner possible. As with all other purchases made by state government, this means that the number of vendors (retail grocers and special purpose vendors) may be limited and that all vendors must meet minimum criteria for approval. A retailer that intends to derive more than 50 percent of annual revenue of the sale of food items from the redemption of WIC food instruments will not be allowed. The department shall be responsible for the following:

*a.* Approving or denying vendor applications. The department shall determine if applications meet the mandatory specifications in 73.8(4) and meet the minimum review points in 73.8(4) for a subsequent agreement.

*b.* Compiling the statewide or local area composite data against which vendor applications are reviewed, determining if applications meet the selection criteria which require use of that data, providing training, and signing the initial authorization agreement if a vendor is determined to be eligible.

*c.* Developing procedures, forms, and standards for agencies to use in conducting on-site review of vendor applications, monitoring, compliance buys, educational buy monitoring, or compliance investigations as defined in 73.8(5).

*d.* Determining when compliance investigation activities are necessary to verify program violations, developing or approving standards and procedures to be used in conducting the activities, and arranging for an appropriate state or private agency to conduct the compliance buying investigation as required.

*e.* Providing written notice to vendors of program violations and sanctions.

**73.8(4) Responsibilities of WIC vendors.** A potential vendor shall make application to the Iowa department of public health WIC program and shall accept the obligations imposed by the signing of a WIC vendor agreement prior to acceptance of any WIC food instrument. The two categories for which any potential vendor may apply are grocery vendors and special purpose vendors. A retailer that intends to derive more than 50 percent of annual revenue of the sale of food items from the redemption of WIC food instruments will not be approved.

*a. Grocery vendor agreement.* To qualify for a grocery vendor agreement with the Iowa WIC program, a retail outlet shall meet all of the following criteria:

(1) The vendor must stock all of the following categories of items to be defined as a grocery vendor: a minimum of 5 linear feet of raw fruits and vegetables; a minimum of 12 linear feet of unbreaded fresh or frozen meats and poultry (prepackaged luncheon meats do not qualify); canned and frozen vegetables; dairy products; and cereals.

(2) No more than 20 percent of the vendor's gross retail sales may be from the sale of gasoline or other automotive supplies.

(3) No more than 20 percent of the vendor's gross retail sales may be from the sale of alcoholic beverages and tobacco products.

(4) The vendor must maintain regular business hours. This shall include a minimum of two 4-hour blocks of time on each of five days per week. Daily operating hours shall be consistent from week to week, and shall be posted.

(5) The vendor must stock the minimum variety and quantity of WIC-approved foods as defined in the latest revised version of the Iowa WIC vendor application.

The specific brands of products that are included on the WIC-approved food list shall be made available to the vendor at the time of application and prior to renewal of each agreement.

The variety and quantity in stock are defined as including both inventory on display and in on-premises storage, but not inventory on order from suppliers.

(6) A vendor shall charge a price to WIC participants that is equal to or less than the price charged to all other customers. The prices charged to WIC participants for the average of all WIC items, as reported on the application, at the time of the on-site review, and throughout the agreement period, shall not exceed 105 percent of the average prices of all other WIC vendors in the same peer group. The vendor's average price for any category of WIC items, as reported on the application, at the time of the on-site review, and throughout the agreement period, shall not exceed 115 percent of the average price charged for the same category by all other WIC vendors in the same peer group. Categories refer to the broad groupings of items rather than specific brands. For purposes of making the price comparisons, the average price for all other WIC vendors in the peer group shall be computed from the most recent Price Assessment Reports on file from those vendors. If a vendor intends to comply with this provision by charging WIC participants a lower price than the price charged to other customers, the WIC price for each approved item must be identified on the package or shelf front.

(7) There must be a minimum of five current WIC participants residing in the same ZIP code area as the vendor.

(8) The vendor must not have had a food stamp program disqualification or civil monetary penalty imposed within the 12 months preceding the date of the application or reauthorization.

(9) The vendor must not have had a WIC program suspension imposed or a WIC application denied within the six-month period preceding the date of the application.

(10) The vendor must not have had a conviction or civil judgment for any activity that indicates a lack of business integrity against any of the officers or owners during the previous six years.

(11) The vendor must accept training on WIC program regulations prior to signing an agreement and must agree to provide training to all employees who will handle WIC food instruments prior to accepting any food instruments.

(12) The vendor must agree to adhere to all provisions of the WIC Vendor Instructions and Agreement Booklet.

*b. Special purpose vendor.* To qualify as a special purpose vendor, a retail outlet shall meet all of the following criteria:

(1) The vendor may be primarily a retailer of any type of merchandise but shall be authorized to provide only specified infant formula in exchange for WIC food instruments.

(2) The vendor must be able to provide the specified formula within 48 hours; 72 hours if a weekend or holiday is involved.

(3) The prices charged WIC participants must be equal to or less than the prices charged all other customers. The average price of each brand of infant formula sold to WIC participants as reported must not exceed the average price of the same brands of infant formula charged by all authorized WIC grocery vendors in the same peer group.

(4) The vendor shall meet the criteria in paragraph "a," subparagraphs (2) to (4) and (6) to (12), for grocery vendors.

(5) The vendor must agree to adhere to applicable provisions of the WIC Vendor Instructions and Agreement Booklet.

(6) Vendors that derive more than 50 percent of annual revenue of the sale of food items from the redemption of WIC food instruments are not allowed.

The department shall review each vendor application within five working days of receipt and determine if the information provided indicates that the retail outlet meets the selection criteria. If the application shows that the vendor does not meet one or more of the criteria, the department shall deny the application. If the vendor's application indicates that the vendor would qualify, the department or contract agency shall make an on-site visit to verify that the information provided in the application

is correct, to provide training, and sign the agreement. If the department or contract agency finds that the vendor has two or more types of out-of-date, stale, or moldy WIC foods in stock during the on-site visit, the vendor's application may be denied. If the contract agency or department determines during the on-site visit that the vendor does not qualify, the contract agency or department shall not sign the agreement. Within five working days of disapproving an application or agreement, the department will advise the vendor in writing of the reasons for denial of the application and the procedure for appeal. During the on-site visit, the contract agency representative is acting as an agent of the department and has the authority to approve or deny an application.

A vendor that is denied an agreement, either at the application review level or at the on-site review, is required to wait six months prior to submitting a new application. The department may, at its discretion, request a vendor to resubmit an application prior to completing its review if the application has not been completed to the extent that a determination of eligibility can be made.

*c. Reauthorization.* If ownership of an authorized vendor changes during the agreement period, the agreement becomes void. The new owner must file an application and be approved prior to accepting WIC food instruments. Vendor agreements are valid only for the period of time specified, and a vendor may not continue accepting food instruments past the expiration date unless a new agreement is signed. When a currently authorized vendor makes application for a subsequent agreement, an agreement shall be signed only if the vendor has been assessed less than 60 violation points under paragraph 73.19(2) "b" within the previous 24 months.

Vendors must complete a new application and sign a new WIC vendor agreement at least every three years to continue accepting WIC food instruments.

The department shall send the vendor written notice at least 30 days prior to the expiration of the agreement that it does not intend to offer the vendor a new agreement if the vendor has been assessed 60 or more violation points under paragraph 73.19(2) "b" within the last 24 months, or if any of the following conditions are in effect:

(1) The vendor has failed to submit any of the preceding year's Price Assessment Reports by the specified dates.

(2) The vendor has not cashed any WIC food instruments for at least two consecutive months at any time during the contract period, or has not cashed five or more WIC food instruments for any 120-day period during the contract period. A vendor will not be excluded under this provision if it is the only grocery or special purpose vendor in that ZIP code area.

(3) Any of the selection criteria listed in 73.8(4) "a" and "b" above are no longer met.

Expiration of a WIC agreement is not subject to appeal. A vendor who is not offered a new agreement by the department has the right to file a new application. If that application is denied, the vendor has the right to appeal.

*d. Training.* Vendors shall accept training in program policies and procedures at the on-site review prior to becoming an authorized vendor and shall be responsible for training all employees who will be handling WIC food instruments. The manager and person responsible for staff training must allow time at this visit for training; the agreement will not be signed until training is completed. Vendors shall be responsible for all actions of their employees in conducting WIC transactions.

If violations of program policies and procedures are documented, either through on-site monitoring or other indirect means, the vendor shall implement a corrective action training plan developed jointly by the vendor and the department or contract agency.

*e. Validity of food instruments.* The WIC vendor shall be responsible for ensuring that:

(1) The participant signature required on the food instrument is completed in the vendor's presence;

(2) The participant presents a WIC identification card prior to redeeming food instruments. A signature on the WIC identification card must match the food instrument signature;

(3) The type and quantity of food to be purchased is as indicated on the food instrument;

(4) The amount of money written onto the food instrument for repayment does not exceed the maximum amount as designated by the department and printed on the food instrument;

(5) The expiration date is present on the food instrument and is equal to or no later than the date of usage;

- (6) WIC food instruments are never exchanged for cash or credit;
- (7) Substitutions of foods different from those listed on the food instrument in type or amount are not made;
- (8) Food instruments are presented to the state's agent (bank) for payment within 15 days of the date of receipt;
- (9) The costs of foods purchased by WIC participants do not exceed charges to other customers for the same foods;
- (10) The vendor's authorizing number is stamped with the state-issued vendor stamp on the face of the food instrument prior to its being presented for payment.

*f. Cooperation during monitorings.* Contracted WIC vendors shall cooperate with department and contract agency staff who are present on site to monitor the store's WIC activities.

*g. Reimbursement to the program.* Vendors determined by the department to have collected more moneys than the true value of food items received shall make reimbursement to the department.

**73.8(5) Vendor monitoring.** To maintain program integrity and accountability for federal or state program funds, the department and contract agencies shall conduct ongoing monitoring of authorized vendors, both through on-site visits and through indirect means. A sample of 10 percent of currently authorized vendors receives on-site monitoring every year. Vendors that change ownership during the year, or apply during the contract period, receive an on-site visit prior to signing an agreement. The types of on-site monitoring are defined as follows:

*a.* Routine or representative monitoring is used for vendors for which there is no record of violations or complaints or other indication of problems. It may include any or all of the following: use of a food instrument or observation of a participant, educational buys, review of inventory levels, examination of redeemed WIC food instruments on hand, review of store policies on return items, and review of employee training procedures. The results of the monitoring are reviewed with the owner or manager on duty, and a follow-up letter confirming the findings is sent from the department. Routine monitoring may be performed by the department or by contract agency staff under the direction of the department. Depending on the nature and severity of violations noted, the department may schedule additional visits, initiate a compliance investigation, or apply sanctions.

Educational buy monitoring is a specialized type of routine monitoring. Department or contract agency staff attempt to use a WIC food instrument to purchase unauthorized types or brands of foods to test the level of training of store employees. At the conclusion of the transaction, the results of the buy are discussed with the store owner or manager on duty. The transaction is then voided, and the merchandise returned to the shelves. Educational buys are used on authorized vendors selected by the department. If unauthorized items are allowed to be purchased, the vendor shall agree to a corrective action training plan. A follow-up educational buy is scheduled within 30 to 90 days. A letter is sent from the department documenting the violation. By signing a WIC agreement, a vendor gives consent for educational buys by the department or contract agency. Vendors are not notified in advance that an educational buy is scheduled. The protocol for educational buys, including procedures, appropriate items to purchase, and forms to be used, is specified in the Iowa WIC Policy and Procedure Manual.

*b.* Electronic monitoring is examination of indicators tracked in the vendor computer database. It allows the analysis of data collected via computer from the contract agencies and the state's bank, from which patterns indicating compliance with or deviation from established patterns for Iowa WIC vendors emerge. Data is collected daily and reviewed on an ongoing basis. Trends identified can necessitate another type of monitoring, depending on the nature of each exception.

*c.* Compliance investigations may be used for any vendors. Compliance investigations will be conducted annually in a minimum percentage of vendors as mandated in federal regulations. A compliance investigation includes a sufficient number of compliance buys to provide evidence of program noncompliance, two compliance buys in which no program violations are found, or when an inventory audit has been completed. A compliance buy means a covert, on-site investigation in which a representative of the program poses as a participant, parent or caretaker, or proxy, transacts one or more food instruments and does not reveal during the visit that he or she is a WIC representative. Compliance buys may be performed by the department or another state agency or private company under contract

with the department. The department is responsible for identifying the vendors to be investigated and for approving the protocol to be used during the investigation. Upon completion of a compliance buy documenting program violations, the department shall issue the vendor a notice of violation points assessed unless such notification would hinder an investigation.

The department also monitors vendor performance through in-office review of information. Such information, specifically the total amount of WIC redemptions, is confidential as provided for in Iowa Code section 22.7(6). This business information could provide an advantage to competitors and would serve no public purpose if made available.

**641—73.9(135) Food package.** The authorized supplemental foods shall be prescribed for participants by a CPA in the contract agency from food packages outlined in 7 CFR 246.10 and in accordance with the following:

**73.9(1) *Prescription of foods.*** Food packages shall maintain a balance between cost and nutrition integrity. There are two components to this balance: (1) administrative adjustments by the department; and (2) nutrition tailoring by both the department and the CPA in the contract agencies.

*a.* Administrative adjustments include restrictions in the packaging methods, brands, sizes, types, and forms (but not quantities) of the federally allowable foods in order to establish the approved food list for the state. Administrative adjustments include decisions to eliminate more expensive brands or prohibit more costly food items allowed by regulations. Criteria for considering foods for inclusion in the approved food list are found in 73.9(3).

*b.* Nutrition tailoring includes changes or substitutions to food types, forms, and quantities in order to prescribe food packages that better meet the nutritional needs of participants. Tailoring is done to reduce quantities of foods based on nutritional needs, to accommodate participant preferences, to accommodate household conditions such as lack of refrigeration or other special needs and problems of homeless or transient participants, and to recommend or prescribe specific forms of the allowable WIC foods based upon a participant's nutritional needs or goals.

*c.* Rescinded IAB 8/4/04, effective 9/8/04.

**73.9(2) *Tailoring to meet individual nutrition needs.*** Food packages are individually tailored to meet the needs of specific participants according to USDA regulations and the Iowa WIC Policy and Procedure Manual.

**73.9(3) *Criteria for approving products for inclusion in the WIC food package.***

*a.* A product shall meet the federal regulations governing the WIC food package.

*b.* Variety in the food package is encouraged to increase the likelihood of products being used and to allow participants to exercise responsibility in shopping.

*c.* Changes to the approved food list take effect on October 1 in years when new vendor contracts are signed. Inquiries from food companies about new and continuing products must be received prior to February 1 of the year vendor contracts expire to be guaranteed consideration. The state reserves the right to change the food list more frequently if necessary.

*d.* Cereals shall meet federal guidelines for content and shall also meet the following conditions:

(1) They are carried by current Iowa WIC-approved vendors.

(2) The product form and marketing approach are consistent with the promotion of good nutrition and education.

(3) If a group of cereals from one manufacturer have similar names and package designs and some do not qualify, the department reserves the right to not approve those types that would otherwise qualify, to reduce the potential for confusion by retail vendors and participants.

(4) Ready-to-eat cold cereals are ranked by the six major distributors to Iowa grocery retailers based on volume of total sales. Hot cereals are ranked in the same way. Multiple container sizes of a single cereal variety shall be considered as one variety for the purposes of constructing this ranking. The department compiles data from all distributors to develop an overall ranking or ranked list. At least half of the cereals authorized on the WIC-approved food list must have whole grain as the primary ingredient by weight and must meet labeling requirements for making a health claim as a whole grain food with

moderate fat content. The department reserves the right to limit the number of approved cereals for administrative efficiency.

(5) Product has been available in retail grocery stores in Iowa for one year prior to the effective date of inclusion in the WIC-approved food list.

*e.* Juices shall meet the federal guidelines for vitamin C content and all of the following conditions:

(1) Juices are 100 percent juice and contain no added sugar, sweeteners or artificial sweeteners.

(2) The brand is carried by current Iowa WIC-approved vendors. Juices are ranked by the six major distributors to Iowa grocery retailers based on volume of total sales. Any private-label (store) brands that meet the selection criteria will also be considered.

(3) The product form and marketing approach are consistent with the promotion of good nutrition and education.

(4) If a group of juices from one manufacturer have similar names and package designs and some do not qualify, the department reserves the right to not approve those types that would otherwise qualify, to reduce the potential for confusion by retail vendors and participants. Single-strength and concentrated varieties of juice with the same brand name will be evaluated separately.

(5) Product has been available in retail grocery stores in Iowa for one year prior to the effective date of inclusion in the WIC-approved food list.

(6) Frozen fruit juices must be single flavors.

*f.* The following conditions apply to dairy products:

(1) To qualify, brands of whole, 1%, or fat-free skim milk marketed in Iowa must contain or be fortified with vitamins A and D to meet the federal standards. The department reserves the right to disqualify brands which have a retail value of 115 percent or higher than the state average for this product.

(2) Fluid milk with added bacterial cultures or enzymes, including but not limited to sweet acidophilus or lactose-reduced milk, may qualify. Brands are approved by the department on a case-by-case basis.

(3) All brands of natural cheese designated in the USDA WIC regulations qualify. The cheese shall have no added flavors (e.g., smoke flavoring, peppers, wine).

*g.* All brands of dried beans or peas are approved whether packaged or purchased in bulk; however, no mixes are allowed.

*h.* Any brand of peanut butter qualifies as long as it does not contain other ingredients such as jelly. Brands may be either refrigerated or nonrefrigerated.

*i.* Eggs shall be fresh, Grade A or AA large chicken eggs. Eggs which have a retail value of 115 percent or higher than the state average for this product shall not be approved.

*j.* Any brand of tuna or salmon qualifies if it is either water- or oil-packed, in cans or pouches, chunked, solid, or flaked. Fish packaged with other items such as crackers, relish or other flavorings may not be purchased. Albacore tuna is not allowed.

*k.* Commercial infant formula shall meet the following conditions:

(1) It is registered with the Food and Drug Administration as complying with the legal definition of infant formula.

(2) It complies with the calorie and iron content prescribed by the federal WIC regulations.

(3) It is approved by the USDA for use in the WIC program.

(4) The product form and marketing approach are consistent with the promotion of good nutrition and education.

(5) All of the formula marketed under one label shall meet all standards. If a similar, nonqualifying formula is marketed along with a qualifying formula, participants may be easily confused. Therefore, the qualifying formula shall not be approved.

*l.* At least two whole grain options that meet federal guidelines will be provided.

*m.* Infant food fruits, vegetables and meats must meet the federal guidelines.

*n.* Fresh and frozen vegetables and fruits that meet federal guidelines will be available for purchase with cash value vouchers specifically for fruits and vegetables.

*o.* Soy beverages shall meet federal guidelines.

*p.* Products will be evaluated for use in the Iowa WIC program based on nutrient content, packaging, container size, labeling, availability to wholesale distributors, cost and participant preference. The state reserves the right to limit the number of foods for the WIC-approved food list based on accessibility, availability, retail value of product, USDA recommendations, increased number of WIC participants, changes in appropriation of funds and administrative efficiency.

*q.* In addition to the criteria specified above, the department reserves the right to further restrict the number of brands of any products in order to contain the cost of the food package through competitive procurement of rebate contracts or other similar means.

*r.* The department reserves the right to discontinue specific brand names and products if the cost is 115 percent or higher than the state average for that particular product.

[ARC 7984B, IAB 7/29/09, effective 9/2/09]

#### **641—73.10(135) Education.**

##### **73.10(1) *Nutrition education for WIC participants.***

*a.* Nutrition education is provided as a benefit to all women and to parents of all children enrolled in the program.

*b.* A minimum of two nutrition education contacts shall be offered to each woman participant or the parent/guardian of children participating in WIC during each certification period.

*c.* Nutrition education shall be based on information obtained through the diet and health histories and shall be tailored to the specific nutrition need of the participant.

*d.* All pregnant women enrolled in WIC shall receive education on the benefits of breastfeeding.

*e.* Education in normal nutrition, i.e., education in nutrition for life-cycle stages, shall be provided in accordance with the Iowa WIC Policy and Procedure Manual.

*f.* Participants who are at high risk, as defined in the Iowa WIC Policy and Procedure Manual, shall receive counseling and a nutrition plan of care developed by a licensed dietitian. The plan of care shall be documented in the participant record and shall include scheduling a minimum of one individual education contact by a licensed dietitian.

*g.* The department shall make nutrition education materials and resources available at no cost to contract agencies. The department reserves the right to review and approve or disapprove any printed materials or lesson plans developed by contract agencies.

*h.* To the extent that time and resources are available, nutrition education may be provided to applicants who are not eligible to receive other WIC services.

**73.10(2) *Education of contract agency personnel.*** Agencies accepting WIC funds shall be responsible for ensuring that all agency staff or contractors are adequately trained for their responsibilities. At a minimum, training shall include the components described in the Iowa WIC Policy and Procedure Manual.

Continuing education is an allowable WIC administrative expense for contract agency staff and contractors who provide nutrition education.

**641—73.11(135) Health services.** The WIC program shall serve in the arrangement of ongoing health services for its participants. Health services are defined to include ongoing, routine pediatric and obstetrical care, and referral for diagnosis and treatment of any other condition. Contract agencies not able to provide such health services directly shall enter into written agreements with other public health agency(ies) or private physician to ensure availability of health services.

##### **73.11(1) *Written agreements.***

*a. Contract for services.* Contract agencies shall maintain an annual written, contractual agreement with any health agency performing WIC health assessments, whether for fee or exchange of service.

*b. Memorandum of understanding.* Contract agencies shall maintain a current memorandum of understanding with any health agency designated to provide ongoing health services to WIC participants and with any agency providing referral data for precertification of infants and pregnant women.

**73.11(2) Referral procedures.** The contract agency shall be responsible for referral of WIC participants to appropriate health care providers, as determined by the WIC health professional's assessment of their condition.

*a. Authorization for release of information.* Except as indicated below, before releasing medical or other personal information, including name, to an outside agency, the contract agency shall secure the participant's or parent/legal guardian's written authorization to release such information. A statement shall be signed for each specific provider to which information is being sent. The information contained in individual participant records shall be confidential pursuant to 7 CFR 246.26.

Referrals to the department of human services' child protective services for investigation of potential child abuse or to a law enforcement agency conducting an active criminal investigation may be made without obtaining a written release of information. Procedures for responding to a subpoena are made in accordance with the Iowa WIC Policy and Procedure Manual.

*b. The referral form.* A standard referral form, as provided by the department, shall be completed and sent to the referral agency. Documentation and follow-up are made in accord with the Iowa WIC Policy and Procedure Manual.

**641—73.12(135) Appeals and fair hearings—local agencies and vendors.**

**73.12(1) Right of appeal.** The right to appeal shall be granted when a local agency's or a vendor's application to participate is denied. The right to appeal shall also be granted when, during the course of the contract or agreement period, a local agency or vendor is disqualified or any other action which affects participation is taken. For participating vendors, a minimum of 30 days' advance notice will be given before the effective date of the action. For participating contract agencies, a minimum of 60 days' advance notice will be given before the effective date of the action. The right to appeal shall not be granted in the following circumstances:

- a.* When a vendor's contract expires.
- b.* When the department makes a determination regarding participant access.
- c.* When a vendor is disqualified from the WIC program as a result of a food stamp program disqualification.
- d.* When a vendor does not agree with the validity or appropriateness of selection criteria defined in 73.8(4).

**73.12(2) Request for hearing.** An appeal is brought by filing a written request for a hearing with the Division Director, Division of Health Promotion and Chronic Disease Prevention, Iowa Department of Public Health, Lucas State Office Building, Des Moines, Iowa 50319-0075, within ten days of receipt of notification of the adverse action. The written request for hearing shall state the adverse action being appealed.

**73.12(3) Contested cases.** Upon receipt of an appeal that meets contested case status, the appeal shall be forwarded within five working days to the department of inspections and appeals pursuant to the rules adopted by that agency regarding the transmission of contested cases. The information upon which the adverse action is based and any additional information that may be provided by the aggrieved party shall also be provided to the department of inspections and appeals.

**73.12(4) Notice of hearing.** The administrative law judge (ALJ) shall schedule the time, place and date of the hearing as expeditiously as possible. Hearings shall be conducted by telephone or in person in Des Moines at the Lucas State Office Building or other suitable location. If necessary, parties will be provided at least two opportunities to have the hearing rescheduled.

**73.12(5) Conduct of hearing.** The hearing shall be conducted according to the procedural rules of the department of inspections and appeals found in 481—Chapter 10, Iowa Administrative Code, and federal regulations found at 7 CFR 246.24. Copies of these regulations are available from the department of inspections and appeals upon request.

**73.12(6) Decision.** A written decision of the ALJ shall be issued, where possible, within 60 days from the date of the request for a hearing unless the parties agree to a longer period of time.

**73.12(7) Decision of ALJ.** When the ALJ makes a proposed decision and order, it shall be served by certified mail, return receipt requested, or delivered by personal service. That proposed decision and

order then becomes the department's final agency action without further proceedings ten days after it is received by the aggrieved party unless an appeal to the director is taken as provided in subrule 73.12(8).

**73.12(8) *Appeal to director.*** Any appeal to the director for review of the proposed decision and order of the ALJ shall be filed in writing and mailed to the Director, Iowa Department of Public Health, Lucas State Office Building, Des Moines, Iowa 50319-0075, by certified mail, return receipt requested, or delivered by personal service within ten days after the receipt of the ALJ's proposed decision and order by the aggrieved party. A copy of the appeal shall also be mailed to the ALJ. Any request for an appeal shall state the reason for appeal.

**73.12(9) *Record of hearing.*** Upon receipt of an appeal request, the ALJ shall prepare the record of the hearing for submission to the director. The record shall include the following:

- a. All pleadings, motions, and rules.
- b. All evidence received or considered and all other submissions by recording or transcript.
- c. A statement of all matters officially noticed.
- d. All questions and offers of proof, objections and rulings thereon.
- e. All proposed findings and exceptions.
- f. The proposed decision and order of the hearing officer.

**73.12(10) *Decision of director.*** The decision and order of the director becomes the department's final agency action upon receipt by the aggrieved party and shall be delivered by certified mail, return receipt requested, or by personal service.

**73.12(11) *Exhausting administrative remedies.*** It is not necessary to file an application for a rehearing to exhaust administrative remedies when appealing to the director or the district court as provided in Iowa Code section 17A.19. The aggrieved party to the final decision of the department who has exhausted all administrative remedies may petition for judicial review pursuant to Iowa Code chapter 17A.

**73.12(12) *Petition for judicial review.*** Any petition for judicial review of a decision and order shall be filed in the district court within 30 days after the decision and order becomes final. A copy of the notice of appeal shall be sent to the department by certified mail, return receipt requested, or by personal service. The address is: Division Director, Division of Health Promotion and Chronic Disease Prevention, Iowa Department of Public Health, Lucas State Office Building, Des Moines, Iowa 50319-0075.

#### **641—73.13(135) Right to appeal—participant.**

**73.13(1) *Right of appeal.*** A WIC participant shall have the right to appeal whenever a decision or action of the department or contract agency results in the individual's denial of participation, disqualification, or termination from the WIC program. All hearings shall be conducted in accordance with these rules.

**73.13(2) *Notification of appeal rights and right to hearing.*** Each program participant shall be notified in writing of the participant's right to appeal at the time of application and at the time of denial of eligibility or termination from the program (on Denial or Termination of Eligibility Form). Appeal and hearing notices shall also be written, posted, and immediately available at contract agencies to explain the method by which a hearing is requested, and that the participant may present arguments at the hearing either personally or through a representative such as a relative, friend, legal counsel, or other spokesperson.

**73.13(3) *Request for hearing.*** A request for hearing by an individual or the individual's parent, guardian, or other representative must be made in writing. The request for hearing shall be made to the contract agency within 90 days from the date the individual receives notice of the decision or action that is the subject of appeal.

**73.13(4) *Receipt of benefits during appeal.*** Participants who are involuntarily terminated from the WIC program prior to the end of the standard certification period shall continue to receive program benefits while the decision to terminate is under administrative appeal, provided that subsequent certifications are completed as required. Participants who are terminated because of categorical ineligibility (e.g., a child over five years of age) shall not continue to receive benefits during the administrative appeal period. Participants who are terminated at the end of a certification period for

failure to reapply, following notice of expiration of certification, shall not continue to receive benefits during the administrative appeal period. Applicants who are denied program benefits at the initial certification or at subsequent recertifications, due to a finding of ineligibility, shall not receive benefits during the administrative appeal period.

**73.13(5) *Hearing officer.*** The hearing officer shall be impartial, shall not have been directly involved in the initial determination of the action being contested, and shall not have a personal stake in the decision. If the party filing the appeal objects prior to a scheduled hearing to a contract agency director serving as a hearing officer in a case involving the director's own agency, another hearing officer shall be selected and, if necessary, the hearing shall be rescheduled as expeditiously as possible. Contract agencies may seek the assistance of the state WIC office in the appointment of a hearing officer.

**73.13(6) *Notice of hearing.*** The hearing officer shall schedule the time, place and date of the hearing as expeditiously as possible. Parties shall receive notice of the hearing at least ten days in advance of the scheduled hearing. The hearing shall be accessible to the party requesting the hearing. The hearing shall be scheduled within three weeks from the date the contract agency received the request for a hearing, or as soon as possible thereafter, unless a later date is agreed upon by the parties.

**73.13(7) *Conduct of hearing.*** The hearing shall be conducted in accordance with federal regulations found at 7 CFR Section 246.23. Copies of these regulations are available from the contract agency and the department. At a minimum, the party requesting the hearing or the party's representative shall have the opportunity to:

- a. Examine, prior to and during the hearing, the documents and records presented to support the decision under appeal;
- b. Be assisted or represented by an attorney or other person at the party's own expense;
- c. Bring witnesses;
- d. Question or refute any testimony or evidence, including an opportunity to confront and cross-examine adverse witnesses;
- e. Submit evidence to establish all pertinent facts and circumstances in the case;
- f. Advance arguments without undue interference.
- g. If a participant fails to attend the hearing, the agency will reschedule the hearing and give the participant 20 days' notice. The participant may have another person as the participant's designee. If neither the participant nor the designee attends the second hearing, the appeal will be closed.

**73.13(8) *Decision.*** Decisions of the hearing officer shall be in writing and shall be based on evidence presented at the hearing. The decision shall summarize the facts of the case, specify the reasons for the decision, and identify the supporting evidence and pertinent regulations or policy. The decision shall be issued within 45 days of the receipt of the request for a hearing, unless a longer period is agreed upon by the parties.

**73.13(9) *Appeal of decision to the department.*** If either party to a hearing receives an unfavorable decision, that decision may be appealed to the department. Such appeals must be made within 15 days of the mailing date of the decision. Appeals shall be sent to the Division Director, Division of Health Promotion and Chronic Disease Prevention, Iowa Department of Public Health, Lucas State Office Building, Des Moines, Iowa 50319-0075.

**73.13(10) *Contested case.*** Upon receipt of an appeal that meets contested case status, the appeal shall be forwarded within five working days to the Iowa department of inspections and appeals pursuant to the rules adopted by that agency regarding the transmission of contested cases. The information upon which the adverse action is based and any additional information that may be provided by the aggrieved party shall also be provided to the Iowa department of inspections and appeals.

**73.13(11) *Hearing.*** Parties shall receive notice of the hearing in advance. The administrative law judge shall schedule the time, place and date of the hearing so that the hearing is held as expeditiously as possible. The hearing shall be conducted according to the procedural rules of the Iowa department of inspections and appeals found in 481—Chapter 10, Iowa Administrative Code.

**73.13(12) *Decision of administrative law judge.*** The administrative law judge's decision shall be issued within 60 days from the date of request for hearing. When the administrative law judge makes a proposed decision and order, it shall be served by certified mail, return receipt requested, or delivered by

personal service. That proposed decision and order then becomes the department's final decision without further proceedings ten days after it is received by the aggrieved party unless an appeal to the director is taken as provided in subrule 73.13(13).

**73.13(13) *Appeal to director.*** Any appeal to the director for review of the proposed decision and order of the administrative law judge shall be filed in writing and mailed to the Director, Iowa Department of Public Health, Lucas State Office Building, Des Moines, Iowa 50319-0075, by certified mail, return receipt requested, or delivered by personal service within ten days after the receipt of the administrative law judge's proposed decision and order by the aggrieved party. A copy of the appeal shall also be mailed to the administrative law judge. Any request for an appeal shall state the reason for appeal.

**73.13(14) *Record of hearing.*** Upon receipt of an appeal request, the administrative law judge shall prepare the record of the hearing for submission to the director. The record shall include the following:

- a. All pleadings, motions, and rules.
- b. All evidence received or considered and all other submissions by recording or transcript.
- c. A statement of all matters officially noticed.
- d. All questions and offers of proof, objections and rulings thereon.
- e. All proposed findings and exceptions.
- f. The proposed decision and order of the administrative law judge.

**73.13(15) *Decision of director.*** An appeal to the director shall be based on the record of the hearing before the administrative law judge. The decision and order of the director becomes the department's final decision upon receipt by the aggrieved party and shall be delivered by certified mail, return receipt requested, or by personal service.

**73.13(16) *Exhausting administrative remedies.*** It is not necessary to file an application for a rehearing to exhaust administrative remedies when appealing to the director or the district court as provided in Iowa Code section 17A.19. The aggrieved party to the final decision of the department who has exhausted all administrative remedies may petition for judicial review of that action pursuant to Iowa Code chapter 17A.

**73.13(17) *Petition for judicial review.*** Any petition for judicial review of a decision and order shall be filed in the district court within 30 days after the decision and order becomes final. A copy of the notice of appeal shall be sent to the department by certified mail, return receipt requested, or by personal service. The address is: Division Director, Division of Health Promotion and Chronic Disease Prevention, Iowa Department of Public Health, Lucas State Office Building, Des Moines, Iowa 50319-0075.

**73.13(18) *Benefits after decision.*** If a final decision is in favor of the person requesting a hearing and benefits were denied or discontinued, benefits shall begin immediately and continue pending further review should an appeal to district court be filed. If a final decision is in favor of the contract agency, benefits shall be terminated, if still being received, as soon as administratively possible after the issuance of the decision. Benefits denied during an administrative appeal period may not be awarded retroactively following a final decision in favor of a person applying for benefits.

**641—73.14(135) *State monitoring of contract agencies.*** The department shall review contract agency operations through use of reports and documents submitted, state-generated data processing reports, and on-site visits for evaluation and technical assistance.

**73.14(1) *On-site visits.*** Department staff shall visit contract agencies whenever necessary, to review operations and ensure compliance with state and federal regulations.

**73.14(2) *Request for written reports.*** The department may request written progress reports from contract agencies within specified times.

**73.14(3) *Qualifications of department reviewers.*** At minimum, one of the persons from the department responsible for reviewing a contract agency shall be a licensed dietitian.

**641—73.15(135) *Migrant services.*** To meet the WIC needs of migrant workers within the state, a contract or work agreement shall be maintained with at least one contract migrant service agency within the state to provide or assist in the provision of service to this population.

**641—73.16(135) Civil rights.** The Iowa WIC program shall operate in compliance with the Equal Employment Opportunity Act of 1973, the Civil Rights Act of 1964, amended 1972, the State of Iowa Civil Rights Act of 1965, the Age Discrimination Act of 1967, Section 504 of Rehabilitation Act of 1973, Iowa Executive Order #15 of 1973, Executive Order #11246 of 1965 as amended by Executive Order #11375 of 1967, and the Americans With Disabilities Act of 1991 to ensure the rights of all individuals under this program.

**641—73.17(135) Audits.** Each contract agency shall ensure an audit of the WIC program within the agency at least every two years, to be conducted by a private certified public accountant or in accord with applicable Office of Management and Budget Circulars: A-128, Audits of State and Local Governments, and A-133, Audits of Institutions of Higher Education and Other Nonprofit Institutions. Each audit shall cover all unaudited periods through the end of the previous grant year. The department's audit guide shall be followed to ensure an audit that meets federal and state requirements.

**641—73.18(135) Reporting.** Completion of grant applications, budgets, expenditure reports and written responses to the department's monitoring for the WIC program shall be conducted by contract agencies in compliance with the formats and procedures outlined by the department in the Iowa WIC Policy and Procedure Manual, as specified in the contract entered into by the department and the contract agency.

**641—73.19(135) Program violation.** Participants or vendors are subject to the sanctions outlined below if determined by contract agency or department staff to be guilty of abusing the program or its regulations.

**73.19(1) Participant violation.** Violations may be detected by contract agency staff, by vendors, or by department staff. Information obtained by the department is forwarded to the contract agency for appropriate action.

*a.* Whenever possible, the participant is counseled in person concerning the violation. Documentation is maintained according to procedures set forth in the Iowa WIC Policy and Procedure Manual.

*b.* Participants who violate program regulations are subject to sanction in accordance with the schedule below:

| Violation                                                                                                      | Points Per Event |
|----------------------------------------------------------------------------------------------------------------|------------------|
| 1. Attempting to purchase unauthorized brands/types of foods (i.e., incorrect brands of cereal, juices, etc.). | 3                |
| 2. Attempting to cash food instrument for more than the possible value of the foods listed.                    | 3                |
| 3. Not signing the food instrument at the time of purchase.                                                    | 3                |
| 4. Attempting to cash food instruments after the last valid date.                                              | 4                |
| 5. Redeeming WIC food instruments at an unauthorized vendor.                                                   | 4                |
| 6. Redeeming food instruments before the allowable date.                                                       | 4                |
| 7. Attempting to cash food instruments that were signed prior to redemption at the vendor.                     | 5                |
| 8. Redeeming WIC food instruments that were reported as lost or stolen.                                        | 5                |
| 9. Attempting to purchase more than the quantity of foods specified on the food instrument.                    | 5                |
| 10. Verbal abuse or harassment of WIC or vendor employees.                                                     | 5                |
| 11. Threat of physical abuse of WIC or vendor employees.                                                       | 10               |
| 12. Attempting to sell, return, or exchange foods for cash or credit.                                          | 10               |
| 13. Attempting to purchase unauthorized (non-WIC) foods, such as meat, canned goods, etc.                      | 10               |
| 14. Attempting to purchase items that are not food.                                                            | 10               |
| 15. Sale or exchange of WIC food instruments for cash or credit.                                               | 10               |

| Violation                                                                                                                             | Points Per Event |
|---------------------------------------------------------------------------------------------------------------------------------------|------------------|
| 16. Altering a food instrument (e.g., changing last valid date, food item or quantity).                                               | 10               |
| 17. Attempting to redeem food instrument issued to another participant.                                                               | 10               |
| 18. Receiving more than one set of benefits for the same time period.                                                                 | 10               |
| 19. Knowing and deliberate misrepresentation of circumstances to obtain benefits (resulting in a false determination of eligibility). | 10               |
| 20. Attempting to steal WIC food instruments from a contract agency or participant.                                                   | 10               |
| 21. Physical abuse of WIC contract agency or vendor employees.                                                                        | 10               |
| 22. Attempting to pick up food instruments for a child that is not currently in their care.                                           | 10               |

c. The accumulation of 10 violation points within a 12-month period will result in a 2-month disqualification.

The accumulation of 10 additional violation points within a 12-month period following the disqualification will result in a 3-month disqualification. The participant must then reapply for the program and be scheduled for a certification.

d. Fifteen days' notice must be given prior to all disqualifications. In all cases, the participant must be informed of the reason for the disqualification and of the right to appeal the decision through the fair hearing process.

e. A disqualification generally applies to all members of a family who are on the program. The competent professional authority may waive the disqualification for one or more members of the family if it is determined that a serious health risk may result from program disqualification. The reason for this waiver must be documented in the participant's file.

f. The cashing of one or more food instruments at the same time constitutes a single violation. Participants will not be charged with a second violation for minor violations worth 5 or fewer points for subsequent food instruments cashed between the first instance and the receipt of the violation notice if the violation is the same. If a major violation greater than 5 points occurs during this period, the participant will be disqualified. Violations are cumulative.

g. When a participant improperly received benefits as a result of intentionally making a false or misleading statement, or intentionally misrepresenting, concealing, or withholding facts, the department shall collect the cash value of the improperly used food instruments. Collection of overpayment is not required when the department determines it is not cost-effective to do so.

The contract agency shall issue a Statement of Restitution along with the disqualification notice. The statement lists the serial numbers and dollar value of the food instruments for which payment is required.

The participant is required to surrender any unspent food instruments and send payment to the department in check or money order for those food instruments that have been cashed.

h. Each contract agency shall maintain a master list of all participant violation notices, disqualifications, and statements of restitution. The participant's notice of violation must also indicate when it is a second offense.

**73.19(2) Vendor violations.** There are five types of sanctions that are applied to vendors for violations of program regulations: nonpayment of food instruments, issuance of violation points, temporary disqualification, permanent disqualification, and civil money penalties.

a. Nonpayment of food instruments.

(1) As a result of prepayment reviews conducted by the state's bank, improperly completed food items are refused payment and returned to the vendor. Items screened during prepayment are authorized vendor stamp not present or legible in the "Pay to the Order of:" box on face of food instrument, missing signature, price exceeds maximum printed on face of food instrument.

(2) If the violation can be corrected by applying the authorized stamp, obtaining the proper signature, or reducing the price, the item may be resubmitted for payment. Federal banking regulations prohibit a financial instrument from being sent through the federal reserve system more than twice.

If an improperly completed WIC food instrument is received by the state's bank a second time, it is voided and may not be redeposited.

*b.* Administrative and procedural violation points. Administrative and procedural violations are offenses to the provisions of the WIC vendor agreement that do not rise to the level of fraud against the program or its participants.

These violations are an indication of a vendor's inattention to or disregard of the requirements of a WIC vendor agreement. It is in the department's interest to record and consider these violations when considering whether to continue its contractual relationship with the vendor.

One or more transactions prior to notification of the vendor constitute only one violation if they contain the same error.

The assignment of violation points does not limit the department's right to effect stronger penalties and sanctions in cases in which there is evidence of an intentional or systematic practice of abusing or defrauding the Iowa WIC program.

| Violation                                                                                                                                                                                                                       | Points Per Event |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|
| 1. Accepting food instrument(s) outside the valid dates of use.                                                                                                                                                                 | 5                |
| 2. Depositing food instrument(s) more than 15 days after purchase date.                                                                                                                                                         | 5                |
| 3. Accepting food instrument(s) with no date stamp.                                                                                                                                                                             | 5                |
| 4. Refusal to accept valid WIC food instruments from participants.                                                                                                                                                              | 10               |
| 5. Discriminatory treatment of WIC participants, such as requiring WIC participants to use special checkout lanes or provide extra identification.                                                                              | 10               |
| 6. Providing to WIC participants incentive items not prior authorized by the department.                                                                                                                                        | 10               |
| 7. Failure to carry out corrective action plan developed as a result of monitoring visit.                                                                                                                                       | 10               |
| 8. Failure to reimburse department for potentially overpaid food instrument or provide reasonable explanation for the cost of the food instrument.                                                                              | 5                |
| 9. Accepting the return of food purchased with WIC food instruments for cash or credit toward other purchases.                                                                                                                  | 10               |
| 10. Failure to use the WIC vendor stamp issued by the Iowa WIC program.                                                                                                                                                         | 5                |
| 11. Issuing "rain checks" or credit in exchange for WIC food instruments.                                                                                                                                                       | 10               |
| 12. Stocking out-of-date, stale, or moldy WIC foods.                                                                                                                                                                            | 10               |
| 13. Failure to submit vendor price assessment reports as requested.                                                                                                                                                             | 10               |
| 14. For vendors that have special WIC prices, failure to post WIC prices on the shelf or on the package.                                                                                                                        | 15               |
| 15. Cashing food instrument(s) without amount, date of purchase, or participant signature.                                                                                                                                      | 15               |
| 16. Contacting WIC participants in an attempt to recover funds not paid by WIC.                                                                                                                                                 | 15               |
| 17. Providing false information on the price assessment report.                                                                                                                                                                 | 15               |
| 18. Failure to train all employees and ensure their knowledge regarding WIC program procedures set forth in the vendor's current agreement and in the current publication of the Iowa WIC program's vendor instruction booklet. | 10               |
| 19. Requiring WIC participants to purchase a particular brand when other WIC-approved brands are available.                                                                                                                     | 10               |
| 20. Not allowing WIC participants to use discount coupons or promotional specials to reduce the WIC food instrument amount.                                                                                                     | 10               |
| 21. Requiring other cash purchases to redeem WIC food instruments.                                                                                                                                                              | 15               |
| 22. Failure to allow purchase of up to the full amount of WIC foods authorized on the food instrument if such foods are available and desired by the WIC participant.                                                           | 20               |

c. One-year disqualification. With an administrative finding of the following violations, the vendor will be disqualified for one year.

(1) Accumulation of 45 or more violation points within a single federal fiscal year of the agreement period.

(2) Allowing purchase of nonapproved and nonsimilar food items in exchange for WIC food instruments.

(3) Failure to provide access to store premises or in any manner to hinder, impede or misinform authorized WIC personnel in the act of conducting an on-site education, monitoring or investigation visit.

(4) Loss of Iowa department of inspections and appeals license.

(5) Submitting for payment a WIC food instrument redeemed by another authorized vendor.

(6) Threatening or verbally abusing WIC participants or authorized WIC program personnel in the conduct of legitimate WIC program transactions.

d. With an administrative finding of the following violations, the vendor will be disqualified from being a WIC vendor for three years.

(1) A pattern of charging WIC participants more than non-WIC customers or charging WIC participants more than the current shelf price.

(2) A pattern of charging for items not received by the WIC participant or for foods provided in excess of those listed on the WIC food instrument.

(3) A pattern of providing credit or nonfood items, except for alcohol, alcoholic beverages, or tobacco products, in exchange for WIC food instruments.

(4) One incidence of allowing the purchase of alcohol, alcoholic beverages, or tobacco products with a WIC food instrument.

(5) A pattern of receiving, transacting, or redeeming WIC food instruments outside authorized channels, including through unauthorized vendors or persons.

(6) A pattern of claiming reimbursement for the sale of a quantity of a specific food item which exceeds the store's documented inventory of that food item for a specified period of time.

(7) Submission for payment of WIC food instruments known by the vendor to have been lost or stolen.

e. With an administrative finding of the following violations, the vendor will be disqualified for six years.

(1) One incidence of buying or selling food instruments for cash (trafficking).

(2) Participating with other individuals including but not limited to WIC employees, vendors, and participants, in systematic efforts to submit false claims for reimbursement of improper WIC food instruments.

(3) One incidence of selling firearms, ammunition, explosives, or controlled substances (as defined in Section 102 of the Controlled Substances Act (21 U.S.C. 802)) in exchange for WIC food instruments.

f. With a conviction in a criminal court of law for trafficking in WIC food instruments or selling firearms, ammunition, explosives, or controlled substances (as defined in Section 102 of the Controlled Substances Act (21 U.S.C. 802)) in exchange for WIC food instruments, the vendor will be permanently disqualified from the Iowa WIC program. The department may impose a civil money penalty (CMP) in lieu of a disqualification when it determines, in its sole discretion, that:

(1) Disqualification of the vendor would result in inadequate participant access; or

(2) The vendor had, at the time of the violation, an effective policy and program in effect to prevent trafficking; and the ownership of the vendor was not aware of, did not approve of, and was not involved in the conduct of the violation.

g. The following items do not have a point value, but shall result in or extend a disqualification period:

(1) Failure to return WIC vendor stamp(s) to the WIC program within 10 days of effective date of disqualification, or expiration of agreement following denial of subsequent application, shall result in a 30-day extension of a disqualification period.

(2) For each month in which a vendor accepts WIC food instruments during a disqualification period, the disqualification period shall be extended by 30 days.

*h.* The above sanctions notwithstanding, the state of Iowa reserves the right to seek civil and criminal prosecution of WIC vendors for any and all instances of dealing in stolen or lost food instruments, trading cash and other inappropriate commodities for food instruments, or cases in which there exists evidence of a clear business practice to improperly obtain WIC funds, or other practices meeting the definition of fraud as defined in 7 CFR 246 or the Iowa Code.

*i.* A vendor shall not be entitled to receive any compensation for revenues lost as a result of any temporary or permanent disqualification.

*j.* A minimum of 15 days' notice is provided prior to all disqualifications, except for permanent disqualifications assessed under paragraph 73.19(2) "*f*," which are effective on the date of receipt of the notice of administrative action. When the department determines that an offense has occurred, a disqualification letter with supporting documentation is prepared for the WIC director's signature. The disqualification letter identifies the specific offenses that the vendor is charged with and the procedures for filing an appeal.

*k.* The department is responsible for issuing all warning and disqualification letters. Contract agencies are informed of all vendor correspondence regarding violations. In situations where participant violations are also involved, the contract agency is responsible for follow-up, as detailed in subrule 73.19(1).

*l.* Federal food stamp regulations require automatic disqualification from the food stamp program for vendors disqualified by the WIC program for certain types of violations. When a vendor is disqualified from the WIC program, the disqualification letter to the vendor will include the following statement: "This disqualification from WIC may result in disqualification as a retailer in the food stamp program. Such disqualification may not be subject to administrative or judicial review under the food stamp program." For all vendor disqualifications from the WIC program, notice will be sent to the United States Department of Agriculture for appropriate action.

*m.* The department shall disqualify a vendor who has been disqualified from the food stamp program. The disqualification shall be for the same length of time as the food stamp program disqualification, may begin at a later date than the food stamp program disqualification, and shall not be subject to administrative or judicial review under the WIC program. If the department determines that disqualification of a vendor would result in inadequate participant access, it will impose a civil money penalty (CMP) in lieu of disqualification.

*n.* Civil money penalties.

(1) When the department determines that a civil money penalty (CMP) shall be imposed in lieu of disqualification for reasons specified under paragraph 73.19(2) "*f*" or 73.19(2) "*m*," it shall use the civil money penalty formula in accordance with Title 7 CFR Subpart 246.12(k)(1)(x) to determine the CMP.

(2) If a vendor does not pay, only partially pays, or fails to timely pay a CMP, the department will disqualify the vendor for the length of the disqualification corresponding to the violation for which the CMP was assessed. "Failure to timely pay a CMP" includes the failure to pay a CMP in accordance with an installment plan approved by the department.

(3) Money received by the state WIC agency as a result of civil money penalties or fines assessed against a vendor and any interest charged in the collection of these penalties and fines shall be considered as program income.

**641—73.20(135) Data processing.** All contract agencies shall comply with the instructions outlined in the Iowa WIC Policy and Procedure Manual for use of the automated data processing system in provision of WIC food instruments and monitoring of WIC services. No contract agency is exempted from adherence to any portion of these instructions.

**641—73.21(135) Outreach.** Outreach efforts within the Iowa WIC program shall be directed toward extension of services to the neediest Iowans of high priority by reason of their WIC status (see 7 CFR 246.1(d)3). The department and contract agencies shall share responsibility for the conduct of outreach efforts.

**73.21(1) *Contract agency responsibilities.*** Contract agencies shall conduct any or all of the following outreach activities annually:

- a. Employ outreach worker(s).
- b. Submit for publication a minimum of two newspaper articles on WIC in the local community.
- c. Distribute WIC brochures to numerous community organizations and offices.
- d. Hold informational meetings for county social service departments, including food stamp program staff, drug/alcohol abuse counseling services, family investment program staff, and child abuse staff; and for public health nurse offices, physician offices, maternal and child health programs, Head Start programs, dental programs, family planning programs, nutrition professional groups, nursing professional groups, extension services, parent-teacher and other community organizations.

**73.21(2)** Reserved.

**641—73.22(135) Caseload management.** The statewide caseload (number of participants) shall be managed by the department in accord with funding limitations and federal regulations or directives. The federally established priority categories of participant shall be followed when limitation of services is necessary in accord with 7 CFR 246.7(d)3. In addition the following rules shall apply:

**73.22(1)** A contract agency shall maintain a waiting list only when the department determines that sufficient funds are not available to meet demand.

**73.22(2)** When a waiting list has been authorized, contract agencies shall certify applicants of potential highest priority first (e.g., women and infants) and potential lower priority second (children). Within these priority groups, applicants shall be offered certification appointments in the order of placement on the list.

**73.22(3)** When insufficient funds are available to serve all priority categories, the department shall provide instructions to contract agencies regarding which priority categories may continue to be certified.

**73.22(4)** When necessitated by federal funding restrictions, the department reserves the right to terminate or temporarily suspend benefits for categories of participants prior to the end of their certification period. Each participant shall be advised in writing 15 days before the effective date of the reasons for the action and of the right to a fair hearing.

**641—73.23(135) Grant application procedures for contract agencies.** Private, nonprofit or public agencies wishing to provide WIC services shall file a letter of intent to make application to the department no later than April 1 of the competitive year. Applications shall be to administer WIC services for a specified project period, as defined in the request for proposal, with an annual continuation application. The contract period shall be from October 1 to September 30 annually. All materials submitted as part of the grant application are considered public records in accordance with Iowa Code chapter 22, after a notice of award is made by the department. Notification of the availability of funds and grant application procedures will be provided in accordance with the department rules found in 641—Chapter 176.

Contract agencies are selected on the basis of the grant applications submitted to the department. The department will consider only applications from private nonprofit or public agencies. In the case of competing applications, the contract will be awarded to the agency that scores the highest number of points in the review. Copies of review criteria are available from: Chief, Bureau of Nutrition and Health Promotion, Iowa Department of Public Health, Lucas State Office Building, Des Moines, Iowa 50319-0075, (515)281-4913.

**641—73.24(135) Participant rights.** The special supplemental nutrition program for women, infants and children shall be open to all eligible persons regardless of race, color, sex, creed, age, mental/physical handicap or national origin. An applicant or participant may appeal any decision made by the contract agency or department regarding the applicant's or participant's eligibility for the program.

These rules are intended to implement federal law 42 U.S.C. Section 1786, and Iowa Code sections 10A.202(1) "h" and 135.11(1).

CHAPTER 74  
FAMILY PLANNING SERVICES  
[Prior to 7/29/87, Health Department[470] Ch 74]

**641—74.1(135) Program explanation.** The Iowa department of public health is a designated agency to operate the family planning program pursuant to an agreement with the federal government. Congress authorized grants to assist in the establishment and operation of family planning projects which offer a broad range of acceptable and effective family planning methods, including natural family planning, infertility services and services to adolescents. The majority of the funding available is from the Title X, family planning services grant, administered by the United States Department of Health and Human Services (DHHS).

The purpose of the program is to promote the health of persons of reproductive age and families by providing access to family planning and reproductive health promotion services.

The department, bureau of family health, enters into contracts with selected private and public agencies within the department family planning service area for the provision of family planning services. A description of the department family planning service area can be obtained from the Chief, Bureau of Family Health, Department of Public Health, Lucas State Office Building, Des Moines, Iowa 50319-0075.

The maternal and child health (MCH) advisory council assists in the development of the state plan for MCH, including children with special health care needs and family planning. The advisory council assists with the assessment of need, prioritization of services, establishment of objectives, and encouragement of public support for MCH and family planning programs. In addition, the advisory council advises the director regarding health and nutrition services for women and children, supports the development of special projects and conferences and advocates for health and nutrition services for women and children. The director appoints the council membership. Membership shall include parents of and service providers for children with special health care needs. Council membership shall also include the chairs, or designees, of the department's advisory committee for perinatal guidelines and the birth defects advisory committee to ensure coordination of each committee's respective issues and priorities. The chair of the family services grantee committee or the designee of the chair may serve as an ex officio member of the council.

**641—74.2(135) Adoption by reference.** Federal regulations found at 42 CFR Subpart A, Part 59, and the Program Guidelines for Project Grants for Family Planning Services shall be the regulations governing the Iowa family planning program and are incorporated by reference herein.

Copies of the federal regulations adopted by reference are available from the Chief, Bureau of Family Health, Department of Public Health, Lucas State Office Building, Des Moines, Iowa 50319-0075.

**641—74.3(135) Rule coverage.** These rules cover the agencies that have a contract with the department to provide family planning services and receive funds from the department for that purpose.

**641—74.4(135) Definitions.**

*"Applicant"* means a private nonprofit or public agency that seeks a contract with the department to provide family planning services and receives funds from the department for that purpose.

*"Client"* means an individual who receives family planning services through a contract agency.

*"Contract agency or contractor"* means a private nonprofit or public agency within the department family planning service area that has a contract with the department to provide family planning services and receives funds from the department for that purpose.

*"Department"* means the Iowa department of public health.

*"DHHS"* means the United States Department of Health and Human Services.

*"DIA"* means the Iowa department of inspections and appeals.

*"Director"* means the director of the Iowa department of public health.

*"Family"* means a group of two or more persons related by birth, marriage, or adoption or residing together. A pregnant woman is considered as two individuals when calculating the number of individuals

in the family. If a pregnant woman is expecting multiple births, the family size is increased by the number expected in the multiple birth.

*“Family planning”* means the promotion of reproductive and family health by the prevention of and planning for pregnancy, and reproductive health education.

*“Health education”* means services provided by a health professional to include teaching about normal anatomy and physiology, contraception, risk assessment, safety and injury prevention, signs or symptoms indicating need for medical care, and other anticipatory guidance topics.

*“Health professional”* means an individual who is licensed to provide health care or social services within their scope of practice.

*“Health services”* means services provided by family planning contract agencies.

*“Medicaid”* means the Medicaid program authorized by Title XIX of the Social Security Act and funded through the Iowa department of human services from DHHS.

*“OMB”* means the United States Department of the Treasury, Office of Management and Budget.

*“Performance standards”* means criteria or indicators of the quality of service provided or the capability of an agency to provide services in a cost-effective or efficient manner as defined in “Iowa Department of Public Health Family Planning Manual” and the federal regulations found at 42 CFR Subpart A, Part 59, and the Program Guidelines for Project Grants for Family Planning Services.

*“Title X”* means the federal requirements contained in 42 CFR Subpart A, Part 59, and the Program Guidelines for Project Grants for Family Planning Services.

*“Title XX”* means the combined federal and state dollars in the Social Services Block Grant allocated to pay for family planning services.

**641—74.5(135) Grant application procedures for contract agencies.** Notification of the availability of funds and grant application procedures will be provided in accordance with the department rules found in 641—Chapter 176. Eligible applicants include only private nonprofit or public agencies. Private nonprofit or public agencies seeking to provide Title X family planning center services shall file a letter of intent to make application to the department no later than April 1 of the competitive year. The request for proposals shall identify the project period and the contract period. Contract agencies are selected on the basis of the grant applications submitted to the department. In the case of competing applications, the contract will be awarded to the applicant that scores the highest number of points in the review. Copies of review criteria are available from the Chief, Bureau of Family Health, Department of Public Health, Lucas State Office Building, Des Moines, Iowa 50319-0075. All materials submitted as part of the grant application are considered public records in accordance with Iowa Code chapter 22, after a notice of award is made by the department.

**641—74.6(135) Funding levels for contract agencies.** The amount of funds available to each contract agency on an annual basis shall be determined by the department using a methodology based upon dollars available, number of clients enrolled, and selected needs criteria.

**641—74.7(135) Agency performance.** Contract agencies are required to provide services in accordance with these rules.

**74.7(1) Performance standards.** The department shall establish performance standards that contract agencies shall meet in the provision of public health services in addition to meeting all federal requirements. The performance standards for community-based agencies are published in the document “Iowa Department of Public Health Family Planning Manual.” Copies of the performance standards are available from the Chief, Bureau of Family Health, Department of Public Health, Lucas State Office Building, Des Moines, Iowa 50319-0075. Contract agencies that do not meet the performance standards shall not be eligible for continued funding as a family planning agency unless the contract agency has secured an exception.

**74.7(2) Contract agency review.** The state agency shall review contract agency operations through use of reports and documents submitted, state-generated data reports, chart audits, on-site and clinic visits for evaluation and technical assistance.

**74.7(3) Exception.** An agency that does not meet a performance standard or fails to meet action plans as approved by the department may be granted an exception for up to one year in order to improve performance. Such an exception must be requested in writing. If granted, the approval for the exception will include the conditions necessary for the successful completion of the standard, a time frame, and additional reporting requirements. The procedures for applying for and approving an exception are outlined in the “Iowa Department of Public Health Family Planning Manual.”

**641—74.8(135) Reporting.** Contract agencies shall complete grant applications, a budget, expenditure reports, an annual progress report, a family planning annual report, and data forms in compliance with the terms of the contract.

**641—74.9(135) Fiscal management.** All contract agencies are required to meet certain fiscal management policies.

**74.9(1) Last pay.** Family planning grant funds are considered last pay. Title XIX, Title XX and other third parties are to be billed first if the client is covered by those sources.

**74.9(2) Program income.** Program income means gross income earned by the contractor from activities in which part or all of the cost is either borne as a direct cost by a grant or counted as a direct cost toward providing services. It includes but is not limited to such income in the form of Title XIX and Title XX fees for services, third-party reimbursements, client fees, and proceeds from sales of tangible personal or real property.

Program income shall be used for allowable costs of the project. Program income shall be used prior to the use of funds received from the department. Excess program income may be retained to establish a three-month operating capital. Program income shall be used during the current fiscal year or the following fiscal year. Five percent of unobligated program income may be used by the contract agency for special purposes or projects provided such use furthers the mission of the family planning program and does not violate state rules or federal regulations governing the program.

**74.9(3) Advances.** A contract agency may request an advance up to one-sixth of its contract at the beginning of a contract year. The amount of any advance shall be deducted prior to the end of the fiscal year.

**74.9(4) Subcontracts.** Contract agencies may subcontract a portion of the project activity to another entity provided such subcontract is approved by the department. Subcontract agencies must follow the same rules, procedures, and policies as required of the contract agency by these rules and contract with the department. The contract agency is responsible for ensuring the compliance of the subcontract agency. Subcontract agencies may not subcontract these project activities with other entities.

**641—74.10(135) Audits.** Every two years, each contract agency shall undergo financial audit of the family planning program. The audit shall be conducted in compliance with OMB Circular A-133, Audits of States, Local Governments, and Non-Profit Organizations. Each audit shall cover all unaudited periods through the end of the previous grant year. The department’s audit guide should be followed to ensure an audit which meets federal and state requirements.

**641—74.11(135) Denial, suspension, revocation, or reduction of contracts with contract agencies.** The department may deny, suspend, revoke, or reduce contracts with contract agencies in accord with applicable federal regulations or contractual relationships. Notice of such action shall be in writing.

**641—74.12(135) Right to appeal—contract agency.** Contract agencies may appeal denial of a contract or the suspension, revocation or reduction of an existing contract.

**74.12(1) Appeal.** The appeal shall be made in writing to the department within ten days of receipt of notification of the adverse action. Notice is to be addressed to the Director, Division of Community Health, Department of Public Health, Lucas State Office Building, Des Moines, Iowa 50319-0075.

**74.12(2) Contested case.** Upon receipt of an appeal that meets contested case status, the appeal shall be forwarded within five working days to the DIA pursuant to the rules adopted by the DIA regarding

the transmission of contested cases. The information upon which the adverse action is based and any additional information which may be provided by the aggrieved party shall also be provided to the DIA.

**74.12(3) *Hearing.*** Parties shall receive notice of the hearing in advance. The administrative law judge shall schedule the time, place and date of the hearing so that the hearing is held as expeditiously as possible. The hearing shall be conducted according to the procedural rules of the DIA found in 481—Chapter 10, Iowa Administrative Code.

**74.12(4) *Decision of administrative law judge.*** The administrative law judge's decision shall be issued within 60 days from the date of request for hearing. When the administrative law judge makes a proposed decision and order, it shall be served by certified mail, return receipt requested, or delivered by personal service. That proposed decision and order then becomes the department's final decision without further proceedings ten days after it is received by the aggrieved party unless an appeal to the director is taken as provided in subrule 76.17(5).

**74.12(5) *Appeal to the director.*** Any appeal to the director for review of the proposed decision and order of the administrative law judge shall be filed in writing and mailed to the director by certified mail, return receipt requested, or delivered by personal service within ten days after the receipt of the administrative law judge's proposed decision and order by the aggrieved party. A copy of the appeal shall also be mailed to the administrative law judge. Any request for an appeal shall state the reason for appeal.

**74.12(6) *Record of hearing.*** Upon receipt of an appeal request, the administrative law judge shall prepare the record of the hearing for submission to the director. The record shall include the following:

- a. All pleadings, motions and rules.
- b. All evidence received or considered and all other submissions by recording or transcript.
- c. A statement of all matters officially noticed.
- d. All questions and offers of proof, objections and rulings thereon.
- e. All proposed findings and exceptions.
- f. The proposed decision and order of the administrative law judge.

**74.12(7) *Decision of director.*** An appeal to the director shall be based on the record made at the hearing. The decision and order of the director becomes the department's final decision upon receipt by the aggrieved party and shall be delivered by certified mail, return receipt requested, or by personal service.

**74.12(8) *Exhausting administrative remedies.*** It is not necessary to file an application for a rehearing to exhaust administrative remedies when appealing to the director or the district court as provided in Iowa Code section 17A.19. The aggrieved party to the final decision of the department who has exhausted all administrative remedies may petition for judicial review of that action pursuant to Iowa Code chapter 17A. Petition for judicial review must be filed within 30 days after decision becomes final.

These rules are intended to implement Iowa Code section 135.11.

CHAPTER 75  
STATEWIDE OBSTETRICAL AND  
NEWBORN INDIGENT PATIENT CARE PROGRAM

**641—75.1(255A) Definitions.**

*“Applicant”* means a person for whom assistance under this program is being requested.

*“Delivery”* means that the delivery occurs after 20 weeks gestation.

*“Director”* means the administrator of a maternal health center or other designated agency.

*“Family”* means a group of two or more persons related by birth, marriage, or adoption who reside together or a unit of one who is an unrelated individual not living with any relatives. The unborn fetus will be counted as a family member.

*“Nonquota case”* means a patient who is provided obstetrical or newborn care services at the University of Iowa Hospitals and Clinics under the indigent nonquota obstetrical care program established pursuant to Iowa Code chapter 255 and referenced in Iowa Code section 255A.2.

*“Obstetrical and newborn care services”* means those types of services as recognized by the latest editions of The American College of Obstetricians and Gynecologists, “Standards for Obstetric-Gynecologic Services” and The American Academy of Pediatrics, “Standards and Recommendations for Hospital Care of Newborn Infants.”

*“Poverty level”* means poverty income guidelines established by the United States Department of Health and Human Services.

*“Program”* means the obstetrical and newborn indigent patient care program for quota cases.

*“Provider”* means a licensed hospital or a licensed physician who agrees to service eligible patients.

*“Quota case”* means a patient who is provided obstetrical or newborn care by a licensed hospital or physician under the obstetrical indigent patient quota program established pursuant to Iowa Code section 255A.4.

*“Resident”* means the individual is a legal resident of the state and resides in one of the designated 90 counties.

*“Spendedown”* means the process by which an applicant obligates income for allowable medical expenses to reduce income to a qualifying level. The medical expenses used for spenddown cannot be paid for with funds from this program.

*“Spendedown interval”* means one month for delivery services and six months for antepartum and delivery services.

**641—75.2(255A) Covered services.** The following obstetrical and newborn care services may be provided through the obstetrical indigent patient care program:

1. Antepartum and postpartum care except where patient qualifies for antepartum and postpartum care provided by the department of public health, maternal and child health care program.
2. Normal delivery.
3. Cesarean section.
4. Newborn hospital care.
5. Sick newborns who qualify as a quota case will be covered until the patient is stabilized and transferred to University of Iowa Hospitals and Clinics, where the patient may be eligible to receive care as a county quota indigent patient pursuant to Iowa Code chapter 255.
6. Inpatient transportation from one hospital to another when authorized by a medical provider.
7. One outpatient visit for false labor.
8. Excluded services for quota cases will include but not be limited to elective abortion, elective hysterectomy, circumcision, nonobstetric related procedures and services.

**641—75.3(255A) Quota assignment.** The department of public health shall establish the quota annually for each county. The formula used shall be based upon, but not limited to, the following criteria:

1. Dollars available to the program.
2. Average number of births for the most recent three-year period for each county.

3. Per capita income for each county.

**641—75.4(255A) Eligibility criteria.** The certification process to determine eligibility for services under this program will include the following requirements:

**75.4(1) *Income.***

*a.* Income guidelines will be set at 185 percent of the poverty income guidelines published by the United States Department of Health and Human Services. State income guidelines will be adjusted following any change in Department of Health and Human Services guidelines.

*b.* Income information will be provided by the applicant, who will attest in writing to the accuracy of the information contained on the application. The director may request verification of income.

*c.* All earned and unearned income of family members as defined by DHHS poverty guidelines will be used in calculating the applicant's gross income for purposes of determining initial and continued eligibility.

*d.* Income will be estimated prospectively as follows:

(1) Annual income will be estimated based on the applicant's income for the past three months unless the applicant's income will be changing or has changed, or

(2) In the case of self-employed families the past year's income tax return will be used in estimating annual income unless a substantial change has occurred.

(3) Terminated income will not be considered.

*e.* An applicant for obstetric services under this program whose income falls between 185 percent and 300 percent of the poverty level guidelines may qualify through spenddown of medical expenses of all family members as follows:

(1) The applicant must provide copies of medical bills or a statement from the providers of projected medical expenses.

(2) Medical expenses which can be used to meet spenddown are as follows:

1. Health insurance premiums, deductibles, or coinsurance charges.

2. Medical and dental expenses as defined by the Internal Revenue Service.

(3) In order to qualify with spenddown, the amount of spenddown, adjusted by one-twelfth, must be equal to or less than the projected and actual medical expenses.

**75.4(2) *Resources.***

*a.* The resource limitation for an applicant will be \$10,000 per household.

*b.* The following are countable resources:

(1) Unobligated cash.

(2) Savings accounts.

(3) Stocks, bonds, certificates of deposit, excluding Internal Revenue Service defined retirement plans.

*c.* Resource information will be provided by the applicant, who will attest in writing to the accuracy of the information contained on the application. The director may request verification of resources.

**75.4(3) *Noneligibility for Title XIX or medically needy without spenddown.*** In order to be eligible, the applicant must not be eligible for services under Title XIX or the medically needy program without a spenddown.

**75.4(4) *Residency.*** The applicant for this program must be a legal resident of Iowa currently living in any county except Clinton, Cedar, Scott, Muscatine, Louisa, Washington, Iowa, Johnson, or Keokuk.

**641—75.5(255A) Application procedures.**

**75.5(1)** A person desiring obstetrical and newborn care under this program, or the parent or guardian of a minor desiring such care, may apply to the director of the maternal health center serving the person's county of residence at any time between confirmation of the pregnancy and not later than 60 days after delivery. If there is no maternal health center covering that county, the department will designate an agency.

**75.5(2)** The applicant will provide the following information to be considered for eligibility under this program:

- a.* Income and resource information on an application form.
- b.* Written verification obtained from the department of human services certifying that the applicant is not eligible for Title XIX or the medically needy program without a spenddown. The applicant will submit this copy within 60 days of applying with the director. To meet this 60-day deadline, the applicant will need to apply with the department of human services before or immediately after contacting the director.

**75.5(3)** Assignment of quotas shall be on a first-come, first-served basis based upon application date.

**75.5(4)** The director will provide written notification to the applicant regarding determination of eligibility or noneligibility and applicant's right to appeal a denial.

**75.5(5)** After an applicant has been determined to be eligible, the patient or provider will report any changes in eligibility or status of pregnancy to the director within 10 days from the date the change occurred.

**75.5(6)** Standardized application, determination of eligibility, and certification forms will be furnished by the department of public health to the directors.

**75.5(7)** Copies of appropriate certification forms will be mailed by the director to the department of public health as follows:

- a.* In counties covered by the department of public health's maternal and child health program, certification forms will be sent at 26 weeks or more gestation.
- b.* In counties not covered by maternal and child health programs, certification forms will be sent upon determination of eligibility for patients whose antepartum care will also be paid through the program.

**75.5(8)** Receipt of a certification form for a quota patient by the department of public health shall be considered the point in time when the quota has been used.

**75.5(9)** A woman who resides in a county which exceeds the patient quota allocated for the county, and who meets eligibility under rule 75.4(255A) shall be served at the University of Iowa Hospitals and Clinics pursuant to Iowa Code section 255.16. A woman who resides in a county with available quota and who meets eligibility under rule 75.4(255A) may be served at the University of Iowa Hospitals and Clinics pursuant to Iowa Code section 255.16.

**75.5(10)** Maternal health center directors shall negotiate 28E agreements with general relief directors for the purpose of coordinating application and eligibility services for obstetric patients under Iowa Code chapter 255.

#### **641—75.6(255A) Reimbursement of providers.**

**75.6(1)** The University of Iowa Hospitals and Clinics and other hospitals will submit their billings on the UB 82, uniform hospital billing form, and physicians will submit their billings on the Health Care Financing Administration form HCFA 1500. Forms will be furnished by the providers.

**75.6(2)** Providers will submit bills after delivery but not more than 60 days after the delivery or after determination of eligibility, whichever occurs later, to the department of public health.

**75.6(3)** Reimbursement for physicians and hospitals will be based upon the Title XIX rates. Bills will be adjusted accordingly by the department of public health and forwarded to the department of revenue and finance for payment.

**75.6(4)** Providers may be reimbursed for antepartum care prior to the patient becoming ineligible, as long as the patient is counted as a quota case.

**75.6(5)** On an annual basis the department of public health will furnish participating physicians with a list of reimbursable procedure codes and maximum rate.

**75.6(6)** The obstetrical indigent care fund is last pay. Private insurance shall be billed first.

**75.6(7)** All providers of services to quota obstetrical and newborn patients shall agree to accept as full payment the reimbursements allowable under the medical assistance program established pursuant to Iowa Code chapter 249A, up to a maximum of medical assistance's average reimbursement for the most

recent fiscal year. When the medical assistance reimbursement methodologies change, the maximum reimbursement may be based upon projection.

**75.6(8)** The obstetrical and newborn indigent program will pay, out of a set-aside fund, for certain cases that exceed the current year's maximum reimbursement rate. Cases that can be paid out of this fund are:

*a.* Allowable physician and hospital costs associated with DRGs 370, 371, 372, 374, 375 for the woman. Costs associated with DRGs 383, 384 will be covered if followed by a qualifying delivery event.

*b.* Allowable physician and hospital costs for the newborn associated with DRGs 385, 385.1, 389, 390.

*c.* Care provided to newborns under DRGs 386, 386.1, 387, 387.1, 388, 388.1, 389.1, 390.1 are defined under rule 75.2(255A) as being outside the scope of this program. These services could, however, be covered by Iowa Code chapter 255 or medically needy programs.

*d.* Physicians who provide obstetrical or newborn care at the University of Iowa Hospitals and Clinics are not entitled to receive any compensation for the provision of such care to persons certified as eligible under this program.

**75.6(9)** In all other cases, the maximum reimbursement level will apply. If the total reimbursable charges exceed the maximum reimbursement level, reimbursement to providers will be prorated based upon allowable reimbursement amounts.

**75.6(10)** Certifications for quota cases received by June 30 will have medical assistance's average reimbursement and the 10 percent fund encumbered.

#### **641—75.7(255A) Reassignment of county quotas.**

**75.7(1)** Unused quota numbers will be assigned by the department of public health after March 31 of each year to counties according to receipt of request on a case-by-case, first-come basis.

**75.7(2)** Request for additional quotas cannot be made until all quotas have been used in a given county.

**75.7(3)** Requests for additional quotas may be submitted by directors and must be based on pending applications. Requests will be made on forms provided by the department of public health designed to provide necessary information regarding pending applications.

#### **641—75.8(255A) Appeals and fair hearings.**

**75.8(1)** *Right of appeal.* An applicant shall have the right to appeal whenever a decision of the director or the state program results in the individual's denial of eligibility for the program or denial as a quota case. No appeal can be filed for denial as a quota case, if there are no quotas available. Quotas would not be available if already assigned or sequestered to cases under appeal. Quotas will only be held when applicant is appealing a change in status.

**75.8(2)** *Request for reconsideration.* The applicant seeking to appeal shall first request reconsideration by the director of the denial of eligibility for this program or denial as a quota case. The written request shall be made within 15 days from the date the individual received notice of the decision which is the subject of appeal. The written request shall state the adverse decision being appealed and the reasons the applicant believes state standards were not correctly applied. The director shall reconsider the application and make a written determination with notice of right to appeal to the state within 10 days of receipt of the request. If the denial stands, the applicant may appeal to the department of public health.

**75.8(3)** *Request for hearing.* An appeal is brought by filing an appeal with the Division Director, Division of Family and Community Health, Department of Public Health, Lucas State Office Building, Des Moines, Iowa 50319-0075, within 30 days of the director's final determination in subrule 75.8(2).

**75.8(4)** *Contested use.* Upon receipt of an appeal that meets contested case status, the appeal shall be forwarded within five working days to the department of inspections and appeals pursuant to the rules adopted by that agency regarding the transmission of contested cases. The information upon which the adverse action is based and any additional information which may be provided by the aggrieved party shall also be provided to the department of inspections and appeals.

**75.8(5) *Hearing.*** The hearing shall be conducted according to the procedural rules of the department of inspections and appeals found in 481—Chapter 10, Iowa Administrative Code.

**75.8(6) *Decision.*** A written decision of the hearing officer shall be issued, where possible, within 30 days from the date of the request for a hearing unless the parties agree to a longer period of time. The decision of the hearing shall be served by certified mail, return receipt requested, or delivered by personal service. That proposed decision and order then becomes the department's final agency action without further proceedings 10 days after it is received by the aggrieved party unless an appeal to the director of public health is taken as provided in subrule 75.8(7).

**75.8(7) *Appeal to director.*** Any appeal to the director of public health for review of the proposed decision and order of the hearing officer shall be filed in writing and mailed to the director of public health by certified mail, return receipt requested, or delivered by personal service within 10 days after the receipt of the hearing officer's proposed decision and order by the aggrieved party. A copy of the appeal shall also be mailed to the hearing officer. Any appeal shall state the reason for appeal.

**75.8(8) *Record of hearing.*** Upon receipt of an appeal request, the hearing officer shall prepare the record of the hearing for submission to the director of public health. The record shall include the following:

- a. All pleadings, motions and rules.
- b. All evidence received or considered and all other submissions by recording or transcript.
- c. A statement of all matters officially noticed.
- d. All questions and offers of proof, objections and rulings thereon.
- e. All proposed findings and exceptions.
- f. The proposed decision and order of the hearing officer.

**75.8(9) *Decision of director.*** The decision and order of the director of public health becomes the department's final agency action upon receipt by the aggrieved party and shall be delivered by certified mail, return receipt requested, or by personal service.

**75.8(10) *Exhausting administrative remedies.*** It is not necessary to file an application for a rehearing to exhaust administrative remedies when appealing to the director of public health or the district court as provided in Iowa Code section 17A.19. The aggrieved party to the final agency action of the department who has exhausted all administrative remedies may petition for judicial review of that action pursuant to Iowa Code chapter 17A.

**75.8(11) *Petition for judicial review.*** Any petition for judicial review of a decision and order shall be filed in the district court within 30 days after the decision and order becomes final. A copy of the notice of appeal shall be sent to the department by certified mail, return receipt requested, or by personal service. The address is: Division Director, Division of Family and Community Health, Iowa Department of Public Health, Lucas State Office Building, Des Moines, Iowa 50319-0075.

These rules are intended to implement Iowa Code chapter 255A.

## CHAPTER 76 MATERNAL AND CHILD HEALTH PROGRAM

**641—76.1(135) Program explanation.** The maternal and child health (MCH) programs are operated by the Iowa department of public health as the designated state agency pursuant to an agreement with the federal government. The majority of the funding available is from the Title V, MCH services block grant, administered by the Health Resources and Services Administration within the United States Department of Health and Human Services.

The purpose of the program is to promote the health of mothers and children by ensuring or providing access to quality maternal and child health services (especially for low-income families or families with limited availability of health services); to reduce infant mortality and the incidence of preventable diseases and handicapping conditions; to increase the number of children appropriately immunized against disease; and to facilitate the development of community-based systems of health care for children and their families. The program provides and promotes family-centered, community-based coordinated care, including care/service coordination for children with special health care needs.

The department's family services bureau enters into contracts with selected private nonprofit or public agencies for the assurance of access to prenatal and postpartum care for women, preventive and primary child health services, and services to children with special health care needs. The types of services provided by these contracts are infrastructure building, population-based services, enabling services, and direct health services. The department's dental health bureau collaborates with the family services bureau to develop oral health programs to reduce barriers to oral health care and reduce dental disease through prevention. The children with special health care needs program is administered by Child Health Specialty Clinics (CHSC), University of Iowa. The department contracts with the University of Iowa department of pediatrics' Child Health Specialty Clinics to provide services to children with special health care needs. In accordance with the Maternal and Child Health Services Title V Block Grant Program administered by the U.S. Department of Health and Human Services, Health Resources and Services Administration, Maternal and Child Health Bureau, CHSC shall ensure that public health funds will be used to cover the cost of services only after all other sources of reimbursement have been exhausted.

The MCH advisory council assists in the development of the state plan for MCH, including children with special health care needs and family planning. The advisory council assists with assessment of need, prioritization of services, establishment of objectives, and encouragement of public support for MCH and family planning programs. In addition, the advisory council advises the director regarding health and nutrition services for women and children, supports the development of special projects and conferences and advocates for health and nutrition services for women and children. The director appoints the council membership. Membership shall include parents of and service providers for children with special health care needs. The council membership shall also include the chairs, or designees, of the department's advisory committee for perinatal guidelines, and the birth defects advisory committee to ensure coordination of their respective issues and priorities. The chair of the family services bureau grantee committee or the designee of the chair may serve as an ex-officio member of the council.

**641—76.2(135) Adoption by reference.** Federal requirements contained in the Omnibus Reconciliation Act of 1989 (Public Law 101-239), Title V, MCH services block grant shall be the rules governing the Iowa MCH program and are incorporated by reference herein.

The department finds that certain rules should be exempted from notice and public participation as being a very narrowly tailored category of rules for which notice and public participation are unnecessary as provided in Iowa Code section 17A.4(2). Such rules shall be those that are mandated by federal law governing the Iowa MCH program where the department has no option but to adopt such rules as specified and where federal funding for the MCH programs is contingent upon the adoption of the rules.

Copies of the federal legislation adopted by reference are available from Chief, Family Services Bureau, Department of Public Health, Lucas State Office Building, Des Moines, Iowa 50319-0075.

**641—76.3(135) Rule coverage.** These rules cover agencies contracting with the department to provide community-based MCH public health services and to receive funds from the department for that purpose. The contract agencies conduct essential public health services directed toward the maternal and child health populations consistent with the state's MCH services block grant state plan. The state plan is developed and administered collaboratively by the family services bureau of the department and CHSC.

**641—76.4(135) Definitions.**

*"Applicant"* means a private nonprofit or public agency that seeks a contract with the department to provide MCH services.

*"Care/service coordination"* means a process of linking the service system to the recipient and organizing the various elements in order to achieve a successful outcome. The terms "care coordination" and "service coordination" may be used interchangeably.

*"Children with Special Health Care Needs (CSHCN)"* means children with chronic physical, developmental, behavioral, or emotional conditions that require health and related services of a type or amount beyond that required by children generally.

*"CHSC"* means Child Health Specialty Clinics, a statewide program for children with special health care needs authorized under Title V of the Social Security Act.

*"Client"* means an individual who receives MCH services through a contract agency.

*"CMS"* means the United States Department of Health and Human Services Centers for Medicare and Medicaid Services (formerly Health Care Financing Administration).

*"Contract agency"* means a private nonprofit or public agency that has a contract with the department to provide MCH services and receives funds from the department for that purpose.

*"Core public health functions"* means the functions of community health assessment, policy development, and assurance.

1. Assessment: regular collection, analysis, interpretation, and communication of information about health conditions, risks, and assets in a community.

2. Policy development: development, implementation, and evaluation of plans and policies, for public health in general and priority health needs in particular, in a manner that incorporates scientific information and community values and is in accordance with state public health policy.

3. Assurance: ensuring, by encouragement, regulation, or direct action, that programs and interventions that maintain and improve health are carried out.

*"Dental home"* means a usual source of dental care where dental care services are provided in a primary care setting where care is accessible, family-centered, continuous, comprehensive, coordinated, compassionate, and culturally competent. In addition, the dental care provider and parents partner to identify and access all the dental and nondental services needed to help children and their families achieve maximum oral health.

*"Department"* means the Iowa department of public health.

*"DHHS"* means the United States Department of Health and Human Services.

*"DIA"* means the Iowa department of inspections and appeals.

*"Direct health services"* means those services generally delivered one-on-one between a health professional and a client in an office or clinic.

*"Director"* means the director of the Iowa department of public health.

*"Enabling services"* means services that allow or provide for access to and the derivation of benefits from, the array of basic health care services and include activities such as outreach, case management, health education, transportation, translation, home visiting, smoking cessation, nutrition, support services, and others.

*"EPSDT"* means the Early and Periodic Screening, Diagnosis, and Treatment program which provides for regular preventive health care services for children aged 0 to 21 as authorized by Title XIX of the Social Security Act.

*"Essential public health services"* means those activities carried out by public health entities and their contractors that fulfill the core public health functions in the promotion of maternal and child health.

*“Family,”* for the purpose of establishing eligibility, means a group of two or more persons related by birth, marriage or adoption or residing together and functioning as one socioeconomic unit. For the purpose of these rules, a pregnant woman is considered as two individuals when calculating the number of individuals in the family. If a pregnant woman is expecting multiple births, the family size is thereby increased by the number expected in the multiple birth.

*“Family planning”* means the promotion of reproductive and family health by the prevention of and planning for pregnancy, and reproductive health education.

*“Gap filling”* means direct health services supported by Title V staff or resources that are needed by children with special health care needs but are not otherwise accessible in the community.

*“HAWK-I”* means healthy and well kids in Iowa and is the child health insurance program in Iowa as authorized in Title XXI of the Social Security Act.

*“HCFA”* means the DHHS, Health Care Finance Administration.

*“Health education”* means services provided by a health professional to include instruction about normal anatomy and physiology, growth and development, safety and injury prevention, signs or symptoms indicating need for medical care, and other anticipatory guidance topics.

*“Health professional”* means an individual who possesses specialized knowledge in a health or social science field or is licensed to provide health care.

*“Health services”* means services provided through MCH contract agencies.

*“Informing”* means the act of advising families of the services available through the EPSDT/Care for Kids program, explaining what to expect at screening, and providing information about health resources in the community.

*“Infrastructure building”* means activities directed at improving and maintaining the health status of all clients by providing support for the development and maintenance of comprehensive health services systems including development and maintenance of health services standards or guidelines, training, data, and planning systems.

*“MCH services”* means essential public health services provided by MCH contract agencies.

*“Medicaid”* means the Medicaid program authorized by Title XIX of the Social Security Act and funded through the Iowa department of human services from the DHHS.

*“Medical home”* means a usual source of health care where the physician/health care provider is available to coordinate preventive, primary and follow-up care at all times (24 hours per day, seven days per week) for the patient while maintaining the client’s health records. In addition, the physician/health care provider and parents partner to identify and access the medical and nonmedical services needed to help children and their families achieve their maximum potential.

*“Nutrition screening”* means nutrition education appropriate to the needs of the client, and referral to a licensed dietitian if indicated.

*“OMB”* means the United States Department of the Treasury, Office of Management and Budget.

*“Oral health counseling”* means services to assess oral health status and to provide education appropriate to the needs of the client and referral to a dentist if indicated.

*“Oral health education”* means information provided by a health professional about dental disease, prevention, and oral hygiene and other anticipatory guidance.

*“Parenting education”* means educational services for parents or expectant parents provided by health professionals to include care of infants and children, normal development, discipline, and other topics as appropriate.

*“Performance measures”* means a narrative statement that describes a specific maternal and child health need or requirement that, when addressed, will lead to a specific health outcome within a community and generally within a specified time frame.

*“Performance standards”* means criteria or indicators of the quality of service provided or the capability of a contract agency to provide public health services in a cost-effective or efficient manner as identified in the quality assurance section (501) of the MCH Administrative Manual. Copies of the performance standards are available from the Chief, Family Services Bureau, Department of Public Health, Lucas State Office Building, Des Moines, Iowa 50319-0075, or on the Iowa department of public health Web site ([www.idph.state.ia.us](http://www.idph.state.ia.us)).

*“Pharmacist”* means a person currently licensed to practice pharmacy under Iowa Code chapter 155.

*“Physician”* means a person currently licensed to practice medicine and surgery, osteopathic medicine and surgery, or osteopathy under Iowa Code chapters 148 and 150A.

*“Population-based services”* means preventive interventions and personal health services, developed for and available to the entire MCH population of the state rather than for individuals in a one-on-one situation. Disease prevention, health promotion, and statewide outreach are major components.

*“Prenatal and postpartum care”* means those types of services as recognized by the American College of Obstetricians and Gynecologists.

*“Program income”* means gross income earned by the contract agency from activities in which part or all of the cost is either borne as a direct cost by the funds received from the department or counted as a direct cost toward meeting cost-sharing or matching requirements of the contract agency. “Program income” includes but is not limited to such income in the form of fees for services, third-party reimbursements, and proceeds from sales of tangible, personal or real property.

*“Psychosocial services”* means screening activities that include social assessment and assisting with a family’s additional needs for support and referral.

*“Title V”* means Title V of the Social Security Act and the federal requirements contained in the Omnibus Reconciliation Act of 1989 (Public Law 101-239) which address the Maternal and Child Health and Children with Special Health Care Needs programs.

*“Title X”* means the program authorized in the federal regulations found in 42 CFR Subpart A, Part 59, published in the Federal Register on June 3, 1980, and the Program Guidelines for Project Grants for Family Planning Services.

*“Title XIX”* means the Medicaid program authorized in the Social Security Act and funded through the Iowa department of human services from the DHHS.

*“Title XXI”* means the child health insurance program authorized in the Social Security Act and implemented in Iowa as the HAWK-I program as administered by the Iowa department of human services.

*“Well-child health care”* means those types of services as recognized by the latest edition of the American Academy of Pediatrics, Guidelines for Health Supervision.

*“WIC”* means the Special Supplemental Nutrition Program for Women, Infants and Children, funded through the department from the United States Department of Agriculture.

**641—76.5(135) MCH services.** The following public health services shall be provided by contract agencies:

**76.5(1) Infrastructure building services.**

- a. Community assessment activities to identify population-based health conditions, risks, and assets in the community.
- b. Analysis of health data to determine community population-based health status, health system utilization and community resources.
- c. Methodological support for data collection, analysis and dissemination.
- d. Community planning activities to promote family and community health initiatives based on scientific, economic, and political factors.
- e. Promotion of regulations, standards, and contracts that protect the public’s health and safety.
- f. Monitoring and evaluating the effectiveness, accessibility and quality of personal health and population-based services in the community.
- g. Supporting innovative initiatives to gain new insights and solutions to family and community health-related needs.
- h. Development of state plan and annual report in conjunction with the family services bureau.
- i. Development of systems for transitioning adolescents with special health care needs to adult services.

**76.5(2) Population-based services.**

- a. Immunization.

- b. Injury prevention.
- c. Outreach and health education.
- d. Counseling for families who have lost a child to sudden infant death syndrome.
- e. Childhood lead poisoning screening.
- f. Support screening and follow-up for sickle cell disease and other hemoglobin disorders.

**76.5(3) *Enabling services.***

- a. Care/service coordination.
- b. Informing.
- c. Outreach to families and children who do not access a regular and continuous source of health care (medical and dental home).
- d. Coordination of local systems of care for improving access to health services.
- e. Access to translation services.
- f. Access to transportation.
- g. Parent-to-parent support for families who have children with special health care needs.
- h. Information and outreach to families applying for the Supplemental Security Income program (Title XVI).
- i. Rescinded IAB 2/6/02, effective 3/13/02.

**76.5(4) *Direct health services.*** Direct health services may be provided to meet identified community needs. The following preventive direct health services may be supported by MCH program funds to the extent the comprehensive community assessment documents that the services are not otherwise available from health professionals within the community. Payment shall be based upon Title XIX rates to the extent that current Title XIX rate information is available to the department. Contract agencies may enter into agreements that reimburse less than the Title XIX rate. Agencies shall not reimburse a provider under sanction by CMS.

a. *Child health.*

- (1) Informing.
- (2) Care/service coordination.
- (3) Nutrition counseling.
- (4) Psychosocial services.
- (5) Parenting education.
- (6) Health education.
- (7) Well-child health services include routine, ambulatory well-child care.
- (8) Assistance in establishing a medical and dental home or usual source of care.
- (9) Referral.

b. *Prenatal and postpartum services.*

- (1) Care/service coordination.
- (2) Risk assessment.
- (3) Psychosocial screening assessment and counseling.
- (4) Nutrition assessment and counseling.
- (5) Health education.
- (6) Routine, ambulatory prenatal medical care, postpartum exams, and family planning services.

c. *Dental health—maternal and child.*

- (1) Oral screening.
- (2) Dental treatment services through referral.
- (3) Oral health education.
- (4) Fluoride varnish application.

d. *Children with special health care needs.* Community-based pediatric subspecialty clinic services that are “gap filling.”

**641—76.6(135) Client eligibility criteria.** The certification process to determine eligibility for direct health care under the program shall include the following requirements:

**76.6(1) Age.**

- a. Prenatal program—no age restrictions.
- b. Child health care services—birth through 21 years of age.
- c. CHSC—birth through 21 years of age.

**76.6(2) Income.**

a. Income guidelines will be the same as those established for the state's Title XXI program. Guidelines are published annually by DHHS. Department income guidelines will be adjusted following any change in DHHS guidelines.

b. Income information will be provided by the individual, who will attest in writing to the accuracy of the information contained in the application.

c. Proof of Title XIX or Title XXI (HAWK-I) eligibility will automatically serve in lieu of an application.

d. All income of family members as defined by DHHS poverty guidelines will be used in calculating the individual's gross income for purposes of determining initial and continued eligibility.

e. Income will be calculated as follows:

(1) Annual income will be estimated based on the individual's income for the past three months unless the individual's income will be changing or has changed, or

(2) In the case of self-employed families the past year's income tax return (adjusted gross income) will be used in estimating annual income unless a change has occurred.

(3) Terminated income will not be considered.

f. Individuals will be screened for eligibility for Title XIX and Title XXI (HAWK-I). If an individual's income falls within the eligibility guidelines for Title XIX and Title XXI (HAWK-I), the individual should be referred to the Iowa department of human services or other enrollment source to apply for coverage. Pregnant women shall be considered for Title XIX presumptive eligibility. Children shall be considered for Title XIX eligibility to the extent these activities are approved by the Iowa department of human services.

g. An individual whose income is above the poverty level established by Title XXI and below 300 percent of the federal poverty guidelines will qualify for services on a sliding fee scale, as determined by the local agency's cost for the service. The department provides annual guidelines. An individual whose income is at or above 300 percent will qualify for services at full fee.

h. Eligibility determinations must be performed at least once annually. Should the individual's circumstances change in a manner which affects third-party coverage or Title XIX/Title XXI eligibility, eligibility determinations shall be completed more frequently.

**76.6(3) Residency.** Individuals must be currently residing in Iowa.

**76.6(4) Pregnancy.** An individual applying for the prenatal program shall have verification of pregnancy by an independent health provider, by the maternal health contract agency, or by a family planning (Title X) agency.

**76.6(5) Children with special health care needs.** An individual applying for CHSC services shall be determined to have a special health care need as defined by the federal MCH bureau. Children aged 0 to 21 residing in Iowa with or at risk of having a special health care need are eligible for CHSC services. Care/service coordination or other nonclinic services are provided at no charge to the family. Clinic services are provided without charge to families with adjusted gross incomes below 185 percent of the federal poverty guideline. Families above this threshold are responsible for payment according to a sliding fee scale based on tax exemptions, adjusted gross income, and extenuating circumstances.

**641—76.7(135) Client application procedures for MCH services.**

**76.7(1)** A person or the parent or guardian of a minor desiring direct health services other than those provided to children with special health care needs shall apply to a contract agency using a Health Services Application, Form 470-2927, 470-2927(SP), or the alternate form authorized by the HAWK-I board.

**76.7(2)** The contract agency shall verify the following information to apply for MCH services under this program:

- a. The information requested on the application form under “Household Information.”
- b. Income information for all family members or proof of eligibility for Title XIX (Medicaid) or Title XXI (HAWK-I).
- c. Information about health insurance coverage.
- d. The signature of the individual or responsible adult, dated and witnessed.
- e. For pregnant women, denial of benefits under Title XIX (Medicaid) due to economic or categorical ineligibility.

**76.7(3)** If an individual has completed a Health Services Application, Form 470-2927, within the last year and the form accurately documents the current financial and family status, the MCH contract agency shall accept a copy of that application and determine eligibility without requiring completion of any other application form.

**76.7(4)** If an individual indicates on the Health Services Application, Form 470-2927, that the individual also wishes to apply for WIC or Medicaid or HAWK-I, the contract agency shall forward the appropriate copy to the indicated agency within two working days.

**76.7(5)** The contract agency shall determine the eligibility of the family and the percent of the cost of care that is the family’s responsibility. The individual shall be informed in writing of eligibility status prior to incurring costs for care.

**76.7(6)** Once an individual has been determined to be eligible, the individual shall report any changes in income, family composition, or residency to the contract agency within 30 days from the date the change occurred.

**76.7(7)** A family seeking direct health care or care/service coordination services for a child with special health care needs shall follow CHSC policies and procedures. Insurance status and eligibility for the sliding fee scale are determined during the patient registration process.

#### **641—76.8(135) Right to appeal—client.**

**76.8(1)** *Right of appeal.* Individuals applying for MCH services and clients receiving MCH services shall have the right to appeal whenever a decision or action of the department or contract agency results in the denial of participation, suspension, or termination from the approved MCH program. Notification of the denial of participation, suspension or termination shall be made in writing and shall state the basis for the action. All hearings shall be conducted in accordance with these rules.

**76.8(2)** *Notification of appeal rights and right to hearing.* Individuals applying for MCH services shall be notified of the right to appeal and the procedures for requesting a hearing at the time of application for MCH services. Information about the appeal and hearing process shall be provided in writing and shall be immediately available at maternal and child health centers. A health professional shall be available to explain the method by which an appeal or hearing is requested and the manner in which the appeal and hearing will be conducted.

**76.8(3)** *Request for hearing.* A request for a hearing is a written expression by an individual or the individual’s parent, guardian, or other representative that an opportunity to present the individual’s case is desired. The request shall be filed with the contract agency within 60 days from the date the individual receives notice of the decision or action which is the subject of appeal.

**76.8(4)** *Receipt of benefits during appeal.* Individual applicants, who are denied program benefits due to a finding of ineligibility, shall not receive benefits during the administrative appeal period. Clients who are involuntarily suspended or terminated from the MCH program shall continue to receive program benefits during the administrative appeal period.

**76.8(5)** *Hearing officer.* The hearing officer shall be impartial, shall not have been directly involved in the initial determination of the action being contested, and shall not have a personal stake in the decision. Hearing officers may be contract agency directors, health professionals, community leaders, or any impartial citizen. If prior to the hearing, the appealing party objects to a contract agency director serving as the hearing officer in a case involving the director’s own agency, another hearing officer shall be selected and, if necessary, the hearing shall be rescheduled as expeditiously as possible. Contract agencies may seek the assistance of the Chief, Family Services Bureau, Department of Public Health, Lucas State Office Building, Des Moines, Iowa 50319-0075, in the appointment of a hearing officer.

**76.8(6) *Notice of hearing.*** The hearing officer shall schedule the time, place and date of the hearing as expeditiously as possible. Parties shall receive notice of the hearing at least ten days in advance of the scheduled hearing. The hearing shall be accessible to the party requesting the hearing. The hearing shall be scheduled within three weeks from the date the contract agency received the request for a hearing or as soon as possible thereafter, unless a later date is agreed upon by the parties.

**76.8(7) *Conduct of hearing.*** The party requesting the hearing or the party's representative shall have the opportunity to:

- a. Examine, prior to and during the hearing, the documents and records presented to support the decision under appeal;
- b. Be represented by an attorney or other person at the party's own expense;
- c. Bring witnesses;
- d. Question or refute any testimony or evidence, including an opportunity to confront and cross-examine adverse witnesses;
- e. Submit evidence to establish all pertinent facts and circumstances in the case; and
- f. Advance arguments without undue interference.

**76.8(8) *Decision.*** Decisions of the hearing officer shall be in writing and shall be based on evidence presented at the hearing. The decision shall summarize the facts of the case, specify the reasons for the decision, and identify the supporting evidence and pertinent regulations or policy. The decision shall be issued within 90 days of the receipt of the request for the hearing, unless a longer period is agreed upon by the parties.

**76.8(9) *Appeal of decision to the department.*** A party receiving an unfavorable decision may file an appeal with the department. Such appeals must be filed within 15 days of the mailing date of the hearing decision. Appeals shall be sent to the Division Director, Family and Community Health, Department of Public Health, Lucas State Office Building, Des Moines, Iowa 50319-0075.

**76.8(10) *Contested case.*** Upon receipt of an appeal that meets contested case status, the appeal shall be forwarded within five working days to the DIA pursuant to the rules adopted by the DIA regarding the transmission of contested cases. The information upon which the adverse action is based and any additional information, which may be provided by the aggrieved party, shall also be provided to the DIA.

**76.8(11) *Hearing.*** Parties shall receive notice of the hearing in advance. The administrative law judge shall schedule the time, place and date of the hearing so that the hearing is held as expeditiously as possible. The hearing shall be conducted according to the procedural rules of the DIA found in 481—Chapter 10, Iowa Administrative Code.

**76.8(12) *Decision of administrative law judge.*** The administrative law judge's decision shall be issued within 60 days from the date of request for hearing. When the administrative law judge makes a proposed decision and order, it shall be served by certified mail, return receipt requested, or delivered by personal service. That proposed decision and order then becomes the department's final decision without further proceedings ten days after it is received by the aggrieved party unless an appeal to the director is taken as provided in subrule 76.8(13).

**76.8(13) *Appeal to the director.*** Any appeal to the director for review of the proposed decision and order of the administrative law judge shall be filed in writing and mailed to the director by certified mail, return receipt requested, or delivered by personal service within ten days after the receipt of the administrative law judge's proposed decision and order by the aggrieved party. A copy of the appeal shall also be mailed to the administrative law judge. Any request for an appeal shall state the reason for appeal.

**76.8(14) *Record of hearing.*** Upon receipt of an appeal request, the administrative law judge shall prepare the record of the hearing for submission to the director. The record shall include the following:

- a. All pleadings, motions and rules.
- b. All evidence received or considered and all other submissions by recording or transcript.
- c. A statement of all matters officially noticed.
- d. All questions and offers of proof, objections and rulings thereon.
- e. All proposed findings and exceptions.
- f. The proposed decision and order of the administrative law judge.

**76.8(15) *Decision of director.*** An appeal to the director shall be based on the record of the hearing before the administrative law judge. The decision and order of the director becomes the department's final decision upon receipt by the aggrieved party and shall be delivered by certified mail, return receipt requested, or by personal service.

**76.8(16) *Exhausting administrative remedies.*** It is not necessary to file an application for the rehearing to exhaust administrative remedies when appealing to the director or the district court as provided in Iowa Code section 17A.19. The aggrieved party to the final decision of the department who has exhausted all administrative remedies may petition for judicial review of that action pursuant to Iowa Code chapter 17A.

**76.8(17) *Petition for judicial review.*** Any petition for judicial review of a decision and order shall be filed in the district court within 30 days after the decision and order becomes final. A copy of the notice of appeal shall be sent to the director by certified mail, return receipt requested, or by personal service. The address is Director, Department of Public Health, Lucas State Office Building, Des Moines, Iowa 50319-0075.

**76.8(18) *Benefits after decision.*** If a final decision is in favor of the person requesting a hearing and benefits were denied or discontinued, benefits shall begin immediately and continue pending further review should an appeal to district court be filed. If a final decision is in favor of the contract agency, benefits shall be terminated, if still being received, as soon as administratively possible after the issuance of the decision. Benefits denied during an administrative appeal period may not be awarded retroactively following a final decision in favor of a person applying for MCH services.

**641—76.9(135) *Grant application procedures for community-based contract agencies.*** Private nonprofit or public agencies seeking to provide community-based Title V-MCH public health services shall file a letter of intent to make application to the department no later than April 1 of the competitive year. Applications shall be to administer MCH services for a specified project period, as defined in the request for proposal, with an annual continuation application. The contract period shall be from October 1 to September 30 annually. All materials submitted as part of the grant application are considered public records in accordance with Iowa Code chapter 22, after a notice of award is made by the department. Notification of the availability of funds and grant application procedures will be provided in accordance with the department rules found in 641—Chapter 176.

Contract agencies are selected on the basis of the grant applications submitted to the department. The department will consider only applications from private nonprofit or public agencies. In the case of competing applications, the contract will be awarded to the applicant that scores the highest number of points in the review.

**641—76.10(135) *Funding levels for community-based contract agencies.*** The amount of funds available to each contract agency on an annual basis shall be determined by the department using a methodology based upon dollars available, number of clients enrolled, and selected needs criteria. A contract agency will receive four dollars of the available funds from the department for each one dollar of matching funds up to but not to exceed the total available funds for that contract agency.

**641—76.11(135) *Contract agency performance.*** Contract agencies are required to provide services in accordance with these rules.

**76.11(1) *Performance standards.*** The department shall establish performance standards that contract agencies shall meet in the provision of public health services. The performance standards for community-based agencies are published in the quality assurance section (501) of the MCH Administrative Manual. Copies of the performance standards are available from the Chief, Family Services Bureau, Department of Public Health, Lucas State Office Building, Des Moines, Iowa 50319-0075, or on the Iowa department of public health Web site ([www.idph.state.ia.us](http://www.idph.state.ia.us)). Contract agencies that do not meet the performance standards shall not be eligible for continued funding as an MCH contract agency unless the contract agency has secured an exception.

**76.11(2) *Contract agency review.*** The department shall review contract agency operations through the use of reports and documents submitted, state-generated data reports, chart audits, on-site and clinic visits for direct care services as applicable for evaluation and technical assistance.

**76.11(3) *Exception.*** A contract agency that does not meet a performance standard or fails to meet an action plan as approved by the department may be granted an exception for up to one year in order to improve performance. Such an exception must be requested in writing. If granted, the approval for the exception will include the conditions necessary for the successful completion of the standard, a time frame, and additional reporting requirements. The procedures for applying for and approving of an exception are outlined in the "Performance Standards, Maternal and Child Health Contractors, Family Services Bureau."

**641—76.12(135) Reporting.** Completion of grant applications, budgets, expenditure reports, annual progress reports, and data forms shall be performed by contract agencies in compliance with the contract with the department.

**641—76.13(135) Fiscal management.** All contract agencies are required to meet fiscal management policies.

**76.13(1) *Last pay.*** MCH grant funds are considered last pay. Title XIX and other third-party payers are to be billed first if other resources cover the service.

**76.13(2) *Program income.*** Program income shall be used for allowable costs of the MCH program. Program income shall be used before using the funds received from the department. Excess program income may be retained to build a three-month operating capital. Program income shall be used during the current fiscal year or the following fiscal year. Five percent of unobligated program income may be used by the contract agency for special purposes or projects provided such use furthers the mission of the MCH program and does not violate state or federal rules governing the program.

**76.13(3) *Advances.*** A contract agency may request an advance of up to one-sixth of its contract at the beginning of a contract year. The amount of any advance will be deducted prior to the end of the fiscal year.

**76.13(4) *Local share.*** Community-based contract agencies are required to match the MCH funds received from the department at a minimum rate of one dollar of local match for every four dollars received from the department. Sources that may be used for match are reimbursement for service from third parties such as insurance and Title XIX, client fees, local funds from nonfederal sources, or in-kind contributions. In-kind contributions must be documented in accordance with generally accepted accounting principles.

**76.13(5) *Subcontracts.*** Contract agencies may subcontract a portion of the project activity to another entity provided such subcontract is approved by the department. Subcontract agencies must follow the same rules, procedures, and policies as required of the contract agency by these rules and contract with the department. The contract agency is responsible for ensuring the compliance of the subcontract. Subcontract agencies may not subcontract these project activities with other entities.

**641—76.14(135) Audits.** Every two years, each contract agency shall undergo financial audit of the MCH program. The audit shall be conducted in compliance with OMB Circular A-133 Audits of States, Local Governments, and Non-Profit Organizations. Each audit shall cover all unaudited periods through the end of the previous grant year. The department's audit guide should be followed to ensure an audit which meets federal and state requirements.

**641—76.15(135) Diagnosis and therapeutic services for children.** Rescinded IAB 2/6/02, effective 3/13/02.

**641—76.16(135) Denial, suspension, revocation or reduction of contracts with contract agencies.** The department may deny, suspend, revoke or reduce contracts with contract agencies in accord with applicable federal regulations or contractual relationships. Notice of such action shall be in writing.

**641—76.17(135) Right to appeal—contract agency.** Community-based contract agencies may appeal the denial of a contract or the suspension, revocation or reduction of an existing contract.

**76.17(1) Appeal.** The appeal shall be made in writing to the department within ten days of receipt of notification of the adverse action. Notice is to be addressed to the Division Director, Family and Community Health Division, Department of Public Health, Lucas State Office Building, Des Moines, Iowa 50319-0075.

**76.17(2) Contested case.** Upon receipt of an appeal that meets contested case status, the appeal shall be forwarded within five working days to the DIA pursuant to the rules adopted by the DIA regarding the transmission of contested cases. The information upon which the adverse action is based and any additional information, which may be provided by the aggrieved party, shall also be provided to the DIA.

**76.17(3) Hearing.** Parties shall receive notice of the hearing in advance. The administrative law judge shall schedule the time, place and date of the hearing so that the hearing is held as expeditiously as possible. The hearing shall be conducted according to the procedural rules of the DIA found in 481—Chapter 10.

**76.17(4) Decision of administrative law judge.** The administrative law judge's decision shall be issued within 60 days from the date of request for hearing. When the administrative law judge makes a proposed decision and order, it shall be served by certified mail, return receipt requested, or delivered by personal service. That proposed decision and order then becomes the department's final decision without further proceedings ten days after it is received by the aggrieved party unless an appeal to the director is taken as provided in subrule 76.17(5).

**76.17(5) Appeal to the director.** Any appeal to the director for review of the proposed decision and order of the administrative law judge shall be filed in writing and mailed to the director by certified mail, return receipt requested, or delivered by personal service within ten days after the receipt of the administrative law judge's proposed decision and order by the aggrieved party. A copy of the appeal shall also be mailed to the administrative law judge. Any request for an appeal shall state the reason for appeal.

**76.17(6) Record of hearing.** Upon receipt of an appeal request, the administrative law judge shall prepare the record of the hearing for submission to the director. The record shall include the following:

- a. All pleadings, motions and rules;
- b. All evidence received or considered and all other submissions by recording or transcript;
- c. A statement of all matters officially noticed;
- d. All questions and offers of proof, objections and rulings thereon;
- e. All proposed findings and exceptions; and
- f. The proposed decision and order of the administrative law judge.

**76.17(7) Decision of director.** An appeal to the director shall be based on the record made at the hearing. The decision and order of the director becomes the department's final decision upon receipt by the aggrieved party and shall be delivered by certified mail, return receipt requested, or by personal service.

**76.17(8) Exhausting administrative remedies.** It is not necessary to file an application for a rehearing to exhaust administrative remedies when appealing to the director or the district court as provided in Iowa Code section 17A.19. The aggrieved party to the final decision of the department who has exhausted all administrative remedies may petition for judicial review of that action pursuant to Iowa Code chapter 17A. Petition for judicial review must be filed within 30 days after decision becomes final.

These rules are intended to implement Iowa Code section 135.11.

CHAPTER 77  
LOCAL BOARDS OF HEALTH  
[Prior to 7/29/87, Health Department[470] Ch 77]

**641—77.1(137) Purpose of local boards of health.** The local board of health shall have jurisdiction over public health matters within its designated geographic area according to Iowa Code chapter 137. The local board of health shall promote and protect the health of the citizens, and carry out the powers of local boards as specified in Iowa Code sections 137.6 and 137.7, and all other applicable Iowa Code chapters.

**641—77.2(137) Definitions.** For the purpose of these rules, unless otherwise defined, the following definitions apply:

*“Core public health functions”* means the functions of community health assessment, policy development, and assurance.

1. **Assessment:** Regular collection, analysis, interpretation, and communication of information about health conditions, risks, and assets in a community.

2. **Policy development:** Development, implementation, and evaluation of plans and policies, for public health in general and priority health needs in particular, in a manner that incorporates scientific information and community values and in accordance with state public health policy.

3. **Assurance:** Ensuring by encouragement, regulation, or direct action that programs and interventions that maintain and improve health are carried out.

*“Department”* means the Iowa department of public health.

*“Environmental health services”* means services focused on assessing and controlling the impact of people on their physical environment and the impact of the environment on them.

*“Essential public health services”* means those activities carried out by public health that fulfill the core functions.

*“Local board of health”* means a county, city, or district board of health.

*“Personal health services”* means services focused on the care of individuals.

*“Population-based health services”* means services focused on the health status of population groups and their environments.

**641—77.3(137) Roles and responsibilities of local boards of health.** Public health is responsible for safeguarding the community’s health. This goal is pursued through three core functions: assessment, policy development and assurance.

**77.3(1)** **Assessment:** regularly and systematically collect, assemble, analyze, and make available information on the health of the community, including statistics on health status, community health needs, personal health services, and epidemiologic and other studies of health problems. Assessment includes the essential public health services that:

- a. Monitor health status to identify community health problems,
- b. Diagnose and investigate health problems and health hazards in the community, and
- c. Evaluate effectiveness, accessibility, and quality of personal and population-based health services.

**77.3(2)** **Policy development:** exercise its responsibility to serve the public interest in the development of comprehensive public health policies. This can be accomplished by promoting use of a scientific knowledge base in decision making about public health and by taking the lead in public health policy development. Policy development includes the essential public health services that:

- a. Develop policies and plans that support individual and community health efforts,
- b. Enforce laws and regulations that protect and ensure safety, and
- c. Research new insights and innovative solutions to health problems.

**77.3(3)** **Assurance:** assure their constituents that services necessary to achieve agreed-upon goals are provided either by encouraging actions by other entities (private or public sector), by requiring such action through regulation, or by providing services directly. Each local board must involve key

policymakers and the general public in determining a set of high-priority personal and communitywide health services. Assurance includes the essential public health services that:

- a. Link people to needed personal health services and provide such personal and environmental health services as deemed necessary,
- b. Ensure the competence of public health and personal health care workforce,
- c. Inform, educate, and empower people about health issues, and
- d. Mobilize community partnerships to identify and solve health problems.

**641—77.4(137) Organization of local boards of health.**

**77.4(1) *Officers of local board of health.*** Each local board of health shall, at its first meeting during any calendar year, elect one of its members to serve as chairperson until the first meeting of the following calendar year.

a. The local board of health may elect a vice-chairperson, secretary, or other such officers as it may deem advisable.

b. In case of a vacancy of the office of chairperson, a successor shall be elected at the next meeting of the board, who shall serve the remainder of the term.

**77.4(2) *Meetings of local board of health.*** The place, date and time of regular meetings of the local board of health shall be determined by vote of the board, and shall comply with the provisions of the open meetings law which is found in Iowa Code chapter 21.

a. Each local board of health shall meet at least quarterly.

b. Special meetings of the board may be called as needed by the chairperson, or by any three board members. At least 24 hours' notice shall be given of special meetings, except in case of emergency.

**77.4(3) *Quorum of local board of health.*** Fifty percent or more of the board membership shall constitute a quorum.

**641—77.5(137) Operating procedures of local boards of health.**

**77.5(1)** The following information shall be submitted to the Iowa department of public health:

a. Names, addresses, and telephone numbers of members of the local board of health, within one month after their appointment.

b. Names of the chairperson and any other officers elected by the board, within one month after their election.

c. A copy of the minutes of each regular and special meeting of the board, which shall include at least:

- (1) The date and place of the meeting,
- (2) A list of members present, and
- (3) A report of any official board actions, within one month of the date of the meeting.

**77.5(2)** An annual report of expenditures for the previous fiscal year, to be submitted on forms provided by the Iowa department of public health, shall be submitted within 90 days of the close of the county fiscal year.

**641—77.6(137) Expenses of board of health members.**

**77.6(1)** The following may be considered necessary expenses of board of health members:

a. Reimbursement for travel in private car on board of health business at the same rate as provided for a public officer or employee in Iowa Code section 70A.9.

b. Actual lodging and meal expenses including sales tax on lodging and meals.

c. Actual expense of public transportation when traveling on board of health business.

d. Miscellaneous expenses related to performance of duties as approved by the board of health.

**77.6(2)** This rule shall not be construed as requiring the payment of reimbursement to any person or as prohibiting local boards from imposing additional restrictions or administrative requirements on expenses of their members.

These rules are intended to implement Iowa Code section 135.11(13) and chapter 137.

CHAPTER 78  
DISTRICT HEALTH DEPARTMENTS  
[Prior to 7/29/87, Health Department[470] Ch 78]

**641—78.1(137) Minimum standards for district health departments.**

**78.1(1)** A district health department approved after September 3, 1997, shall have jurisdiction over at least two counties.

**78.1(2)** All areas under the jurisdiction of a district health department shall be in close proximity, and district boundaries shall follow existing county boundaries.

**78.1(3)** A district health department shall provide public health nursing services and environmental health services, and may provide other public health population-based services as are deemed advisable and necessary.

**78.1(4)** The district board of health shall delegate responsibility for administration of the district health department to an individual who is a full-time employee in the department.

**641—78.2(137) Preparation of district health department plan.**

**78.2(1)** The Iowa department of public health shall prepare a proposed plan for formation of district health departments after consideration of the following factors:

- a. Compliance with 78.1(1), 78.1(2) and 78.1(3).
- b. Opinions and desires of existing local boards of health, as determined by questionnaire, conference, or other appropriate method.
- c. Configuration of existing or proposed districts of other agencies whose activities are related to public health.

**78.2(2)** The plan shall consist of a map showing district boundaries, and a list of existing city and county boards of health in each district. The proposed plan shall be submitted to all existing local boards for consideration. At least 30 days shall be allowed for submission of comments by the local boards.

**78.2(3)** After consideration of comments by the local boards, the Iowa department of public health shall prepare a final plan and shall send copies to each local board.

**78.2(4)** Whenever any amendment to the final plan is proposed, the Iowa department of public health shall notify all affected local boards and shall allow at least 30 days for submission of comments.

**78.2(5)** Whenever amendments of the plan are made, the Iowa department of public health shall transmit copies of the amended plan to all local boards of health.

**641—78.3(137) Approval of district health departments.** Local boards of health desiring to form a district health department shall submit the following information:

**78.3(1)** A resolution passed by each involved local board of health within the district, as designated in the state plan, stating:

- a. Its desire that a district health department be formed, and
- b. Its approval of the plan for appointment of district board members.

**78.3(2)** Adequate assurance that, upon organization as a district, the minimum organizational and service standards specified in 78.1(4) and 78.1(5) will be met. Such assurance may include:

- a. Listing of existing personnel in the district whose services will be utilized by the district board.
- b. Copies of existing or proposed budgets or resolutions of intent from counties, cities or other organizations, indicating that funds will be provided for the district's local health fund.
- c. Such other information as shall be acceptable to the director of public health.

**78.3(3)** A plan for appointment of the district board of health, which shall include:

- a. The number of members to be appointed, which shall not be less than 5 nor more than 11.
- b. The number of doctors of medicine and surgery or osteopathic physicians and surgeons to be appointed, which shall not be less than one nor more than three.
- c. The term of office of the members, which shall not be less than two nor more than six years.

*d.* The dates of appointment of members. Except for appointment of the original board, and appointments for filling vacancies in unexpired terms, no more than 60 percent of the board members shall be appointed in any one year.

*e.* The appointing authority for each board member. Members may be appointed by:

- (1) County boards of supervisors.
- (2) City councils.

*f.* The method or methods of filling vacancies in unexpired terms of each board member.

*g.* Any other qualifications or restrictions relating to appointment of board members.

- (1) At least one member shall be appointed from each county.
- (2) When a district includes a city of over 25,000 population, at least one board member shall be appointed from such city.

**78.3(4)** Upon receipt of all necessary information, as specified in 78.3(1), 78.3(2) and 78.3(3), the Iowa department of public health shall review such information, and shall determine, within 30 days, whether the minimum standards specified in 78.1(137) will be met by the proposed district.

**78.3(5)** Upon determination that minimal standards will be met by the proposed district, the Iowa department of public health shall approve formation of the district, and shall set an effective date for district formation, which shall not be less than 30 days from the date of approval.

**78.3(6)** Notice of approval for district formation, including the effective dates, shall immediately be sent to:

- a.* The county board of health of each county in the district.
- b.* The board of supervisors of each county in the district.
- c.* The city board of health of each city over 25,000 population in the district, unless such board has been terminated.

**78.3(7)** Upon receipt of the notice of approval for district formation, each appointing authority shall, prior to the effective date of formation of the district, appoint board members as specified in the plan referred to in 78.3(3), who shall take office on the effective date.

#### **641—78.4(137) Additions to district health departments.**

**78.4(1)** The board of health of any county, or any city over 25,000 population which desires to be added to an existing district health department, shall submit an application to the district board of that district.

**78.4(2)** If addition of said city or county is approved by a majority of the members of the district board, the following information shall be submitted to the state board of health:

- a.* A resolution passed by the board of health of the applicant city or county, stating its desire to be added to the district, and approving the revised plan for appointment of district board members.
- b.* Adequate assurances, as described in 78.3(2), that minimum service standards will continue to be met following addition of the applicant city or county.
- c.* A revised plan for appointment of members of the district board of health, which shall conform with all requirements of 78.3(3).
- d.* A resolution or statement of agreement from each appointing authority whose authority to appoint board members is affected by the revised plan for appointment of district board members.
- e.* A resolution passed by the district board approving addition of the applicant city or county.

**78.4(3)** If addition of the applicant city or county to the district is approved by the state board of health, an effective date shall be set for the action, and notification sent to:

- a.* The district board of health.
- b.* The board of health of the applicant city or county.
- c.* The board of supervisors of the applicant county.
- d.* The council of the applicant city.
- e.* The council of each city within the applicant county.

**78.4(4)** Any new district board of health members required by the revised plan shall be appointed prior to the effective date by the appropriate authorities, and shall take office on the effective date.

**641—78.5(137) Withdrawal from district health departments.**

**78.5(1)** The board of supervisors of any county, or the city council of any city over 25,000 population, desiring to withdraw from a district health department, shall submit an application to the district board of health of that district.

**78.5(2)** If withdrawal of said county or city is approved by a majority of the members of the district board, the following information shall be submitted to the state board of health:

*a.* A resolution passed by the board of supervisors of the applicant county, or the city council of the applicant city, stating its desire to withdraw from the district and stating also its intent to:

- (1) Apply for addition to another district, or
- (2) Appoint a county or city board of health.

*b.* Adequate assurances, as described in 78.3(2) that minimum service standards will continue to be met in the district following withdrawal of the applicant county or city.

*c.* Assurance that minimum standards specified in 78.1(1), 78.1(2) and 78.1(3) will continue to be met in the district following withdrawal of the applicant county or city.

*d.* A revised plan for appointment of the district board of health, which shall conform with all requirements of 78.3(3).

*e.* A resolution passed by the district board approving withdrawal of the applicant city or county, and approving the revised plan for appointment of the district board of health.

**78.5(3)** If withdrawal of the applicant county or city from the district is approved by the state board of health, an effective date shall be set for the action, and notification sent to:

- a.* The district board of health.
- b.* The board of supervisors of the applicant county.
- c.* The council of the applicant city.
- d.* The council of each city within the applicant county.

**78.5(4)** Any new district board of health members required by the revised plan shall be appointed prior to the effective date by the appropriate authorities, and shall take office on the effective date.

These rules are intended to implement Iowa Code section 137.9.

[Filed emergency 7/10/87—published 7/29/87, effective 7/10/87]

[Filed 7/11/97, Notice 6/4/97—published 7/30/97, effective 9/3/97]

CHAPTER 79

PUBLIC HEALTH NURSING

[Prior to 7/29/87, Health Department[470] Ch 79]

Rescinded IAB 4/11/07, effective 7/1/07; see 641—Ch 80

CHAPTER 80  
LOCAL PUBLIC HEALTH SERVICES  
[Prior to 8/3/94, "Homemaker-Home Health Aide Services"]  
[Prior to 4/11/07, see also 641—Ch 79]

**641—80.1(135) Purpose.** The purposes of the local public health services state grant is to assist with assuring core public health functions and delivering essential public health services and to increase the capacity of local boards of health to promote healthy people and healthy communities.

**641—80.2(135) Definitions.** For the purposes of these rules, the following definitions apply:

*"Administrative expense"* means the costs incurred which are not identified readily and specifically with a program but which are necessary to the general operations of the authorized agency.

*"Appropriation formula"* means the method used to distribute the allocations of the state grant to each county.

*"Authorized agency"* means a contractor or a private nonprofit or governmental organization delivering all or part of the local public health services funded by the local public health services state grant.

*"Care coordination"* means assessing a consumer's need for care; developing, implementing and updating the plan of care; assigning a direct care worker to the case; assigning direct care worker duties, including specifying the frequency of task performance and the length and frequency of visits; providing referrals and follow-up; coordinating the case, including coordinating interagency and intra-agency communications; and maintaining records and reports.

*"Community"* means the aggregate of persons with common characteristics such as race, ethnicity, age, or occupation or other similarities such as location.

*"Consumer"* means an individual, family, or community utilizing essential public health services through the local public health services state grant.

*"Contractor"* means the local board of health or the county board of supervisors as agreed upon by the local board of health and the county board of supervisors.

*"Core public health functions"* means the scope of activities which serve as a broad framework for public health agencies. Core public health functions are:

1. Assessment, which means to regularly and systematically collect, assemble, analyze, and make available information on the health of the community, including statistics on health status, community health needs and personal health services and epidemiologic and other studies of health problems.

2. Policy development, which means efforts to serve the public interest in the development of comprehensive public health policies by promoting use of a scientific knowledge base in decision making about public health and by taking the lead in comprehensive public health policy development.

3. Assurance, which means public health efforts to assure constituents that services necessary to achieve agreed-upon goals are provided either by encouraging actions by other entities (private or public sector), by requiring such action through regulation, or by providing services directly.

*"Department"* means the Iowa department of public health.

*"Dependent nursing"* means a function requiring the skills of a licensed registered nurse and the order of a physician according to 655—Chapter 6, Iowa Administrative Code.

*"Direct care worker"* means a trained and supervised individual who provides services, care, and emotional support to consumers.

*"Essential public health services"* means activities carried out by the authorized agency fulfilling core public health functions. Essential public health services are:

1. Monitoring health status and understanding health issues facing the community.
2. Protecting people from health problems and health hazards.
3. Giving people information they need to make healthy choices.
4. Engaging the community to identify and solve health problems.
5. Developing public health policies and plans.
6. Enforcing public health laws and regulations.
7. Helping people receive health services.

8. Maintaining a competent public health workforce.
9. Evaluating and improving programs and interventions.
10. Contributing to and applying the evidence base of public health.

*"Evaluation"* means the process to measure the effectiveness of interventions by measuring outcomes against previously established goals and objectives.

*"Health promotion"* means organizational, economic and environmental supports and education to stimulate healthy behaviors in individuals, groups or communities.

*"Income"* means all sources of revenue for the consumer and, if applicable, the consumer's spouse.

*"Independent nursing"* means a function requiring the skills of a licensed registered nurse according to 655—Chapter 6, Iowa Administrative Code.

*"Local board of health"* means a county, city or district board of health as defined in Iowa Code section 137.2.

*"Nonprofit"* means an entity meeting the requirements for tax-exempt status under the United States Internal Revenue Code.

*"Nursing process"* means the steps completed by a skilled licensed registered nurse according to 655—Chapter 6, Iowa Administrative Code.

*"Outcome"* means an action or event that follows as a result or consequence of the provision of a service or support.

*"Outcome measures"* means the mathematical expression of the effect of an activity, product, or service on consumers and the public health. Outcome measures are used to determine the extent to which the activity, product, or service has impacted its intended audience and to identify progress toward the achievement of a goal.

*"Personal health services"* means health services delivered to individuals, including primary care, specialty care, hospital care, emergency care, and rehabilitative care. For the purpose of the local public health services state grant, personal health services include nursing (disease and disability), nursing (health maintenance), home care aide (homemaker), and home care aide (personal care) activities.

*"Population-based services"* means interventions or activities for a community to promote health and to prevent disease, injury, disability, premature death, and exposure to environmental hazards.

*"Poverty"* means the level of adjusted income, factoring in resources and income, which is at or below 75 percent of the current federal poverty guidelines.

*"Preservice education"* means training required prior to assignment.

*"Procedures"* means the steps to be taken to implement a policy.

*"Process"* means a service or support provided by an authorized agency to a consumer that will allow the consumer to achieve an outcome. A process may include a written, formal, and consistent trackable method or an informal method that is not written but is trackable.

*"Program,"* for the purposes of the state grant, means local public health services, local board of health services, public health nursing services, and home care aide services.

*"Protective services"* means interventions or activities for a child or adult to alleviate, protect against, or prevent situations which could lead to abuse or neglect. For the purposes of the local public health services state grant, protective services require an order from the justice system.

*"Quality improvement"* means a process to review, plan and ensure standards of quality for essential public health services, interventions and activities.

*"Resources"* means unrestricted assets owned by a consumer and, if applicable, by the consumer's spouse. The place of residence and one vehicle are exempt from consideration of resources.

*"Restricted assets"* means assets typically involving a penalty for early withdrawal such as IRA accounts, KEOGH accounts, 401(k) accounts, employee retirement accounts, and other deferred tax protected assets involving a penalty for early withdrawal. Restricted assets shall not be considered as a resource in the determination of a consumer's financial liability for services.

*"Service management"* means recruiting, employing, providing workforce development to, scheduling, supervising and evaluating direct care workers; ensuring the competency of direct care workers; providing quality assurance for the program; and maintaining community relations.

*“Sliding fee scale”* means a scale of consumer fee responsibility based on an assessment of the consumer’s ability to pay all or a portion of the charge for services.

*“State grant”* means the local public health services state grant, which is the allocation of state funds appropriated annually by the Iowa general assembly for local public health services.

*“Unrestricted assets”* means assets that can be converted to cash for financial support. Unrestricted assets shall be considered in the determination of a consumer’s financial liability for services in the sliding fee calculation.

*“Vulnerable population”* means individuals or groups in the community who are unable to promote and protect their personal and environmental health.

*“Workforce development”* means the provision of training relevant to services or tasks assigned to direct care workers to enhance their knowledge and the delivery of essential public health services.

**641—80.3(135) Local public health services state grant.** The following applies to the state allocation for local public health services, local board of health services, public health nursing services, and home care aide services.

**80.3(1) Priority population.** The state grant serves all populations, with a priority to serve vulnerable populations in Iowa.

**80.3(2) Contractor assurance.** In order to receive funding, the contractor shall provide to the department assurance that authorized agencies meet all applicable federal, state, and local requirements. The contractor may directly provide or subcontract all or part of the delivery of services. The contractor shall assure that each authorized agency complies with Title IV of the Civil Rights Act, the Americans with Disabilities Act of 1990 (ADA), and Section 504 of the 1973 Rehabilitation Act and with affirmative action requirements. In addition, the contractor shall assure that each authorized agency has, at a minimum, the following:

- a. A governing board.
- b. Program policies and procedures, which shall, at a minimum, include:
  - (1) Admission and discharge.
  - (2) A consumer appeals process.
  - (3) Records appropriate to the level of consumer care.
  - (4) A financial assessment.
  - (5) A sliding fee scale.
- c. Personnel policies and procedures, which shall be reviewed and updated annually and communicated to staff. Personnel policies and procedures shall, at a minimum, include:
  - (1) Delegation of authority and responsibility for agency administration.
  - (2) Staff supervision.
  - (3) A staff training program for the identification and reporting of child and dependent adult abuse to the department pursuant to Iowa Code sections 232.69 and 235B.3.
  - (4) Conditions of employment including recruitment, selection, termination, promotion and compensation.
  - (5) A leave of absence policy.
  - (6) A grievance procedure.
  - (7) Annual employee performance evaluations.
  - (8) A nondiscrimination policy.
  - (9) An employee orientation program.
  - (10) A provision for career or workforce development.
  - (11) Fringe benefits.
  - (12) Employment application forms which comply with civil rights regulations.
  - (13) Current job descriptions which delineate qualifications, responsibilities and essential functions, reflect current responsibilities, and are dated.
  - (14) A current salary schedule.
- d. Fiscal management, which shall, at a minimum, include:
  - (1) An annual budget.

- (2) Fiscal policies and procedures which follow generally accepted accounting practices.
- (3) An annual audit which is performed according to usual and customary accounting principles and practices.
  - e. A quality improvement plan. The plan shall address annual evaluation of the authorized agency, public health programs, and professional development and shall include:
    - (1) Written goals, objectives, and performance measures that use appropriate data and are analyzed regularly.
    - (2) Strategies to monitor program and service compliance with local, state, and federal requirements.
    - (3) Evidence that programs and services align with community health priorities.
    - (4) Methods for reporting the outcomes of evaluation to stakeholders.
    - (5) Steps to determine the cost-effectiveness of programs and services.

**641—80.4(135) Billing services to the local public health services state grant.** The contractor shall bill public health activities to the state grant based on the identified needs of the community.

**80.4(1) *Planning process.*** Prior to the ensuing fiscal year application process, the contractor shall initiate a community planning process with input from community partners including but not limited to authorized agencies in order to identify the needs of the community.

**80.4(2) *Alternative plan.*** A plan is required for the alternative use of the state grant funds. The plan shall be based on an assessment of the community and shall be submitted by the contractor for approval by the department. The plan shall:

- a. Assure the department of the delivery of essential public health services that are the primary purpose of these funds.
- b. Identify essential public health services to be delivered.
- c. Describe the activity to be delivered.
- d. Identify target populations to be served.
- e. Identify outcome measures.

**80.4(3) *Funder of last resort.*** The state grant shall be billed as the last resort.

- a. The state grant shall be billed the lower of the authorized agency's cost or charges.
- b. The state grant shall not be billed for services eligible for third-party reimbursement (e.g., Medicare, Medicaid, private insurance, approved Iowa waivers, or other federal or state funds).
- c. The state grant shall not be billed for the balance between the authorized agency cost or charge, whichever is lower, and the allowed reimbursement from a third-party payer.
- d. The state grant shall not be billed for fees waived by the authorized agency.

**80.4(4) *Cost analysis.*** The authorized agency shall complete, at a minimum, an annual cost analysis, using a method approved by the department. The authorized agency shall maintain documentation to support the administrative cost allocation.

**80.4(5) *Fees and donations.*** Fees for services and donations shall be used to support local public health services.

a. Fees for services provided shall be based on a financial assessment which determines the consumer's financial responsibility. The financial assessment shall be updated annually by the authorized agency. An authorized agency may consider additional health care-related expenses or resources above \$10,000 when determining the consumer fee according to an agency's policy.

b. Sliding fee scale. The authorized agency shall establish a sliding fee scale that considers resources and income. The sliding fee scale shall be based on the charge for services. The authorized agency shall determine placement on the sliding fee scale before the service begins. The authorized agency shall use payments, based on the sliding fee scale, and donations received from consumers to support essential public health services. The following instructions apply to the use of the sliding fee scale:

- (1) A fee shall be charged to consumers who have an income at or above 200 percent of federal poverty guidelines.

(2) No fee shall be charged to consumers who have an income at or below 75 percent of federal poverty guidelines and resources of \$10,000 or less.

(3) A sliding fee or full fee for home care aide (personal care); home care aide (homemaker), home care aide (home helper) and home care aide (chore); nursing (disease and disability); and nursing (health maintenance) shall be established.

(4) No fee shall be charged for protective services or communicable disease follow-up services.

(5) An authorized agency may charge a fee according to the authorized agency's policy for services other than those described in subparagraph (4) if the consumer has an income below 200 percent but above 75 percent of federal poverty guidelines.

**80.4(6) *Reallocation.*** The department will annually determine the potential for unused funds from contracts. If funds are available, reallocation of the funds shall be at the discretion of the department.

#### **641—80.5(135) Right to appeal.**

##### **80.5(1) *Denial, reduction or termination of services.***

*a.* When an authorized agency denies, reduces or terminates services funded by the state grant against the wishes of a consumer, the authorized agency shall notify the consumer and the contractor of the following:

- (1) The action taken;
- (2) The reason for the action; and
- (3) The consumer's right to appeal.

*b.* If a consumer files an appeal, the authorized agency shall provide services to the consumer throughout the appeals process, unless the agency receives a waiver from the department pending the outcome of the appeal.

##### **80.5(2) *Local appeals process.***

*a.* All contractors and their authorized agencies shall have a written local procedure to hear appeals. The local procedure shall, at a minimum, include:

- (1) The method of notification of the right to appeal;
- (2) The procedure for conducting the appeal;
- (3) Time limits for each step; and
- (4) The method of notification of the outcome of the local appeal and notification of the consumer's right to appeal to the state. Notifications of the outcome of the local appeal shall include the facts used to reach the decision and the conclusions drawn from the facts to support the authorized agency's decision.

*b.* The written appeals procedure and the record of appeals filed (including the record and disposition of each) shall be available for inspection by authorized representatives of the Iowa department of public health.

##### **80.5(3) *Appeal to department.***

*a.* If a consumer is dissatisfied with the decision of the local appeal, the consumer may appeal to the state. The appeal shall be made in writing by certified mail, return receipt requested, to the Division Director, Division of Health Promotion and Chronic Disease Prevention, Iowa Department of Public Health, Lucas State Office Building, Des Moines, Iowa 50319-0075, within 15 days of the receipt of the local contractor's or authorized agency's appeal decision.

*b.* Department review. The department shall evaluate the appeal based upon the merits of the local appeal documentation. A department decision affirming, reserving, or modifying the local appeal decision shall be issued within 30 days of the receipt of all local appeal documentation. The department decision shall be in writing and sent by certified mail, return receipt requested, to the consumer and the contractor and the authorized agency.

**80.5(4) *Further appeal.*** The consumer may appeal the department's decision by submitting an appeal, within 10 days of the receipt of the department decision, to the Division Director, Division of Health Promotion and Chronic Disease Prevention, Iowa Department of Public Health, Lucas State Office Building, Des Moines, Iowa 50319-0075. Upon receipt of an appeal that meets contested case status, the department shall forward the appeal within 5 working days to the department of inspections and appeals pursuant to the rules adopted by the department of inspections and appeals regarding the

transmission of contested cases. The continued process for appeals shall be governed by 641—Chapter 173, Iowa Administrative Code.

**641—80.6(135) Case management.** Case management is a process optimizing self-care capabilities of consumers and their families in gaining access to needed medical, social, and other services.

**80.6(1) Case manager qualifications.** Individuals performing case management shall meet one of the following criteria:

- a. Be a registered nurse licensed to practice in the state of Iowa.
- b. Possess a bachelor's degree in family and consumer science, education, social work or other health or human services field.
- c. Be a licensed practical nurse with a current Iowa license.
- d. Be a home care aide who has an equivalent of two years' experience and who is supervised by an individual who meets one of the criteria in paragraphs "a" to "c."

**80.6(2) Case management services.** Case management services shall be provided at the direction of the consumer and shall include:

- a. An initial assessment of the consumer's needs.
- b. Development and implementation of a service plan to meet the identified needs.
- c. A team composed of the consumer and the case manager and other entities, such as providers relevant to the consumer's service needs or family members, who may be included at the discretion of the consumer.
- d. Face-to-face meetings with the consumer, which shall be held at least quarterly.
- e. Coordination and monitoring of delivery of services. Case managers do not provide direct services. Case managers link the consumer to appropriate resources and natural supports.
- f. Evaluation of outcomes.
- g. Reassessment and revision of the consumer's service plan, which shall be completed as needed, but no less than annually.
- h. Advocacy on behalf of the consumer.
- i. Communication with the consumer and team members regarding the consumer's progress toward achieving the goals of the service plan.
- j. Documentation which supports and demonstrates (1) the consumer's use of the case management process, (2) contacts with the consumer and with providers the consumer is using for services, and (3) other relevant information related to the coordination and delivery of case management services.

k. Monitoring of the consumer's health, safety and welfare.

l. An assurance that the consumer has a choice of providers.

**80.6(3) Consumer records.** Consumer records for case management, at a minimum, shall include the following:

- a. An initial assessment;
- b. A service plan;
- c. Reassessment;
- d. An emergency plan;
- e. Documentation of the following:
  - (1) Consumer and family contacts;
  - (2) The coordination and monitoring of services;
  - (3) Activities related to delivery of services (i.e., interdisciplinary team meetings);
  - (4) The evaluation of outcomes.

**641—80.7(135) Local board of health services.**

**80.7(1) Program purpose.** The purpose of this program is to increase the organizational capacity of county boards of health to develop conditions for healthy people and healthy communities through public health nursing, home care aide, core public health functions and population-based essential public health services in Iowa.

**80.7(2) *Program services.*** Local board of health services include public health essential services as defined in rule 641—80.2(135).

**80.7(3) *Appropriation to county board of health.*** The funding supports the efforts of local boards of health in addressing specific health priorities in each county. The appropriation to each county board of health is determined by the following formula: 30 percent of the total allocation shall be divided so that an equal amount is available for use in each county in the state. The remaining 70 percent shall be allocated to each county according to the county's population based on the department's current published vital statistics.

**641—80.8(135) Local public health services.**

**80.8(1) *Program purpose.*** The purpose of this program is to increase local public health capacity by implementing core public health functions and essential public health services to address health inequalities. Local public health services address health inequalities by advocating for population-based policies and services to improve the health of the whole population in an equal way.

**80.8(2) *Program services.*** Local public health services include:

- a.* Assisting local boards of health in providing services that address health problem priorities identified in each county's health improvement plan.
- b.* Advancing the goals of Healthy Iowans 2010.
- c.* Providing financial support for targeted areas of service relating to Iowa's elderly and disabled populations (i.e., home- and community-based services, protective services, nursing (disease and disability), nursing (health maintenance), home care aide (personal care), home care aide (home helper), home care aide (chore) or home care aide (homemaker)).

**80.8(3) *Appropriation to county board of health.*** The appropriation to each county board of health is determined by the following formula: 40 percent of the total allocation shall be divided so that an equal amount is available for use in each county in the state. The remaining 60 percent shall be allocated to each county according to the county's population based on the department's current published vital statistics.

**641—80.9(135) Public health nursing services.** Public health nursing is a specialized nursing practice that combines the science and art of public health with the science and art of nursing.

**80.9(1) *Program purpose.*** The purpose of this program is to improve the health of the entire community, prevent illness, enhance the quality of life, and provide leadership to safeguard the health and wellness of the community. The program implements core public health functions and essential public health services to reduce, prevent or delay inappropriate institutionalization of consumers and to preserve families.

**80.9(2) *Scope.*** The practice of public health nursing is population-based, with the goals of promoting health and preventing disease and disability for all people through the creation of conditions in which people can be healthy. For the purposes of the state grant, public health nursing services include both personal health services and population-based services.

**80.9(3) *Standards of practice of public health nursing are consistent with the nursing process and include:***

- a. Assessment.* The public health nurse assesses the health status of populations using data, community resources identification, input from the population, and professional judgment.
- b. Diagnosis.* The public health nurse analyzes collected assessment data and partners with people to attach meaning to those data and determine opportunities and needs.
- c. Outcome identification.* The public health nurse participates with other community partners to identify expected outcomes in the populations and their health status.
- d. Planning.* The public health nurse promotes and supports the development of programs, policies, and services that provide interventions that improve the health status of populations.
- e. Evaluation.* The public health nurse evaluates the status of the population.

**80.9(4) *Public health coordinator/supervisor qualifications.***

*a.* Individuals performing public health coordination/supervision shall meet one of the following criteria:

(1) Possess a bachelor's degree or higher from an accredited college or university in public health, health administration, nursing or other applicable field and a minimum of two years of related experience; or

(2) Be a registered nurse, licensed to practice by the Iowa board of nursing, who has a minimum of two years of related experience and has completed a course approved by the department within six months of employment.

*b.* By January 1, 2008, individuals who hold the position of public health coordinator/supervisor on or before June 30, 2007, shall meet one of the criteria in paragraph “*a.*”

**80.9(5) Appropriation.** The appropriation to each county is determined by the following formula: 25 percent of the total amount to be allocated shall be divided so that an equal amount is available for use in each county in the state. The remaining 75 percent shall be divided so that the share available for use in each county is proportionate to the number of elderly and low-income persons living in the county in relation to the total number of elderly and low-income persons living in the state.

**641—80.10(135) Home care aide services.** Home care aide services are intended to enhance the capacity of consumers to attain or maintain their independence. Trained and supervised direct care workers provide services to consumers who, due to the absence, incapacity or limitations of the usual homemaker, are experiencing stress or crisis.

**80.10(1) Program purpose.** The purpose of this program is to reduce, prevent or delay inappropriate institutionalization of consumers and to preserve families through the provision of supportive services by direct care workers who have completed training and are professionally supervised.

**80.10(2) Scope.** The direct care worker provides services for consumers by following a plan of care identifying assigned tasks. A direct care worker participates in activities to safeguard the health and wellness of the community and to implement core public health functions and essential public health services.

**80.10(3) Authorized agency.**

*a.* The authorized agency shall establish policies for supervision of direct care workers.

*b.* The authorized agency shall ensure that each direct care worker has completed adequate training and demonstrated competency for each task assigned. The required preservice education for direct care workers is outlined in the following chart:

| Level of Direct Care Worker | Direct Care Worker I (equivalent to chore)                                                                                                                                                      | Direct Care Worker II (equivalent to home helper)                                                                                                        | Direct Care Worker III (equivalent to homemaker)                                                                                                                                                        | Direct Care Worker IV (equivalent to personal care)                                                                                                                                                | Direct Care Worker V (equivalent to protective worker)                                                                                                                                                                         |
|-----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Scope of Services</b>    | Provides services to a consumer necessary to enable the consumer to live independently and that encompass heavier cleaning tasks, including outside maintenance and chores. For chore services, | Under the supervision of a professional, provides services to protect the environment for a self-directing consumer to preserve a safe and sanitary home | Under the supervision of a professional, provides services primarily in the homes of consumers who, due to the absence, incapacity or limitations of the usual homemaker or caregiver, are experiencing | Under the direction of nursing or medical staff, provides health-related services such as observation of self-administration of oral medications; checking the consumer's pulse rate, temperature, | Provides services intended to stabilize a child's or adult's residential environment and relationships with relatives, caretakers, and other consumers and household members in order to alleviate a situation involving abuse |

| <b>Level of Direct Care Worker</b>                                 | <b>Direct Care Worker I<br/>(equivalent to chore)</b>                                                                                                                       | <b>Direct Care Worker II<br/>(equivalent to home helper)</b>                                                                                                                                                                            | <b>Direct Care Worker III<br/>(equivalent to homemaker)</b>                                                                                                                                                                                  | <b>Direct Care Worker IV<br/>(equivalent to personal care)</b>                                                                                                                                                                                                        | <b>Direct Care Worker V<br/>(equivalent to protective worker)</b>                                                                                                                                                                                             |
|--------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                    | there is no physical contact between the consumer and the direct care worker                                                                                                |                                                                                                                                                                                                                                         | stress or crisis, to promote consumer health and a safe, stable, sanitary home environment                                                                                                                                                   | and respiration rate; helping with simple prescribed exercises; keeping the consumer's rooms neat; changing nonsterile dressings; providing skin care and back rubs; assisting with braces and artificial limbs; or assisting the consumer in using medical equipment | or neglect or to otherwise protect the child or adult from a threat of abuse or neglect; also provides services intended to prevent situations which could lead to abuse or neglect of a child or adult when a definite potential for abuse or neglect exists |

**80.10(4)** Professional staff as providers of home care aide services. An individual who is in the process of receiving or who has completed the training required for LPN or RN licensure or who possesses an associate's degree or higher in social work, sociology, home economics or other health or human services field may be assigned to provide home care aide services if the following conditions are met:

- a. Services or tasks assigned are appropriate to the individual's prior training.
- b. Orientation to home care is conducted. Orientation includes adaptation of the individual's knowledge and skills from prior education to the home setting and to the role of the home care aide.

**80.10(5)** Care coordinator and service manager qualifications.

a. An individual performing care coordination or service management shall meet one of the following criteria:

- (1) Be a registered nurse licensed to practice in the state of Iowa.
  - (2) Possess a bachelor's degree in family and consumer science, education, social work or other health or human services field.
  - (3) Be a licensed practical nurse with a current Iowa license.
- b. A home care aide with an equivalent of two years' experience may be delegated care coordination/service management duties as long as a qualified individual who meets one of the criteria in paragraph "a" retains responsibility and provides supervision and evidence of supervision.
- c. An individual who has provided home care aide care coordination and service management prior to June 30, 2007, shall be considered qualified to continue in the position.

**80.10(6)** A qualified care coordinator or service manager may provide direct care services as appropriate to the individual's level of education and competency for the assignment.

**80.10(7)** The service manager's scheduling duty may be delegated to an individual not possessing one of the qualifications in paragraph 80.10(5) "a" provided that a qualified individual who meets one of the qualifications in 80.10(5) "a" retains responsibility and provides supervision and evidence of supervision.

**80.10(8)** Consumer records. The authorized agency shall maintain records for each consumer. The records shall include:

- a. An initial assessment.
- b. A plan of care.
- c. Assignment of direct care worker.
- d. Assignment of tasks.
- e. Reassessment.
- f. Update of plan of care.
- g. Direct care worker narrative notes.
- h. Documented supervision.

**80.10(9) Appropriation.** The appropriation to each county is determined by the following formula: 15 percent of the total allocation shall be divided so that an equal amount is available for use in each county in the state. The following percentages of the remaining 85 percent shall be allocated to each county according to that county's proportion of state residents with the following demographic characteristics:

- a.* Sixty percent according to the number of elderly persons living in the county.
- b.* Twenty percent according to the number of persons below the federal poverty guidelines living in the county.
- c.* Twenty percent according to the number of substantiated cases of child abuse in the county during the three most recent years for which data is available.

These rules are intended to implement Iowa Code chapter 135.

CHAPTER 81  
GENERAL RULES FOR MIGRATORY LABOR CAMPS  
[Prior to 7/29/87, Health Department[470] Ch 81]

**641—81.1(138) Shelters.**

**81.1(1) *Heating season.*** The season requiring artificial heating as provided in Iowa Code section 138.13 is designated as the period between September 15 and June 1.

**81.1(2) *Minimum floor space requirements.*** The following floor space requirements shall be provided:

*a.* At least 50 square feet per occupant for sleeping purposes only in family units and dormitory accommodations.

*b.* At least 40 square feet per occupant for sleeping purposes only in accommodations using double bunk beds.

**81.1(3) *Inspection.*** The operator of a migrant labor camp shall be in possession of keys to all migrant shelters in order that inspections can be made of the facilities at any reasonable time.

**81.1(4) *Register.*** A register of all occupants of a migrant labor camp shall be maintained and open to inspection by the Iowa department of public health representatives at all times when the camp is occupied.

**81.1(5) *Separate rooms.*** Housing used for families with one or more children six years of age or older shall have a room or partitioned sleeping area for the husband and wife. The partition shall be of rigid materials and installed so as to provide reasonable privacy.

**81.1(6) *Storage.*** Arrangements for hanging clothing and storing personal effects for each person or family shall be provided.

**641—81.2(138) Water supply.**

**81.2(1) *General.***

*a.* The water supply shall be of a safe bacterial and chemical quality.

*b.* Where a public water supply is available, such water shall be used in the camp. If a private water source under pressure is provided, the water system shall be capable of delivering at least 35 gallons per person per day to the camp site.

*c.* Cistern supplies consisting of roof or other surface runoff water shall not be used for drinking or culinary purposes.

*d.* The adequacy of a well as a source of water for drinking or culinary purposes shall be determined by inspection and bacteriological examination. Defects found by inspection or contaminated samples shall be sufficient grounds for requiring repair, chlorination or condemnation of the well.

*e.* Water containing 45 or more parts per million nitrates shall not be used for drinking or preparation of formula for infants under one year of age. When the supply contains nitrates in the quantity above, water for infant feeding shall be obtained from another source that has been tested and found to be bacterially satisfactory and contains less than 45 parts per million nitrates. A water supply containing 45 or more parts per million of nitrates shall be placarded or posted stating the water shall not be used for infant feeding.

*f.* Wooden well platforms or manhole covers are prohibited.

*g.* Hand-pump bases shall be of the solid one-piece type bolted, including suitable gaskets, secured to the well casing by thread or weld connection. Handpumps secured to the platform by bolts cast in the concrete shall be provided with a rubber or neoprene gasket between the pump base and the platform to ensure a watertight joint.

*h.* The pump head shall be of a type designed to prevent external water or other contaminating material from entering the water chamber.

*i.* The pump spout shall be of the closed, downward-directed type.

*j.* No hand-operated type of pump or cylinder which requires priming shall be used. No pail and rope, bailer, or chain-bucket systems shall be used.

**81.2(2) Existing pump pits.** Existing pump pits may be approved if the construction conforms to the following minimum standards:

a. Walls, floor and top of pit shall be of watertight concrete or masonry construction or equivalent. The well casing shall extend at least 6 inches above the pit floor.

b. A positive seal shall be provided for the annular opening between the casing wall and the drop pipe.

c. A positive drain shall be provided by either a watertight sump and automatic sump pump discharging with at least a 6-inch free fall above the ground surface or an independent drain line discharging to the ground surface above any possible flood level. Pit drains discharging to any other drain or sewer are prohibited.

**81.2(3) Water supply systems.** The water supply system shall be installed so as to prevent backflow of contaminated water from appliances, fixtures, drains and sewers and shall have no cross-connections with any nonpotable supply or any other water supply which does not comply with these requirements.

**81.2(4) Water tanks.** All water to be hauled for a camp shall be obtained from an approved source. All equipment used for hauling or storage of potable water shall be thoroughly cleaned and disinfected with a solution containing at least 200 parts per million of chlorine immediately before use. No equipment, tanks or reservoirs used for hauling or storing potable water shall be used for any other purpose.

#### **641—81.3(138) Waste disposal.**

**81.3(1) Solid waste disposal.** Solid waste shall be disposed of in a sanitary disposal project approved by the Iowa department of public health, or if disposed of on the premises, the solid wastes shall be buried so as to create no health hazard or nuisance.

##### **81.3(2) Liquid waste.**

a. Existing wastewater disposal systems shall be located and constructed so as not to create a nuisance or condition of pollution.

b. Water-carriage toilets shall discharge to a septic tank and solid absorption system or other type disposal system approved by the Iowa department of public health located, designed and constructed in accordance with the specifications set forth in the Iowa department of natural resources' current publication, "Residential Sewage Disposal Systems."

c. A leaching pit or other type disposal system approved by the Iowa department of public health shall be provided to receive the wastes from sinks, laundries, showers and tubs when no septic tank and absorption system is available. Such leaching pits shall be located and constructed in accordance with the specifications set forth in the Iowa department of natural resources' current publication, "Residential Sewage Disposal Systems."

#### **641—81.4(138) Bathing facilities.**

**81.4(1)** Showers shall be supplied with hot and cold water under pressure. Shower enclosures shall be sufficient to provide privacy for the user. An adjacent, enclosed dry area shall be provided for dressing. No duckboards, mats or other such accessories shall be permitted.

**81.4(2)** Automatic water-heating equipment, or storage tanks with hand-fired heating coils, shall be equipped with combination pressure and temperature relief valves or separate pressure and temperature relief valves. Temperature relief valves shall be located in the top one-eighth or not more than 3 inches above the top of the tank served. Pressure relief valves may be located adjacent to the tank. Gas-fired or other combustion-type water heaters shall be vented to the outside atmosphere.

#### **641—81.5(138) Central dining facilities.**

**81.5(1) Physical facilities.** When central dining facilities are provided by a concessionaire, operator or the manager of a camp, the size of the kitchen and dining hall shall be commensurate with the capacity of the housing and shall be separate from the sleeping quarters.

**81.5(2) Requirements.** When central cooking and eating facilities are provided by a concessionaire, operator or the manager of a camp, such facilities shall comply with the laws and rules of the Iowa department of inspections and appeals.

**641—81.6(138) Safety and fire.**

**81.6(1) Fire exits.**

*a.* Shelters of one story construction housing less than ten persons shall have two means of escape, one of which may be a readily accessible window with an openable space of at least 24 by 24 inches.

*b.* Sleeping quarters designed for ten or more persons, central dining facilities and common assembly rooms shall have at least two doors remotely separated so as to provide alternate means of escape.

*c.* Floors, above the first floor, used for sleeping quarters or common assembly rooms shall have a stairway and a permanent affixed exterior ladder or a second stairway.

**81.6(2) Shelter spacing.** In camps established after July 1, 1972, there shall be at least 10 feet of space in all directions between shelters.

These rules are intended to implement Iowa Code section 138.18.

[Filed emergency 7/10/87—published 7/29/87, effective 7/10/87]

CHAPTER 82  
OFFICE OF MULTICULTURAL HEALTH

**641—82.1(135) Purpose.** The office of multicultural health exists to actively promote and facilitate health equity for Iowa's multicultural communities.

**641—82.2(135) Definitions.** For purposes of this chapter, the following definitions apply:

*"Community"* is defined as a group of people living in the same locality and under the same government or a group viewed as forming a distinct segment of society.

*"Continual cultural competency"* is defined as a set of congruent behaviors, attitudes and policies that come together as a system or an agency or among professionals and that enable that system or agency or those professionals to work effectively in cross-cultural situations.

*"Department"* means the Iowa department of public health.

*"Director"* means the director of the department of public health.

*"Disparity"* is defined as the condition or fact of being unequal.

*"Diverse"* is defined as made up of distinct characteristics, qualities or elements.

*"Immigrant"* is defined as a person who leaves one country to settle permanently in another.

*"Minority"* is defined as a part of a population differing from others in one or more characteristics and often subjected to differential treatment. Racial and ethnic minorities are classified as people of African descent (African-American/Black), Hispanic/Latino descent, Asian/Pacific Islander descent, Native American descent, and refugees and immigrants.

*"Multicultural"* is inclusive of communities of racial, ethnic or linguistic diversity.

*"Refugee"* is defined as one who flees in search of refuge, as in times of war, political oppression, or religious persecution.

**641—82.3(135) Responsibilities of the office of multicultural health.** The office of multicultural health shall provide public health leadership regarding existing or potential issues or practices that can or could affect the health status of racial, ethnic, and linguistic multicultural individuals and families, immigrants and refugees. The office shall provide this leadership through the core functions of (1) education; (2) advocacy; (3) data management; (4) technical assistance and consultation; and (5) training and development. The office is responsible for the following:

**82.3(1)** Promoting continuous cultural competency in health care practice and education throughout Iowa's public health care sector;

**82.3(2)** Collecting and providing valid empirical information on the health status of multicultural groups in Iowa;

**82.3(3)** Advocating for the development of policies and programs that improve the health of Iowa's racially, ethnically and linguistically diverse populations and addressing health disparities that exist within these populations;

**82.3(4)** Providing technical planning assistance to communities and counties throughout the state;

**82.3(5)** Advocating for Iowa's racial, ethnic, and linguistic multicultural communities;

**82.3(6)** Creating and promoting a climate of inclusiveness in the public health sector on state, regional and local levels by partnering with its racial, ethnic, and linguistic multicultural constituents in Iowa to help them improve their collective health status; and

**82.3(7)** Promoting the Iowa public health standards and providing technical assistance and consultation regarding state and local criteria relating to disparate populations and delivery of culturally appropriate services.

**641—82.4(135) Advisory council.** A multicultural health advisory council shall be established within the department.

**82.4(1) Membership.** The council shall be composed of no more than 15 voting members appointed by the director.

*a.* Membership shall include the following:

- (1) One representative from each of the six local public health service regions;
- (2) One representative from the Meskwaki Settlement;
- (3) Public-sector representatives such as legislators and state commissioners;
- (4) Service-sector representatives such as representatives from the department of human services, local councils, education, and health care;
- (5) Private-sector representatives such as business leaders, representatives from grassroots, nonprofit, faith-based and volunteer organizations, and community leaders.

*b.* A term of appointment is three years, with no more than three consecutive terms. An exception for individual reappointment from organizations represented shall be determined by the director.

*c.* The advisory council shall elect a chairperson.

*d.* In the case of a vacancy, the chairperson shall notify the department of the need to appoint another representative. Vacancies shall be filled in the same manner as original appointments.

*e.* The advisory council may designate one or more subcommittees to have such powers and perform such duties as may be deemed necessary by the council.

**82.4(2) Duties.** The advisory council shall perform the following duties:

*a.* Provide advice and make recommendations on diverse racial, ethnic, and linguistic health issues to the department, the office of multicultural health, and policy makers;

*b.* Provide advice and make recommendations on public policies and practices that affect multicultural communities; and

*c.* Provide advice and make recommendations on funding that supports the activities of the office of multicultural health.

**82.4(3) Meetings.** The advisory council shall meet at least four times a year to conduct its business. Meetings may be scheduled more frequently as business requires.

*a.* Notice of meetings and agenda shall be made available to council members a minimum of five working days prior to the meeting.

*b.* The operation of council meetings shall be governed by the following rules of procedure:

(1) A majority of the members of the council shall constitute a quorum.

(2) Action can be taken by a vote of the majority of the members of the council.

(3) Robert's Rules of Order shall govern at all meetings.

*c.* All meetings are open to the public in accordance with the open meetings law, found at Iowa Code chapter 21.

**82.4(4) Absences.** Three consecutive unexcused absences shall be grounds for the director to consider dismissal of the advisory council member and to appoint another. The chairperson of the advisory council is charged with providing notification of absences.

**82.4(5) Minutes.** The advisory council shall keep minutes of all its meetings showing the date, time, place, members present, members absent, and the general topics discussed.

*a.* The minutes shall reflect the actions agreed upon by the members for topics requiring the members' input or consensus.

*b.* The minutes shall be provided to the members of the advisory council prior to the next scheduled meeting.

*c.* The minutes shall be available at the office of multicultural health for inspection Monday through Friday from 8:30 a.m. to 4:30 p.m. with the exception of holidays.

**82.4(6) Expenses of the council.** The following may be considered necessary expenses for reimbursement of advisory council members when incurred on behalf of advisory council business and are subject to established state reimbursement rates:

*a.* Reimbursement for travel in a private car.

*b.* Actual lodging and meal expenses, including sales tax on lodging and meals.

*c.* Actual expenses for public transportation.

These rules are intended to implement Iowa Code section 135.12.

[Filed 5/14/08, Notice 3/26/08—published 6/4/08, effective 7/9/08]

CHAPTER 83

EARLY CHILDHOOD IOWA COUNCIL

Rescinded IAB 6/2/10, effective 7/7/10

CHAPTER 84

STATE SUBSTITUTE MEDICAL DECISION-MAKING BOARD

Rescinded IAB 6/2/10, effective 7/7/10

CHAPTER 85  
LOCAL SUBSTITUTE MEDICAL DECISION-MAKING BOARDS

**641—85.1(135) Purpose.** The purpose of this chapter is to establish the requirements and procedures for local substitute medical decision-making boards. Counties may establish local substitute medical decision-making boards for patients who are incapable of making their own medical care decisions and who have no other surrogate decision maker available. If the patient has designated an individual to have durable power of attorney for health care or has a guardian or has family members who are reasonably available, willing and able to make medical care decisions, the case should not be submitted to the substitute medical decision-making board. If the patient has provided advance directives which cover the proposed care, the case should not be submitted to the board.

**641—85.2(135) Definitions.** For the purpose of these rules, the following definitions shall apply:

**85.2(1)** “*Conflict of interest*” means a standard which precludes the participation of a panel member in the proceedings with regard to a patient whenever the panel member is a relative of the patient, is a direct care provider of the patient or has a financial interest in the patient.

**85.2(2)** “*Correspondent*” means a person other than a relative of the patient who has demonstrated a genuine interest in promoting the best interest of a patient by having a personal relationship with the patient, by participating in the planning of a patient’s care and treatment, by regularly visiting the patient, or by regularly communicating with the patient.

**85.2(3)** “*Department*” means Iowa department of public health.

**85.2(4)** “*Local board*” means a local substitute medical decision-making board established under Iowa Code section 135.29.

**85.2(5)** “*Medical care*” means care a reasonably prudent person would consider to be medically necessary. It includes, but is not limited to, procedures which involve any significant invasion of bodily integrity requiring an incision or producing substantial pain, discomfort, debilitation or which has a potential for significant bodily harm. This includes, but is not limited to, any medical, surgical or diagnostic intervention or procedure for which a general anesthetic is used. Medical care may include placement decisions where there is inadequate time to obtain appointment of a guardian and the placement is a medical consideration or a medical necessity.

The definition does not include discontinuance of medical treatment which is sustaining life functions because the board does not have authority to make this decision.

The definition also does not include the following types of care which can ordinarily be provided without special approval and do not need to be submitted to the board for consideration:

- a. Routine office-based care or routine dental care;
- b. Routine diagnosis or treatment such as extraction of bodily fluids for analysis, administration of medications or routine activities of daily living support;
- c. Any procedure which is provided under emergency circumstances.

**85.2(6)** “*Other surrogate decision maker*” means an attorney-in-fact, guardian, spouse, adult child, parent or an adult sibling who is reasonably available, willing and able to make a medical care decision.

**85.2(7)** “*Panel*” means a group of three or more members of a local board or the state board who are appointed by the chairperson of that board to hear a case when an application has been filed with the board or when an appeal has been filed with the state board.

**85.2(8)** “*Patient*” means the person for whom the medical care decision is proposed. They may be in a hospital, long-term care facility, home, or other setting.

**85.2(9)** “*Person incapable of making their own medical care decisions*” means a patient who is unable to adequately understand and appreciate the nature and consequences of a proposed medical care decision, including the benefits and risks of the proposed medical care and of alternatives to such care, and cannot thereby reach an informed decision to consent or refuse such care in a knowing and voluntary manner that promotes the patient’s well-being and autonomy. This incapability may be temporary or permanent.

**85.2(10)** “*Physician*” means any individual licensed under Iowa Code chapter 148, 150, or 150A.

**85.2(11)** “*State board*” means the state substitute medical decision-making board established under Iowa Code section 135.28.

**641—85.3(135) Appointment of local boards.**

**85.3(1)** The county board of supervisors may establish and fund a local substitute medical decision-making board. The board shall include one or more representatives from each of the following three categories:

- a. Physicians, nurses, or psychologists licensed by the state of Iowa.
- b. Attorneys admitted to the practice of law in Iowa or social workers.
- c. Other individuals with recognized expertise or interest in persons unable to make their own medical care decisions not included in “a” and “b” above.

The county board of supervisors may appoint and fund a hospital ethics committee to serve as the local decision-making board provided that the composition of the committee fulfills the above requirements.

**85.3(2)** County boards of supervisors may join together to form a multicounty local substitute medical decision-making board pursuant to Iowa Code chapter 28E. If a multicounty board is established, the agreement shall specify the procedure for appointment of board members and the procedure for allocation of expenses.

**85.3(3)** Board members shall be appointed to terms of three years with staggered terms.

**85.3(4)** The board shall elect a chairperson at the first meeting of each fiscal year.

**85.3(5)** The county board of supervisors shall notify the state board when a local board is appointed and shall submit a list of the members appointed.

**641—85.4(135) Filing an application.**

**85.4(1)** Any person having knowledge and concern may file the application on behalf of any patient residing within the geographic area served by the local board, when the person filing the application believes the patient is incapable of decision making, is in need of medical care, and has no other surrogate decision maker available.

**85.4(2)** The local board of the county of residence of the patient shall have jurisdiction except the local board may, by mutual consent, transfer jurisdiction to the local board in the county where the treatment is being considered.

**85.4(3)** The application shall be made in writing and shall include the following:

- a. The relationship of the person filing the application to the patient.
- b. A statement that the patient does not have an attorney-in-fact, guardian, spouse, adult child, parent or an adult sibling who is reasonably available, willing and able to make the medical care decision. The application shall provide the factual basis for such a statement, including the efforts made to contact such persons.
- c. The reasons for believing that the person lacks the capability to consent to or refuse medical care and the factual basis supported by an appropriate statement for this belief.
- d. The patient’s opinion regarding the proposed care, if known, and the source(s) of the information regarding this opinion.
- e. If the patient’s opinion regarding the proposed care is not known, the person filing the application shall include a stated opinion on whether the best interests of the patient would be promoted by such care and the basis for the opinion.
- f. Any other information that may be necessary to determine the need for such care, including a copy of a second medical or dental opinion which would be required by a prudent physician or dentist based on the nature of the proposed medical care.
- g. A statement, completed, signed and dated by a physician or dentist including:
  - (1) A description of the proposed medical care and the patient’s medical or dental condition which requires such treatment indicating the date of diagnosis;
  - (2) The risks and benefits to the patient of the proposed care and any alternative treatments including consideration and consequences of nontreatment; and

(3) A statement whether the patient has any medical or dental condition which would prevent the patient's travel to or presence at the panel meeting and including a description of such condition.

*h.* The application shall be signed and dated by the person filing it stating that the information on the application is true to the best of that person's knowledge, except for any portion signed and dated by another person who shall make a similar statement as to that portion.

**641—85.5(135) Notification of patient and review of application.**

**85.5(1)** When an application is received, the patient shall be notified that an application has been submitted, a hearing will be scheduled, and the patient will be notified of the time and place of the hearing. The notification shall inform the patient of the right to be present, to testify orally or in writing, and to designate someone to represent the patient at the hearing. The hearing shall be held no less than 48 hours after the patient receives this notification.

**85.5(2)** The board chairperson or designee shall preliminarily review the application to ascertain whether additional information may be necessary to assist the board in determining the patient's need for surrogate decision making and in determining whether the patient's best interests will be served by consenting to or refusing medical care on the patient's behalf. The board chairperson or designee may:

*a.* Request and shall, notwithstanding any other law to the contrary, be entitled to receive from any physician, hospital or health care facility or person licensed to render health care, any information which is relevant to the patient's need for surrogate decision making or for the proposed medical care. Such information may include, among other things: information regarding the patient's preferences regarding medical care; facts regarding the patient's attorney-in-fact, guardian, spouse, adult child, parent, or an adult sibling; facts and professional opinions regarding the patient's inability to consent to or refuse medical care; and facts and professional opinions regarding whether the proposed medical care is in the patient's best interests; the board chairperson or designee shall maintain the confidentiality of records as required by Iowa Code chapters 22, 141, and 228, and 42 Code of Federal Regulations Part 2, as of January 1, 1992, or any other applicable confidentiality law provision;

*b.* Consult with any other person who might assist in such a determination of the best interests of the patient, including ascertainment of the personal beliefs and values of the patient.

**641—85.6(135) Panel appointment and procedures.**

**85.6(1)** When an application is filed, the chairperson shall appoint a panel to handle the case and designate a panel chairperson. The panel shall consist of at least three members with at least one from each category listed in rule 85.3(135). A person shall not participate on a panel for a case when that person has a conflict of interest. The panel may include the entire local board.

**85.6(2)** Upon appointment of the panel, the board chairperson or designee shall provide a copy of the application to each panel member accompanied by a notice of the time, place and date of the panel hearing on the application. The notice of the hearing shall also be provided to the patient, the person who filed the application, and any other interested party, if known. The notice shall inform the recipients of the procedures of the panel, including the opportunity for the recipient to be present and to be heard. The notice shall be given no less than 24 hours prior to the scheduled time for the hearing.

**85.6(3)** The general procedures of the hearing are as follows:

*a.* The panel shall be empowered to administer oaths and take testimony from any person who might assist the panel in making its decision. It shall also be empowered to conduct its proceeding via telephone conference calls in appropriate cases, unless someone objects and requests a face-to-face hearing.

*b.* A record of the deliberations and proceedings of the panel shall be made and retained for ten years. Such record shall include any information, record, assessment or consultation submitted to or considered by the panel.

*c.* The panel and each member of the local board shall maintain the confidentiality of records as required by Iowa Code chapters 22, 141, and 228 and 42 Code of Federal Regulations Part 2 or any other applicable confidentiality law provision.

*d.* The patient shall have the right to be present at the hearing and the right to express feelings to the panel orally or in writing and the right to designate someone to represent the patient before the panel.

*e.* If at any time during the pendency or prior to initiation of treatment, an attorney-in-fact, guardian, spouse, adult child, parent or an adult sibling is reasonably available, willing and able to consent to or refuse such care on the patient's behalf, objects to the panel acting upon the application, the proceedings regarding such patient shall cease. A record of any such person's objection shall be included as part of the record as provided for by this section.

*f.* The panel shall issue its written decision within 24 hours after the conclusion of the hearing. The decision shall state when the decision shall become effective and shall include a statement describing the right of appeal. The written decision shall be issued to the necessary persons, including the patient.

*g.* If the decision is hand-delivered, it shall not be effective sooner than 24 hours after the written decision is delivered to the patient or the person designated by the patient in 85.6(3) "e." If the decision is sent by certified mail, return receipt requested, it shall not be effective sooner than 48 hours after it is mailed. The date, time, and method of delivery of the decision to the patient shall be noted in the record.

*h.* A panel determination that a patient is in need of surrogate decision making for the proposed medical care shall not be valid for any future medical care and shall not be construed or deemed valid for any other purpose or for any other future medical care unless the determination explicitly applies to related or continuing treatment necessitated by the original treatment. No panel determination shall be valid after 60 days from its effective date unless the determination explicitly states otherwise.

*i.* All information, records, assessments or consultations submitted to or considered by the panel or board and the panel and board deliberations are confidential as required by Iowa Code chapters 22, 141, and 228 and 42 Code of Federal Regulations Part 2 or any other applicable confidentiality law provision.

**641—85.7(135) Panel determination of need for surrogate decision making.** The panel's determination of the patient's need for surrogate decision making shall be made in accordance with the following provisions:

**85.7(1)** The panel shall decide based upon a preponderance of evidence whether the patient is in need of surrogate decision making by determining that the patient: lacks the ability to consent to or refuse the proposed medical care and does not have an attorney-in-fact, guardian, spouse, adult child, parent, or an adult sibling who is reasonably available, willing and able to make such a decision.

The method of determining patient's capability to consent to or refuse care shall include examination of patient by a licensed physician with a written report to the local board.

When practical, the panel members shall personally interview and observe the patient as a part of the hearing. If a personal appearance by the patient before the panel is not practical, then either the panel chairperson shall designate a member of the panel to interview and observe the patient prior to the hearing or the panel shall require one of the following:

1. Written report of examination by psychiatrist.
2. Written report of examination by psychologist.
3. Written report of examination by physician not involved in case.
4. Written report from a department of human services investigator involved with patient.
5. Written report from long-term care case management project.

**85.7(2)** In making the determination of whether the patient lacks the capacity to consent to or refuse the proposed medical care, the panel or board shall consider whether the patient is unable to adequately understand and appreciate the nature and consequences of the proposed medical care.

**85.7(3)** A majority of the panel members must vote in the affirmative that the patient is in need of surrogate decision making or the patient will be deemed not to need surrogate decision making.

**85.7(4)** A panel determination that a patient is in need of surrogate decision making shall not be construed or deemed to be a legal determination that such person is incompetent.

**85.7(5)** In the event the panel or board has determined the patient to be capable of decision making, then the patient's consent to or refusal of such treatment, if given, shall constitute valid consent or refusal. No other consent shall be required by a provider of health services.

**641—85.8(135) Panel determination regarding proposed medical care decision.** If a patient has been determined by the panel to be in need of surrogate decision making, the panel's determination regarding the proposed medical care shall be made in accordance with the following provisions:

**85.8(1)** The past or present expression of wishes by the patient will be presumed valid unless clearly overcome by other evidence. The patient's autonomy should always be respected.

**85.8(2)** If there is no clear preference by the patient, the panel shall make the determination whether the proposed medical care is in the best interests of the patient based upon a preponderance of the evidence by considering the following standards:

*a.* The burdens of the treatment to the patient in terms of pain and suffering outweighing the benefits or whether the proposed treatment would merely prolong the patient's suffering and not provide any net benefit;

*b.* The degree, expected duration, and constancy of pain with and without treatment, and the possibility that the pain could be mitigated by less intrusive forms of medical treatment including the administration of medications;

*c.* The likely prognosis, expectant level of functioning, degree of humiliation and dependency with or without the proposed medical care; and

*d.* Evaluation of treatment options, including nontreatment, and their benefits and risks compared to those of the proposed medical care.

**85.8(3)** A majority of the panel members must vote in the affirmative for a valid determination of consent to or refusal of medical care on behalf of the patient.

**85.8(4)** The panel determination consenting to or refusing medical care shall constitute valid consent to or refusal of such treatment in the same manner and to the same extent as if the patient were able to consent or refuse on the patient's own behalf.

**85.8(5)** The panel's consent to medical care shall state that any tissues or parts surgically removed may be disposed of or preserved by the provider of health services in accordance with customary practice.

**641—85.9(135) Right of appeal.**

**85.9(1)** The patient, the person who filed the application, or a correspondent may appeal the local board's decision to the state board. The appeal must be made before the date and time that the consent becomes effective. The person appealing shall notify the local board or the department of the appeal. The notice of the appeal shall be in writing or by telephone followed by a written appeal to the department. If the appeal is initially made by telephone, the written appeal to the department shall be postmarked within 48 hours of the telephone notice. The written appeal shall state the reason for the appeal. If the initial appeal is made to the local board, the local board representative shall immediately notify the department and the health care provider. If the initial appeal is made to the department, the department representative shall immediately notify the local board and the health care provider.

**85.9(2)** Upon receipt of the notice of appeal the local board shall immediately provide a copy of the record of the case to the state board. The state board chairperson shall appoint a panel to review the case. The panel shall consist of at least three members with the same composition requirements as the local panels as specified in rule 85.6(135). The panel shall review the record to determine whether the determination by the local panel is supported by substantial evidence. The state panel shall also review new information which is submitted regarding the case. The state panel's decision shall be based on a review of the record and a review of any new information and shall be made in accordance with the provisions for local panel determination in rules 85.7(135) and 85.8(135). The state panel's decision shall be promptly sent by certified mail, return receipt requested, or otherwise provided by any other means that will provide more timely or reliable written notice to: the patient, the person filing the appeal, the person who filed the application and the chairperson of the local board. If any of these persons are dissatisfied with the state panel's decision, an appeal may be taken in the manner provided by Iowa Code chapter 17A.

**641—85.10(135) Procedure when there is no local board.** If an application is filed on behalf of a patient residing in a county which does not have a local board, the application shall be submitted to the

department. When an application is filed with the department, the chairperson of the state substitute medical decision-making board shall appoint a panel to handle the case. The panel shall consist of at least three members with the same composition requirements as the local panels. The state panel shall follow the same procedures as the local board or panel. If a decision is made by a panel of the state board, it may be appealed as provided in rule 85.9(135). The appeal shall be heard by a second panel appointed by the chairperson of the state board.

**641—85.11(135) Records and reports.** Each fiscal year, prior to October 1, the local board shall submit an annual report to the state board on forms provided by the state board. The report shall include summary information regarding the number, nature and disposition of applications filed with the local board in the preceding year. It shall also include a list of the local board members and officers for the new year and such other information as the state board may deem necessary. Members of the state board or authorized representatives of the department shall have access to all records of the local boards. All record information which is excluded from public access and inspection pursuant to Iowa Code chapter 22, 141 or 228 and 42 Code of Federal Regulations Part 2, or any other confidentiality law provision shall be respected by the state board members and department representatives.

**641—85.12(135) Liability.** The local substitute medical decision-making board and its members shall not be held liable, jointly or separately, for any actions or omissions taken or made in the official discharge of their duties, except those acts or omissions constituting willful or wanton misconduct.

These rules are intended to implement Iowa Code sections 135.28 and 135.29.

CHAPTER 86  
PLACES WHERE DEAD HUMAN BODIES ARE PREPARED  
FOR BURIAL OR ENTOMBMENT  
[Prior to 7/29/87, Health Department[470] Ch 86]

**641—86.1(156) Purpose.** The purpose of this chapter is to establish standards for the operation and inspection of places where dead human bodies are prepared for burial, cremation or entombment.

**641—86.2(156) Definitions.**

*“Board”* means the board of mortuary science examiners.

*“Cremated remains”* means the body of a deceased person, including any form of body prosthesis that has been permanently attached to or implanted in the body.

*“Cremation”* means the technical process, using heat and flame, that reduces human remains to bone fragments. The reduction takes place through heat and evaporation. Cremation shall include the processing, and may include the pulverization, of the bone fragments.

*“Cremation chamber”* means the enclosed space within which the cremation takes place.

*“Cremation establishment”* means a place of business which provides any aspect of cremation of human remains.

*“Cremation room”* means the room in which the cremation chamber is located.

*“Department”* means the Iowa department of public health.

*“Funeral establishment”* means a place of business, as defined by the board of mortuary science examiners, devoted to providing any aspect of mortuary science.

*“Human remains”* means a deceased human being for which a death certificate or fetal death certificate is required.

*“Listed”* means equipment or materials included in a list published by an agency that maintains periodic inspection on current production of listed equipment or materials and whose listing states either that the equipment or material complies with approved standards or has been tested and found suitable for use in a specified manner.

*“Preparation room”* means a room in a funeral establishment where human remains are prepared, sanitized, embalmed or held for ceremonies and final disposition.

**641—86.3(156) Licensing.** No person, business or corporation shall operate a funeral establishment, preparation room or cremation chamber without first licensing the establishment with the board.

**641—86.4(156) Public access areas.** Public access areas of funeral homes and crematorium establishments shall have a public rest room with hot and cold running water.

**641—86.5(156) Preparation room.** The preparation room shall meet the following standards:

**86.5(1)** The preparation room shall be of such size and dimensions to accommodate and shall contain an embalming table, an appropriate sink, or other liquid waste receptacle with sewer and water connections, suitable cabinet or shelves, and hand-washing facilities to include hot water, soap and towels.

**86.5(2)** The preparation room shall be private. It shall not be used as a passageway from room to room. No toilet or commode shall be located within the preparation room. Only equipment necessary for use in preparation of bodies for burial, shipment or cremation shall be permitted in the preparation room.

**86.5(3)** There shall be a toilet and hand-washing facility accessible elsewhere in the building.

**86.5(4)** Ventilation shall be provided by an exhaust fan vented to the outside of the building.

**86.5(5)** Doors and windows of the preparation room shall be so installed and constructed as to obstruct view from outside and to prevent fumes and odors from entering any other part of the building.

**86.5(6)** There shall be adequate lighting. Light fixtures shall be easy to clean and kept clean.

**86.5(7)** The preparation room shall be provided with an adequate water supply with hot and cold running water.

**86.5(8)** The building drainage system must be discharged into the municipal sewage system where such a system is available. Where a municipal sewage system is not available, the building drainage system must be discharged into a private system of waste disposal acceptable to the Iowa department of natural resources and the Iowa department of public health.

**86.5(9) Backflow prevention.**

*a.* Funeral homes not meeting the requirements of 86.5(9) “c” shall have water-supplied aspirators equipped with a listed atmospheric vacuum breaker mounted at least six inches above the aspirator. The discharge of the aspirator shall be through an air gap.

*b.* Funeral homes not meeting the requirements of 86.5(9) “c” shall have hose bibbs protected by a listed nonremovable hose bibb type backflow preventer. Potable water outlets with a tube connection fitting shall be protected by a listed atmospheric vacuum breaker mounted at least six inches above the highest point of water usage.

*c.* In new construction, the water supply to the preparation room and to fixtures in the preparation room shall be protected against backflow in accordance with the Iowa state plumbing code (641—Chapter 25) or in accordance with the ordinance of the political subdivision in which the facility is located, provided that the requirements of the ordinance are equal to or greater than the requirements of the Iowa state plumbing code.

**86.5(10)** The embalming table shall have a top composed of stainless steel, porcelain or other rustproof material, and the edges shall be raised at least three-fourths inch around the entire table. There shall be a drain opening in the table.

**86.5(11)** Each preparation room shall have a covered, watertight receptacle for solid refuse.

**86.5(12)** All preparation rooms shall be maintained in a clean and sanitary condition. All embalming tables, sinks, receptacles, instruments and other appliances used in embalming dead human bodies shall be thoroughly cleaned with hot water and disinfectant. There shall be available a suitable means to sterilize instruments.

**641—86.6(156) Crematorium chambers.**

**86.6(1)** Cremation chambers shall be installed according to the manufacturer’s recommendations.

**86.6(2)** Cremation chambers shall be vented to the outside of the building.

**86.6(3)** There shall be a means to bring in a fresh air supply to aid in combustion.

**86.6(4)** The room where the cremation chamber is located shall have adequate exhaust to prevent heat buildup.

**86.6(5)** The cremation chamber shall be cleaned after each use, with cremated remains and pulverized materials being placed in containers as defined in 645—100.1(156).

**641—86.7(156) Inspection fees.** Inspection fees shall be billed to the owner of a funeral home or crematorium upon the completion of an inspection. Inspection fees are due upon receipt of a notice of payment due. When the funeral home or crematorium is located within the contracted area of a board of health that has a 28E agreement for inspections with the department, inspection fees billed shall be paid to the contracted board of health or its designee.

**86.7(1)** The fee for the inspection of a funeral home or crematorium shall be \$15 for each facility.

**86.7(2) Penalty.** Inspection fees not received by the department or contracted board of health within 45 days of the date of billing will be assessed a \$25 penalty for each month or fraction thereof that the payment is delinquent.

These rules are intended to implement Iowa Code chapter 156.

CHAPTER 87  
HEALTHY FAMILIES IOWA (HFI)

**641—87.1(135) Purpose.** These rules are intended to establish standards for the healthy families Iowa (HFI) program, a family support program that provides services to families and children during the prenatal to preschool years through home visitation. This program shall be identified as healthy opportunities for parents to experience success—healthy families Iowa (HOPES-HFI). The HOPES-HFI program is intended to promote optimal child health and development; improve family coping skills and functioning; promote positive parenting skills and intrafamilial interaction; and prevent child abuse and neglect and infant mortality and morbidity. These rules outline the process by which the department assists the Iowa empowerment board in managing contracting for HOPES-HFI funds.

**641—87.2(135) Definitions.** For the purpose of these rules, the following terms shall have the meaning indicated in this rule:

*“Accreditation”* means national recognition of compliance with Healthy Families America standards through a peer review process.

*“Applicant”* means a governmental or nonprofit agency that received grant funds in the previous fiscal year, is fully accredited by Healthy Families America, and applies to the department during a competitive year. In any year in which expansion funds are available for the HOPES-HFI program, the department shall award new grants, subject to annual renewal, to selected applicants in a competitive process.

*“Competitive grant”* means the competitive grant application process to determine the grant awards for a project period.

*“Contractor”* means a governmental or nonprofit agency that holds a contract with the department to provide HOPES-HFI services.

*“Department”* means the Iowa department of public health.

*“Family support”* means community-based services to promote the well-being of children and families.

1. Family support programs have the following characteristics:

- Family-driven, meaning there is a true partnership with families.
  - Comprehensive, flexible, and individualized for each family based on the family’s culture, needs, values and preferences.
  - Build on strengths to increase the stability of family members and the family unit.
  - Utilize informal and formal support networks.
2. Family support programs produce the following results:
- Increased parent confidence and competence in parenting abilities.
  - Safe, stable, and supportive families who are connected to their communities.
  - Enhanced health, growth, and development of children and adults in the family unit.

*“Healthy Families America”* or *“HFA”* means a research-based national program model designed to help overburdened families. HFA is a family support program that provides services to families and children during the prenatal to preschool years through home visitation.

*“Healthy families Iowa”* or *“HFI”* means the state family support program that provides services to families and children during the prenatal to preschool years through home visitation.

*“Home visitation”* means a face-to-face interaction that occurs between the participant(s) and home visitor. The goals of the home visit are to promote positive parent-child interaction and healthy childhood growth and development and to enhance family functioning. Typically, home visits occur in the home, lasting a minimum of an hour, and the child is present.

*“HOPES-HFI”* means the healthy opportunities for parents to experience success—healthy families Iowa program. The HOPES-HFI program is intended to promote optimal child health and development; improve family coping skills and functioning; promote positive parenting skills and intrafamilial interaction; and prevent child abuse and neglect and infant mortality and morbidity.

*“Nonprofit”* means an entity that meets the requirement for tax-exempt status under Internal Revenue Code Section 501(c)(3) or 501(c)(4).

*“Participant”* means a family voluntarily enrolled in and receiving services from the program.

*“Project period”* means the period of time the department intends to support the project without requiring competition for funds.

**641—87.3(135) Applicant eligibility.** Governmental or nonprofit agencies that received grant funds in the previous fiscal year, are fully accredited by HFA, and apply to the department during a competitive year are eligible applicants for funding. The purpose of the applications is to administer HOPES-HFI services for a specified project period, as defined in the request for proposals, with an annual continuation application.

**641—87.4(135) Participant eligibility.** Families must meet the following requirements to be eligible to participate in the HOPES-HFI program: (1) A family member is pregnant or the family has a child aged birth to five years; and (2) The family is determined to be eligible for enrollment according to a universal risk assessment as defined by HFA standards.

**641—87.5(135) Program requirements.** Contractors shall meet the following minimum program requirements:

**87.5(1) Accreditation.** Contractors shall comply with Healthy Families America (HFA) standards and maintain HFA or Council on Accreditation (COA) accreditation status. HOPES-HFI contractors will be required to submit evidence of reaccreditation reports to the department within 30 days of receipt.

**87.5(2) Participant identification.** Contractors shall collaborate with health care, human services, education, and other partners serving pregnant women and women of childbearing age to identify families who are at risk in order to promote positive birth and parenting outcomes.

**87.5(3) Standardized tools.** Contractors shall utilize standardized tools approved by the department to assess and reassess a participant’s risk status and achievements and the appropriate level of service.

**87.5(4) Quality assessment and improvement.** Contractors shall develop a process for annual program evaluation. The process shall include the following:

*a.* The outcome of the program evaluation shall be reviewed by the program’s governing or advisory board with recommendations made for program improvement.

*b.* The evaluation shall demonstrate the effectiveness of the program through program outcomes, including acceptance and retention rates.

**641—87.6(135) Contractor assurance.** In order to receive funding, the contractor shall provide to the department assurance that all applicable federal, state, and local requirements are met. The contractor shall ensure compliance with Title IV of the Civil Rights Act, the Americans with Disabilities Act of 1990 (ADA), Section 504 of the 1973 Rehabilitation Act, and all affirmative action requirements. In addition, the contractor shall ensure the following:

**87.6(1) Program policies and procedures.** Policies and procedures shall be in accordance with HFA standards.

**87.6(2) Personnel policies and procedures.** The personnel policies and procedures shall, at a minimum, include:

*a.* Conditions of employment, including recruitment, selection, termination, promotion, and compensation.

*b.* A leave of absence policy.

*c.* A grievance procedure.

*d.* Annual employee performance evaluations.

*e.* A nondiscrimination policy.

*f.* Fringe benefits.

*g.* Employment application forms that comply with civil rights regulations.

*h.* Current job descriptions that delineate qualifications, responsibilities, and essential functions, that reflect current responsibilities, and that are dated.

*i.* A current salary schedule.

**87.6(3) *Fiscal management.*** Fiscal management shall, at a minimum, include the following:

*a.* An annual budget.

*b.* Fiscal policies and procedures that follow generally accepted accounting practices.

*c.* Utilization of other funds such as private and third-party funds when available.

**641—87.7(135) Applicant appeal process.**

**87.7(1) *Right of appeal.*** The right to appeal shall be granted when an applicant's application to participate is denied. The right to appeal shall also be granted when, during the course of the contract or agreement period, a contractor is disqualified or any other action that affects participation is taken. For participating contractors, a minimum of 60 days' advance notice shall be given before the effective date of the action.

**87.7(2) *Request for hearing.*** An appeal is brought by filing a written request for a hearing with the Division Director, Division of Health Promotion and Chronic Disease Prevention, Iowa Department of Public Health, Lucas State Office Building, Des Moines, Iowa 50319-0075, within ten days of receipt of notification of the adverse action. The written request for hearing shall state the adverse action being appealed.

**87.7(3) *Contested cases.*** Upon receipt of an appeal that meets contested case status, the appeal shall be forwarded within five working days to the department of inspections and appeals pursuant to the rules adopted by that agency regarding the transmission of contested cases. The information upon which the adverse action is based and any additional information that may be provided by the aggrieved party shall also be provided to the department of inspections and appeals.

**87.7(4) *Notice of hearing.*** The administrative law judge (ALJ) shall schedule the time, place and date of the hearing as expeditiously as possible. Hearings shall be conducted by telephone or in person in Des Moines at the Lucas State Office Building or another suitable location. If necessary, parties will be provided at least two opportunities to have the hearing rescheduled.

**87.7(5) *Conduct of hearing.*** The hearing shall be conducted according to the procedural rules of the department of inspections and appeals found in 481—Chapter 10, Iowa Administrative Code.

**87.7(6) *Decision.*** A written decision of the ALJ shall be issued, when possible, within 60 days from the date of the request for a hearing unless the parties agree to a longer period of time. The decision of the ALJ shall be served by certified mail, return receipt requested, or delivered by personal service. That proposed decision and order then becomes the department's final agency action, without further proceedings, ten days after it is received by the aggrieved party unless an appeal to the director is filed as provided in subrule 87.7(7).

**87.7(7) *Appeal to director.*** Any appeal to the director for review of the proposed decision of the ALJ shall be filed in writing and mailed to the Director, Iowa Department of Public Health, Lucas State Office Building, Des Moines, Iowa 50319-0075, by certified mail, return receipt requested, or delivered by personal service within ten days after the receipt of the ALJ's proposed decision by the aggrieved party. A copy of the appeal shall also be mailed to the ALJ. Any request for an appeal shall state the reason for appeal.

**87.7(8) *Record of hearing.*** Upon receipt of an appeal request, the ALJ shall prepare the record of the hearing for submission to the director of the department. The record shall include the following:

*a.* All pleadings, motions, and rules.

*b.* All evidence received or considered and all other submissions by recording or transcript.

*c.* A statement of all matters officially noticed.

*d.* All questions and offers of proof, objections and rulings thereon.

*e.* All proposed findings and exceptions.

*f.* The proposed decision and order of the hearing officer.

**87.7(9) *Decision of director.*** The decision and order of the director becomes the department's final agency action upon receipt by the aggrieved party and shall be delivered by certified mail, return receipt requested, or by personal service.

**87.7(10) *Exhausting administrative remedies.*** It is not necessary to file an application for a rehearing to exhaust administrative remedies when appealing to the director or the district court as provided in Iowa Code section 17A.19. The aggrieved party to the final decision of the department who has exhausted all administrative remedies may petition for judicial review pursuant to Iowa Code chapter 17A.

**87.7(11) *Petition for judicial review.*** Any petition for judicial review of a decision and order shall be filed in the district court within 30 days after the decision and order becomes final. A copy of the notice of appeal shall be sent to the department by certified mail, return receipt requested, or by personal service. The address is: Division Director, Division of Health Promotion and Chronic Disease Prevention, Iowa Department of Public Health, Lucas State Office Building, Des Moines, Iowa 50319-0075.

#### **641—87.8(135) Participant right to appeal.**

**87.8(1) *Denial, reduction or termination of services.***

*a.* When a contractor denies, reduces or terminates services funded by the HOPES-HFI grant against the wishes of a participant, the contractor shall notify the participant of the following:

- (1) The action taken;
- (2) The reason for the action; and
- (3) The participant's right to appeal.

*b.* If a participant files an appeal, the contractor shall provide services to the participant throughout the appeals process, unless the contractor receives a waiver from the department pending the outcome of the appeal.

**87.8(2) *Local appeals process.***

*a.* All contractors shall have a written local procedure to hear appeals. The local procedure shall, at a minimum, include:

- (1) The method of notification of the right to appeal;
- (2) The procedure for conducting the appeal;
- (3) Time limits for each step; and
- (4) The method of notification of the outcome of the local appeal and notification of the participant's right to appeal to the state. Notifications of the outcome of the local appeal shall include the facts used to reach the decision and the conclusions drawn from the facts to support the contractor's decision.

*b.* The written appeals procedure and the record of appeals filed (including the record and disposition of each) shall be available for inspection by authorized representatives of the Iowa department of public health.

**87.8(3) *Appeal to department.***

*a. Procedure for appeal.* If a participant is dissatisfied with the decision of the local appeal, the participant may appeal to the state. The appeal shall be made in writing by certified mail, return receipt requested, to the Division Director, Division of Health Promotion and Chronic Disease Prevention, Iowa Department of Public Health, Lucas State Office Building, Des Moines, Iowa 50319-0075, within 15 days of receipt of the local contractor's appeal decision.

*b. Department review.* The department shall evaluate the appeal based upon the merits of the local appeal documentation. A department decision affirming, reserving, or modifying the local appeal decision shall be issued within 30 days of the receipt of all local appeal documentation. The department decision shall be in writing and shall be sent by certified mail, return receipt requested, to the participant and the contractor.

**87.8(4) *Further appeal.*** The participant may appeal the department's decision by submitting an appeal, within 10 days of receipt of the department's decision, to the Division Director, Division of Health Promotion and Chronic Disease Prevention, Iowa Department of Public Health, Lucas State Office Building, Des Moines, Iowa 50319-0075. Upon receipt of an appeal that meets contested case status, the department shall forward the appeal within 5 working days to the department of inspections and appeals pursuant to the rules adopted by the department of inspections and appeals regarding the

transmission of contested cases. The continued process for appeals shall be governed by 641—Chapter 173, Iowa Administrative Code.

These rules are intended to implement Iowa Code section 135.106.

CHAPTER 89  
DECISION-MAKING ASSISTANCE PROGRAM  
AND PARENTAL NOTIFICATION OF INTENT  
TO TERMINATE A PREGNANCY THROUGH ABORTION

**641—89.1(135L) Title.** This chapter may be cited as “Decision-Making Assistance Program and Parental Notification of Intent to Terminate a Pregnancy Through Abortion.”

**641—89.2(135L) Purpose and scope.** The rules contained in this chapter govern the procedures and documentation necessary for notification of a parent or grandparent of a pregnant minor prior to the termination of the pregnancy through abortion. These rules also describe the certification procedure for the decision-making assistance program.

**641—89.3(135L) Definitions.** The following definitions shall apply throughout the chapter.

“*Abortion*” means an abortion as defined in Iowa Code chapter 146.

“*Adult*” means a person 18 years of age or older.

“*Certification form*” means the form included in the written decision-making materials developed by the department.

“*Court*” means juvenile court.

“*Department*” means the Iowa department of public health.

“*Grandparent*” means the parent of an individual who is the parent of the pregnant minor.

“*Licensed physician*” means a physician as licensed by the Iowa board of medical examiners, Iowa Code chapters 148, 150, and 150A.

“*Medical emergency*” means a condition which, based upon a physician’s judgment, necessitates an abortion to avert the pregnant minor’s death, or for which a delay will create a risk of serious impairment of a major bodily function.

“*Minor*” means a person under 18 years of age who has not been and is not married.

“*Parent*” means a parent or a legal guardian or custodian of a pregnant minor.

“*Video*” means the video developed by the Iowa department of public health which provides information regarding the various options available to a pregnant minor with regard to the pregnancy, including a decision to continue the pregnancy to term and retain parental rights following the child’s birth, a decision to continue the pregnancy to term and place the child for adoption following the child’s birth, and a decision to terminate the pregnancy through abortion.

“*Written decision-making materials*” means the materials developed by the Iowa department of public health which provide information regarding the various options available to a pregnant minor with regard to the pregnancy as outlined in the definition of video.

**641—89.4 to 89.10** Reserved.

DECISION-MAKING ASSISTANCE PROGRAM

**641—89.11(135L) Purpose.** The program is intended to provide assistance to minors in making informed decisions relating to pregnancy through the use of the video and written decision-making materials developed by the department.

**89.11(1)** The video and written decision-making materials contain information regarding the following options available to a pregnant minor with regard to the pregnancy:

- a. Continue the pregnancy to term and retain parental rights following the child’s birth;
- b. Continue the pregnancy to term and place the child for adoption following the child’s birth; and
- c. Terminate the pregnancy through abortion.

**89.11(2)** Reserved.

**641—89.12(135L) Initial appointment of a pregnant minor with a licensed physician from whom an abortion is sought and certification procedure for the decision-making assistance program.**

**89.12(1)** A licensed physician from whom a pregnant minor is seeking the performance of an abortion shall offer the viewing of the video and the written decision-making materials to the pregnant minor during the initial appointment relating to those services.

**89.12(2)** The pregnant minor shall sign and date the certification form provided in the written decision-making materials or an exact replica certifying that she has been offered a viewing of the video and the written decision-making materials.

*a.* The minor shall complete a certification form for the licensed physician providing medical services relating to the termination of the minor's pregnancy.

*b.* The licensed physician from whom an abortion is sought shall keep the original certification form as a part of the minor's medical record relating to the termination of the pregnancy.

*c.* A copy of the completed certification form shall be provided to the pregnant minor.

**89.12(3)** A licensed physician shall not knowingly perform an abortion on a pregnant minor prior to obtaining the completed certification form and completing the notification process.

**641—89.13 to 89.20** Reserved.

NOTIFICATION PROCESS

**641—89.21(135L) Notification of parent prior to the performance of abortion on a pregnant minor.**

**89.21(1)** Notification shall be made to the parent of the pregnant minor at least 48 hours prior to the termination of a pregnancy through abortion unless a judicial waiver is granted as provided in Iowa Code section 135L.3, or unless any of the conditions of rule 89.22(135L) have been met.

*a.* The licensed physician who will perform the abortion shall provide notification in person or by mailing the notification by restricted certified mail to a parent of the pregnant minor at the usual place of abode of the parent.

*b.* For the purpose of delivery by restricted certified mail, the time of delivery is deemed to occur at 12 noon on the next day on which regular mail delivery takes place, subsequent to the mailing.

*c.* The notification form shall be in duplicate in the form that may be provided by the department or shall be in duplicate and include, at a minimum, the following:

(1) The name of the minor.

(2) Notification of the intent to terminate the pregnancy.

(3) The name, address, and relationship of the person to be notified.

*d.* The licensed physician who will perform the abortion shall keep the original notification form as a part of the minor's medical record relating to the termination of the pregnancy.

*e.* A copy of the completed notification form shall be provided to the pregnant minor.

**89.21(2)** If the pregnant minor objects to the notification of a parent prior to the performance of an abortion on the pregnant minor, the pregnant minor may petition the court to authorize waiver of the notification requirement pursuant to Iowa Code section 135L.3.

**641—89.22(135L) Exceptions to notification of parent.** The requirements of rule 89.21(135L) do not apply if any of the following conditions exist:

**89.22(1)** The abortion is authorized in writing by a parent entitled to notification.

**89.22(2)** The pregnant minor declares, in a written statement submitted to the licensed physician who will perform the abortion, a reason for not notifying a parent and a reason for notifying a grandparent of the pregnant minor in lieu of the notification of a parent.

*a.* The licensed physician who will perform the abortion shall keep all written documentation as a part of the minor's medical record relating to the termination of the pregnancy.

*b.* Upon receipt of the written statement from the pregnant minor, the licensed physician who will perform the abortion shall provide notification to a grandparent of the pregnant minor, specified by the pregnant minor, in the manner in which the notification of a parent was prescribed in rule 89.21(135L).

c. The notification form shall be in duplicate in the form that may be provided by the department or shall be in duplicate and include, at a minimum, the following:

- (1) The name of the minor.
- (2) Notification of the intent to terminate the pregnancy.
- (3) The name, address, and relationship of the person to be notified.
- (4) A declaration which informs the grandparent of the pregnant minor that the grandparent of the pregnant minor may be subject to civil action if the grandparent accepts notification.
- (5) A provision that the grandparent of the pregnant minor may refuse acceptance of notification and a provision that the grandparent immediately contact the licensed physician if refusing acceptance of the notification.

d. The licensed physician who will perform the abortion shall keep the original notification form as a part of the minor's medical record relating to the termination of the pregnancy.

e. A copy of the completed notification form shall be provided to the pregnant minor.

**89.22(3)** The licensed physician who will perform the abortion certifies in writing that a medical emergency exists which necessitates the immediate performance of an abortion in accordance with Iowa Code chapter 135L. The physician shall certify in writing the basis for the medical judgment that a medical emergency exists and place this written certification in the medical file of the pregnant minor.

**89.22(4)** The pregnant minor declares that the pregnant minor is a victim of child abuse pursuant to Iowa Code section 232.68, the person responsible for the care of the child is a parent of the child, and either the abuse has been reported pursuant to the procedures prescribed in Iowa Code chapter 232, division III, part 2, or a parent of the child is named in a report of founded child abuse.

**89.22(5)** The pregnant minor declares that the pregnant minor is a victim of sexual abuse as defined in Iowa Code chapter 709 and has reported the sexual abuse to law enforcement.

**89.22(6)** The pregnant minor elects not to allow notification of the pregnant minor's parent and a court authorizes waiver of the notification requirement following completion of the proceedings prescribed under Iowa Code chapter 135L.

**641—89.23(135L) Physician compliance.** A licensed physician shall not perform an abortion on a pregnant minor prior to compliance with the requirements outlined in rule 89.21(135L) or 89.22(135L).

**641—89.24 and 89.25** Reserved.

**641—89.26(135L) Fraudulent practice.** A person who does any of the following is guilty of a fraudulent practice in the fourth degree pursuant to Iowa Code section 714.12:

**89.26(1)** Knowingly tenders a false original or copy of the signed and dated certification form described in rule 89.12(135L) or Iowa Code section 135L.2, to be retained by the licensed physician.

**89.26(2)** Knowingly tenders a false original or copy of the notification document mailed to a parent or grandparent of the pregnant minor under this chapter, a false original or copy of the written certification to be provided to a parent of a pregnant minor pursuant to rule 89.22(135L) or Iowa Code section 135L.6, or a false original or copy of the order waiving notification relative to the performance of an abortion on a pregnant minor.

These rules are intended to implement Iowa Code chapter 135L as amended by 1997 Iowa Acts, House File 121.

[Filed emergency 7/11/97 after Notice 6/4/97—published 7/30/97, effective 7/11/97]

CHAPTER 90  
IOWA CHILD DEATH REVIEW TEAM

**641—90.1(135) Purpose.** The purpose of the child death review team is to aid in the reduction of the incidence of serious injury and death to children by accurately identifying the cause and manner of child death for children under age 18.

**641—90.2(135) Definitions.**

*“Team”* means the Iowa child death review team.

*“Unexcused absence”* means failure by a team member to notify the chairperson of an anticipated absence from a team meeting.

**641—90.3(135) Agency.** The Iowa child death review team is established as an independent agency of state government. The Iowa department of public health shall provide staffing and administrative support to the team.

**641—90.4(135) Membership.** The membership of the review team is subject to the provisions of Iowa Code sections 69.16 and 69.16A, relating to political affiliation and gender balance. Review team members who are not designated by another appointing authority shall be appointed by the director of public health in consultation with the director of human services. Membership terms shall be for three years.

**90.4(1)** The review team shall include the following:

- a. The state medical examiner or the state medical examiner’s designee.
- b. A certified or licensed professional who is knowledgeable concerning sudden infant death syndrome.
- c. A pediatrician who is knowledgeable concerning deaths of children.
- d. A family practice physician who is knowledgeable concerning deaths of children.
- e. One mental health professional who is knowledgeable concerning deaths of children.
- f. One social worker who is knowledgeable concerning deaths of children.
- g. A certified or licensed professional who is knowledgeable concerning domestic violence.
- h. A professional who is knowledgeable concerning substance abuse.
- i. A local law enforcement official.
- j. A county attorney.
- k. An emergency room nurse who is knowledgeable concerning the deaths of children.
- l. A perinatal expert.
- m. A representative of the health insurance industry.
- n. One other appointed at large.

**90.4(2)** Vacancies shall be filled in the same manner in which the original appointments were made. An appointment shall complete the original member’s term.

**90.4(3)** Three consecutive unexcused absences shall be grounds for the director to consider dismissal of the team member and to appoint another. The chairperson of the team is charged with providing notification of absences.

**641—90.5(135) Officers.** Officers of the team shall be a chairperson and a vice chairperson and shall be elected at the first meeting of each fiscal year unless designated at the time of appointment. Vacancy in the office of chairperson shall be filled by elevation of the vice chairperson. Vacancy in the office of vice chairperson shall be filled by election at the next meeting after the vacancy occurs. The chairperson shall preside at all meetings of the team, appoint such subcommittees as deemed necessary, and designate the chairperson of each subcommittee. If the chairperson is absent or unable to act, the vice chairperson shall perform the duties of the chairperson. When so acting, the vice chairperson shall have all the powers of and be subject to all restrictions upon the chairperson. The vice chairperson shall also perform such other duties as may be assigned by the chairperson.

**641—90.6(135) Meetings.** The team shall meet upon the call of the chairperson, upon the request of a state agency, or as determined by the team. Robert's Rules of Order shall govern all meetings.

**641—90.7(135) Expenses of team members.** The members of the team are eligible for reimbursement of actual and necessary expenses incurred in the performance of their official duties.

**641—90.8(135) Team responsibilities.** The team shall perform the following responsibilities.

1. Collect, review, and analyze child death certificates and child death data, including patient records or other pertinent confidential information concerning deaths of children aged six or younger, and other information as the review team deems appropriate for use in preparing an annual report to the governor and the general assembly concerning the causes and manner of child deaths. The report shall include analysis of factual information obtained through review and recommendations regarding prevention of child deaths.

2. Recommend to the governor and the general assembly interventions to prevent deaths of children based on an analysis of the cause and manner of such deaths.

3. Recommend to the agencies represented on the review team and to other agencies changes which may prevent child deaths.

4. Maintain the confidentiality of any patient records or other confidential information reviewed.

5. Develop protocols for and establish a committee to review child abuse investigations which involve the death of a child.

6. The team may establish subcommittees to which the team may delegate some or all of the team's responsibilities set out in this rule.

**641—90.9(135) Liaisons.** The following individuals shall each designate a liaison to assist the team in fulfilling its responsibilities.

1. Director of public health.

2. Director of human services.

3. Commissioner of public safety.

4. Administrator of the bureau of vital records of the Iowa department of public health.

5. Attorney general.

6. Director of transportation.

7. Director of the department of education.

**641—90.10(135) Confidentiality and disclosure of information.** The team and liaisons shall maintain the confidentiality of all information and records used in the review and analysis of child deaths, including disclosure of information which is confidential under Iowa Code chapter 22 or any other provisions of state law. No information on individual deaths contained in the records described in this rule shall be disclosed except for the purposes of the team, committee or subcommittee meeting, and no confidential information received in preparation for or during the course of such meeting shall be removed from the meeting room except for further review as authorized by the team chairperson.

In preparation for review of an individual death by the team or its authorized committee or subcommittee, the chairperson of the team or the chairperson's designee is authorized to gather all information pertinent to the review. This information may include, but is not limited to, hospital records, physician's records, school records, day-care records, autopsy records, child abuse registry, investigation or assessment records, state public assistance records, traffic records, public safety records, law enforcement records, fire marshal's records, birth records, death records, and other relevant records necessary to conduct a complete review.

A person in possession or control of medical, investigative or other information pertaining to a child death and child abuse review shall allow the inspection and reproduction of the information by the department upon the request of the department, to be used only in the administration and for the duties of the Iowa child death review team. Information and records which are confidential under Iowa Code section 22.7 and chapter 235A, and information or records received from the confidential records, remain

confidential under this rule. A person does not incur legal liability by reason of releasing information to the department as required under and in compliance with this rule.

**641—90.11(135) Immunity and liability.** Review team members and their agents are immune from any liability, civil or criminal, which might otherwise be incurred or imposed as a result of any act, omission, proceeding, decision, or determination undertaken or performed, or recommendation made as a review team member or agent provided that the review team members or agents acted in good faith and without malice in carrying out their official duties in their official capacity. A complainant bears the burden of proof in establishing malice or lack of good faith in an action brought against review team members involving the performance of their duties and powers.

A person who releases or discloses confidential data, records, or any other type of information in violation of this chapter is guilty of a serious misdemeanor.

These rules are intended to implement Iowa Code Supplement section 135.43.

CHAPTER 91  
IOWA DOMESTIC ABUSE DEATH REVIEW TEAM

**641—91.1(77GA,ch1221) Purpose.** The purpose of the domestic abuse death review team is to aid in the reduction of the incidence of domestic abuse deaths by accurately identifying the cause and manner of deaths occurring from domestic violence and by making recommendations for changes in policy and practice to improve community interventions for preventing domestic abuse deaths.

**641—91.2(77GA,ch1221) Definitions.**

“*Team*” means the Iowa domestic abuse death review team.

“*Unexcused absence*” means failure by a team member to notify the chairperson of an anticipated absence from a team meeting.

**641—91.3(77GA,ch1221) Agency.** The Iowa domestic abuse death review team is established as an independent agency of state government. The Iowa department of public health shall provide staffing and administrative support to the team.

**641—91.4(77GA,ch1221) Membership.** The membership of the team is subject to the provisions of Iowa Code sections 69.16 and 69.16A, relating to political affiliation and gender balance. Team members who are not designated by another appointing authority shall be appointed by the director of public health. At least one member shall also be a member of the Iowa child death review team. Membership terms shall be for three years. One-third of the initial members shall serve for three years, one-third of the initial members shall serve for two years, and one-third of the initial members shall serve for one year, as designated by the appointing authority.

**91.4(1)** The team shall include the following:

- a. The state medical examiner or the state medical examiner’s designee.
- b. A licensed physician who is knowledgeable concerning domestic abuse deaths, suicide, and child deaths by homicide.
- c. A licensed mental health professional who is knowledgeable concerning domestic abuse.
- d. A representative or designee of the Iowa coalition against domestic violence.
- e. A certified or licensed professional who is knowledgeable concerning substance abuse.
- f. A law enforcement official who is knowledgeable about domestic abuse and is a member of a state law enforcement association.
- g. A law enforcement investigator experienced in domestic abuse investigation.
- h. A prosecuting attorney experienced in prosecuting domestic abuse cases.
- i. A member of the judiciary appointed by the chief justice of the supreme court.
- j. A clerk of the district court appointed by the chief justice of the supreme court.
- k. A department of correctional services’ employee or subcontractor who is assigned batterers’ treatment program responsibilities and is knowledgeable about risk level assessment.
- l. An attorney licensed in this state who provides criminal defense assistance or child custody representation and who is experienced in dissolution of marriage proceedings.
- m. A former victim of domestic abuse.
- n. A family member of a decedent whose death resulted from domestic abuse.

**91.4(2)** Vacancies shall be filled in the same manner in which the original appointments were made. An appointee shall complete the original member’s term.

**91.4(3)** Three consecutive unexcused absences shall be grounds for the director to consider dismissal of the team member and the appointment of another. The chairperson of the team is charged with providing notification of absences.

**91.4(4)** The department may temporarily appoint other members to serve as experts, as needed, on a case-by-case basis.

**641—91.5(77GA,ch1221) Officers.** Officers of the team shall be a chairperson and a vice chairperson and shall be elected at the first meeting of each fiscal year unless designated at the time of appointment.

Vacancy in the office of chairperson shall be filled by elevation of the vice chairperson. Vacancy in the office of vice chairperson shall be filled by election at the next meeting after the vacancy occurs. The chairperson shall preside at all meetings of the team, appoint such subcommittees as deemed necessary, and designate the chairperson of each subcommittee. If the chairperson is absent or unable to act, the vice chairperson shall perform the duties of the chairperson. When so acting, the vice chairperson shall have all the powers of and be subject to all restrictions upon the chairperson. The vice chairperson shall also perform such other duties as may be assigned by the chairperson.

**641—91.6(77GA,ch1221) Meetings.** The team shall meet upon the call of the chairperson, upon the request of a state agency, or as determined by the team. Robert's Rules of Order shall govern all meetings.

**641—91.7(77GA,ch1221) Expenses of team members.** The members of the team are eligible for reimbursement of actual and necessary expenses incurred in the performance of their official duties.

**641—91.8(77GA,ch1221) Team responsibilities.** The team shall perform the following responsibilities.

1. Collect, review, and analyze death certificates and death data, including investigative reports, medical and counseling records, victim service records, child abuse reports, or other confidential information concerning domestic abuse deaths, survivor interviews and surveys, and other information deemed by the team as necessary and appropriate concerning the causes and manner of domestic abuse deaths.
2. Prepare an annual report to the governor, supreme court, attorney general, and the general assembly concerning the contributing factors of domestic abuse deaths.
3. Recommend community interventions to prevent domestic abuse deaths based on an analysis of the contributing factors to such deaths.
4. Recommend to the agencies represented on the review team and to other agencies changes which may prevent domestic abuse deaths.
5. Maintain the confidentiality of any patient records or other confidential information reviewed.
6. The team may establish subcommittees to which the team may delegate some or all of the team's responsibilities set out in this rule.

**641—91.9(77GA,ch1221) Liaisons.** The following individuals shall each designate a liaison to assist the team in fulfilling its responsibilities.

1. Director of public health.
2. Director of human services.
3. Commissioner of public safety.
4. Director of corrections.
5. Attorney general.
6. Director of education.
7. State court administrator.
8. Director of the law enforcement academy.

**641—91.10(77GA,ch1221) Confidentiality and disclosure of information.** The team and liaisons shall maintain the confidentiality of all information and records used in the review and analysis of domestic abuse deaths, including disclosure of information which is confidential under Iowa Code chapter 22 or any other provisions of state law. No information on individual deaths contained in the records described in this rule shall be disclosed except for the purposes of the team, committee or subcommittee meeting, and no confidential information received in preparation for or during the course of such meeting shall be removed from the meeting room except for further review as authorized by the team chairperson.

In preparation for review of an individual death by the team or its authorized committee or subcommittee, the chairperson of the team or the chairperson's designee is authorized to gather all information pertinent to the review. This information may include, but is not limited to, hospital

records, physician's records, school records, day-care records, autopsy records, child abuse registry, investigation or assessment records, state public assistance records, traffic records, public safety records, law enforcement records, fire marshal's records, birth records, death records, and other relevant records necessary to conduct a complete review.

A person in possession or control of medical, investigative or other information pertaining to a domestic abuse death and domestic abuse death review shall allow the inspection and reproduction of the information by the department upon the request of the department to be used only in the administration and for the duties of the Iowa domestic abuse death review team. Information and records which are confidential under Iowa Code section 22.7 and chapter 235A, and information or records received from the confidential records, remain confidential under this rule. A person does not incur legal liability by reason of releasing information to the department as required under and in compliance with this rule.

**641—91.11(77GA,ch1221) Immunity and liability.** Review team members and their agents are immune from any liability, civil or criminal, which might otherwise be incurred or imposed as a result of any act, omission, proceeding, decision, or determination undertaken or performed, or recommendation made as a review team member or agent provided that the review team members or agents acted in good faith and without malice in carrying out their official duties in their official capacity. A complainant bears the burden of proof in establishing malice or lack of good faith in an action brought against review team members involving the performance of their duties and powers.

These rules are intended to implement 1998 Iowa Acts, chapter 1221, section 5, subsection 4(10).

[Filed 11/10/98, Notice 9/9/98—published 12/2/98, effective 1/6/99]

CHAPTER 92  
IOWA FATALITY REVIEW COMMITTEE

**641—92.1(135) Purpose.** The purpose of the child fatality review committee is to determine whether the department of human services and others involved with the case of child abuse responded appropriately.

**641—92.2(135) Definitions.**

*“Child abuse assessment”* means an assessment performed in accordance with Iowa Code section 232.71B.

*“Child fatality”* means the death of a child under the age of 18.

*“Committee”* means the Iowa child fatality review committee.

*“Department”* means the department of public health.

*“Director”* means the director of the department of public health.

*“Multidisciplinary team”* means the group of individuals as defined in Iowa Code section 235A.13.

**641—92.3(135) Committee.** The committee is an ad hoc committee appointed by the director on a case-by-case basis. The committee shall include a medical examiner, a pediatrician who is knowledgeable concerning deaths of children, and a person involved in law enforcement. The committee may also consult with individuals with specific child death expertise as necessary to perform the duties and responsibilities of the committee. The department shall provide staffing and administrative support to the committee.

**641—92.4(135) Formation of the committee.** The director may appoint a committee to review the death of a child under the age of 18 upon the request from a member of the legislature or the governor in cases in which a report of suspected child abuse had been filed with the department of human services pursuant to Iowa Code section 232.70 within two years preceding the child’s death.

**641—92.5(135) Committee protocol for review.** In determining whether the department of human services and others involved with the case of child abuse responded appropriately, the committee shall review records relevant to the child’s death, which may include but are not limited to the following:

1. All reports of suspected child abuse on the identified child made to the department of human services pursuant to Iowa Code section 232.70;
2. All child abuse assessments performed on the identified child in accordance with Iowa Code section 232.71B;
3. All other department of human services records maintained on the identified child;
4. All relevant law enforcement records which refer to the identified child;
5. All relevant medical and hospital records of the identified child;
6. All relevant court records which refer to the identified child;
7. Records of any multidisciplinary team which reviewed the case of the identified child;
8. Records of any public entity which reviewed the case of the identified child; and
9. All relevant records maintained by a day care provider, other child care provider, preschool, elementary school, middle school, or high school which refer to the identified child.

The committee shall also consult with any multidisciplinary team that is operating in the area where the fatality occurred.

**641—92.6(135) Content of report.**

**92.6(1)** Upon completion of the review, the director shall submit the committee’s report to:

- a. The governor or the governor’s designee;
- b. The member of the senate or employee of the general assembly designated by the majority leader or minority leader of the senate;
- c. The member of the house of representatives or employee of the general assembly designated by the speaker or minority leader of the house of representatives.

**92.6(2)** The committee report shall include findings concerning the case and recommendations for changes to prevent child fatalities when similar circumstances exist. The report shall include but is not limited to the following information:

- a.* The dates, outcomes, and results of any actions taken by the department of human services and others in regard to each report and allegation of child abuse involving the child who died.
- b.* The results of any review of the case performed by a multidisciplinary team, or by any other public entity that reviewed the case.
- c.* Confirmation of the department of human services' receipt of any report of child abuse involving the child, including confirmation as to whether or not any assessment involving the child was performed in accordance with Iowa Code section 232.71B, the results of any assessment, a description of the most recent assessment and the services offered to the family, the services rendered to the family, and the basis for the department's decisions concerning the case.

**641—92.7(135) Consultation with county attorney.** Prior to issuing the report, the committee shall consult with the county attorney responsible for prosecution of the alleged perpetrator of the child fatality. The committee's report shall include child abuse information associated with the case and the child but is subject to the restrictions applicable to the department of human services for release of information concerning a child fatality or near fatality in accordance with Iowa Code section 235A.15(9).

**641—92.8(135) Supplemental report.** Following the completion of the trial of any alleged perpetrator of the child fatality and the appeal period for the granting of a new trial, the committee shall issue a supplemental report containing the information that was withheld, in accordance with rule 92.7(135), so as not to jeopardize the prosecution or the rights of the alleged perpetrator to a fair trial as described in Iowa Code section 235A.15(9) "f" and "g."

**641—92.9(135) Confidentiality and disclosure of information.** The committee shall have access to patient records and other confidential information. The committee may disseminate confidential information in the committee's report which shall be submitted to the governor and the general assembly. For all other purposes, the committee shall maintain the confidentiality of all records which are confidential under Iowa Code section 22.7, Iowa Code chapter 235, or other provision of law. A person in possession or control of medical, investigative, or assessment information or other information pertaining to a child death and child abuse review shall allow the inspection and reproduction of the information by the department, upon the request of the department, to be used only in the administration and for the duties of the Iowa child fatality review committee. A person does not incur legal liability by reason of releasing information to the department as required under and in compliance with this rule.

**641—92.10(135) Immunity and liability.** Review committee members are immune from any liability, civil or criminal, which might otherwise be incurred or imposed as a result of any act, omission, proceeding, decision, or determination undertaken or performed, or recommendation made as a review committee member provided that the review committee members acted in good faith and without malice in carrying out their official duties in their official capacity. A complainant bears the burden of proof in establishing malice or lack of good faith in an action brought against review committee members involving the performance of their duties and powers.

A person who releases or discloses confidential data, records, or any other type of information in violation of this chapter is guilty of a serious misdemeanor.

These rules are intended to implement Iowa Code section 135.43(4).

[Filed emergency 11/9/00—published 11/29/00, effective 11/9/00]

[Filed 5/25/01, Notice 1/10/01—published 6/13/01, effective 7/18/01]

CHAPTER 93  
ABUSE EDUCATION REVIEW PANEL

**641—93.1(135) Purpose.** The purpose of the abuse education review panel process is to provide an objective method by which curricula for child and dependent adult abuse mandatory reporter training are reviewed and approved. Approved curricula are to be taught to persons who work in a position classification that under law makes the persons mandatory reporters of child or dependent adult abuse and the position classification does not have a mandatory reporter training curriculum approved by a licensing or examining board.

**641—93.2(135) Panel.**

**93.2(1) Panel composition.** The director shall appoint the members of the panel. The panel shall be comprised of seven members, with one member having expertise in issues related to child abuse, one member having expertise in issues related to dependent adult abuse, one member having expertise in curriculum development, and four members representing mandatory reporters or employers of mandatory reporters. Appointments shall be for three-year staggered terms that shall expire on June 30. A member shall serve no more than three terms or nine years. The director shall fill any vacancy for the unexpired term of the vacancy. The director shall make all reasonable efforts to ensure that the total composition of the panel is fair, impartial, and equitable.

**93.2(2) Designation of officers.** The panel shall elect a chairperson and vice-chairperson at the first meeting of each fiscal year. A vacancy in the office of chairperson shall be filled by elevation of the vice-chairperson. A vacancy in the office of vice-chairperson shall be filled by election at the next meeting after the vacancy occurs. If the chairperson is absent or unable to act, the vice-chairperson shall perform the duties of the chairperson. The chairperson shall preside at all meetings of the panel, appoint such subcommittees as deemed necessary, and designate the chairperson of each subcommittee.

**93.2(3) Vacancies.** In the event a vacancy occurs prior to the completion of the panel member's term, the director shall fill the vacancy using the same criteria required in the selection of the original member. The director shall declare a vacancy upon the death, resignation, or failure to serve of any panel member.

**641—93.3(135) Meetings.** The panel shall meet as necessary and appropriate. Four members shall constitute a quorum, and no recommendations may be adopted without the affirmative vote of at least four members of the panel. The members of the panel shall be eligible for reimbursement of actual and necessary expenses for the performance of their official duties.

**641—93.4(135) Duties.** The panel shall perform the following duties:

1. Review and approve criteria for child and dependent adult abuse curricula for persons who work in a position classification that under law makes the persons mandatory reporters of child or dependent adult abuse and the position classification does not have a mandatory reporter training curriculum approved by a licensing or examining board.
2. Conduct literature reviews and scrutinize existing research pertinent to its purpose.
3. Review curricula based on the criteria established in rule 93.5(135).
4. Report decisions regarding approvals or denials to applicants.
5. Review appeals as provided in rule 93.7(135).
6. Maintain a list of all approved curricula and distribute the list upon request.

**641—93.5(135) Standards for approval of curricula.** The following criteria are established to assist in evaluation of curricula. Nothing in this rule shall preclude providers from offering additional coursework, training, or information that exceeds or expands upon the curriculum prescribed by the panel. At a minimum, approved curricula shall contain each of the following:

**93.5(1)** Content that necessitates at least two hours of training.

**93.5(2)** The definition of child abuse as defined in Iowa Code section 232.68(2) or the definition of dependent adult abuse as defined in Iowa Code section 235B.2(5) or both.

**93.5(3)** Training in the physical, psychological, behavioral, environmental, and other relevant indicators of child abuse as defined in Iowa Code section 232.68(2) or dependent adult abuse as defined in Iowa Code section 235B.2(5) or both.

**93.5(4)** Requirements and procedures for reporting suspected cases of abuse, including when to report, how to report, and to whom to report.

**93.5(5)** Review of the Code of Iowa and the Iowa Administrative Code pertaining to child or dependent adult abuse, including review of the classifications of mandatory reporters, confidentiality provisions, immunity provisions, and penalties for failure to report.

**93.5(6)** A description of the assessment protocol utilized by the department of human services and other investigating agencies following receipt of a report and the manner in which information is shared between the department of human services and the reporter, other relevant individuals, agencies, and entities.

**93.5(7)** An evaluation component to assess the understanding, knowledge, and skills acquired.

**93.5(8)** Resource materials or information in the following areas:

- a. The causes and risk factors of child or dependent adult abuse;
- b. Assisting individuals and families who have experienced child or dependent adult abuse, including information on local resources and available referral services;
- c. Prevention of child or dependent adult abuse.

**641—93.6(135) Process for application review and approval.**

**93.6(1)** *Submission and decision.* An organization, institution, agency, or individual may submit an application for approval of curriculum on a form prescribed by the panel. The application shall at a minimum demonstrate the manner in which the proposed curriculum meets the criteria in rule 93.5(135). Within three months of submission of an application, the panel shall review the application and issue a written decision regarding the application. If each of the standards for approval has been satisfied, the panel shall approve the curriculum for a period of three years and shall notify the applicant of the panel's decision in writing. If the standards for approval have not been met, the panel shall deny the curriculum and shall provide to the applicant a written explanation of the reason for denial.

**93.6(2)** *Renewal.* Within 90 days of expiration of the three-year approval period, an applicant may apply for approval renewal by completing a renewal of application form provided by the panel.

**93.6(3)** *Additional information.* The panel may request additional information from the applicant or other individuals at any phase in the review process.

**93.6(4)** *Evaluation of approved curriculum.* The panel may at any time reevaluate an approved curriculum. Upon evidence of a significant variation in the curriculum presented from the curriculum approved, the panel may disapprove all or any part of the previously approved curriculum.

**93.6(5)** *Amendment to approved curriculum.* The panel may require amendments to an approved curriculum based on legislative or administrative rule changes.

**641—93.7(135) Process for appeal.** A person aggrieved by a panel decision may, within 30 days of receipt of the decision, appeal the decision by submitting a written appeal to the chairperson which states the reason for the appeal. Within 60 days of receipt of the appeal, the panel shall review the application and any additional information submitted. If the panel finds that each of the standards for approval has been satisfied, the panel shall approve the curriculum. If the standards for approval have not been met, the panel shall deny the curriculum. The panel shall provide a written explanation of the reasons for the approval or denial of approval. This decision is the final action of the panel and shall be considered final agency action for purposes of judicial review. The appeal review process is not a contested case proceeding as that term is defined in Iowa Code chapter 17A.

These rules are intended to implement Iowa Code section 135.11 as amended by 2001 Iowa Acts, chapter 122, section 1.

[Filed 1/10/02, Notice 11/28/01—published 2/6/02, effective 3/13/02]

[Filed 7/13/07, Notice 6/6/07—published 8/1/07, effective 9/5/07]

CHAPTER 94  
CHILD PROTECTION CENTER GRANT PROGRAM

**641—94.1(135) Scope and purpose.** A child protection center grant program is established to provide grants to eligible applicants for the purpose of establishing new child protection centers and to support existing child protection centers. Grants may be available to eligible organizations that meet, or that are in the process of implementing, child protection center standards established by the National Children's Alliance. If sufficient funding is available, the program shall, at a minimum, award a grant to a child protection center in or available to each department of human services region in Iowa. Implementation of the grant program is subject to the availability of funding.

**641—94.2(135) Definitions.** For the purposes of these rules, the following definitions shall apply:

*"Child abuse"* means abuse as defined by Iowa Code section 232.68(2).

*"Child protection center"* or *"child advocacy center"* means a comprehensive, child-focused program, designed by communities to meet their needs, based in a facility that allows law enforcement, child protection professionals, prosecutors, and the mental health and medical communities to work together to handle child abuse cases. Child advocacy center is synonymous with child protection center.

*"Child protection worker"* means a worker as defined by Iowa Code section 232.68(2A).

*"Culturally competent"* means the capacity to function in more than one culture, requiring the ability to appreciate, understand and interact with members of diverse populations within the community.

*"Department"* means the Iowa department of public health.

*"Developmentally appropriate"* means that services are based on human development and learning, individual characteristics and experiences, social and cultural contexts.

*"Director"* means the director of the Iowa department of public health.

*"Family advocate"* means an individual who supports a child provided service through a child protection center and ensures access to formal or informal community services as needed by the child or the child's family.

*"Forensic interview"* means a face-to-face meeting between individuals to elicit information and that follows a process suitable for a law court or public debate.

*"Multidisciplinary team"* means individuals with many education levels that encompass the individuals' beliefs and training in fields of health, education, human service, justice, faith, and others.

**641—94.3(135) Goals.** A child protection center's goals for victims of child abuse allegations shall be:

1. To provide consistent and expedient response and follow-up to abuse reports.
2. Coordination of activities to investigate, prosecute, and treat child abuse.
3. To advocate for medical and mental health resources to effectively help the child and the child's family.
4. To reduce the number of interviews and interactions with a victim.
5. To provide consistent and compassionate support for the child and the child's family.
6. To ensure that the child is not further victimized by the system designed to protect the child.
7. To increase successful prosecutions.

**641—94.4(135) Review process.**

**94.4(1)** The department shall establish a request for proposal and application process for organizations eligible to receive funding. The department shall establish a process to review applications, which includes receiving input from a review committee. The review process and review criteria shall be described in the request for proposals.

**94.4(2)** The director shall create a committee to review proposals and make recommendations to the director. At a minimum, committee membership shall include representation from:

- a. State departments of human services, justice and public health;
- b. Iowa Medical Society;
- c. Iowa Hospital Association;

- d.* Iowa Nurses Association; and
- e.* Iowa chapter of the National Association of Social Workers.

**641—94.5(135) Eligibility and criteria.** To be eligible for a child protection center grant, an organization shall:

**94.5(1)** Have acquired partial membership rank as a child advocacy center from the National Children's Alliance and shall identify a plan to acquire full membership rank within one year of receiving a state grant.

**94.5(2)** Have in place an interagency memorandum of understanding which meets the requirements of Iowa Code section 135.118. The applicant shall provide in the application written information in the following areas:

- a.* Data, statistics and facts from an assessment of need and assets in the community to support a child protection center for children.
- b.* Identification of barriers to the child protection center to reach the purpose and goals for children as may exist in federal, state or local rules, regulations, codes, policies or procedures.
- c.* A plan to request and advocate waivers of federal, state, or local rules, regulations, codes, policies, or procedures to remove or reduce barriers.
- d.* The child protection center's access to information regarding all suspected or confirmed child abuse/neglect victims in the identified service area.
- e.* The child protection center's provision of 24-hour access to center staff for support, questions and referrals regarding child abuse.
- f.* Identification of matching local funds to support and sustain the child protection center in the community.
- g.* A plan for community education on prevention of child abuse and neglect.
- h.* Collaboration agreements with providers of human services, child health services, early education services, and all other potential community partners to support the purpose and goals of the child protection center.
- i.* The child protection center's ability to access and utilize alternate funds for activities provided.

**641—94.6(135) Appeals.** An applicant may appeal the denial of a properly submitted grant application. Appeals shall be governed by rule 641—176.8(135,17A).

These rules are intended to implement Iowa Code section 135.118.

[Filed 3/14/03, Notice 2/5/03—published 4/2/03, effective 5/7/03]

CHAPTER 95  
CERTIFICATE OF BIRTH—REGISTRATION FEE  
[Prior to 7/29/87, Health Department[470]Ch 95]

**641—95.1(144) Birth certificates—when filing fee required.** Registration of a certificate of birth shall be the following for the purpose of a registration fee being charged pursuant to Iowa Code section 144.13A: birth certificate filed pursuant to Iowa Code section 144.13; delayed certificates of birth established for persons less than 18 years of age, pursuant to Iowa Code section 144.15 or 144.18; birth certificates established for foreign-born adoptees pursuant to Iowa Code section 144.23.

The state and county registrar shall charge the parent \$10 registration fee for the registration of a certificate of birth. Partial payment of fee shall not be accepted.

For delayed certificates of birth the fee shall be charged to the individual filing the certificate.

For foreign-born adoptees the fee shall be charged to the adoptive parent or parents.

**641—95.2(144) Collection.** If the person responsible for the filing of the certificate of birth under Iowa Code section 144.13 is not the parent, the person shall collect the fee from the parent, and remit to the appropriate registrar.

The person is discharged from the duty to collect and remit the fee when the person has made a good faith effort to collect the fee from the parent or has established that the fee is to be waived.

**641—95.3(144) Waivers.** The fee for registration and certified copy of a certificate of birth shall be waived when the following circumstances exist.

**95.3(1)** The expenses of birth are reimbursed under the medical assistance program established by Iowa Code chapter 249A.

**95.3(2)** The expenses of birth are paid for under the statewide indigent patient care program established by Iowa Code chapter 249A or chapter 255.

**95.3(3)** The parent is indigent and unable to pay the expenses of the birth and no other means of payment is available to the parent.

**641—95.4(144) Fee deposit.** Fees collected by the county registrar and state registrar shall be accounted for as birth registration fees or certified copy fees and shall be remitted to the treasurer of state for deposit in the appropriate state fund.

**641—95.5(144) Responsibilities of institutions.** Institutions responsible for filing certificates of birth shall collect both the registration fee and fee for the certified copy from the parent. All fees shall be remitted to the state registrar with the appropriate copy of the completed Birth Registration and Certification Fee Summary Report.

**95.5(1)** Completion of the Birth Registration Certification Fee Summary Report documenting the fee status of each certificate of birth shall indicate:

1. Fees collected for the registration and certified copy.
2. The fees waived, as applicable, and reason.
3. No fee collected when good faith effort has been made.
4. Paternity affidavit completed.

**95.5(2)** All certificates of birth listed on the Birth Registration Certification Fee Summary Report shall be submitted together to the appropriate registrar. All fees shall be remitted to the state registrar with the appropriate copy of the completed Birth Registration and Certification Fee Summary Report.

**641—95.6(144) Local registrar.** Rescinded IAB 8/4/93, effective 7/16/93.

**641—95.7(144) County registrars.** For births which occur in institutions the county registrar shall review the Birth Registration Certification Fee Summary Report for completeness and correctness and verify that all certificates of birth correspond with those listed on the Birth Registration Certification Fee Summary Report.

**95.7(1)** For births filed directly with the county registrar, complete a Birth Registration Certification Fee Summary Report, collect the registration fee, the certified copy fee and forward report and fees to state registrar for deposit to appropriate accounts.

**95.7(2)** If the registration fee has not been collected or waived, provide notice to the parent that a fee is required for registration of a birth certificate and that the fee is due.

**95.7(3)** If the fee is paid or waived within six months of the receipt of the Birth Registration Certification Fee Summary Report, it shall be noted on the Birth Registration Certification Fee Summary Report. Fees shall be accounted for and forwarded to the state registrar for deposit to appropriate accounts.

Two weeks after notice of payment due has been sent, if no fee has been received, the uncollected fee will be referred to the county attorney of the county of residence of the parent.

**641—95.8(144) State registrar.** Review the Birth Registration Certification Fee Summary Report for completeness and correctness, verify that all certificates of birth correspond with those listed on the Birth Registration Certification Fee Summary Report, account for all fees and deposit fees.

**95.8(1)** For births filed directly with the state registrar, complete a Birth Registration Certification Fee Summary Report, collect the registration and certified copy, fees, and deposit fees.

**95.8(2)** If the fee has not been collected or waived, provide notice to the responsible party that a fee is required for registration of a birth certificate and that the fee is due.

**95.8(3)** If the fee is paid or waived within six months of the receipt of the Birth Registration Certification Fee Summary Report, it shall be noted on the Birth Registration Certification Fee Summary Report. Fees shall be accounted for and deposited.

Two weeks after notice of payment due has been sent, if no fee has been received, the uncollected fee will be referred to the county attorney of the county in which the birth occurred.

**641—95.9(144) Retention.** The Birth Registration Certification Fee Summary Report shall be retained for three years after the close of the fiscal year in which the fees are received.

**641—95.10(144) Forms.** For purposes of these rules the following forms are utilized: Hospital Birth Worksheet, CFN 220-0006; Birth Registration Certification Fee Summary Report, CFN 220-0242. These forms can be inspected or copied at the Iowa Department of Public Health, Fourth Floor, Lucas State Office Building, Des Moines, Iowa 50319-0075.

These rules are intended to implement Iowa Code chapter 144.

## CHAPTER 96 VITAL RECORDS

[Prior to 7/29/87, Health Department[470] Ch 96]

**641—96.1(144) Definitions.** Record(s) shall be the following for the purposes of general public accessibility:

*Record of death.* Record of death shall be the compilation of those entries of death contained in docket books reflecting the recording of the death event.

Record of death shall also be the Certificate of Death excluding all entries indicating that they are “confidential information,” “for statistical purposes only,” or otherwise indicated as confidential or statistical in nature on the face of the record.

*Record of dissolution or divorce.* Record of dissolution or divorce shall be the Statistical Report of Dissolution and Report of Divorce excluding all entries under that “Confidential Statistical Section,” or indicating the “Information for Statistical Purposes Only,” or otherwise indicated as confidential or statistical in nature on the face of the record.

*Record of live birth.* Record of live birth shall be the compilation of those entries of live birth contained in docket books reflecting the recording of the live birth event.

Record of live birth shall also be the Certificate of Live Birth excluding all entries indicating that “they will not appear upon the certificate,” “for medical and health purposes only,” “for statistical purposes only,” “confidential information,” or otherwise indicated as confidential or statistical in nature on the face of the record.

*Record of marriage.* Record of marriage shall be the compilation of those entries contained in docket books reflecting the recording of the marriage event.

Record of marriage shall also be the Certificate of Marriage excluding all entries indicating “confidential information,” “for statistical purposes only,” or otherwise indicated as confidential or statistical in nature on the face of the record.

This rule is intended to implement Iowa Code section 144.43.

**641—96.2(144) Specification.** The state registrar may require that a person requesting a copy of a vital record, examination, or search for a vital record specify in writing the name of the person whose vital records are to be copied, examined, or searched; the purpose of such request; the relationship of the person making the request to the registrant; and the signature and address of the person making the request.

This rule is intended to implement Iowa Code section 144.43.

**641—96.3(144) Handling.** Equipment or vital records shall not be physically handled except by the state registrar, deputy or authorized personnel. This rule shall not prevent copying vital records.

**641—96.4(144) Fees.** Effective January 1, 2005, the following fees shall be charged for the various services provided by the state registrar or the county registrar.

**96.4(1)** A fee of \$15 shall be charged for the preparation of an adoption certificate, for amending a certificate, for amending a certificate of birth to reflect legal change of name, and for the preparation of a delayed certificate, for processing any other administrative or legal action, and for the preparation of copies of supporting documents on file in the state registrar’s office.

**96.4(2)** A fee of \$15 shall be charged by the state registrar and a fee of \$15 shall be charged by the county registrar for each record search conducted and shall include the issuance of a copy if the record is located. A fee of \$15 shall be charged for each additional certified copy issued. If following a search no record is found, the \$15 fee shall be retained.

**96.4(3)** A fee of \$15 shall be charged by the state registrar for amending an abstract or other legal documentation in support of the preparation of a new certificate.

**96.4(4)** Any overpayment of less than \$15 received by the state registrar for copying of or search for vital records, or for preparation or amending of a certificate, shall not be refunded.

**96.4(5)** When an individual is in possession of a previously issued certified copy of a vital record and the original record is subsequently changed or amended, the individual may request and receive a certified copy of the changed record without charge, if the uncorrected certified copy is relinquished.

**96.4(6)** When a search is conducted by the person requesting the copy, a fee based on the average administrative costs as established by the county shall be charged for an uncertified copy of a county record. The fee shall be retained by the county.

**96.4(7)** All fees collected by the county registrar and the state registrar, with the exception of the fee in subrule 96.4(6), shall be distributed as follows.

*a. Fees collected by a county registrar.* The county registrar shall retain \$4 of all fees collected by that office. The balance of fees collected by the county registrar shall be divided as follows:

(1) For birth and marriage certificates, the state registrar shall receive \$8, and \$3 shall be deposited in the general fund of the state.

(2) For death certificates, the state registrar shall receive \$6, the office of the state medical examiner shall receive \$3, and \$2 shall be deposited in the general fund of the state.

*b. Fees collected by the state registrar.* The state registrar shall retain \$9 of all fees collected by that office. The balance of fees collected by the state registrar shall be divided as follows:

(1) For birth and marriage certificates, \$6 shall be deposited in the general fund of the state.

(2) For death certificates, the office of the state medical examiner shall receive \$3, and \$3 shall be deposited in the general fund of the state.

All fees retained by the state registrar shall be added to the fund established by the department for the modernization of vital records.

All fees received by the office of the state medical examiner shall be added to the fund established for the operation of that office and the contribution it makes to the modernization of vital records.

This rule is intended to implement Iowa Code section 144.46; 1993 Iowa Acts, chapter 55; 1994 Iowa Acts, chapter 1068, section 8; and 2004 Iowa Acts, Senate File 2298, section 104.

**<sup>1</sup>641—96.5(144) Additional statistical data.** Additional statistical data desired by the state registrar may be gathered on a separate sheet which may be attached to the marriage certificate. The statistical information sheet shall be clearly labeled, and data which is not required shall be clearly identified as optional. The statistical data sheet may be removed and forwarded to the department separate from the marriage certificate. Data collected by this means shall be considered as subject to Iowa Code section 144.43.

This rule is intended to implement Iowa Code chapter 144.

<sup>1</sup> Objection, see filed rules published IAC Supp. 6/14/76, 8/9/76

**641—96.6(144) General public accessibility.** At county level the general public shall have complete uncensored access and right to inspect all vital statistics records and information contained therein, except for that information specifically excluded by statute or definition for purposes of confidentiality.

**96.6(1)** There shall be complete uncensored access and a right to inspect all vital record docket books at the county level, when these dockets are purged of information categorized as confidential or private.

**96.6(2)** Access and the right to inspect all other vital records, nondocket, shall be on a document-by-document basis.

**96.6(3)** Upon request certified copies of vital records may be issued or made at county level, upon the payment of the required fee and demonstration of a verifiable direct and tangible interest. Uncertified copies of all vital records may be issued or made at county level, upon payment of a reasonable charge and demonstration of a verifiable direct and tangible interest.

**96.6(4)** Out-of-wedlock birth records prior to July 1, 1995. Accessibility: Records of out-of-wedlock births shall not be accessible to the public as of right under Iowa Code chapter 22 when they are in the custody of a county registrar.

For purposes of general public access and confidentiality, “out-of-wedlock” birth records shall be determined as follows:

a. Any record of birth where there is a reference or statement on the certificate or entry which directly indicates or specifies illegitimate or specified “no” regarding “born in wedlock” or “legitimate,” or

b. Any record of birth where there is reference or statement on the certificate or entry that either parent is “unknown,” “anonymous,” or there was a refusal to give parents’ name, or

c. Any certificate or entry which reflects the omission or absence of the name of the father of the child.

However, in all of the above paragraphs “a,” “b,” and “c” where the registrar has evidence from the record itself that the birth is a legitimate birth, the record of birth shall be accessible.

For out-of-wedlock births after July 1, 1995, filed at the county, accessibility will be as described in subrules 96.6(1), (2), and (3).

**96.6(5)** The state registrar may transmit to the appropriate local boards of health information from birth certificates for the sole purpose of identifying those children in need of immunizations. The state registrar may impose conditions to ensure that the use of the data is limited to official purposes.

This rule is intended to implement Iowa Code section 144.43.

**641—96.7(144) Direct tangible interest accessibility.** Certified copies of vital records may be issued or made at county level, upon the payment of the required fee for certification and demonstration of a verifiable direct and tangible interest. Uncertified copies of all vital records may be issued or made at county level, upon payment of a reasonable charge and demonstration of a verifiable direct and tangible interest.

The following persons shall be considered to have a direct tangible interest in requested records:

1. The registrant, a member of the registrant’s immediate family, legal representative or agent. Other persons may demonstrate a direct and tangible interest when it is shown the information needed is for the determination or protection of a personal or property interest.

“Legal representative” shall include an attorney, physician, funeral director, abstractor, insurance agent or an agent acting on behalf of the registrant or the registrant’s immediate family.

2. Applicants or their agents conducting family research satisfactorily demonstrating to the local custodian the existence of a direct and tangible interest. This is accomplished by substantiating a line of direct lineal consanguinity.

Direct lineal consanguinity is the existence of a line of descent in which one person is descended in a direct lineal relationship to another; as between a particular person and the person’s parent, grandparent, great-grandparent, and so upward, in the direct ascending line; or between a particular person and the person’s child, grandchild, great-grandchild and so downward in the direct descending line and any siblings of those persons. The county custodian shall require sufficient identification, such as name, address and relationship of all applicants requesting access under the criteria of direct and tangible interest. A written attestation by the applicant as to the applicant’s right to uncensored access may be required by the county custodian.

This rule is intended to implement Iowa Code section 144.3.

**641—96.8(144) County custodians’ responsibility for maintenance of confidentiality.** The state and county registrars shall maintain the confidentiality of all excluded material and information. Where records are such that this confidential information is included with accessible information, only accessible material and information shall be made available to the general public.

County custodians of vital records shall take all necessary steps to ensure the confidentiality of that information reflected on vital records that has been excluded from general public access. The county custodians must employ one or all of the following methods to ensure confidentiality:

1. Temporarily cover, by appropriate means, confidential material or information in such a manner as to allow access if needed at a later time.

2. If vital records are microfilmed, make a copy of the records from existing microfilm, eliminating the confidential material and information or cover the copy as above.

3. The county custodian will reproduce all vital records at county level eliminating the confidential material and information.

The county registrar may adopt reasonable charges to reflect the expenses for efforts required to allow general public access, examination and the assurance of confidentiality of this material and information pursuant to the authority of Iowa Code chapter 22. This fee is to be paid by those requesting these services as provided by the county custodian for supervising, copying or providing a suitable place for such work.

These rules are intended to implement Iowa Code sections 144.13 and 144.43.

CHAPTER 97

Rescinded, effective May 28, 1986.

CHAPTER 98  
FORMS UNIFORM

[Prior to 7/29/87, Health Department[470] Ch 98]

**641—98.1(144) Forms property of Iowa department of public health.** All forms, certificates and reports pertaining to the registration of vital events are the property of the Iowa department of public health and shall be surrendered to the state registrar or the registrar's representative upon demand. The forms supplied or approved for reporting vital events shall be used for official purposes as provided for by law, rules and instructions of the state registrar. No forms shall be used in the reporting of vital events or making copies of vital records except those furnished or approved by the state registrar.

**641—98.2(144) Preparation of certificates.** Death certificates must be prepared on a typewriter with a dark ribbon. All other certificates must either be prepared on a typewriter with a dark ribbon or written in dark, unfading ink. All signatures required shall be entered in dark, unfading ink. Unless otherwise directed by the state registrar, no certificate shall be complete and correct and acceptable for filing:

1. That does not have the names typed or printed legibly under all signatures for positive identification purposes;
  2. That does not supply all items of information called for thereon or satisfactorily accounts for their omission;
  3. That contains major alterations or erasures;
  4. That does not contain genuine signatures;
  5. That is marked "copy" or "duplicate";
  6. That is a carbon copy;
  7. That is prepared on an improper form;
  8. That contains obviously improper or inconsistent data;
  9. That is not prepared in conformity with these rules or instructions issued by the state registrar.
- These rules are intended to implement Iowa Code section 144.13A.

CHAPTER 99  
DELAYED BIRTH, DEATH AND MARRIAGE REGISTRATION  
[Prior to 7/29/87, Health Department[470] Ch 99]

**641—99.1(144) Foundling registration.** The certificate for a living infant of unknown parentage is to be filed on a regular live birth certificate and shall:

1. Have “foundling registration” plainly marked in the left top margin of the certificate;
2. Show the required facts as determined by approximation and have parentage data left blank;
3. Have the certification of the attendant changed to read “signature of custodian” indicating title, if any.

**641—99.2(144) Birth registration—five days to one year.** The registration of a birth after the statutory time prescribed for filing but within one year from the date of birth shall be registered on the standard form of live birth certificate. Such certificate shall not be marked delayed. In any case where the certificate is signed by one of the parents, a statement giving the reason why the certificate cannot be signed by the attendant must appear on the reverse side of the certificate. The state registrar may require additional evidence in support of the facts of birth or an explanation for the delay in filing in any case where there appears to be reason to question the adequacy of the registration.

**641—99.3(144) Delayed birth registration—after one year.** All births registered one year or more after the date of birth are to be registered on a special “delayed certificate of birth” form adopted by the state registrar.

**641—99.4(144) Who may file delayed certificate.** Any person born in Iowa and whose birth is not recorded in Iowa, or the person’s parent, guardian, next of kin or other person acting for the registrant and having personal knowledge of the facts of birth, may file a delayed certificate of birth with the state registrar.

**641—99.5(144) Delayed certificate to be signed.** Each delayed certificate of birth shall be signed and sworn to before an official authorized to administer oaths by the person whose birth is to be registered if such person is 16 years of age or over and is competent to sign and swear to the accuracy of the facts stated therein; otherwise, the certificate shall be signed and sworn to by one of the parents, the guardian, the next of kin, or if none of these exist, any other older person. In all cases when someone other than the applicant signs the certificate, such person must be older than the applicant and have personal knowledge of the facts of birth.

**641—99.6(144) Facts to be established for delayed registration of birth.** The minimum facts which must be established by documentary evidence shall be the following:

1. The full name of the person at the time of birth, except that an additional delayed certificate may reflect a name established by adoption or legitimation when such evidence is submitted;
2. The date of birth and place of birth;
3. The name of the mother;
4. The full name of the father, except that if the mother was not married to the father of the child at the time of birth or during the ten months preceding such birth, the name of the father shall not be entered on the delayed certificate unless the child has been adopted or legitimated or parentage has been determined by a court of competent jurisdiction or there is evidence of acknowledgment of paternity by both parents.

**641—99.7(144) Documentary evidence.**

**99.7(1)** To be acceptable for filing, the name of registrant and the date and place of birth entered on a delayed birth certificate shall be supported by at least:

- a. Two pieces of documentary evidence if filed within seven years after the date of birth; or
- b. Three pieces of documentary evidence if filed seven years or more after the date of birth.

**99.7(2)** Each document must be from an independent source. Facts of parentage need be supported by only one document which may be one of the documents above. Documents presented shall be in the form of the original record or a duly certified copy thereof or a certification statement from the custodian of the record or document.

**99.7(3)** All documents submitted in evidence must have been executed at least ten years prior to the date of application or have been established prior to the applicant's tenth birthday.

**99.7(4)** Rescinded IAB 8/4/93, effective 7/16/93.

**641—99.8(144) Abstraction and certification by state registrar.** The state registrar or the registrar's designated representative shall abstract on the delayed certificate of birth a description of each document submitted to support the facts on the delayed birth certificate. This description shall include:

1. The title or description of the document;
2. The name and address of the affiant if the document is an affidavit of personal knowledge or of the custodian if the document is an original or certified copy of a record or certification statement;
3. The date of the original filing of the document being abstracted;
4. The information regarding the birth and parentage contained in the document.

**641—99.9(144) Documents returned.**

**99.9(1)** The state registrar or authorized agent shall by signature certify:

- a. That no prior birth certificate is on file for the person whose birth is to be recorded;
- b. That the state registrar or authorized agent has reviewed the evidence submitted to establish the facts of birth;
- c. That the abstract of the evidence appearing on the delayed birth certificate accurately reflects the nature and content of the document.

**99.9(2)** All documents submitted in support of the delayed birth registration shall be returned to the applicant after review and abstraction.

**641—99.10(144) Cancellation after one year.** Delayed certificates not completed within one year may be canceled at the discretion of the state registrar. Upon cancellation, the state registrar shall return to the applicant all documents that have been submitted.

**641—99.11(144) Duties of county registrar.** Documentary evidence may be presented to the county registrar for review. If presented to the county registrar, the county registrar shall prepare an abstract for each document on a separate form provided by the state registrar. The abstracts along with the partially completed delayed certificate form and any affidavits that are being presented in evidence shall be transmitted to the state registrar for final determination of acceptability.

**641—99.12(144) Delayed registration of death records.**

**99.12(1)** The registration of a death after the statutory time prescribed for filing shall be registered on the standard form of death certificate in use at the time of registration.

**99.12(2)** If the attending physician or medical examiner at the time of death and the attending funeral director or person who acted as such are available to complete and sign the certificate of death, it may be completed without additional documentary evidence and filed with the state registrar. However, for those certificates filed one year or more after the date of death, the physician or medical examiner must state on the reverse side of the certificate that the information on the certificate is based on records kept in the files.

**99.12(3)** In the absence of the attending physician or medical examiner or the funeral director or person who acted as such, the certificate may be filed by a member of the immediate family of the deceased and shall be accompanied by:

- a. An affidavit of the person filing the certificate swearing to the accuracy of the information in the certificates;
- b. Two documents which identify the deceased and the date and place of death.

**99.12(4)** In all cases, the state registrar may require additional documentary evidence to prove the facts of death.

**641—99.13(144) Delayed registration of marriage records.**

**99.13(1)** A delayed certificate of marriage may be filed by the husband or wife or survivor if either party has died, or an adult son or daughter for any marriage performed in Iowa and not recorded within the statutory time prescribed for filing.

**99.13(2)** To be acceptable for registration by the state registrar, the delayed certificate of marriage must be supported by:

- a.* A copy of the license or the application for the license; and
- b.* A statement transcribed from the official records where the marriage was performed or of the person who performed the ceremony proving that there was a marriage and the date and place of such marriage. Such statements must be prepared and sworn to by the custodian of such records; or
- c.* An affidavit from one witness to the wedding ceremony swearing to the facts of the marriage.

**99.13(3)** The delayed certificate of marriage shall be the form of marriage certificate in use at the time of registration.

These rules are intended to implement Iowa Code sections 144.3, 144.15, 144.16, and 144.17.

CHAPTER 100  
ESTABLISHMENT OF NEW CERTIFICATES OF BIRTH  
[Prior to 7/29/87, Health Department[470] Ch 100]

**641—100.1(144) Certificates, forms.** The standard form of certificate of birth in use at the time of preparation of the new certificate of birth shall be used.

**641—100.2(144) Data required.** To establish a new certificate following legitimation or determination of paternity, the necessary data to locate the original record and appropriate parental data shall be on a form furnished or approved by the state registrar.

**641—100.3(144) Certificate following adoption.**

**100.3(1)** A new certificate of birth may be prepared by the state registrar for a child born in Iowa upon receipt of an adoption report or certified copy of an adoption decree from the courts of Iowa or the several states of the United States.

**100.3(2)** A new certificate of birth may be prepared by the state registrar for a child born in a foreign nation upon request of resident adoptive parent(s) and receipt of all of the following documents:

*a.* Authenticated adoption decree in both the foreign language and English containing the official signature of the translator or an adoption report or certified copy of an adoption decree from the courts of Iowa;

*b.* If the decree does not contain all required fields to establish the certificate of foreign birth, then an adoptee's authenticated birth certificate in the foreign language and the English translation containing the official signature of the translator;

*c.* Adoptee's original permanent residence card (green card) or passport containing the official stamped I-551 statement of temporary evidence of permanent residence;

*d.* Certified copy of the birth certificate of the adoptive parent(s); and

*e.* Notarized statement on letterhead from the licensed adoption agency or certified adoption investigator that establishes parental residency.

By the authority of Public Law 106-395, a foreign-born child adopted by a U.S. citizen after February 27, 2001, automatically becomes a U.S. citizen. A certificate of citizenship may be obtained from the Immigration and Naturalization Service, and a passport may be obtained from the Department of State.

**100.3(3)** The name reflected on the certificate shall be the child's name exactly as listed on the decree presented to the state registrar. A legal change of name issued pursuant to Iowa Code chapter 674 shall be required to change the name.

**100.3(4)** The state registrar shall collect the fee for processing and registering the birth.

**641—100.4(144) Certificate following legitimation.**

**100.4(1)** If the natural parents of a child intermarry after the birth of the child, a new certificate of birth may be prepared if the child was born in Iowa. However, if another man is shown as the father on the original certificate, a new certificate may be prepared only when a determination of paternity is made by a court of competent jurisdiction.

**100.4(2)** An affidavit of paternity prepared and signed by the natural parents and a certified copy of the parents' marriage record or a certified copy of the court determination of paternity must be submitted to the state registrar in order that a new certificate may be prepared.

**641—100.5(144) Certificate following determination of paternity.** A certified copy of the court determination of paternity along with the request of the mother that a new certificate be prepared must be submitted to the state registrar in order that a new certificate may be prepared.

**641—100.6(144) Minimum information required.** In addition to the information required by law, the new certificate shall also contain as a minimum the following items:

1. The name of the child;
2. The date and place of birth as transcribed from the original certificate;

3. The names and personal particulars of the adoptive parents or of the natural father;
4. The name of the attendant, printed or typed;
5. The same birth number as was assigned to the original certificate;
6. The original filing date.

**641—100.7(144) Original certificate to be sealed.** After preparation of the new certificate, the original certificate and the evidence upon which it was based are to be sealed and placed in a special file. The state registrar may inspect such sealed information for purposes of properly administering the vital statistics program.

These rules are intended to implement Iowa Code section 144.3.

CHAPTER 101  
DEATH CERTIFICATION, AUTOPSY AND DISINTERMENT  
[Prior to 7/29/87, Health Department[470] Ch 101]

**641—101.1(144) Report of autopsy findings.**

**101.1(1)** In cases where an autopsy is to be performed, it shall not be necessary to defer the entry of the cause of death pending a full report of microscopic and toxicological studies.

**101.1(2)** In any case where the gross findings of an autopsy are inadequate to determine the cause of death, the physician or medical examiner shall enter the cause as “pending” on the certificate and sign the certification. Immediately after the medical data necessary for determining the cause of death have been made known, the physician or medical examiner shall forward the cause of death to the registrar on a supplemental form provided by the state registrar and signed by the physician or medical examiner.

**101.1(3)** In any case where the autopsy findings significantly change the medical diagnosis of cause of death, a supplemental report of the cause of death shall be made by the physician or medical examiner to the registrar as soon as the findings are available. Such report shall be made a part of the original certificate.

**641—101.2(144) Attending physician not available.** An associate physician, who relieves the attending physician while on vacation or otherwise unavailable, may certify to the cause of death in any case where the associate physician has access to the medical history of the case, provided that the associate physician views the deceased at or after death occurs and the death is from natural causes. In all other cases in which a physician is unavailable, the medical examiner shall prepare the medical certification of cause of death.

**641—101.3(144) Hospital or institution may assist in preparation of certificate.** When death occurs in a hospital or other institution and the death is not under the jurisdiction of the medical examiner, the person in charge of such institution or the designated representative where the cause of death is known may aid in the preparation of the death certificate as follows:

Place the full name of the deceased, date and place of death on the death certificate blank and obtain from the attending physician the medical certification of cause of death and the signature of the attending physician;

Present the partially completed death certificate (identified by the name) and the completed medical certification to the funeral director or person who acted as such.

**641—101.4(135) Removal of dead body or fetus.**

**101.4(1)** Before assuming custody of a dead human body or fetus, any person shall:

- a.* Contact the attending physician and receive assurance that death is from natural causes and that the physician will assume responsibility for certifying to the cause of death or fetal death; or
- b.* If the case comes within the jurisdiction of the medical examiner, contact the medical examiner and receive authorization to remove the dead human body or fetus.

**101.4(2)** If a person other than a funeral director, medical examiner, or emergency medical service assumes custody of a dead human body or fetus, the person shall secure a burial-transit permit.

**641—101.5(144) Burial-transit permit.**

**101.5(1)** The burial-transit permit shall be issued upon a form prescribed by the state registrar and shall state:

- a.* The name, date of death, cause of death and other necessary details required by the state registrar;
- b.* That a satisfactory certificate of death has been filed;
- c.* That permission is granted to inter, remove or otherwise dispose of the body; and
- d.* The name and location of the cemetery or crematory where final disposition of the body is to be made.

The burial-transit permit shall be issued by the county medical examiner, a funeral director, or the county registrar of the county where the certificate of death or fetal death was filed.

**101.5(2)** The burial-transit permit shall be delivered to the person in charge of the place of final disposition.

**101.5(3)** The person in charge of every place of final disposition shall see that all of the requirements of this chapter relative to burial-transit permits have been complied with before disposition. Such person shall retain the burial-transit permit for a period of one year from the date of final disposition.

**101.5(4)** A burial-transit permit shall not be issued prior to the filing of a certificate of death or fetal death in the county where the death occurred.

**101.5(5)** A burial-transit permit shall not be issued to a person other than a licensed funeral director if the death or fetal death is of a suspected or known communicable disease as defined by 641—paragraph 1.2(1) “a.”

**101.5(6)** In all cases where a fetus has reached a gestation period of 20 completed weeks or more, or with a weight of 350 grams or more, a burial-transit permit must be obtained for the disposition of the fetus.

#### **641—101.6(135) Transportation and disposition of dead body or fetus.**

**101.6(1)** A dead human body or fetus shall be transported only after enclosure in a container for transfer that will control odor and prevent the leakage of body fluids, unless the body or fetus has been embalmed, or is being transported by a licensed funeral director, emergency medical service, or medical examiner. In addition, the transport of a dead human body or fetus shall be in a manner that, applying contemporary community standards with respect to what is suitable, is respectful of the dead, the feelings of relatives, and the sensibilities of the community.

**101.6(2)** When a dead human body or fetus is transported from the state, the burial-transit permit shall accompany the body or fetus. When a dead human body or fetus is brought into the state, a burial-transit permit under the law of the state in which the death occurred shall accompany the body or fetus.

**101.6(3)** If the final disposition of a dead human body or fetus is cremation at a licensed cremation establishment, scattering of cremated remains shall be subject to the local ordinances of the political subdivision, and any and all regulations of the cemetery, if applicable, in which the scattering site is located. However, such local ordinances and cemetery regulations shall not allow scattering of cremated remains upon state property or upon private property without the property owner’s consent. In the absence of an applicable local ordinance or cemetery regulation, scattering of cremated remains shall not be allowed upon any public property or upon private property without the property owner’s consent. Cremation shall be considered final disposition by the department and no further burial-transit permits shall be required.

**101.6(4)** If the final disposition of a dead human body or fetus is burial, interment or entombment, local ordinances of the political subdivision in which the final disposition site is located and any and all regulations of the cemetery, if applicable, shall apply. In the absence of an applicable local ordinance, the depth of the grave at its shallowest point shall be at least three feet from the top of the burial container.

#### **641—101.7(135,144) Disinterment permits.**

**101.7(1)** Disinterment permits shall be required for any relocation (above or below ground) of a body from its original site of interment. Disinterment permits shall be valid for 30 days after the date of issuance. Disinterment permits are to be issued on a four-copy form prescribed by the state registrar: one copy filed with the sexton or person in charge of the cemetery in which disinterment is to be made; one copy to be used during transportation; one copy filed with the sexton or person in charge of the cemetery of reinterment; and one copy to be returned within ten days after the date of disinterment by the funeral director or embalmer to the state registrar.

**101.7(2)** A dead body, properly prepared by an embalmer and deposited in a receiving vault, shall not be considered a disinterment when removed from the vault for final burial.

**641—101.8(144) Extension of time.** If the attending physician or medical examiner is unable to complete the medical certification of cause of death or if the funeral director is unable to obtain the personal information about the deceased within the statutory time period, the funeral director shall file a death certificate form completed with all information available. Such certificate shall be authority for the county registrar to issue a burial-transit permit. As soon as possible, but in all cases within 15 days, a supplemental report shall be filed with the local registrar providing the information missing from the original certificate.

These rules are intended to implement Iowa Code sections 135.11(9), 144.3 and 144.32.

CHAPTER 102  
CORRECTION AND AMENDMENT OF VITAL RECORDS  
[Prior to 7/29/87, Health Department[470] Ch 102]

**641—102.1(144) Application to amend records.**

**102.1(1)** To amend a birth certificate, application may be made only by one of the parents, the guardian, or the registrant if of legal age.

**102.1(2)** To amend a death or fetal death certificate, application shall be made by the next of kin or the funeral director or person acting as such. Corrections or amendments to the medical certification of cause of death shall be requested by the attending physician or the medical examiner. The physician or medical examiner may by affidavit amend the cause of death within 90 days following the date of death or fetal death. Any amendment after 90 days following death or fetal death can be made only by court order. Provided, however, that the cause of death may be amended at any point upon submission of a report of autopsy findings.

**102.1(3)** To amend a marriage record, application shall be made by the parties married, the officiant, or by the next of kin.

**102.1(4)** To amend a divorce record, a certification must be received from the clerk of court maintaining the record from which the report was prepared stating in what manner such record has been amended. Those items appearing on the divorce record which are not a part of the divorce decree may be corrected or amended either by query or upon application of the parties to the divorce or their legal representatives.

**641—102.2(144) Correction of minor errors within first year.** Corrections of obvious errors, transposition of letters in words of common knowledge, or omissions, may be made by the state registrar within the first year after the date of the event, either upon observation, upon query, or upon request of a person with a direct and tangible interest in the record. If such additions or minor corrections are made by the state registrar, a notation as to the source of the information, together with the date the change was made and the initials of the authorized agent making the change, shall be made on the record. Certificates corrected under this section are not to be marked amended.

**641—102.3(144) Amendments or major corrections.**

**102.3(1)** All other corrections or amendments unless covered elsewhere in these rules or in the law, shall be supported by:

*a.* An affidavit setting forth

- (1) Information to identify the certificate;
- (2) The incorrect data as it is listed on the certificate;
- (3) The correct data as it should appear.

*b.* One or more pieces of documentary evidence supporting the correction or amendment. If the application for correction or amendment is made one year or more after the event, the documentary evidence must be established at least five years prior to the date the correction or amendment is requested or within seven years of the date of event.

**102.3(2)** The state registrar may determine a priority of best evidence and may, upon discretion, require additional documentary evidence to support the requested correction or amendment. The state registrar shall evaluate the evidence submitted in support of any amendment, and when there is reason to question its validity or adequacy, the state registrar may reject the amendment and shall advise the applicant of the reasons for this action.

**641—102.4(144) Correction of same item more than once.** Once a correction of an entry is made on a vital record, that entry shall not be corrected again unless:

1. It can be shown that the first correction was made through mistake; or
2. A court order is received from a court of competent jurisdiction.

**641—102.5(144) Methods of amending certificates.** Corrections or amendments shall be made by drawing a single line through the incorrect item, if listed, and inserting the correct or missing data immediately above it or to the side of it, or by completing the blank item, as the case may be. In all cases where a line must be drawn through an original entry, it must not obliterate the original entry. In addition, there shall be inserted on the certificate, or in a separate file, a statement identifying the affidavit and documentary evidence used as proof of the correct facts and the date the correction was made. The word “amended” shall be placed on the certificate. In every case where the word “amended” is required to appear on the certificate, it shall appear on all copies of such certificates.

**641—102.6(144) Amendment of birth certificate by paternity affidavit.** A certificate of birth may be amended to show paternity, if paternity is not shown on the certificate, by submission of a sworn acknowledgment or affidavit signed by both parents. Where there is a legal finding of fact that the husband of the mother at time of conception or birth is not the biological father of the child, the husband’s name shall be removed. Subsequent to the removal of the husband’s name a sworn acknowledgment or affidavit may be used to establish paternity. The certificate shall not be marked as “amended.”

**641—102.7(144) Change of given names within first year.**

**102.7(1)** Until the registrant’s first birthday, given names may be added or changed upon written request of:

- a.* Both parents; or
- b.* The mother in the case of a child born out of wedlock or the death or incapacity of the father; or
- c.* The father in the case of the death or incapacity of the mother; or
- d.* The guardian in the case of the death or incapacity of both parents.

**102.7(2)** This procedure may be employed to change a given name only once. Thereafter, and at any time after the first year, the given name may be changed only upon submission of a court order.

**641—102.8(144) Addition of given names until seventh birthday.**

**102.8(1)** Until the registrant’s seventh birthday, the given name for a child whose birth was reported without a given name may be added based upon an affidavit signed by:

- a.* Both parents; or
- b.* The mother in the case of a child born out of wedlock or the death or incapacity of the father; or
- c.* The father in the case of the death or incapacity of the mother; or
- d.* The guardian or agency having legal custody of the registrant in the case of death or incapacity of both parents.

**102.8(2)** A certificate amended in this manner is not to be marked “amended.”

**641—102.9(144) Addition of given name after seventh birthday.** After the seventh birthday one or more pieces of documentary evidence must be submitted to substantiate the given name being added.

**641—102.10(144) Legal change of name.** For a legal change of name, a certified copy of the court order changing the name must be presented to the state registrar along with data to identify the birth certificate and a request that it be amended to show the new name.

These rules are intended to implement Iowa Code section 144.3.

CHAPTER 103  
CONFIDENTIALITY OF RECORDS  
[Prior to 7/29/87, Health Department[470] Ch 103]

**641—103.1(144) Disclosure of data.**

**103.1(1)** The state registrar or county registrar shall permit the inspection of a record or issue a certified copy of a record or part thereof only when satisfied that the applicant has a direct and tangible interest in the content of the record and that the information contained therein is necessary for the determination of a personal or property right.

*a.* A request from the registrant, a member of the immediate family, the guardian, or their respective legal representatives shall be considered to be a direct and tangible interest.

*b.* For the purpose of securing information or obtaining certified copies of vital records, the term legal representative shall include an attorney, physician, funeral director, insurance company, or an authorized agency acting in behalf of the registrant or the registrant's family.

*c.* For the purpose of securing and obtaining data from vital records, requests from natural parents of adopted children, in the absence of a court order, and requests from commercial firms or agencies requesting listings of names and addresses shall not be considered to be direct and tangible interest.

**103.1(2)** The state registrar may permit use of data of vital statistics records for research purposes subject to conditions the state registrar may impose to ensure that the use of the data is limited to such research purposes.

**103.1(3)** The state registrar or county registrar may disclose data from vital statistics records to federal, state, county or municipal agencies of government which request such data in the conduct of their official duties, subject to conditions the state registrar may impose to ensure that the use of the data is limited to official purposes.

**103.1(4)** Information in vital records indicating a birth occurred out of wedlock shall be released by the state registrar to the registrant, to the legal parent(s), to the legal grandparents, to the legal guardian, to their respective legal representatives, to an authorized agency acting on behalf of the registrant or upon order of a district court. Information may also be released to a legal descendant, or the descendant's authorized agent, who has direct and tangible interest and satisfactorily substantiates a direct lineal consanguinity.

**103.1(5)** Whenever it shall be deemed necessary to establish an applicant's right to information from vital statistics records, the state registrar or county registrar may require written application, identification of the applicant, or a sworn affidavit.

**103.1(6)** No data shall be furnished from records for research purposes until the state registrar has prepared in writing the conditions under which the records may be used and received an agreement signed by a responsible agent of the research organization agreeing to meet with and conform to such conditions.

**103.1(7)** The state registrar or the registrar's designee shall have the right to appoint volunteers to assist with vital records. All volunteers utilized for the purging project for vital records shall be responsible to, and under the direction of, the state registrar or designees. Volunteers will be screened by the state registrar or the registrar's designee prior to participation. This purging shall be done in a secure place maintained to ensure the confidentiality of the vital records in question.

All volunteers will be required to sign an oath swearing to abide by all appropriate statutes and rules applicable to nondisclosure of confidential information contained in accessed vital records. The volunteers' obligation of confidentiality is to be clearly spelled out in the agreement as well as all penalties which the volunteers may be subjected to if violations occur.

All volunteers serve without compensation.

These rules are intended to implement Iowa Code section 144.3.

CHAPTER 104  
COPIES OF VITAL RECORDS  
[Prior to 7/29/87, Health Department[470] Ch 104]

**641—104.1(144) Certified copies and verifications.** Certified copies of vital statistics certificates may be prepared and issued by the state registrar or the county registrar.

**104.1(1)** Full- or short-form certified copies of vital records may be made by mechanical, electronic, or other reproductive processes, except that the medical and health data on birth and fetal death certificates, other than the cause of fetal death, shall not be included.

**104.1(2)** When a certified copy is issued, each certification shall contain a statement certifying that the facts are the true facts recorded in the issuing office; the date issued; the name of the issuing office; the registrar's signature or an authorized facsimile thereof; and the seal of the issuing office.

**104.1(3)** Confidential verifications of the facts contained in vital statistics records may be furnished by the state registrar to any federal, state, county or municipal government agency or other entity representing the interest of the registrant. Such confidential verifications shall be on forms prescribed and furnished by the state registrar or on forms furnished by the requesting agency and acceptable to the state registrar, or the state registrar may authorize the verification in other ways.

**641—104.2(144) Cancellation of fraudulent records.** When the state registrar is satisfied that a certificate was registered through fraud or misrepresentation, the state registrar shall give to the person named in the certificate a notice in writing of the state registrar's intention to cancel said certificate. The notice shall give such person an opportunity to appear and show cause why the certificate should not be canceled. The notice may be served on such person, or in the case of a minor or incompetent, on parent or guardian by forwarding the notice by certified mail to the last-known address on file in the division. Unless such person or the parent or guardian shall within 30 days after the date of mailing the notice show cause satisfactory to the state registrar why the certificate shall not be canceled, the state registrar may cancel the certificate, and it shall not be available for certification.

These rules are intended to implement Iowa Code section 144.3.

CHAPTER 105  
DECLARATION OF PATERNITY REGISTRY

**641—105.1(144) Definitions.**

“*Child*” means a person under 18 years of age for whom paternity has not been established.

“*Court*” means the juvenile court.

“*Father*” means the male, biological parent of a child.

“*Putative father*” means a man who is alleged to be or who claims to be the biological father of a child born to a woman to whom the man is not married at the time of the birth of the child.

“*Registrant*” means a person who has registered and who claims to be the father of a child.

“*Registrar*” means the state registrar of vital statistics.

“*Registry*” means the declaration of paternity registry.

**641—105.2(144) Registry established.** There is established in the Bureau of Vital Records a registry for the declaration of paternity to be kept separately from paternity. The declaration may be filed prior to the birth of a child and no later than the date of the filing of a petition for termination of parental rights. Failure or refusal to file a declaration of paternity shall not be used as evidence to avoid a legally established obligation of financial support for a child.

**641—105.3(144) Information to be provided.** A person who files a declaration of paternity with the state registrar shall complete the correct form and provide all of the following:

1. Registrant’s name, current address, social security number, notarized signature and date.
2. The name, last known address, and social security number, if known, of the mother of the child.
3. The name of the child, if known, and the date and location of the birth of the child, if known.

A copy of the declaration of paternity shall be forwarded by the state registrar to the mother as notification that the person has registered if the mother’s name and address are known.

**641—105.4(144) Change of address.** The person who files the declaration will be responsible to notify the state registrar in writing of any change in address.

**641—105.5(144) Fees.** There shall be no fee required to file the declaration.

There shall be a fee charged for searches of the registry and the fee shall be the same as the fee charged for searches of other vital records as established by IAC 641—96.4(144). After a search is completed and no declaration of paternity is on file, a written statement to that effect shall be provided to the person making the inquiry. The fee shall be retained for the search.

**641—105.6(144) Access to registry information.** The information shall not be divulged to any other person and shall be considered a confidential record as to any other person, except upon order of the court for good cause shown.

The department shall, upon request, provide the name, address, and social security number of a registrant to the following:

1. The biological mother of the child;
2. A court;
3. The department of human services, child support recovery unit, for an action to establish paternity or support.
4. The attorney of any party to an adoption, termination of parental rights, or establishment of paternity or support action.

If the registry has not received a declaration of paternity, the department shall provide a written statement to that effect to the person making the inquiry.

**641—105.7(144) Revocation.** Information provided to the registry may be revoked by the registrant by submission of a written statement provided by the department, signed and acknowledged by the registrant before a notary public. The statement shall include a declaration that to the best of the registrant’s

knowledge, the registrant is not the father of the named child or that paternity of the true father has been established. Revocation shall be deemed a nullity and the information provided by the registrant shall be expunged. Revocation is effective only following the birth of the child.

**641—105.8(144) Forms.** All forms for the declaration of paternity shall be available from the state registrar of vital records and the county registrar which is the clerk of the district court located in each county.

These rules are intended to implement 1994 Iowa Acts, chapter 1174.

[Filed 11/10/94, Notice 8/31/94—published 12/7/94, effective 1/11/95]

CHAPTER 106  
REPORTING OF TERMINATION OF PREGNANCY

**641—106.1(144) Definitions.**

*“Aggregate form”* means a compilation of the information received by the department on termination of pregnancies for each information item listed, with the exception of the report tracking number, the health care provider code, and any set of information for which the number is so small that the confidentiality of any person to whom the information relates may be compromised.

*“Health care provider”* means an individual licensed under Iowa Code chapter 148, 148C, 148D, 150, 150A, or 152 or any individual who provides medical services under the authorization of the licensee.

*“Inducing a termination of pregnancy”* means the use of any means to terminate the pregnancy of a woman known to be pregnant with the intent other than to produce a live birth or to remove a dead fetus.

*“Spontaneous termination of pregnancy”* means occurrence of an unintended termination of pregnancy at any time during the period from conception to 20 weeks’ gestation and which is not a spontaneous termination of pregnancy at any time during the period from 20 weeks or greater which is reported to the department as a fetal death under this chapter.

**641—106.2(144) Report of termination of pregnancy.** A health care provider who initially identifies and diagnoses a spontaneous termination of pregnancy or who induces a termination of pregnancy shall file with the department a report for each termination. The health care provider shall make a good-faith effort to obtain all of the following information that is available with respect to each termination:

1. The confidential health care provider code as assigned by the department;
2. The report tracking number;
3. The maternal health services region of the Iowa department of public health, as designated as of July 1, 1997, in which the patient resides. If the patient resides in another state, the residence shall be reported as nonresident;
4. The race of the patient;
5. The age of the patient;
6. The marital status of the patient;
7. The educational level of the patient;
8. The number of previous pregnancies, live births, and spontaneous or induced termination of pregnancies;
9. The month and year in which the termination occurred;
10. The number of weeks since the patient’s last menstrual period and clinical estimate of gestation.

The health care provider who identifies a spontaneous or induced termination shall prepare the report on the standard form and forward to the state registrar on or before the tenth day of each calendar month all records for the preceding month. Reports shall be sent certified restricted mail to the Bureau of Vital Statistics. Termination reports shall be returned within 30 days of the date of occurrence. Forms shall be provided by the department.

**641—106.3(144) Confidentiality of released information.** The information shall be collected, reproduced, released, and disclosed in a manner which ensures the anonymity of the patient who experiences a termination of pregnancy, the health care provider who identifies and diagnoses or induces a termination of pregnancy, and the hospital, clinic, or other health facility in which a termination of pregnancy is identified and diagnosed or induced. The department may share information with federal public health officials for the purpose of securing federal funding or conducting public health research. However, in sharing the information, the department shall not relinquish control of the information, and any agreement entered into by the department with federal public health officials to share information shall prohibit the use, reproduction, release, or disclosure of the information by federal public health officials in a manner which violates this chapter. The department shall annually publish a demographic summary of the information obtained pursuant to this chapter, except that the department shall not

reproduce, release, or disclose any information obtained pursuant to this chapter which reveals the identity of any patient, health care provider, hospital, clinic, or other health facility, and shall ensure anonymity in the following ways:

**106.3(1)** The department may use information concerning the report tracking number or concerning the identity of a reporting health care provider, hospital, clinic, or other health facility only for purposes of information collection. The department shall not reproduce, release, or disclose this information for any purpose other than for use in annually publishing the demographic summary under this chapter.

**106.3(2)** The department shall enter the information, from any report of termination submitted, within 30 days of receipt of the report, and shall immediately destroy by shredding the report following entry of the information. However, entry of the information from a report shall not include any health care provider, hospital, clinic, or other health facility identification information including, but not limited to, the confidential health care provider code, as assigned by the department.

**106.3(3)** To protect confidentiality, the department shall limit release of information to release in an aggregate form which prevents identification of any individual patient, health care provider, hospital, clinic, or other health facility.

The department shall establish and use a methodology to provide a statistically verifiable basis for any determination of the aggregate level at which information may be released so that the confidentiality of any person is not compromised. The methodology shall consider both the counts of the events for each item of information and the population that could be represented.

**641—106.4(144) Confidentiality of reports submitted.** Reports, information, and records submitted and maintained pursuant to this chapter are strictly confidential and shall not be released or made public upon subpoena, search warrant, discovery proceedings, or by any other means.

**641—106.5(144) Provider codes.** The department shall assign a code to any health care provider who may be required to report a termination under this chapter. An application procedure shall not be required for assignment of a code to a health care provider.

A health care provider shall assign a report tracking number which enables the health care provider to access the patient's medical information without identifying the patient. The report tracking number shall be maintained by the provider for a period of six months after the end of the calendar year.

To ensure proper performance of the reporting requirements under this chapter, it is preferred that a health care provider who practices within a hospital, clinic, or other health facility authorize one staff person to fulfill the reporting requirements.

**641—106.6(144) Unlawful acts—punishment.** Any person who knowingly violates a provision of these rules is guilty of a serious misdemeanor.

These rules are intended to implement 1997 Iowa Acts, Senate File 128.

[Filed emergency 7/11/97 after Notice 6/4/97—published 7/30/97, effective 7/11/97]

CHAPTER 107  
MUTUAL CONSENT VOLUNTARY ADOPTION REGISTRY

**641—107.1(78GA, HF497) Definitions.**

*“Adult”* means an individual who has reached the age of 18 years at the time of making application to the registry.

*“Department”* means the department of public health.

*“Sibling”* means one of two or more persons born of the same parents or, sometimes, having one parent in common; brother or sister.

**641—107.2(78GA, HF497) Eligibility.** The state registrar shall establish a mutual consent voluntary adoption registry through which adult adopted children, adult siblings and the biological parents of adult adoptees may register to obtain identifying information. All identifying information maintained in the registry is confidential. Any person who discloses such information in violation of Iowa law is subject to criminal penalties. All requests shall be completed on the form provided by the department.

**107.2(1)** The state registrar shall reveal the identity of the biological parent to the adult adopted child or the identity of the adult adopted child to the biological parent if the following conditions are met:

- a.* A biological parent has filed a completed request form and provided consent to the revelation of the biological parent’s identity to the adult adopted child, upon request of the adult adopted child; and
- b.* An adult adopted child has filed a completed request form and provided consent to the revelation of the identity of the adult adopted child to a biological parent, upon request of the biological parent.

**107.2(2)** The state registrar shall reveal the identity of the adult adopted child to an adult sibling and shall notify the parties involved that the requests have been matched, and disclose the identifying information to those parties if all of the following conditions are met:

- a.* An adult adopted child has filed a completed request form and provided consent to the revelation of the adult adopted child’s identity to an adult sibling;
- b.* The adult sibling has filed a completed request form and provided consent to the revelation of the identity of the adult sibling to the adult adopted child; and
- c.* The state registrar has been provided sufficient information to make the requested match.

**641—107.3(78GA, HF497) Exception.** If the adult adopted person has a sibling who is a minor and who has also been adopted, the state registrar shall not grant the request of either the adult adopted person or the biological parent to reveal the identities of the parties.

**641—107.4(78GA, HF497) Application.** Application forms shall be provided by the department and shall be the only application accepted for registration. The adult adoptee, adult sibling, and biological parent completing an application shall be responsible for updating the contact information required.

**641—107.5(78GA, HF497) Notification.** Notification of parties shall be initiated via telephone at which time address information shall be verified and written notice sent to the parties involved. Written notice shall be mailed via certified mail with return notification requested.

**641—107.6(78GA, HF497) Withdrawal.** A person who has filed a request or provided consent may withdraw the consent at any time prior to the release of any information by completing and filing a written withdrawal of consent statement on the form provided by the department.

**641—107.7(78GA, HF497) Fees.** The state registrar shall collect a fee of \$25 for the filing of a completed application for the registry. A fee of \$2 shall be charged for updating applicant information maintained in the registry.

These rules are intended to implement 1999 Iowa Acts, House File 497, section 19.

[Filed 9/17/99, Notice 7/28/99—published 10/6/99, effective 11/10/99]

CHAPTER 108  
Reserved

CHAPTER 109  
PRESCRIPTION DRUG DONATION REPOSITORY PROGRAM

**641—109.1(135M) Definitions.** For purposes of this chapter, the following definitions apply:

*“Centralized repository”* means a distributor approved by the contractor and licensed pursuant to 657 IAC Chapter 17 that accepts donated drugs, conducts a safety inspection of the drugs, and ships the donated drugs to a local repository to be dispensed in compliance with this chapter and federal and state laws, rules and regulations.

*“Contractor”* means the third party approved by the department to implement and administer the prescription drug donation repository program.

*“Controlled substance”* means the same as defined in Iowa Code section 124.101.

*“Department”* means the Iowa department of public health.

*“Indigent”* means a person with an income that is below 200 percent of the federal poverty level (FPL) as defined by the most recently revised poverty income guidelines published by the United States Department of Health and Human Services.

*“Local repository”* means a pharmacy or medical facility that elects to accept and dispense donated drugs and that meets the eligibility requirements of rule 641—109.3(135M).

*“Medical facility”* means any of the following:

1. A physician’s office.
2. A hospital.
3. A health clinic.
4. A nonprofit health clinic, including a federally qualified health center as defined in 42 U.S.C. § 1396d(l)(2)(B); a rural health clinic as defined in 42 U.S.C. § 1396d(l)(1); and a nonprofit health clinic that provides medical care to patients who are indigent, uninsured, or underinsured.
5. A free clinic as defined in Iowa Code section 135.24.
6. A charitable organization as defined in Iowa Code section 135.24.
7. A nursing facility as defined in Iowa Code section 135C.1.

*“NDC #”* means the unique national drug code number that identifies a specific approved drug.

*“Nurse practitioner”* means an advanced registered nurse practitioner as defined in 655 IAC Chapter 7.

*“Pharmacist”* means a pharmacist as defined in Iowa Code section 155A.3.

*“Pharmacy”* means a pharmacy as defined in Iowa Code section 155A.3.

*“Physician”* means an individual licensed under Iowa Code chapter 148, 150, or 150A.

*“Prescription drug”* means the same as defined in Iowa Code section 155A.3 and includes cancer drugs and antirejection drugs, but does not include controlled substances.

*“Supplies”* means the supplies necessary to administer the prescription drugs donated.

*“USP”* means United States Pharmacopoeia.

**641—109.2(135M) Purpose.** The overall purpose of this chapter is to establish administrative rules in accordance with Iowa Code chapter 135M relative to the following:

1. Requirements for medical facilities and pharmacies to accept and dispense donated prescription drugs and supplies.
2. Eligibility criteria for individuals to receive donated prescription drugs and supplies.

**641—109.3(135M) Eligibility criteria for program participation by medical facilities and pharmacies.**

**109.3(1)** To be eligible for participation in the prescription drug donation repository program, a medical facility or pharmacy shall be in compliance with all applicable federal and state laws, including laws applicable to the storage and distribution of drugs and the appropriate licensure standards, and shall hold active, nonrestricted, state-issued licenses or registrations in good standing.

**109.3(2)** Participation in the prescription drug donation repository program is voluntary.

**109.3(3)** A pharmacy or medical facility may elect to participate in the prescription drug donation repository program by providing, on a form prescribed by the department and available on the program's Web page, written notification to the centralized repository of all of the following:

*a.* The name, street address, and telephone number of the pharmacy or medical facility, and any state-issued license or registration number issued to the pharmacy or medical facility, including the name of the issuing agency.

*b.* The name and telephone number of the responsible pharmacist, physician or nurse practitioner who is employed by or under contract with the pharmacy or medical facility.

*c.* A statement, signed and dated by the responsible pharmacist, physician or nurse practitioner, indicating that the pharmacy or medical facility meets the eligibility requirements under this rule and shall comply with the requirements of this chapter.

**109.3(4)** Withdrawal from participation. A pharmacy or medical facility may withdraw from participation in the prescription drug donation repository program at any time by providing written notice to the centralized repository on a form prescribed by the department and available on the program's Web page.

**641—109.4(135M) Standards and procedures for accepting donated prescription drugs and supplies.**

**109.4(1)** Any individual who is 18 years of age or older may donate legally obtained prescription drugs or supplies to the centralized repository or a local repository if the drugs or supplies meet the requirements of this rule, as determined by a pharmacist who is employed by or under contract with a drug repository.

**109.4(2)** No drugs that require storage temperatures other than normal room temperature as specified by the manufacturer or United States Pharmacopoeia shall be donated or accepted as part of the prescription drug donation repository program. Drugs that require storage temperatures other than normal room temperature as specified by the manufacturer or USP shall not be donated or accepted because of the increased potential for these drugs to become adulterated. Excluded from this restriction are drugs donated directly from a drug manufacturer.

**109.4(3)** Controlled substances shall not be donated or accepted. Pursuant to federal and state laws, a controlled substance cannot be returned or reused once the drug has been dispensed to a patient.

**109.4(4)** The centralized repository or a local repository may accept a prescription drug only if all of the following requirements are met:

*a.* The drug is in its original sealed and tamper-evident packaging. However, a drug in a single-unit dose or blister pack with the outside packaging opened may be accepted if the single-unit-dose packaging is undisturbed;

*b.* The drug has been stored according to manufacturer or USP storage requirements;

*c.* The packaging contains the lot number and expiration date of the drug. If the lot number is not retrievable, all specified medications will be destroyed in the event of a recall, pursuant to Iowa board of pharmacy rules;

*d.* The drug has an expiration date that is more than six months after the date that the drug was donated. However, a donated prescription drug bearing an expiration date that is six months or less after the date the prescription drug was donated may be accepted and distributed if the drug is in high demand and can be dispensed for use prior to the drug's expiration date;

*e.* The drug does not have any physical signs of tampering or adulteration, and there is no reason to believe that the drug is adulterated;

*f.* The packaging does not have any physical signs of tampering, misbranding, deterioration, compromised integrity or adulteration; and

*g.* All drugs shall be inventoried at the centralized repository or a local repository. The inventory shall include the name of the drug, strength of the drug, quantity of the drug, and the date of donation if the drug has been continually under the control of a health care professional. If the drug has not been continually under the control of a health care professional, the repository shall collect a donation form

provided by the prescription drug donation repository program that is signed by the person making the donation or that person's authorized representative.

**109.4(5)** A repository may accept supplies necessary to administer the prescription drugs donated only if all of the following requirements are met:

- a. The supplies are in their original, unopened, sealed packaging;
- b. The supplies are not adulterated or misbranded; and
- c. All supplies shall be inventoried at the centralized repository or a local repository. The inventory shall include a description of the supplies and the date donated. Such inventory shall be recorded on a form provided by the prescription drug donation repository program.

**109.4(6)** Drugs and supplies may be donated on the premises of a participating centralized repository or a local repository to a person designated by the repository. A drop box may not be used to deliver or accept donations.

**641—109.5(135M) Standards and procedures for inspecting and storing donated prescription drugs and supplies.**

**109.5(1)** A licensed pharmacist employed by or under contract with the centralized repository or a local repository shall inspect donated prescription drugs and supplies to determine, to the extent reasonably possible in the judgment of the pharmacist, that the drugs and supplies are not adulterated or misbranded, are safe and suitable for dispensing, and are not ineligible drugs or supplies. The pharmacist who inspects the drugs shall sign an inspection record stating the above and attach it to the copy of the inventory or donor record provided with the drugs. If a local repository receives drugs and supplies from the centralized repository, the local repository does not need to reinspect the drugs and supplies.

**109.5(2)** The centralized repository and local repositories shall store donated drugs and supplies in a secure storage area under environmental conditions appropriate for the drugs or supplies being stored. Donated drugs and supplies may not be stored with nondonated inventory. When donated drugs are not inspected immediately upon receipt, a repository shall quarantine the donated drugs separately from all dispensing stock until the donated drugs have been inspected and approved for dispensing under the program.

**109.5(3)** Repositories shall destroy donated noncontrolled substances that are not suitable for dispensing and make a record of such destruction according to board of pharmacy rule 657—8.8(124,155A). The destruction record shall be made in the same manner as prescribed for the record of return or destruction of a controlled substance in subrule 109.5(4).

**109.5(4)** Controlled substances shall not be accepted for donation.

a. Controlled substances submitted for donation shall be documented and returned immediately to the donor or the donor's representative that provided the drugs.

b. In the event controlled substances enter the centralized repository or a local repository and it is not possible or practicable to return the controlled substances to the donor or the donor's representative due to inability to identify the donor or the donor's representative or due to refusal by the donor or the donor's representative to receive them, abandoned controlled substances shall be documented and destroyed beyond reclamation pursuant to rules of the board of pharmacy examiners. Such destruction shall be performed by a pharmacist or other person that has authority to dispense controlled substances and shall be witnessed by another responsible adult employee of the repository.

**109.5(5)** If a repository receives a recall notification, the repository shall perform a uniform destruction of all of the recalled prescription drugs in the repository and complete the destruction information form for all donated drugs destroyed. If a recalled drug has been dispensed, the repository shall immediately notify the recipient of the recalled drug pursuant to established drug recall procedures.

**641—109.6(135M) Standards and procedures for dispensing donated prescription drugs and supplies.**

**109.6(1)** Donated drugs and supplies may be dispensed only if the drugs or supplies are prescribed by a health care practitioner for use by an eligible individual and are dispensed by a licensed pharmacist, physician or nurse practitioner.

**109.6(2)** A repository shall prioritize dispensing to an individual requesting drugs through the program as follows:

- a.* First, to an indigent individual;
- b.* Second, to an individual who has no active third-party prescription drug reimbursement coverage for the drug prescribed; and
- c.* Third, to any other individual if an indigent or uninsured individual is unavailable.

**109.6(3)** A repository shall dispense donated prescription drugs in compliance with applicable federal and state laws and regulations for dispensing prescription drugs, including all requirements relating to packaging, labeling, record keeping, drug utilization review, and patient counseling.

**109.6(4)** The centralized repository and a local repository shall remove the original donor's identification and the name of the dispensing pharmacy from the package prior to dispensing the drugs or supplies.

**109.6(5)** The centralized repository and a local repository shall be responsible for drug recalls and shall have an established mechanism to notify recipients in the event of a drug recall.

**109.6(6)** Prescription drugs or supplies donated under this program shall not be resold.

**109.6(7)** The participating centralized repository and local repositories may distribute drugs and supplies donated under this program to other participating repositories for use pursuant to the program. The repository distributing the drugs or supplies shall complete a transfer form.

**641—109.7(135M) Eligibility criteria for individuals to receive donated prescription drugs and supplies.**

**109.7(1)** An individual who requests drugs from the prescription drug donation repository program shall certify to the repository that the individual is a resident of Iowa and meets one or both of the following criteria:

- a.* Is indigent;
- b.* Has no active third-party prescription drug reimbursement coverage for the drug prescribed.

**109.7(2)** The local repository shall collect from each individual recipient a signed intake collection form provided by the department or its contractor.

- a.* The intake collection form shall attest that:
  - (1) The individual is a resident of the state of Iowa;
  - (2) The individual's income does not exceed 200 percent of the FPL;
  - (3) The individual is uninsured and has no prescription coverage or is underinsured and has no prescription coverage;
  - (4) The individual acknowledges that the drugs may have been donated; and
  - (5) The individual consents to a waiver of the requirement for child resistant packaging of the Poison Prevention Packaging Act.

*b.* The intake collection form will include an identification card to be given to the recipient for continued use for one year.

**109.7(3)** The identification card is valid for one year or until the new federal poverty guidelines have been published for all prescriptions and supplies.

**109.7(4)** A summary of data taken from the intake collection form is to be sent via regular mail, E-mail or facsimile to the centralized repository for data collection.

**641—109.8(135M) Forms and record keeping.**

**109.8(1)** The following forms developed for the administration of this program shall be utilized by participants of the program and are available on the program's Web page on the department's Web site, [www.idph.state.ia.us](http://www.idph.state.ia.us).

- a. Prescription drug donation repository program notice of participation or withdrawal.
- b. Prescription drug donation repository program donation, transfer, inventory or destruction record.
- c. A record of medications dispensed.

**109.8(2)** The prescription drug donation repository program recipient data collection form and identification card are given to the recipient by the local repository, and the completed data collection form is collected from the recipient by the local repository.

**109.8(3) Record-keeping requirements.**

a. All records required to be maintained as a part of the prescription drug donation repository program shall be maintained for a minimum of five years by participating pharmacies and medical facilities.

b. Records required as part of this program shall be maintained pursuant to all current applicable practice acts.

c. Data collected by the prescription drug donation repository program from all participating repositories shall be submitted quarterly or upon request to the centralized repository. The data will consist of the information collected in accordance with 641—109.8(135M), Forms and record keeping.

d. The centralized repository and the contractor shall submit reports to the department as required by the contract or upon request of the department.

**641—109.9(135M) Handling fee.** A repository may charge the recipient of a donated drug a handling fee, not to exceed a maximum of 200 percent of the Medicaid professional dispensing fee as established by rule of the department of human services, to cover stocking and dispensing costs. A prescription drug dispensed through the prescription drug donation repository program shall not be eligible for reimbursement under the medical assistance program.

**641—109.10(135M) List of drugs and supplies program will accept.** All prescription drugs, excluding controlled substances, that have been approved for medical use in the United States, that are listed in the USP or National Formulary (USP/NF), and that meet the criteria for donation established by these rules may be accepted for donation under the prescription drug donation repository program.

**641—109.11(135M) Exemption from disciplinary action, civil liability and criminal prosecution.**

**109.11(1)** A drug manufacturer acting reasonably and in good faith is not subject to criminal prosecution or civil liability for injury, death, or loss to a person or property for matters related to the donation, acceptance, or dispensing of a prescription drug manufactured by the drug manufacturer that is donated under this chapter, including liability for failure to transfer or communicate product or consumer information or the expiration date of the donated prescription drug.

**109.11(2)** Except as provided in subrule 109.11(3), a person other than a drug manufacturer subject to subrule 109.11(1), acting reasonably and in good faith, is immune from civil liability and criminal prosecution for injury to or the death of an individual to whom a donated prescription drug is dispensed under this chapter and shall be exempt from disciplinary action related to the person's acts or omissions related to the donation, acceptance, distribution, or dispensing of a donated prescription drug under this chapter.

**109.11(3)** The immunity and exemption provided in subrule 109.11(2) does not extend to any of the following:

- a. The donation, acceptance, distribution, or dispensing of a donated prescription drug under this chapter by a person if the person's acts or omissions are not performed reasonably and in good faith.
- b. Acts or omissions outside the scope of the program.

These rules are intended to implement Iowa Code chapter 135M.

CHAPTER 110  
CENTER FOR RURAL HEALTH  
AND PRIMARY CARE

**641—110.1(135) Purpose and scope.** The following rules developed by the department of public health govern the organization of the center for rural health and primary care within the bureau of health delivery systems of the department of public health.

**641—110.2(135) Definitions.**

*“Area health education center (AHEC)”* means the linking of university health centers with community-based delivery systems in order to improve delivery of health care.

*“Center for rural health and primary care”* means the department of public health administrative entity that is responsible for provision of technical planning assistance to rural communities and counties, administration of a comprehensive primary care provider recruitment and retention endeavor, coordination of services to provide research of rural occupational health injuries and hazards, and coordination with the following: the center for agricultural health and safety, the center for health effects of environmental contamination, and the department of agriculture and land stewardship.

*“Center for rural health and primary care advisory committee”* means a group of individuals appointed by the governor, department directors and the Iowa legislature whose purpose is to provide advice and make recommendations on rural health issues to the center for rural health and primary care, department of public health.

*“Community grant program”* means a program that provides assistance in the form of a forgivable loan, grant, or other nonfinancial assistance to communities, to support the effort of a community which is part of the community’s long-term community health services assessment and developmental plan.

*“Community health services assessment and developmental plan”* means a comprehensive health services assessment and plan which has been developed through a community-wide collaborative effort of public and private entities, including citizens at large, located in rural communities.

*“Department”* means the Iowa department of public health.

*“Director”* means the director of the department of public health.

*“Primary care collaborative work group”* means a group of individuals who, at a minimum, represent the following entities, who are responsible for coordination of all statewide recruitment and retention activities and for recommendations related to the implementation of the primary care provider recruitment and retention endeavor (PRIMECARRE): University of Iowa college of medicine, University of Osteopathic Medicine and Health Sciences, University of Iowa physician assistant school, University of Iowa nurse practitioner school, University of Osteopathic Medicine and Health Sciences physician assistant program, Iowa-Nebraska primary care association, Iowa medical society, Iowa osteopathic medical association, Iowa chapter of American college of osteopathic family physicians, Iowa academy of family physicians, nurse practitioner association, Iowa nurses association, Iowa hospital association, and Iowa physician assistants association.

*“Primary care health professional”* means an individual who is providing primary health services, and is licensed to practice in the state of Iowa.

*“Primary care provider community scholarship program”* means a scholarship program that provides obligated-service scholarships to eligible health professional students for qualifying educational expenses incurred to obtain the credentials in that profession in return for providing primary care services in health professional shortage areas in the state.

*“Primary care provider loan repayment program”* means a loan repayment for qualifying loans to eligible health professionals who choose to establish practices in designated health professional shortage areas of the state.

*“Primary care provider recruitment and retention endeavor (PRIMECARRE)”* means a comprehensive primary health care initiative to promote and assist local efforts in developing health care provider recruitment and retention programs, and which includes a community grant program, a

primary care provider loan repayment program, primary care provider community scholarships, and area health education centers.

*“Primary health services”* means health services regarding family practice, internal medicine, pediatrics, obstetrics and gynecology, dentistry, or mental health that are provided by physicians or other health professionals.

**641—110.3(135) Responsibilities of the center.**

**110.3(1)** The center for rural health and primary care shall provide technical planning assistance to rural communities and counties exploring innovative means of delivering rural health services through community health services assessment, planning, and implementation, including but not limited to hospital conversions, cooperative agreements among hospitals, physician and health practitioner support, recruitment and retention of primary health care providers, public health services, emergency medical services, medical assistance facilities, rural health care clinics, and alternative means which may be included in the long-term community health services assessment and developmental plan.

**110.3(2)** The center for rural health and primary care shall encourage collaborative efforts of the local boards of health, hospital governing boards, and other public and private entities located in rural communities to adopt a long-term community health services assessment and developmental plan.

**110.3(3)** The center for rural health and primary care shall provide technical assistance to assist rural communities in improving Medicare reimbursements or establishing additional sources of funding through initiatives such as rural health clinics, distinct part skilled nursing facility beds, and the swing-bed program.

**110.3(4)** The center for rural health and primary care shall coordinate services to provide research for the following:

- a.* Examination of the prevalence of rural occupational health injuries in the state.
- b.* Assessment of training and continuing education available through local hospitals and others relating to diagnosis and treatment of diseases associated with rural occupational health hazards.
- c.* Determination of continuing education support necessary for rural health practitioners to diagnose and treat illnesses caused by exposure to rural occupational health hazards.
- d.* Determination of the types of actions that can help prevent agricultural accidents, surveillance and reporting of disabilities suffered by persons engaged in agricultural-related injuries and diseases in the state.
- e.* Identifying causal factors associated with agricultural-related injuries and diseases, and indicating the effectiveness of intervention programs designed to reduce injuries and diseases.
- f.* Cooperation with the center for agricultural health and safety, the center for health effects of environmental contamination and the department of agriculture and land stewardship, to coordinate programs to the extent practicable.

**110.3(5)** The center for rural health and primary care shall administer grants for farm safety education efforts directed to rural families for the purpose of preventing farm-related injuries to children.

**110.3(6)** The center for rural health and primary care shall administer a primary care provider recruitment and retention endeavor (PRIMECARRE).

**110.3(7)** The department of public health shall, in cooperation with the primary care collaborative work group, coordinate the initiative for the development of area health education centers, including making application for a federal grant.

**641—110.4(135) Advisory committee to the center for rural health and primary care.**

**110.4(1)** The purpose of the advisory committee is to provide advice and make recommendations on rural health issues to the center for rural health and primary care, department of public health.

**110.4(2)** The advisory committee will provide the expertise and technical assistance necessary to review and recommend policies pertinent to rural health issues, as well as guidelines for grants and other programs of the center for rural health and primary care.

**110.4(3)** The advisory committee will review reports prepared for the general assembly and make recommendations regarding the reports compiled.

**110.4(4)** The advisory committee will evaluate new care delivery concepts arising to meet the needs of the rural population.

**641—110.5(135) Organization.** The advisory committee to the center for rural health and primary care shall consist of one representative, approved by the respective agency, of each of the following agencies: the department of agriculture and land stewardship, the Iowa department of public health, the department of inspections and appeals, the national institute for rural health policy, the social and behavioral research center for rural health, the institute of agricultural medicine and occupational health, and the Iowa state association of counties. The governor shall appoint two representatives of consumer groups active in rural health issues and a representative of each of two farm organizations active within the state, a representative of an agricultural business in the state, a practicing rural family physician, a practicing rural physician assistant, a practicing rural advanced registered nurse practitioner, and a rural health practitioner who is not a physician, physician assistant, or advanced registered nurse practitioner, as members of the advisory committee. The advisory committee shall also include as members two state representatives, one appointed by the speaker of the house of representatives and one by the minority leader of the house, and two state senators, one appointed by the majority leader of the senate and one by the minority leader of the senate.

**641—110.6(135) Meetings.**

**110.6(1) Meeting dates.** The advisory committee shall meet at least quarterly to conduct its business. Meetings can be scheduled as business requires, but notice to committee members must be at least five working days prior to the meeting date. The administrative head of the center for rural health and primary care shall attend these meetings.

**110.6(2) Meeting procedures.** Robert's Rules of Order shall govern at all meetings.

**110.6(3) Quorum.** A majority of the total membership shall constitute a quorum. Action can be taken by a vote of the majority of the membership.

**110.6(4) Vacancies.** Vacancies will be filled in the same manner as was prescribed in the Code of Iowa. In the case of a vacancy the chairperson will notify the agency of the need to appoint another representative.

**110.6(5) Term of appointment.** Unless otherwise specified by law, term of appointment is for two years with no more than three consecutive terms, excepting the department of public health representative. Exceptions for individual reappointment from organizations represented shall be determined by the director of public health.

**110.6(6) Subcommittees.** The advisory committee for the center for rural health and primary care may designate one or more subcommittees to have such powers and perform such duties as may be deemed necessary by the committee.

**641—110.7 to 110.10** Reserved.

PRIMECARRE COMMUNITY GRANT PROGRAM

**641—110.11(135) Purpose.** The purpose of the PRIMECARRE community grant program is to support community efforts which are part of the community's long-term community health services assessment and developmental plan. A community or region applying for assistance must complete a community health services assessment and adopt a long-term developmental plan. The community may request assistance with the assessment from the center for rural health and primary care. The long-term developmental plan shall include a clear commitment to informing high school students of the health care opportunities which may be available to such students. The grant assistance may be in the form of a forgivable loan, grant, or other nonfinancial assistance as deemed appropriate by the center for rural health and primary care. Grants or other assistance provided by the center are intended to promote and accommodate local creativity in efforts to recruit and retain health care professionals to provide services in the locality. Notice of the availability of these public funds shall be published in the Iowa Administrative Bulletin in accordance with 641—Chapter 176.

**110.11(1) Eligibility.** The following requirements must be met in order to be eligible for the program:

- a. The applicant must be a single community with a population of 10,000 or less, or a region consisting of communities with populations of 10,000 or less, respectively.
- b. The community or region must have illustrated efforts to meet the health care provider needs of the locality and surrounding area.
- c. The community or region must have completed a community health services assessment and adopted a long-term developmental plan as established herein.
- d. A letter of intent must be submitted by January 1 preceding the year for which application for assistance is to be made.

**110.11(2) Funding limitations.** Grants awarded under the program shall be subject to the following limitations:

- a. An award of no more than \$10,000 for a single community or region with a population of 10,000 or less.
- b. An award of no more than \$1 per capita for a region in which the population exceeds 10,000.

**110.11(3) Use of funds.** Funds may be used for the following:

- a. The procurement of clinical equipment, clinical facilities, and telecommunications facilities.
- b. Support for locum tenens arrangements and primary care provider mentor programs.
- c. Other capacity-building activities as they relate to recruitment and retention of primary health care providers.

**110.11(4) Matching requirements.** Applications submitted shall contain a commitment of at least a dollar-for-dollar match of the grant assistance.

**110.11(5) Application process.** Applicants for grant funds must complete application forms provided by the department. Application materials shall be made available by the department at least 45 days prior to the application due date. Grant applications will be issued in accordance with 641—Chapter 176.

**110.11(6) Selection criteria and review process.** Selection criteria will be based on illustrated efforts to meet the health care provider needs of the locality and surrounding area. Selection criteria and the process for evaluation of applications shall be described in the application materials provided by the department. A competitive grant application review committee shall be appointed by the administrative head of the center for rural health and primary care. Grants will be awarded according to review criteria developed by the center, in accordance with 641—Chapter 176.

**110.11(7) Notice of grant award.** The director of public health shall notify all applicants in writing of the decision of grant awards.

**110.11(8) Appeals.** Applicants with a denied request for funding may appeal the decision of grant awards. The appeal shall be made in writing to the director, Iowa department of public health, within 10 days of the notification date of the grant awards decision. The appeal shall be mailed by certified mail, return receipt requested, or delivered by personal service. The decision of the director of public health becomes the department's final action and shall be sent by certified mail, return receipt requested, or delivered by personal service within 14 days of the receipt of the appeal.

**110.11(9) Grantee oversight.** The department shall monitor the use of funds granted to communities to ensure accountability and conformance with legislative intent. Oversight processes shall be described in the application materials provided by the department.

**641—110.12 to 110.15** Reserved.

PRIMECARRE PRIMARY CARE PROVIDER  
COMMUNITY SCHOLARSHIP PROGRAM

**641—110.16(135) Purpose.** A primary care provider community scholarship program is established to recruit and to provide scholarships to train primary health care practitioners in federally designated health professional shortage areas of the state. If sufficient state funds are available, applications will be considered for scholarship placement in communities not located in federally designated shortage areas. Under the program, scholarships may be awarded to a recipient for educational expenses incurred

while completing an accredited health education program directly related to obtaining the credentials necessary to practice the recipient's health profession. Notice of the availability of these public funds shall be published in the Iowa Administrative Bulletin in accordance with 641—Chapter 176.

**110.16(1) *Student eligibility.*** The following requirements must be met by students in order to be eligible for the program:

- a.* The status of the student's citizenship must meet requirements of the National Health Service Corps scholarship program.
- b.* The student must be enrolled or accepted for enrollment as a student in an accredited primary care health professions program, and meet eligibility requirements of Section 338A of the Public Health Service Act as amended November 16, 1990, by Public Law 101-597.
- c.* The student must agree, while enrolled in a health professional school, to maintain an acceptable level of academic standing as determined by the school.
- d.* The student must agree to meet educational and licensure requirements necessary to become a licensed primary care health professional in the state.
- e.* The student must agree to provide full-time primary health care services in a designated shortage area in the state for the minimum number of years required by federal programs providing funding support for the program.
- f.* The student must agree not to discriminate on the basis of the ability of the individual to pay for such care or on the basis that payment for such care will be made pursuant to the program established in Title XVIII (Medicare) of the Social Security Act, or pursuant to the program established in Title XIX (Medicaid) of such Act.
- g.* The student must agree to accept assignment under Section 1842(b)(3)(B)(ii) of the Social Security Act for all services for which payment may be made under Part B of Title XVIII and agree to enter into an appropriate agreement with the state agency that administers the state plan for medical assistance under Title XIX of such Act to provide service to individuals entitled to medical assistance under the plan.
- h.* The student must complete an application form provided by the Iowa department of public health.

**110.16(2) *Site eligibility.*** The following requirements must be met, in order for a site to be eligible for placement of PRIMECARRE scholars:

- a.* The site must be located in a designated health professional shortage area in the state.
- b.* The site must agree to accept Medicare/Medicaid assignment.
- c.* The site must have a sliding fee schedule in place that is based upon the ability to pay.
- d.* The site must have completed a community health services assessment and adopted a long-term developmental plan.
- e.* The site must be part of a system of care. For the purpose of receiving federal assistance, a system of care is defined as a service continuum that includes comprehensive primary care for all regardless of ability to pay, and appropriate arrangements for secondary and tertiary care, including a referral system and arrangements for call coverage.
- f.* The site must complete an application form provided by the department.
- g.* The site must agree to report to the department those health professionals unable to fulfill the contract.
- h.* The site must meet matching funds requirements consistent with current federal requirements.

**110.16(3) *Federal grant requirements.*** Use of federal grant dollars for scholarships requires that eligibility be determined as authorized by federal grant requirements.

**110.16(4) *Funding limitations.*** Scholarships awarded under this program shall be determined annually, based upon the legislative appropriation for the PRIMECARRE initiative and other sources of funds.

**110.16(5) *Other sources of funds.*** The department of public health shall seek participation in federal programs supporting scholarships for health care providers and shall accept gifts, grants, and other aid or amounts from any person, association, foundation, trust, corporation, governmental agency, or other entity for the purposes of the program.

**110.16(6) *Review process.*** The department of public health shall establish a review committee which will review all community applications and make recommendations for scholarship awards. The department shall provide the review committee with a methodology for prioritization of federal shortage areas and eligible nonfederal shortage areas to be utilized in the application review process. The department of public health shall provide the review committee with the criteria and scoring methodology to be used in reviewing the applications, in accordance with 641—Chapter 176.

**110.16(7) *Contract oversight and administration.*** The department of public health shall establish and enforce the terms of the contract, including implementation of any methods, including legal action, that may be necessary to recoup scholarship funds in the event of failure on the part of an individual scholarship recipient to fulfill the terms and conditions of the contract. The department shall take into consideration mitigating circumstances which may prohibit a recipient from fulfilling the recipient's contractual obligation or for whom fulfilling the obligation would cause undue hardship. The department of public health shall also provide for cancellation of contracts for reasonable cause to be determined by the department.

**110.16(8) *Appeals.*** A community with a denied request for funding may appeal the decision of scholarship awards. The appeal shall be made in writing to the director, Iowa department of public health, within 10 days of the notification date of the grant awards decision. The appeal shall be mailed by certified mail, return receipt requested, or delivered by personal service. The decision of the director of public health becomes the department's final action and shall be sent by certified mail, return receipt requested, or delivered by personal service within 14 days of the receipt of the appeal.

**641—110.17 to 110.20** Reserved.

PRIMECARRE PRIMARY CARE PROVIDER LOAN REPAYMENT PROGRAM

**641—110.21(135) Purpose.** A primary care provider loan repayment program is established to increase the number of health professionals practicing primary care in federally designated health professional shortage areas of the state. If sufficient state funds are available, applications will be considered for loan repayment for primary care providers practicing in communities not located in federally designated shortage areas. Under the program, loan repayment may be made to a recipient for educational loans incurred while completing an accredited health education program directly related to obtaining credentials necessary to practice the recipient's health profession. Notice of the availability of these public funds shall be published in the Iowa Administrative Bulletin in accordance with 641—Chapter 176.

**110.21(1) *Health care professional eligibility.*** The following requirements must be met by health care professionals in order to be eligible for the program:

*a.* The status of the health care professional's citizenship must meet requirements of the National Health Service Corps loan repayment program.

*b.* The health care professional must be licensed or certified to practice in the state of Iowa as a primary care health professional as defined in 110.2(135) and approved by the state for purposes of program priorities and requirements. Physicians must have completed a primary care residency and be board-eligible or board-certified.

*c.* The health care provider must possess evidence of a contractual agreement to practice full-time at a site in a designated shortage area within the state and approved by the state for the minimum number of years required by federal programs providing support for the program.

*d.* The health care provider must agree to comply with all contract provisions and the rules and regulations as promulgated by the department.

*e.* The health care provider must possess a license that is not restricted by a medical regulatory authority of any jurisdiction of the United States, other nations, or territories.

*f.* The health care professional must be eligible under Section 338B of the Public Health Service Act as amended November 16, 1990, by Public Law 101-597.

g. The health care provider must agree to provide full-time primary health care services at a clinical site in a designated health professional shortage area.

h. The health care provider must agree not to discriminate on the basis of the ability of the individual to pay for such care or on the basis that payment for such care will be made pursuant to the program established in Title XVIII (Medicare) of the Social Security Act, or pursuant to the program established in Title XIX (Medicaid) of such Act.

i. The health care provider must agree to accept assignment under Section 1842(b)(3)(B)(ii) of the Social Security Act for all services for which payment may be made under Part B of Title XVIII and to enter into an appropriate agreement with the state agency that administers the state plan for medical assistance under Title XIX of such Act to provide service to individuals entitled to medical assistance under the plan.

j. The health care provider must complete an application form provided by the Iowa department of public health.

**110.21(2) *Site eligibility.*** The following requirements must be met in order to be eligible for placement of a health professional qualified under the PRIMECARRE loan repayment program:

a. The site must be located in a designated health professional shortage area in the state.

b. The site must agree to accept Medicare/Medicaid assignment.

c. The site must have a sliding fee schedule in place that is based upon the ability to pay.

d. The site must have completed a community health services assessment and adopted a long-term developmental plan.

e. The site must be part of a system of care. For the purpose of receiving federal assistance, a system of care is defined as a service continuum that includes comprehensive primary care for all regardless of ability to pay, and appropriate arrangements for secondary and tertiary care, including a referral system and arrangements for call coverage.

f. The site must complete an application form provided by the department.

g. The site must agree to report to the department those individuals unable to fulfill the contract.

**110.21(3) *Federal grant requirements.*** Use of federal grant dollars for loan repayment contracts requires that eligibility be determined as authorized by federal grant requirements.

**110.21(4) *Funding limitations.*** Loan repayment contracts provided under this program shall be determined annually, based upon the legislative appropriation for the PRIMECARRE initiative and other sources of funds.

**110.21(5) *Other sources of funds.*** The department of public health shall seek participation in federal programs supporting repayment of loans of health care providers and acceptance of gifts, grants, and other aid or amounts from any person, association, foundation, trust, corporation, governmental agency, or other entity for the purposes of the program.

**110.21(6) *Review process.*** The department of public health shall establish a review committee which will review all applications and make recommendations for loan repayment contracts. The department shall provide the review committee with a methodology for prioritization of federal shortage areas and eligible nonfederal shortage areas to be utilized in the application review process. The department shall provide the review committee with the criteria and scoring methodology to be used in reviewing the applications, in accordance with 641—Chapter 176. Evaluation criteria will include the applicant's outstanding educational loans and professional credentials.

**110.21(7) *Contract oversight and administration.*** The department of public health shall establish and enforce the terms of the contract, including implementation of any methods, e.g., legal action, that may be necessary to recoup loan repayment funds in the event of failure on the part of a program recipient to fulfill the terms and conditions of the contract. The department shall take into consideration mitigating circumstances which may prohibit a recipient from fulfilling the recipient's contractual obligation or for whom fulfilling the obligation would cause undue hardship. The department of public health shall also provide for cancellation of contracts for reasonable cause to be determined by the department.

**110.21(8) *Appeals.*** Applicants with a denied request for loan repayment funding may appeal the decision of loan repayment awards. The appeal shall be made in writing to the director, Iowa department of public health, within 10 days of the notification date of the loan repayment awards decision. The appeal

shall be mailed by certified mail, return receipt requested, or delivered by personal service. The decision of the director of public health becomes the department's final action and shall be sent by certified mail, return receipt requested, or delivered by personal service within 14 days of the receipt of the appeal.

These rules are intended to implement Iowa Code section 135.107.

CHAPTER 112  
BIOLOGICAL AGENT RISK ASSESSMENT

**641—112.1(135) Purpose.** The purpose of a statewide biological agent risk assessment is to protect the citizens of Iowa from exposure to biological agents which are or have the potential to be biological weapons. In order to protect the public health, the department is charged with identifying sources, locations, safety and security of select biological agents.

**641—112.2(135) Definitions.** For the purposes of these rules, the following definitions shall apply:

*“Biological agent”* means any microorganism (including bacteria, viruses, fungi, rickettsiae or protozoa), pathogen, or infectious substance, toxin, or any naturally occurring, bioengineered or synthesized component of any such microorganism, pathogen or infectious substance, whatever its origin or method of production.

*“Biosecurity council”* or *“council”* means a council established by the director to advise the department on biosecurity issues and to recommend guidelines to protect the citizens of Iowa from exposure to select biological agents.

*“CDC”* means the Centers for Disease Control and Prevention.

*“Department”* means the Iowa department of public health.

*“Director”* means the director of the Iowa department of public health.

*“DOJ”* means the federal Department of Justice.

*“EMD”* means the emergency management division of the department of public defense.

*“FBI”* means Federal Bureau of Investigation.

*“HHS”* means the federal Department of Health and Human Services.

*“Laboratory”* means a facility for the examination of biological, microbiological, serological, chemical, immunohematological, hematological, biophysical, cytological or pathological materials or other materials derived from humans, animals, or plants to provide information for the diagnosis, prevention or treatment of any disease or impairment of, or for the assessment of the health of, humans, animals, or plants.

*“Lethality”* or *“L”* means the relative power and degree of pathogenicity possessed by organisms to produce disease.

*“Select biological agent”* means a biological agent identified by the director, upon recommendation from the biosecurity council, for heightened monitoring and security, including but not limited to any biological agent that is listed as a Category A, B, or C biological agent by the Centers for Disease Control and Prevention, any agent identified as a select agent in the Code of Federal Regulations, Title 42, Part 72, Appendix A, and any biological agent identified by the United States Army Medical Research Institute of Infectious Diseases as appropriate for a heightened level of monitoring and security.

*“Suitability”* or *“S”* means suitability for weaponization.

*“Transmissibility”* or *“T”* means degree of contagion.

*“USAMRIID”* means the United States Army Medical Research Institute of Infectious Diseases.

*“Weaponization”* means manipulation of a biological agent to increase the potential for use as a weapon.

**641—112.3(135) Biosecurity council established.** The director shall appoint a biosecurity council to advise the department on biosecurity issues and to recommend guidelines to protect the citizens of Iowa from exposure to select biological agents.

**112.3(1)** The council shall, at a minimum, consist of the following members:

- a. The director of the department of public health;
- b. The governor’s homeland security advisor;
- c. The director of the University of Iowa Hygienic Laboratory;
- d. A representative from the FBI as made available by the director of the FBI or a representative of the U.S. Secret Service as made available by the director of the U.S. Secret Service;
- e. A representative appointed by the Iowa adjutant general;

- f.* A representative from the Iowa attorney general's office;
- g.* The medical director of the department of public health;
- h.* The executive director of the office of disease epidemiology and disaster preparedness, department of public health;
- i.* A microbiologist at the master's or doctorate level who has expertise in human microbiology;
- j.* A microbiologist at the master's or doctorate level who has expertise in zoonosis;
- k.* A biological safety professional; and
- l.* The emergency management division administrator.

**112.3(2)** The council shall make recommendations to the department on classification of select biological agents, select biological agent risk assessment guidelines, and security guidelines.

**112.3(3)** Security guidelines shall be consistent with applicable state and federal laws, including but not limited to specific antiterrorism regulations of HHS and DOJ.

**641—112.4(135) Biological agent risk assessment.**

**112.4(1)** *Questionnaire.*

*a. Duty to complete and submit.* Any laboratory, clinic, research facility, commercial enterprise, or other entity which possesses select biological agents shall complete and submit to EMD a biological agent risk assessment questionnaire on an annual basis or more frequently as requested by EMD. The questionnaire shall identify the select biological agents possessed and shall contain such other information as required by the department and EMD.

*b. Purpose and use.* The questionnaires shall be used in the development of the critical asset protection plan prepared pursuant to Iowa Code section 29C.8. EMD shall provide the department with the completed questionnaires for the purpose of preparing relevant security guidelines. The department shall not disseminate the information contained in the questionnaires.

**112.4(2)** *Assessment criteria.* The criteria for assessing the risk of a select biological agent shall be based on, but not limited to, current CDC guidelines, recommendations from USAMRIID, recommendations from the biosecurity council, and this subrule. The biosecurity council may modify the criteria based on new scientific information, treatments, or public perceptions, or any combination thereof.

*a.* Biological agent rating criteria. Biological agents shall be rated by the department based on the following three categories:

(1) Transmissibility (T). 0 = nontransmissible, 1 = transmissible only by injection, sexual interface or bite, 2 = transmissible by ingestion, 3 = transmissible by air or touch.

(2) Lethality (L). 0 = nonlethal, 1 = 0-25 percent mortality, 2 = 26-50 percent mortality, 3 = 51-100 percent mortality.

(3) Suitability for or degree of weaponization (S). 0 = not suitable, 1 = suitable but not modified, 2 = modified for antibiotic resistance or improved environmental resilience, 3 = modified and packaged for effective delivery on a mass scale.

*b.* The final rating for a biological agent is determined by adding the score the biological agent received in each of the three categories (T + L + S = biological agent rating).

**112.4(3)** *On-site examination.*

*a. Notification.* The department or its designee may conduct an on-site examination of any premises containing select biological agents. Prior to conducting the on-site examination, the department shall notify the owner or person in charge of the premises.

*b. Examination.* An on-site examination shall include each of the following components:

- (1) A review of laboratory safety and security policies and procedures;
- (2) A review of external and internal access to the premises;
- (3) A review of access controls to areas where select biological agents are used and stored;
- (4) A review of employee, student and visitor access to the premises, including the identification required to access the premises and the method of recording access to the premises;
- (5) A review of background and security clearance measures implemented;
- (6) A review of the screening process for packages brought into or taken out of the premises;

- (7) A review of the emergency plan;
- (8) A review of appropriate biocontainment within a laboratory;
- (9) A review of the training and knowledge of research staff;
- (10) A review of the process for reporting and investigating breach-of-security incidents;
- (11) A review of disposal procedures; and
- (12) A tour of the premises to view access security, select biological agent locations, storage, inventory, records, coding and database procedures.

*c. Administrative search warrant.* If the owner or person in charge of the premises refuses the department's employee or designee admittance or if the department's employee or designee is not permitted to conduct a full examination, the department may obtain an administrative search warrant under Iowa Code section 808.14.

**112.4(4) Security guidelines.** After a biological agent risk assessment questionnaire has been completed and the on-site examination has been conducted, the department shall provide the entity with a biological agent risk assessment report and security guidelines. A select biological agent which is listed as a CDC Category A biological agent or as determined by the biosecurity council shall be maintained in accordance with maximum security guidelines as established by the biosecurity council and the director.

**112.4(5) Confidentiality.** The biological agent risk assessment questionnaire, the biological agent risk report and security guidelines, and any other information if it relates to the imminent threat of death, disease, biological malfunction in a human, animal, plant or other living thing, deterioration of food, water, equipment, supplies, or a deleterious alteration of the environment provided to or by EMD or the department pursuant to this chapter may be considered critical asset protection plan information and may be maintained as confidential pursuant to Iowa Code section 22.7(43).

**641—112.5(135) Requests for biological agent information.** A laboratory, clinic, research facility, commercial enterprise, or other entity which possesses select biological agents shall respond to written requests from the department regarding the presence, location, and security of biological agents within 30 days of the request. In the event of a disaster emergency, a laboratory, clinic, research facility, commercial enterprise, or other entity which possesses select biological agents shall immediately respond to a request from the department or its designee regarding the presence, location, and security of biological agents.

**641—112.6(135) Exceptions.**

**112.6(1)** The requirements of this chapter are not applicable to hospital laboratories which possess select biological agents solely as a result of a patient culture provided that the culture is destroyed within 14 days after referral to and confirmation by the University of Iowa Hygienic Laboratory or other laboratory approved by the council.

**112.6(2)** The requirements of this chapter are not applicable to a person who detects a biological agent in a clinical or environmental sample for the purpose of diagnosing disease, epidemiological surveillance, exposure assessment, reference, verification or proficiency testing, and who discards the agent within 14 calendar days. If a biological agent is kept for more than 14 calendar days, the laboratory shall provide written notice to the department identifying the agent and reason for continued or extended possession.

These rules are intended to implement Iowa Code Supplement section 135.11(28).

[Filed 7/18/02, Notice 5/29/02—published 8/7/02, effective 9/11/02]

CHAPTER 113  
PUBLIC HEALTH RESPONSE TEAMS

**641—113.1(135) Definitions.** For purposes of this chapter, the following definitions shall apply:

*“Defend”* means that the office of the Iowa attorney general shall provide a public health response team member with legal representation at no cost to the public health response team member.

*“Department”* means the Iowa department of public health.

*“Director”* means the director of the Iowa department of public health.

*“Disaster medical assistance team”* or *“DMAT”* means a public health response team that is sponsored by a sponsor agency and approved by the department to provide medical assistance in the event of a disaster or threatened disaster or other incident as defined in Iowa Code section 135.143.

*“Environmental health response team”* or *“EHRT”* means a public health response team that is sponsored and approved by the department to provide environmental health expertise and assistance in the event of a disaster or threatened disaster or other incident defined in Iowa Code section 135.143.

*“Epidemiology response team”* or *“EpiRT”* means a public health response team that is sponsored and approved by the department to provide epidemiological assistance in the event of a disaster or threatened disaster or other incident as defined in Iowa Code section 135.143.

*“Indemnify”* means that the state of Iowa shall pay all sums that a public health response team member is legally obligated to pay as damages because of any claim made against the public health response team member which arises out of the provision of direct medical care or other support services rendered or which should have been rendered during a disaster, threatened disaster, or other incident defined in Iowa Code section 135.143, or arising out of a training exercise to prepare for a disaster or other incident defined in Iowa Code section 135.143.

*“Physician”* means an individual licensed under Iowa Code chapter 148, 150, or 150A.

*“Public health response team”* or *“PHRT”* means a team of professionals, including licensed health care providers, nonmedical professionals skilled and trained in disaster or emergency response, and public health practitioners, that is sponsored by the department, a hospital or other entity and approved by the department to provide assistance in the event of a disaster or threatened disaster or other incident defined in Iowa Code section 135.143. “Public health response team” shall include disaster medical assistance teams, environmental health response teams, epidemiology response teams, and other teams established and approved upon written order of the director, to supplement and support disrupted or overburdened local medical and public health personnel, hospitals, and resources.

*“Public health response team member,” “DMAT member,” “EHRT member,”* or *“EpiRT member”* means an individual who has registered with the department and has received approval from the department to serve on a public health response team.

*“Registered nurse”* or *“RN”* means an individual licensed pursuant to Iowa Code chapter 152.

*“Sponsor agency”* means a hospital, public health agency, health care organization, licensed health care entity, or other entity approved by the department to act as a sponsor for a public health response team.

*“Sponsor agreement”* means a signed agreement between a sponsor agency and the department which defines the terms and conditions under which the agency shall sponsor a public health response team.

**641—113.2(135) Purpose.**

**113.2(1)** The department, through the division of acute disease prevention and emergency response, center for disaster operations and response, shall establish, register, and approve public health response teams, including at a minimum five DMATs and one EHRT, to supplement and support disrupted or overburdened local medical and public health personnel, hospitals, and resources in the event of a disaster or threatened disaster or other incident as defined in Iowa Code section 135.143. The primary purpose of the public health response teams is to respond to Iowa incidents and to provide support for Iowa medical and public health personnel, hospitals, and resources. A public health response team may also

be requested to respond to an out-of-state disaster or emergency pursuant to the Emergency Management Assistance Compact at Iowa Code section 29C.21.

**113.2(2)** DMAT and EHRT shall be established, registered and approved pursuant to this chapter. Other PHRTs may be established, registered and approved as necessary upon written order of the director.

**641—113.3(135) Sponsor agency.**

**113.3(1)** *Sponsor agency approval.* A hospital or other entity may apply to the department to be a sponsor agency of a public health response team. The applicant shall apply on a form approved by the department and shall provide all information requested by the department. The department may approve an application when the department is satisfied that the sponsor agency will operate the PHRT in compliance with Iowa Code section 135.143 and this chapter. Upon approval of the application, the department and the sponsor agency shall execute a sponsor agreement which shall provide that the agency is registered with the department and has been approved to sponsor a public health response team. The sponsor agreement shall also include the effective date of the approval and the terms and conditions of approval.

**113.3(2)** *Sponsor agency denial and revocation.* The department may deny approval to an applicant sponsor agency or may revoke a sponsor agency's approval if the department determines that the sponsor agency has violated or failed to comply with Iowa Code section 135.143 or this chapter, any term or condition contained in the sponsor agreement, any operational procedure, or state or federal law. The department shall notify the applicant or sponsor agency of the department's decision in writing by certified mail, return receipt requested. In the event an applicant or a sponsor agency is dissatisfied with the department's decision, the applicant or sponsor agency may submit a request for reconsideration with the division director. Such request shall be delivered by certified mail, return receipt requested, within 20 days of the date of the denial or revocation notification, to Division Director, Division of Acute Disease Prevention and Emergency Response, Lucas State Office Building, 321 E. 12th Street, Des Moines, Iowa 50319. The division director shall review the matter and issue a written decision within 20 days of receipt of the request. The division director's decision shall be final agency action. This appeal process does not constitute a contested case proceeding as defined in Iowa Code chapter 17A.

**641—113.4(135) Public health response team members.**

**113.4(1)** *Registration and approval.* An individual may apply to the department through a sponsor agency to be a public health response team member. The applicant shall apply on a form approved by the department and shall provide all information requested by the department and sponsor agency. The department shall register and approve an individual to serve as a PHRT member when the department is satisfied that the individual satisfies the requirements of this chapter and will perform on a PHRT in compliance with Iowa Code section 135.143 and this chapter. Upon registration and approval of an individual, the department shall provide the individual with written notification that the individual is registered with the department and has been approved to serve on a public health response team. The written notification shall also include the effective date of the approval and the terms and conditions of approval.

**113.4(2)** *Denial and revocation.* The department may deny approval to an individual or may revoke an individual's approval if the department determines that the individual has violated or failed to comply with Iowa Code section 135.143 or this chapter, any term or condition contained in the written approval notification from the department, any operational procedure, or state or federal law, or has exposed or may expose the state to undue risk. The department shall notify the individual of the department's decision in writing by certified mail, return receipt requested. In the event an individual is dissatisfied with the department's decision, the individual may submit a request for reconsideration with the division director. Such request shall be delivered by certified mail, return receipt requested, within 20 days of the date of the denial or revocation notification, to Division Director, Division of Acute Disease Prevention and Emergency Response, Lucas State Office Building, 321 E. 12th Street, Des Moines Iowa 50319. The division director shall review the matter and issue a written decision within 20 days of receipt of

the request. The division director's decision shall be final agency action. This appeal process does not constitute a contested case proceeding as defined in Iowa Code chapter 17A.

**113.4(3) *Effect of revocation.*** If the department revokes a public health response team member's approval, the action shall revoke future eligibility, but shall not negate defense and indemnification coverage or other protection for covered acts or omissions which occurred during the effective date of approval.

**641—113.5(135) Disaster medical assistance team.**

**113.5(1) *General requirements.***

a. An entity may make application to the department to be a sponsor agency of a DMAT pursuant to subrule 113.3(1). An individual may make application to the department to be a member of a DMAT pursuant to subrule 113.4(1).

b. The department, in conjunction with the sponsor agencies, shall establish the DMAT operational procedures. The operational procedures shall be in writing and shall be provided to each DMAT member. All DMAT members and sponsor agencies shall follow the DMAT operational procedures as established by the department. The Iowa DMAT Operational Procedures Manual is available through the Iowa Department of Public Health, Center for Disaster Operations and Response, Lucas State Office Building, Des Moines, Iowa 50319-0075.

c. If the department notifies a DMAT, DMAT member, or sponsor agency of a violation of Iowa Code section 135.143, this chapter, or an operational procedure, the DMAT, DMAT member, or sponsor agency shall correct the deficiency or violation identified by the department within a time frame determined by the department. If a DMAT, DMAT member, or sponsor agency fails to correct a deficiency or violation within the time frame identified by the department, or if the deficiency or violation constitutes an immediate danger to the public health, safety, or welfare, the department may initiate action to revoke approval pursuant to subrule 113.3(2) or 113.4(2).

**113.5(2) *Team composition.***

a. A DMAT shall be comprised of a minimum of 35 health care professionals and administrative personnel as identified in the Iowa DMAT Operational Procedures Manual.

b. The sponsor agency for each team shall be responsible for maintaining adequate staffing.

**113.5(3) *Licensure and educational requirements.***

a. Each DMAT member shall hold and maintain an active unrestricted license, registration, or certification to practice in Iowa in the member's respective medical or health care profession.

b. Each DMAT member shall complete the following courses or shall complete other substantially similar courses approved by the department:

- (1) Incident command structure;
- (2) Weapons of mass destruction awareness; and
- (3) Hazardous materials awareness or operations.

c. In addition to the requirements in paragraph 113.5(3)"b," the DMAT's leadership shall complete training in:

- (1) Hospital emergency incident command structure; and
- (2) Risk communication.

d. A sponsor agency shall provide specific position training to DMAT members as determined to be necessary by the sponsor agency and as approved by the department.

e. A sponsor agency, in conjunction with the department, shall develop and implement training exercises to test the team's notification process, deployment readiness, and response capabilities.

f. The sponsor agency shall be responsible for documenting each DMAT member's completion of required training.

**113.5(4) *Deployment and standdown.***

a. DMATs shall prepare to deploy within two to four hours of notification by the department. DMATs shall not self-deploy and shall not be covered by the provisions of Iowa Code section 135.143 and this chapter if self-deployed or deployed by another agency or entity.

b. On-call team schedules shall be established and distributed by the department and shall be followed by the DMATs and sponsor agencies.

c. Deployment and standdown procedures are outlined in the Iowa DMAT Operational Procedures Manual and shall be followed by all DMAT members.

**641—113.6(135) Environmental health response team.**

**113.6(1) General requirements.**

a. An entity may make application to the department to be a sponsor agency of an EHRT pursuant to subrule 113.3(1), or the department may elect to sponsor an EHRT. An individual may make application to the department to be a member of an EHRT pursuant to subrule 113.4(1).

b. The department shall establish EHRT operational procedures. The operational procedures shall be in writing and shall be provided to each EHRT member. All EHRT members shall follow the EHRT operational procedures as established by the department. The Iowa EHRT Operational Procedures Manual is available through the Iowa Department of Public Health, Center for Disaster Operations and Response, Lucas State Office Building, Des Moines, Iowa 50319-0075.

c. If the department notifies an EHRT member of a violation of Iowa Code section 135.143, this chapter, or an operational procedure, the EHRT member shall correct the deficiency or violation identified by the department within a time frame determined by the department. If an EHRT member fails to correct a deficiency or violation within the time frame identified by the department, or if the deficiency or violation constitutes an immediate danger to the public health, safety, or welfare, the department may initiate action to revoke approval pursuant to subrule 113.3(2) or 113.4(2).

**113.6(2) Team composition.**

a. An EHRT shall be comprised of a minimum of 20 environmental health professionals and administrative personnel as identified in the Iowa EHRT Operational Procedures Manual.

b. The department shall be responsible for maintaining adequate staffing.

**113.6(3) Licensure and educational requirements.**

a. Each EHRT member shall complete the following courses or shall complete other substantially similar courses approved by the department:

- (1) Incident command structure;
- (2) Weapons of mass destruction awareness;
- (3) Environmental health core competencies and essential services;
- (4) Hazardous materials awareness or operations; and
- (5) Basic, intermediate and advanced epidemiology training.

b. In addition to the requirements in paragraph 113.5(3)“a,” the EHRT’s leadership shall complete training in risk communication.

c. The department shall provide specific position training to EHRT members as determined to be necessary by the department.

d. The department shall develop and implement training exercises to test each team’s notification process, deployment readiness, and response capabilities.

e. The department shall be responsible for documenting each EHRT member’s completion of required training.

**113.6(4) Deployment and standdown.**

a. EHRTs shall prepare to deploy within two to four hours of notification by the department. EHRTs shall not self-deploy and shall not be covered by the provisions of Iowa Code section 135.143 and this chapter if self-deployed or deployed by another agency or entity.

b. On-call team schedules shall be established and distributed by the department and shall be followed by the EHRT.

c. Deployment and standdown procedures are outlined in the Iowa EHRT Operational Procedures Manual and shall be followed by all EHRT members.

**641—113.7(135) Legal and other protections.** A public health response team member acting pursuant to Iowa Code section 135.143 and this chapter shall be considered an employee of the state under Iowa

Code section 29C.21 and chapter 669, shall be afforded protection as an employee of the state under Iowa Code section 669.21 whom the state shall defend and indemnify, and shall be considered an employee of the state for purposes of workers' compensation, disability, and death benefits, provided that the member has done all of the following:

1. Registered with and received approval from the department pursuant to subrule 113.4(1) to serve on a public health response team.
2. Provided direct medical care or other support services during a disaster, threatened disaster, or other incident described in Iowa Code section 135.143(1); or participated in a training exercise to prepare for a disaster or other incident described in Iowa Code section 135.143(1).

**641—113.8(135) Reporting requirements and duties.**

**113.8(1)** Upon obtaining knowledge or becoming aware of any injury allegedly arising out of the negligent rendering of, or the negligent failure to render, medical or other services as a public health response team member, such member or the member's sponsor agency shall provide written notice to the department, as soon as practicable, containing to the extent obtainable the circumstance of the alleged injury, the name and address of the injured, and any other relevant information.

**113.8(2)** Upon obtaining knowledge or becoming aware of any injury as defined in subrule 113.8(1), a public health response team member shall promptly take all reasonable steps to prevent further or additional injury from the same or similar circumstances, situations, or conditions.

**113.8(3)** A public health response team member shall immediately notify the Iowa Department of Justice, Special Litigation Division, Hoover State Office Building, Des Moines, Iowa 50319, of service or receipt of an original petition, suit, or claim seeking damage from the public health response team member related to participation on a public health response team.

**113.8(4)** Each public health response team member shall fully cooperate with the state in the defense of any claim or suit related to participation on a public health response team, including attending hearings, depositions, and trials and assisting in securing and giving evidence, responding to discovery and ensuring the attendance of witnesses.

**113.8(5)** Each public health response team member shall accept financial responsibility for personal expenses and costs incurred in the defense of any claim or suit related to participation on a public health response team, including travel, meals, and compensation for time and lost practice.

These rules are intended to implement Iowa Code section 135.143.

[Filed 1/10/07, Notice 11/22/06—published 1/31/07, effective 3/7/07]

CHAPTER 114  
PREPAREDNESS ADVISORY COMMITTEE

**641—114.1(135) Definitions.** For the purpose of these rules, the following definitions shall apply:

“*Chairperson*” means the chairperson of the preparedness advisory committee, who has been elected by a majority of advisory committee members.

“*Department*” means the Iowa department of public health.

“*Designee*” means the individual designated by the director.

“*Director*” means the director of public health.

“*PAC*” means the preparedness advisory committee.

“*Quorum*” means a simple majority of the voting membership of the preparedness advisory committee.

“*Regions*” means the six multicounty geographic areas of the state as identified by the preparedness advisory committee or the department to provide support services to the public health and hospital preparedness programs.

**641—114.2(135) Purpose.** The preparedness advisory committee (PAC) shall provide technical assistance and make recommendations for the planning and implementation of the public health emergency preparedness program for the department. The committee shall advise the department on matters of policy, plan development, funding allocations, and coordination of state, regional and local entities that are responsible for promoting and protecting the health and safety of all Iowans prior to, during, or after a public health emergency or disaster.

**641—114.3(135) Appointment.**

**114.3(1)** The voting members of the PAC shall be appointed by the director or designee as nominated by the member organizations.

**114.3(2)** The appointments shall be for three-year staggered terms which shall expire on June 30.

**114.3(3)** Vacancies shall be filled in the same manner in which the original appointments were made for the balance of the unexpired term.

**114.3(4)** Absences.

*a.* If a member is unable to attend a scheduled meeting, an alternate may be designated by the member organization to serve in the absence of the regular member.

*b.* Three consecutive unexcused absences shall be grounds for the director or designee to request nomination of an alternate representative to fill the position.

*c.* The chairperson of the preparedness advisory committee shall be charged with providing notification of absences to the department.

**641—114.4(135) Membership.**

**114.4(1)** The voting membership of the PAC shall consist of one representative nominated by each of the following organizations and approved by the director or the director’s designee:

- a.* American Red Cross,
- b.* Indian Health Services,
- c.* Upper Midwest Center for Public Health Preparedness,
- d.* Center for Food Security and Public Health,
- e.* Iowa Counties Public Health Association,
- f.* Iowa Environmental Health Association,
- g.* Iowa Emergency Management Association,
- h.* Iowa Emergency Medical Services Association,
- i.* Iowa Hospital Association,
- j.* Iowa Medical Society,
- k.* Iowa/Nebraska Primary Care Association,
- l.* Iowa Nurses Association,

- m.* Iowa Osteopathic Medical Association,
- n.* Iowa Pharmacy Association,
- o.* Iowa Poison Control Center,
- p.* Iowa National Guard,
- q.* University Hygienic Laboratory,
- r.* Veterans Health Administration,
- s.* Safeguard Iowa Partnership,
- t.* School Administrators of Iowa, and
- u.* A mental health association.

**114.4(2)** The preparedness advisory committee shall also include as voting members:

- a.* One public health representative from each of the six public health preparedness regions, and
- b.* One hospital representative from each of the six health care preparedness regions.

**114.4(3)** Contributions and representation to the PAC shall consist of the following entities:

- a.* The Iowa department of public health,
- b.* The Iowa department of human services,
- c.* The Iowa homeland security and emergency management division,
- d.* The Iowa department of natural resources,
- e.* The Iowa department of agriculture and land stewardship,
- f.* The Iowa department of elder affairs, and
- g.* The Iowa department of education.

**641—114.5(135) Officers.**

**114.5(1)** Officers of the PAC shall consist of a chairperson and a vice chairperson, who shall be elected at the first meeting of each fiscal year.

- a.* Vacancies in the office of chairperson shall be filled by elevation of the vice chairperson.
- b.* Vacancies in the office of vice chairperson shall be filled by election at the next meeting after the vacancy occurs.

**114.5(2)** Duties of officers.

- a.* The chairperson shall:
  - (1) Preside at all meetings of the advisory committee,
  - (2) Appoint such subcommittees as deemed necessary, and
  - (3) Ratify the chairperson of each subcommittee following elections.
- b.* The vice chairperson shall:
  - (1) Perform the duties of the chairperson if the chairperson is absent or unable to act. When so acting, the vice chairperson shall have all the powers of and be subject to all restrictions upon the chairperson.
  - (2) Perform such other duties as may be assigned by the chairperson.

**641—114.6(135) Meetings.**

**114.6(1)** The PAC shall establish a meeting schedule on an annual basis to conduct its business.

- a.* Meetings may be scheduled as business requires, but notice to members must be at least five working days prior to the meeting date unless action is required by the PAC on an emergency basis.
- b.* A four-week notice is encouraged to accommodate the schedules of professional members.

**114.6(2)** Robert's Rules of Order shall govern all meetings.

**641—114.7(135) Subcommittees.**

**114.7(1)** The PAC may designate one or more subcommittees pertinent to the priorities and activities of the public health and hospital preparedness program. Subcommittee members shall perform such duties as may be deemed necessary.

- a.* Each subcommittee shall include one voting member of the PAC.
- b.* The chairperson of each subcommittee shall be elected by the subcommittee membership and ratified by the PAC.

**114.7(2)** The designated subcommittees shall include but are not limited to:

- a.* Planning,
- b.* Epidemiology,
- c.* Lab,
- d.* Communications/information technology,
- e.* Risk communication, and
- f.* Education/exercises.

**114.7(3)** The PAC may establish ad hoc subcommittees for a specified time of duration for special projects or where special expertise is needed.

**641—114.8(135) Expenses of preparedness advisory committee voting members.** The following may be considered necessary expenses for reimbursement of PAC members when incurred on behalf of advisory committee business and are subject to established state reimbursement rates:

1. Reimbursement for travel in a private car.
2. Actual lodging and meal expenses, including sales tax on lodging and meals.
3. Actual expense of public transportation.

**641—114.9(135) Gender balance.** All advisory committees of the department appointed by the governor, director or designee, if not otherwise provided by law, shall be gender-balanced.

These rules are intended to implement Iowa Code chapter 135.

INTERAGENCY COORDINATING COUNCIL  
FOR THE STATE MEDICAL EXAMINER

**641—124.1(691) Purpose.** The purpose of the interagency coordinating council for the state medical examiner is to provide a venue for the effective coordination of the functions and operations of the office of the state medical examiner with the needs and interests of the department of public safety and the department of public health, with input and guidance from the governor's office.

**641—124.2(691) Membership.** Members shall include the chief state medical examiner or, when the state medical examiner is not available, the deputy state medical examiner, the commissioner of public safety or the commissioner's designee, the director of public health or the director's designee, and the governor or the governor's designee.

**641—124.3(691) Meetings.**

**124.3(1)** The interagency coordinating council shall schedule two meetings per year to be held at the office of the director of public health.

**124.3(2)** Meetings may be scheduled more frequently or less frequently depending upon the circumstances and the need for consultation.

**124.3(3)** Meetings may be canceled by any member with the agreement of the other members.

**124.3(4)** All meetings are open to the public in accordance with the open meetings law, Iowa Code chapter 21.

[ARC 8229B, IAB 10/7/09, effective 11/11/09]

**641—124.4(691) Duties.** The interagency coordinating council shall perform the following duties:

**124.4(1)** Provide a venue to coordinate the functions and operations of the office of the state medical examiner with the department of public safety and the department of public health in order to better serve the needs of the citizens of Iowa.

**124.4(2)** Provide to and receive from the governor's office updated information relevant to the mission of the state medical examiner's office.

**124.4(3)** Discuss legislative and budgetary decisions that may impact the functions and operations of one, two, or all three agencies represented by the interagency coordinating council.

**641—124.5(691) Minutes.** The office of the state medical examiner shall keep minutes of all meetings showing the date, time, place, members present, and the general topics presented.

**124.5(1)** The minutes shall be provided to the members of the interagency coordinating council prior to the next scheduled meeting.

**124.5(2)** The minutes shall be available at the office of the state medical examiner for public inspection Monday through Friday from 8:30 a.m. to 4:30 p.m.

These rules are intended to implement Iowa Code section 691.6B.

[Filed 1/10/08, Notice 11/21/07—published 1/30/08, effective 3/5/08]

[Filed ARC 8229B (Notice ARC 7968B, IAB 7/15/09), IAB 10/7/09, effective 11/11/09]

CHAPTER 125  
ADVISORY COUNCIL FOR THE STATE MEDICAL EXAMINER

**641—125.1(691) Purpose.** The purposes of the advisory council for the state medical examiner are to provide guidance concerning medicolegal death investigation for the state of Iowa, facilitate optimal relationships between the state and county medical examiners and other agencies involved in death investigation, and provide a venue for the exchange of information vital to the continued operations of the Iowa office of the state medical examiner.

**641—125.2(691) Membership.** Members shall include representatives from agencies and organizations that are directly involved with the office of the state medical examiner and medicolegal death investigation in the state of Iowa.

**125.2(1)** The advisory council shall include but not be limited to a representative from the following agencies:

- a.* The office of the attorney general;
- b.* The Iowa County Attorneys Association;
- c.* The Iowa Medical Society;
- d.* The Iowa Association of Pathologists;
- e.* The Iowa Association of County Medical Examiners;
- f.* The department of public safety;
- g.* The department of public health;
- h.* The Iowa Emergency Medical Services Association;
- i.* The Iowa Funeral Directors Association;
- j.* The University of Iowa department of pathology;
- k.* The state public defender's office; and
- l.* The office of the state medical examiner.

**125.2(2)** Each specific organization shall designate a representative to serve on the advisory council. Representatives shall be approved by the chief state medical examiner in consultation with the director of public health. Members may be selected from other organizations not specified in subrule 125.2(1) at the discretion of the chief state medical examiner.

**125.2(3)** The chair and presiding member of the council shall be the chief state medical examiner or a designee from the office of the state medical examiner.

**641—125.3(691) Meetings.** The advisory council will hold a meeting at the Iowa laboratory facility in Ankeny at least two times per year or on a more frequent basis as deemed necessary by the chief state medical examiner with approval of a majority of members of the council.

**125.3(1)** Meetings may be conducted via the Iowa Communications Network (ICN) for members who cannot physically be present at the laboratory facilities.

**125.3(2)** Meetings may be conducted by telephone at the discretion of the chief state medical examiner depending upon the complexity of the agenda.

**125.3(3)** Notice of routine meetings and agenda will be made available to the members a minimum of five working days prior to the meeting.

**125.3(4)** The chief state medical examiner or any member of the council may ask for a special meeting to discuss emergent issues within a 24-hour time period.

**125.3(5)** All meetings are open to the public in accordance with the open meetings law, Iowa Code chapter 21.

**125.3(6)** The operation of council meetings will be governed by the following rules of procedure:

- a.* A simple majority will be defined as a quorum, but the chair may choose to continue with the meeting even if a quorum is not present.
- b.* A course of action for topics under debate will be agreed upon by a simple majority vote of the members present at the meeting.

c. Any council member or a designated replacement who is unable to attend a meeting will notify the office of the state medical examiner at least 24 hours prior to the start of a regularly scheduled meeting; a meeting may be canceled if attendance is expected to be low.  
[ARC 8229B, IAB 10/7/09, effective 11/11/09]

**641—125.4(691) Duties.** The advisory council shall perform the following duties:

**125.4(1)** Provide information to council members regarding the current operations and functions of the office of the state medical examiner.

**125.4(2)** Provide information to council members regarding any legislative or budgetary decisions that impact the office of the state medical examiner.

**125.4(3)** Elicit council members' suggestions and recommendations to improve the overall operations of the office of the state medical examiner.

**641—125.5(691) Minutes.** The advisory council shall keep minutes of all its meetings showing the date, time, place, members present, members absent, and the general topics discussed.

**125.5(1)** The minutes shall reflect the actions agreed upon by the members for topics requiring the members' input or consensus.

**125.5(2)** If a meeting is convened within a 24-hour time period to discuss emergent issues, then the minutes shall reflect the emergent nature of this meeting.

**125.5(3)** If a meeting is conducted via telephone, then the minutes shall reflect the reason for the use of this method of communication.

**125.5(4)** The minutes shall be available at the office of the state medical examiner for inspection Monday through Friday from 8:30 a.m. to 4:30 p.m.

These rules are intended to implement Iowa Code section 691.6C.

[Filed 1/10/08, Notice 11/21/07—published 1/30/08, effective 3/5/08]

[Filed ARC 8229B (Notice ARC 7968B, IAB 7/15/09), IAB 10/7/09, effective 11/11/09]

CHAPTER 126  
STATE MEDICAL EXAMINER  
[Prior to 4/20/88, see Medical Examiner, State[566] Ch 1]  
[Prior to 7/1/99, see Public Safety Department[661] Ch 21]

**641—126.1(144,331,691) Definitions.**

“*Autopsy*” means the external and internal postmortem examination of a deceased person.

“*County of appointment*” means the county which requests a medical examiner to conduct an investigation, perform or order an autopsy, or prepare a report(s) in a death investigation case. The request may be authorized by the county attorney or the county medical examiner. The county of appointment shall be the county in which the death occurred.

**641—126.2(691) Medical examiner coverage.** Rescinded IAB 12/12/01, effective 1/16/02.

**641—126.3(691) Fees for autopsies and related services and reimbursement for related expenses.** Autopsies performed by the state medical examiner division are provided on a fee-for-service basis. Costs of autopsies and related services and expenses are the responsibility of the county of appointment. The county of residence of the deceased shall reimburse the county of appointment.

**126.3(1) Fee schedule.** The following fees shall apply to autopsies conducted by the state medical examiner division:

|                             |        |
|-----------------------------|--------|
| Autopsy . . . . .           | \$1200 |
| Copies of reports . . . . . | \$20   |

EXCEPTIONS: A copy of the autopsy report is included in the autopsy fee. A single copy of an autopsy report may be provided to the immediate next of kin of the deceased without fee. Copies of autopsy reports may be provided to public officials and physicians of record for official purposes without fee.

|                                                                                       |                                        |
|---------------------------------------------------------------------------------------|----------------------------------------|
| State, deputy, or associate medical examiner(s)<br>time for all court cases . . . . . | \$350 per hour with a one-hour minimum |
|---------------------------------------------------------------------------------------|----------------------------------------|

This fee is for time spent reviewing case materials, preparing for deposition or court, testifying in deposition or court, and travel time.

**126.3(2) Expense reimbursement.** Other laboratory services associated with an autopsy, which shall include, but not be limited to, photography, toxicology, radiology, microbiology, and morgue fees, shall be billed by the department to the county of appointment. Moneys collected pursuant to this subrule shall be paid by the department to the laboratory or other entity providing the service.

**126.3(3) State medical examiner acting as county medical examiner.** When the state medical examiner acts in the capacity of county medical examiner, the state medical examiner shall receive from the county of appointment a fee of \$100 per hour, with a one-hour minimum, for each report prepared plus the state medical examiner’s actual expenses. Counties may not depend on the state medical examiner for full-time coverage.

**641—126.4(691) Fees for tissue recovery.** When the tissue recovery room located within the office of the state medical examiner is utilized by an authorized tissue recovery agency, a fee of \$400 per case shall be assessed. The tissue recovery agency is responsible for this fee, payable to the office of the state medical examiner.

These rules are intended to implement Iowa Code section 691.6.

CHAPTER 127  
COUNTY MEDICAL EXAMINERS  
[Prior to 7/29/87, Health Department [470] Ch 127]

**641—127.1(144,331,691) Definitions.**

*“Autopsy”* means the external and internal postmortem examination of a deceased person.

*“Cause of death”* means the disease or injury which sets in motion the chain of events which eventually result in the death of a person. The physician shall consider “but for” this injury or disease the person would still be living.

*“County medical examiner”* or *“CME”* means a medical or osteopathic physician or surgeon licensed in the state of Iowa and appointed by the board of supervisors to serve in this capacity.

*“County medical examiner investigator”* or *“CME-I”* means an individual appointed by a county medical examiner, with approval by the board of supervisors and the state medical examiner, to serve under the supervision of a county medical examiner to assist in death investigations.

*“County of appointment”* means the county which requests a medical examiner to conduct an investigation, perform or order an autopsy, or prepare a report(s) in a death investigation case. The request may be authorized by the county attorney or the county medical examiner. The county of appointment shall be the county in which the death occurred.

*“Cremation”* means the technical process, using heat and flame, that reduces human remains to bone fragments.

*“Day”* means calendar day.

*“Death”* means the condition as described in Iowa Code section 702.8.

*“Death affecting the public interest”* means any death of a human being in which the circumstances are sudden, unexpected, violent, suspicious, or unattended, including but not limited to those deaths listed at Iowa Code section 331.802(3) and described as follows:

1. Violent death. Violent death includes homicide, suicide, or accidental death resulting from physical, mechanical, thermal, chemical, electrical, or radiation injury. A medical examiner’s investigation and report are required irrespective of the period of survival following injury.

2. Death caused by criminal abortion, including self-induced.

3. Death related to disease thought to be virulent or contagious which may constitute a public hazard. Any such case investigated by a medical examiner shall be reported to the department and to the local health authority.

4. Death that has occurred unexpectedly or from an unexplained cause. This term includes the following situations:

- Death without prior medical conditions accounting for the death.
- Apparently instantaneous death without obvious cause.
- Death during or following an unexplained syncope or coma.
- Death during an unexplained, acute, or rapidly fatal illness.

5. Death of a person confined in a prison, jail, or correctional institution.

6. Death of a person when unattended by a physician during the period of 36 hours immediately preceding death.

- This term includes the following situations:

- Persons found dead without obvious or probable cause.
