191—43.5(508) Application of the 1994 GAR Table. In using the 1994 GAR Table, the mortality rate for a person aged x in year (1994 + n) is calculated as follows:

$$q_x^{1994+n} = q_x^{1994} (1 - AA_x)^n$$

where the q_x^{1994} and AA_xs are as specified in the 1994 GAR Table.
