

761—143.3(364) Conditions.

143.3(1) Unless a traffic engineering study documents that it is not practical, traffic signals within one-half mile of each other along an arterial street or in a network of intersecting arterial streets shall be operated as a traffic signal system.

143.3(2) Traffic signal timing and operational plans are to be developed by the application of traffic engineering principles to provide maximum traffic flow efficiencies and safety for all users.

143.3(3) All traffic signal installations and operations are to comply with the department's traffic control device manual.
