

761—102.10(312) Considerations for a new or modified distribution formula. A distribution formula that is proposed in accordance with rule 761—102.11(312) should substantially meet the following objectives:

1. Funding levels to counties should be relatively stable, with only small changes occurring from year to year.
2. The formula should be able to factor in changes in population, mileages, the centerline lineal feet of bridges, and traffic levels as they occur over time, without needing to be revised.
