

481—462.5(88A) Maintenance of covered equipment—requirements. An operator will conduct periodic inspections, repairs, tests, and maintenance as set forth in this rule and the manufacturer's recommendations, as applicable. An operator will make a written record of all inspections, maintenance, tests, and repairs of covered equipment, and the records will be available to the director.

462.5(1) *Nondestructive testing.* The operator will ensure that appropriate nondestructive testing (NDT) is conducted and that documentation is available for review. NDT will be performed at the following times:

- a. At intervals recommended by the manufacturer;
- b. When required by the director due to a welded repair;
- c. When required by the director due to a visual indication of a potentially hazardous condition; and
- d. When recommended by a bulletin prepared according to ASTM F1193-14.

462.5(2) *Wood components.* The operator will remove a sufficient amount of soil around piling or wood members embedded in dirt to check for deterioration. When a wood piling requires replacement, the operator will install a concrete pier. The top of the pier will be installed so that the attached wood member is not exposed to dirt or water accumulation.
