UNEMPLOYMENT INSURANCE CLAIMS — DECEMBER 3, 2020

Unemployment Claims Weekly News Release. The U.S. Department of Labor (DOL) releases national and state-level unemployment insurance (UI) claims data each Thursday. The [report](#) released on December 3, 2020, provides preliminary initial claims for the week ending November 28, 2020, and continued claims for the week ending November 21, 2020. The December 3 report represents the 37th consecutive weekly release in which unemployment claims are significantly impacted by the economic turmoil resulting from the COVID-19 pandemic.

The dataset published by the DOL provides two statistics covering the number of unemployment claims each week. The DOL defines the two statistics in the weekly news release as follows:

- **Initial Claims:** An initial claim is a claim filed by an unemployed individual after a separation from an employer. The claimant requests a determination of basic eligibility for the UI program. When an initial claim is filed with a state, certain programmatic activities take place, and these result in activity counts including the count of initial claims. The count of U.S. initial claims for unemployment insurance is a leading economic indicator because it is an indication of emerging labor market conditions in the country. However, these are weekly administrative data that are difficult to seasonally adjust, making the series subject to some volatility.
- **Continued Claims:** A person who has already filed an initial claim and who has experienced a week of unemployment then files a continued claim to claim benefits for that week of unemployment. Continued claims are also referred to as insured unemployment. The count of U.S. continued weeks claimed is also a good indicator of labor market conditions. Continued claims reflect the current number of insured unemployed workers filing for UI benefits in the nation. While continued claims are not a leading indicator (they roughly coincide with economic cycles at their peaks and lag at cycle troughs), they provide confirming evidence of the direction of the U.S. economy.

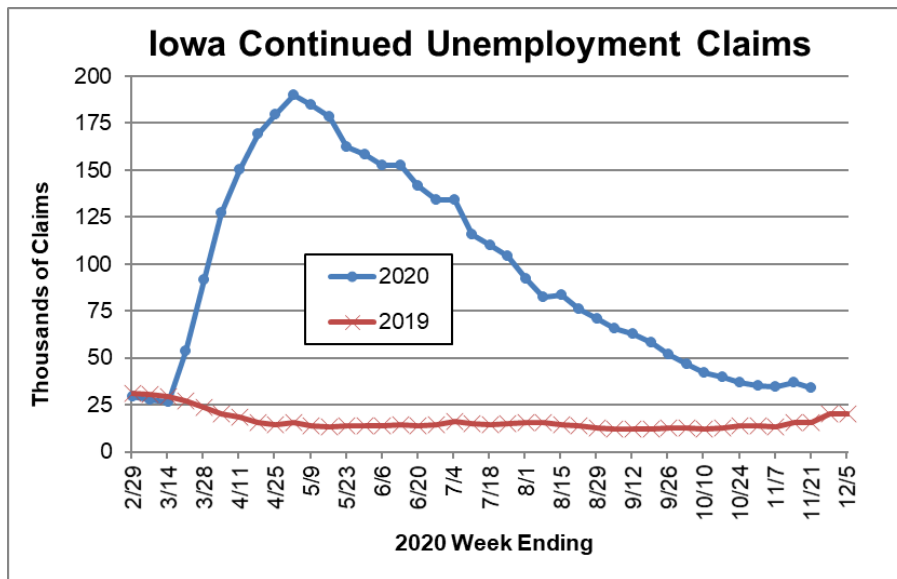

This week's DOL report shows continued elevated initial unemployment claim counts at both the State and national levels, although the level of initial claims has fallen to a level that is now just above the last year's level. The substantial increase in initial claims reported since the week ending March 14, 2020, has produced a large increase in State and national continued claims for the week ending November 21, 2020, when compared to the same week last year.

The following table provides U.S. and Iowa initial and continued claims numbers for the most recent report week as well as the previous week and the same week last year. Please note that the claims reported are actual claims numbers and have not been seasonally adjusted. The claims numbers represent preliminary (advanced) reporting, and the numbers are subject to revision the next week. In many instances, the preliminary numbers for Iowa are revised lower one week later.

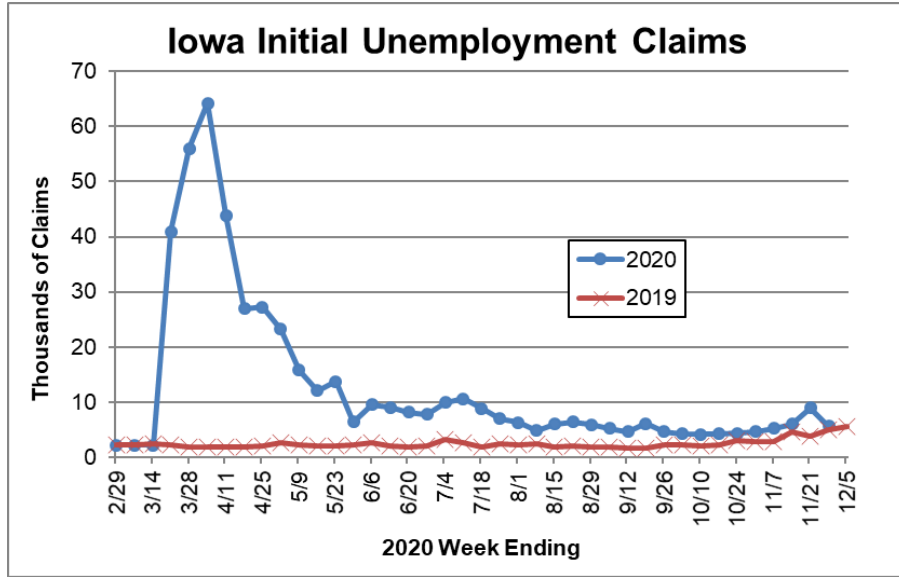

Weekly Continued Claims		Weekly Initial Claims	
Week ending 11/21/2020		Week ending 11/28/2020	
Time Period	U.S. Continued Claims	Time Period	U.S. Initial Claims
Last Year	1,508,294	Last Year	216,827
Last Week	5,930,745	Last Week	836,277
This Week	5,240,575	This Week	713,824
Time Period	Iowa Continued Claims	Time Period	Iowa Initial Claims
Last Year	15,536	Last Year	4,988
Last Week	36,802	Last Week	8,930
This Week	34,178	This Week	5,593

Claim numbers are not seasonally adjusted.

The following chart displays the number of Iowa continued claims over each of the past 39 weeks for 2019 and 2020. Iowa continued claims have declined by 155,465 claims since the week ending May 2, 2020. However, continued claims remain significantly higher than last year, with claims for the week ending November 21, 2020, exceeding claims for the week ending November 23, 2019, by 18,642 claims. It is important to note that while declining continued claims may mean that people are returning to work, it also means that people have reached the end of their eligibility for regular unemployment benefits. Unemployment insurance statistics indicate that 55,579 final payments for Iowa regular unemployment benefits were issued for the months of April through October 2020. For the same months of 2019, 9,549 Iowa regular program final payments were issued.

Iowa initial claims for the week ending November 28, 2020, decreased by 3,337 claims compared to the previous week and increased 605 compared to the week ending November 30, 2019. Given that Iowa initial claims are revised lower the week after the preliminary number is released, it is likely that initial claims will show a smaller year-over-year increase for the week once the actual number of claims is released on December 10, 2020.
