The Skilled Iowa Metrics were designed to measure four different criteria that mirror the initiative's goals. The state, region, county, or city being measured will be identified as a Skilled Iowa Community/Region once 80 percent of the metric goal, in all categories, has been obtained. These metrics are measured and produced on a monthly basis.

Member Businesses Criteria:

Employers around the state can become Skilled Iowa member businesses by committing to recommend the National Career Readiness Certificate (NCRC) in hiring and/or promotion practices for one or more positions within their organization. The member business criteria is two-fold. The first relates to the total number of businesses within the Skilled Iowa designated community. The second is the total number of people that the member businesses employ. The reason these are measured independently is to illustrate that a small number of member businesses can make a huge impact if they employ a very large number of people.

Member Businesses: Goal 10%

o Calculated as the number of member business locations in the region divided by the total number of business locations in the region. The source data comes from the Quarterly Census of Employment and Wages (QCEW).

o *Note: An employer can sign for multiple locations of its business within the state.*

Employment: Goal 20%

o Calculated as the number of people employed by member businesses in the region divided by the total employment in the region. The source data comes from the Quarterly Census of Employment and Wages (QCEW).

Workforce Criteria:

There are also two workforce criteria that are related to the number of NCRCs that have been earned within the region. The first metric relates to the number of employed people that have earned an NCRC, while the second relates to the number of unemployed people that have earned an NCRC.

Current Workforce: Goal 5%

o Calculated as the number of NCRC holders in the region that earned wages in the current quarter of measurement divided by the total employment in the region. The earned wage data comes from the Unemployment Insurance (UI)

wage database, while the total employment comes from QCEW.

o *Note: The "current quarter of measurement" is the most current wage quarter available in the UI wage database, which is typically two quarters previous to the current quarter. Employment status is updated for all NCRC holders at each*

quarter change, so an individual can move between the Current Workforce and Transitioning Workforce metrics.

Transitioning Workforce: Goal 20%

o Calculated as the number of NCRC holders in the region that did not earn wages

in the current quarter of measurement divided by the total unemployment in the region. The earned wage data comes from the UI wage database, while the total unemployment comes from Local Area Unemployment Statistics (LAUS).

o *Note: Since employment is measured with the Iowa UI wage database, NCRC holders that have jobs outside of Iowa or with an employer that doesn't pay unemployment insurance tax will be classified under the transitioning workforce metric. NCRC holders that did not include enough information to match them to the UI wage database are also classified under the transitioning workforce metric.*
