

Ethanol Operating Capacity by State

January 2013

Total U.S. Operating Capacity: 13,317.9 million gallons

Note: Operating Capacity is the volume of product that can be generated by a production plant or enterprise in a given period by using current resources. Figures by state indicate the percentage of Production Capacity. Production Capacity is the full-load continuous rating of a generator, primemover, or other electric equipment under specified conditions as designated by the manufacturer.
