

administrator with duties and responsibilities contained in Chapter 84, Code of Iowa 1962.

Collection and dissemination of data on water wells, water levels, stream flow and sediment loads, lake levels, and other hydraulic data are accomplished in cooperation with the water resources division of the U. S. Geological Survey. This program forms part of the nationwide network of data collection. Topographic mapping of the state, by 7½ minute quadrangles (approximately 55 square miles) and 15 minute quadrangles (approximately 220 square miles), is being conducted in cooperation with the topographic division of the U. S. Geological Survey.

As a part of the results of its work the survey has published 38 volumes of annual reports and accompanying scientific papers. These publications include special reports and maps covering the geology and mineral production of all but six of the 99 counties, as well as special reports on mineral production of all sorts. There are also three technical papers on Iowa coal and eight water-supply bulletins. A new series of publications entitled "Report of Investigations" has been initiated. Geological and mineral resources maps of the state have been prepared. Other summaries of specialized geological studies have been published in geological periodicals. These published reports, together with the large file of unpublished data obtained during almost three-quarters of a century of continuous study, serve as a reliable basis for up-to-the-minute reports to federal, state and municipal agencies and to private concerns and individuals who request and need the available information on water supply and other mineral resources of Iowa.
