

# Cultural Center

## Cultural Center

The building now known as the Cultural Center was built in 1949 as the 4-H Club dormitory. The three-story, monolithic concrete building included concrete block interior partitions, cement finished floors, steel door frames, interior wood doors and exterior metal doors. No plastering was used. Transformation of the building to the current Cultural Center was done in time for the 1981 Fair and included installing new lighting, removing some interior walls, adding new display cases and painting the building inside and out.

The following items are the major focus for restoring and providing accessibility to the Cultural Center:

- Provide handicap accessible parking and an accessible route to the building.
- Furnish the facility with elevators for handicap accessibility to all exhibit and sleeping areas.
- Provide handicap accessible restroom facilities for each level.
- Stabilize the deterioration of the exterior concrete walls.
- Remove and replace existing membrane roofing system.
- Remove and replace existing mechanical and electrical systems.
